GENERAL PREFACE.

THIS Book of Reference is the result of an endeavour to provide in one volume of moderate dimensions such information as is likely to meet the ordinary demands of persons of all classes. It aims, in fact, at becoming *Everybody's Everyday Reference Book*. It does not pretend to satisfy the requirements of the student devoted to some particular branch of study, or of the man in search of some minute technical details connected with his own particular occupation, but it aims at supplying just that kind of information, and just that amount of it, which the ordinary man wants in order to clear up any question that may arise in the course of his reading or conversation, or to settle any point of dispute that may occur in the course of friendly discussion. It is intended for the general reader who wishes to be posted up in facts of every-day life, to ascertain the meaning of scientific and technical terms in common use, to learn something about the names and topics that often occur in current literature, and to get some useful hints of a practical kind on matters of general interest.

Accordingly, no attempt has been made to treat any subject minutely, but rather to give the broad features in clear and concise terms, avoiding everything of an abstruse or highly technical character, and excluding all facts and details that to the great majority of persons are void of interest. In this way it has been possible, *within the limits of a single volume*, to present the general reader with a store of knowledge adequate to all his ordinary requirements. And being in one compact volume, which may be always kept within easy reach, when one is reading or writing, this work may justly be regarded as a *handy* book of reference, ready at any moment to be consulted at a small expenditure of time and trouble.

We do not, of course, pretend that as a book of reference it altogether supersedes the use of larger works consisting, it may be, of many volumes. But we *do* think that a comprehensive book, in small compass, like the one before us, does away in most cases with the necessity of wading through a bewildering mass of information in search of a single fact or simple explanation. We therefore venture to hope that those who have access to large books of reference will find this smaller work a great saving of time and trouble, and that to those who have no such access it will prove invaluable and come to be regarded as indispensable.

Further, this work is much more than a handy book of reference. Unlike an ordinary Encyclopædia, in which the subjects are arranged without any link of connection

438148

other than that which the alphabet affords, it claims to serve a double purpose, both as a book of reference to supply this or that particular at short notice, and also as a book which is largely suited for continuous reading and study.

Moreover, it claims to be a book equally suited for the Home and the Office. In it, for instance, the man of business will find, in the Legal and Commercial sections, much that will be of service to him, from time to time, in the course of his business; whilst the same man in his home will find in the Social Guide much that will aid him in the discharge of his social duties, and in the chapters on Local Government much that will help him in the performance of his duties as a citizen. It aims, in fact, at being in many important matters a good *practical* Guide. For example, in the "Medical Guide" the parent is directed how to act in cases of illness, accidents, and other emergencies; while in the section on Education and the Professions he may learn how, with the least expense, to secure a good education for his children, and what steps he should take to enter them on a career best suited to their talents and circumstances.

Nor have the special needs and interests of women been forgotten. They will find here information helpful in nursing the sick, many particulars respecting women's education and openings for employment, much interesting matter on the correct mode of speaking and writing, and suggestive hints that will aid them in playing their part becomingly in society.

PREFACE TO NEW AND ENLARGED EDITION.

The extraordinary favour with which this Book of Reference has been received has induced the Publishers to make the work still more valuable by enlarging and revising its contents. By the addition of about a hundred pages, it has been possible to include a considerable number of new topics, care being taken to select such as are of general interest from their bearing on modern life and thought. These additional topics are distributed over the whole book, but the greater number find a place in the Dictionary of General Information, the Medical Dictionary, and the Legal Guide. In these Dictionaries are many new articles on men and matters much talked about in recent times; whilst of the four parts of the Legal Guide, the one that treats of "Parliament and Administrative Government" forms a new feature of special interest. The section entitled *Miscellaneous Facts and Figures* has also been greatly extended, admitting, in particular, of a prominent place being given to the record of "Sports and Pastimes."

Advantage has been taken of the issue of a new edition to improve the arrangement of the several sections of the work, to bring all details up to date, and to correct certain inaccuracies. We hope, as the result of the steps taken to enhance the value of the work, that we may confidently look forward to a success even greater than that already achieved.

GENERAL CONTENTS.

This work consists of the following Sections:—

PAGE.

I.—A DICTIONARY OF GENERAL INFORMATION 27–321

II.—A MEDICAL DICTIONARY for the Home Circle 322–423

III.—A LEGAL GUIDE in Four Parts:

1. PARLIAMENT AND ADMINISTRATIVE GOVERNMENT 426–447
2. LOCAL GOVERNMENT 447–474
3. GENERAL PRINCIPLES AND PRACTICE OF ENGLISH LAW . . . 474–563
4. COMMERCIAL LAW 564–607

IV.—A COMMERCIAL GUIDE including a Commercial Dictionary . . 608–712

V.—A GUIDE TO EDUCATION AND THE PROFESSIONS. . . . 713–774

VI.—A SOCIAL GUIDE, with Hints on Etiquette and Social Duties . . 775–812

VII.—THE WORLD AND THE EMPIRE, being

A Compendium of the most interesting and important facts, with many STATISTICAL TABLES 813–911

VIII.—AIDS TO THE STUDY OF ENGLISH 912–998

IX.—MISCELLANEOUS FACTS AND FIGURES. 999–1030

X.—AN ENGLISH DICTIONARY, including ABBREVIATIONS 1031–1088

Synopsis of Contents **6-8**

Directions for Referring to this Work **9**

Index **9-26**

SYNOPSIS OF CONTENTS.

A DICTIONARY OF GENERAL INFORMATION, containing:—

A series of short Articles on well-known Names in History, Biography, Geography, and Mythology, and on Subjects of General Interest . . . . . PAGE. 27–321

II.—A MEDICAL DICTIONARY, designed for use in the Home Circle 322–423

III.—A LEGAL GUIDE, in Four Parts:—

1.—Parliament and Administrative Government.

	PAGE.
The Crown	426
Parliament	428
Parliamentary Elections	430
House of Lords	432
House of Commons	434
Legislation	436
Executive Government	438
Greater Departments of State	440
Lesser Departments of State	442
Administrators of the Law	444
Church Officers	446

2.—Local Government.

Introduction	447
Local Authorities	448
Local Elections	452
Rates	455
Poor Law	460
Public Health	464
Public Protection	467
Education Law	472

3.—General Principles and Practice of English Law.

Sources of the Law	474
The Law Courts	475
Procedure in the Courts	477
Juries	482
Coroners and Inquests	484
Evidence, Law of	486
Criminal Law	488
Contracts	494
Torts	503
Personal Rights	512
Church Law	513
Real Property	516
Mortgages	523
Wills	525
Executors and Administrators	528
Trusts and Trustees	530
Solicitor and Client	533
Landlord and Tenant	534
Master and Servant	538
Husband and Wife	542
Parent and Child	546
Hotels and Restaurants	548
Clubs, Law relating to	550
Game, Law relating to	551
Fishing Rights and Penalties	552
Dogs, Law relating to	553
Horses, Law relating to	554
Motor Cars and Motor Cycles	555
Taxes, Duties, and Licences	555
Supplementary	563

4.—Commercial Law.

Negotiable Instruments	564
Sale	569
Debt	573
Bankruptcy	574
Limited Liability Companies	578
Partners and Partnerships	589
Principal and Agent	591
Guarantor and Guarantee	593
Money Lenders and Pawnbrokers	594
Bills of Sale	597
Copyright	599
Patents	601
Trade Marks	603
Thrift and Trade Organisations	604

IV.—A COMMERCIAL GUIDE, forming with Commercial Law in the preceding Section a complete Guide to Business Men, and containing:—

1.—A Commercial Dictionary. PAGE.

Dictionary of Commercial Terms . 610
Commercial Terms in Four Languages 640
Abbreviation of Commercial Terms 645

2.—Articles on Commercial Subjects.

Stock Exchange 646
Banks and Banking 650
Money Market 655
Insurance 659
Shipping 665
Railways 669
Post Office and its Regulations . . 674

3.—Tables on Commercial Business.

Excise Tables 681
Stamp Duties 682
Customs Tariff 684
Commercial Products 685
Metric Tables 692
Weights and Measures—
(1) British 693
(2) Foreign 697
(3) Colonial 699
Money, British and Foreign 699
Interest Tables—
(1) Simple 702
(2) Compound 704
Government Tables—
(1) Life Insurance 707
(2) Annuities 707
Wages Table 709
Ready Reckoner 710
Relative Times 712

V.—A GUIDE TO EDUCATION AND THE PROFESSIONS, showing:—

1.—What to consider in CHOOSING A CALLING 714, 715
2.—How to obtain a UNIVERSITY EDUCATION with the aid of Scholarships . . . 716–733
3.—How to enter on a PROFESSIONAL CAREER 734–774

EDUCATION. PAGE.

Elementary or Primary Schools. . 716
Technical Education 717
Secondary Education 718
The Universities 720
University Extension Schemes . . 730
The Education of Women . . . 730

THE PROFESSIONS.

The Christian Ministry 734
The Army 739
The Navy 742
The Mercantile Marine 744
The Civil Service 745

THE PROFESSIONS (*continued*). PAGE.

Law (Barristers and Solicitors) 750
Medicine (Physicians, Surgeons, Dentists and Veterinary Surgeons) 753
Teaching: (1) In Secondary Schools . . 756
„ (2) In Primary Schools . . 759
Engineering 761
Chemists (Pharmacy and Applied Chemistry) 763
Architects and Surveyors 765

World's Famous Explorers 853–859

THE EMPIRE.

Geography of the British Empire. PAGE.
Tabulated View of the Empire 860
United Kingdom 861
India 866
Ceylon 869
Dominion of Canada 869
Newfoundland 871
Australian Commonwealth 872
New Zealand 874
British West Africa 875
British South Africa 875
British East Africa 877
The Smaller British Possessions:—
(1) In the Mediterranean 878
(2) West Indian Possessions 878
(3) In the Atlantic Ocean. 879
(4) In the Indian Ocean 879
(5) In the Pacific Ocean 880
(6) Remaining British Possessions . . 880

Growth of the British Empire 881–884

STATISTICAL TABLES. For a List of these Tables see p. 885.

VIII.—AIDS TO THE STUDY OF ENGLISH, comprising:—

PAGE.
Common Errors of Speech . . . 912
Homonyms. 926
Synonyms 929
Derivation of English Words . . 935
Phrases, Classical and Foreign . . 944
Characters in Fiction, &c. . . . 950
Familiar Quotations 961
List of English Authors 974
Pseudonyms 983
Formation of a Private Library . . . 984
Glossaries:—
(1) Terms in Art, Architecture and Heraldry. 987
(2) Musical Terms 990
(3) Nautical Terms. 994
(4) Legal Terms 997

IX.—MISCELLANEOUS FACTS AND FIGURES, including *inter alia*:—

PAGE.
Places of Interest in London . . 999
Historical Tables 1005
Memorable Events 1008
Sports and Pastimes 1015

For full details see p. 999.

X.—AN ENGLISH DICTIONARY, containing:—

1. A Selection of Words in current Literature, as well as Scientific and Technical Terms in Common use 1031–1085
2. A List of Abbreviations and Contractions 1085–1088

DIRECTIONS FOR REFERRING TO THIS WORK.

All topics not treated under an Alphabetical arrangement will be found in the *Index*.

The parts of the Work arranged alphabetically are—

1. The Dictionaries, namely—

A DICTIONARY OF GENERAL INFORMATION, being a kind of Condensed Cyclopædia, but without such subjects as are treated, in their proper connection, elsewhere in the book . . . . . PAGE. 27

A MEDICAL DICTIONARY 322

A COMMERCIAL DICTIONARY, giving the meaning of all Commercial Terms in Common use 610

AN ENGLISH DICTIONARY 1031

2. The following Lists and Glossaries :—

	PAGE.		
Abbreviations and Contractions	645, 1085	Pseudonyms	983
Characters in Fiction, Poetry, and Drama	950	Synonyms	929
Commercial Products	685	Terms (Explanation of):—	
Commercial Terms in Four Languages	640	(1) In Art, Architecture, and Heraldry	987
English Authors (British and American)	974	(2) Musical	990
Familiar Quotations	961	(3) Nautical	994
Phrases Classical and Foreign	944	(4) Legal	997

N.B.—Whilst it would be useless to look in the Index for any topic that obviously belongs to one of the above Dictionaries or Alphabetical Lists, yet in any other case, or whenever in doubt where to turn for the desired information, the *Index* should be referred to.

INDEX.

This Index does not, except in certain cases, include the topics treated in the Commercial and Medical Dictionaries, or in the Dictionary of General Information, for being alphabetically arranged they admit of easy reference

A DICTIONARY OF GENERAL INFORMATION.

PREFACE.

THIS Dictionary comprises a series of Short Articles on well-known names in History, Biography, Geography and Mythology. It also treats of topics of general interest, especially the wonderful inventions and discoveries of recent times. It is in fact a kind of condensed Encyclopædia, only it should be remembered that many topics find no place in it, because adequately dealt with elsewhere in the book, namely, Medical matters in the Medical Dictionary, questions relating to Law in the Legal Guide, and those bearing on Commerce in the Commercial Guide.

This Dictionary offers to the ordinary reader two advantages which a large Encyclopædia does not possess: it is easy for a person to find a particular name or topic, and when found to get at the salient facts without wading through a mass of minute details. In glancing through an ordinary Encyclopædia, one is struck by the great number of subjects it contains to which reference is seldom or never likely to be made; on the one hand, subjects which rarely occur in conversation or literature, and on the other hand, subjects so familiar as practically to place them beyond the need of reference. By omitting the subjects which for these reasons are not likely to be missed, it has been found practicable to treat the more likely subjects of reference in a comparatively few pages. Further, in order to make the most of the space at our disposal we omit altogether such subjects as require exhaustive treatment to be of any service to the reader, whilst admitting topics of less importance but of more curious interest; for example, the "Horse" is excluded, whilst *Bucephalus*, the Arabian *Darley*, and *Eclipse* find a place. So with respect to Geographical names; small places find an entry, if noted for their cathedrals, old abbeys, ruined castles, or historical associations, whilst many simply populous places are unmentioned.

N.B.—When a person fails to find what he wants in this Dictionary, he should at once turn if he seeks for information on Medical matters to the Medical Dictionary, for the explanation of Commercial terms and transactions to the Commercial Dictionary, and in every other case to the INDEX.

A DICTIONARY

OF

GENERAL INFORMATION.

AACHEN, the German name of Aix-la-Chapelle (which see).

AAR, a Swiss river which rises in the Bernese Oberland, flows through lakes Brienz and Thun, and joins the Rhine.

AARON, the first high priest of the Jews, the brother of Moses, and his spokesman before Pharaoh. He died on Mount Hor, on the borders of Edom.

ABACUS. (1) The upper part of the capital of a column. (2) An instrument for aiding in arithmetical calculations.

ABADDON = Apollyon (Rev. ix. 11.), the angel of the bottomless pit. Also used to designate the lowest depth of Hell.

AB'ATTIS, a simple kind of entrenchment formed of trees cut down and arranged side by side, with the branches interlaced outwards and the stems inwards.

ABBAS, uncle of Mohammed, founder of the family of the Abbassides, who ruled as caliphs at Bagdad (750-1258).

ABBAS THE GREAT, a famous Shah of Persia, who reigned 1586-1628 and greatly extended that kingdom. When he died his dominions stretched from the Tigris to the Indus.

ABBEVILLE, TREATY OF, A treaty concluded by Henry III. in 1259, by which he surrendered his claims to Anjou, Normandy, and other provinces, to Louis IX. of France.

ABBEY, a monastery of the highest rank ruled by an abbot or abbess. A church always formed the nucleus of the abbey, and close to it a group of buildings, with cloisters, containing a *refectory* or dining hall and dormitories or sleeping places. There were also *guest-rooms* for the reception of travellers and pilgrims, and an *almonry* where the poor were relieved. At the back were a granary, a laundry, a bakehouse, a brew-house, an infirmary, and sometimes a mill, with workshops for smiths, wrights, shoemakers, weavers, etc. The most famous abbeys in England were Westminster, St. Mary's of York, Fountains, Kirkstall, Tintern, Clairvaux, Netley, and St. Albans.

ABBOT, GEORGE, a native of Guildford, Surrey, appointed Archbishop of Canterbury in 1611. He was one of the translators of the authorised version of the Bible.

ABBOT OF UNREASON. See *Unreason, Abbot of.*

ABBOT, THE, a novel by Sir Walter Scott, founded upon incidents in the life of Queen Mary of Scotland.

ABBOTSFORD, residence of Sir Walter Scott, near Melrose.

ABDALLAH, father of Mohammed.

ABD-EL-KADER was the heroic leader of the Arabs in their wars with the French in Algiers. At length he was compelled to surrender (1847), and, having spent five years in honourable captivity in France, was released by Louis Napoleon (1852). He spent the rest of his life as a pensioner of the French Government; *d.* 1883.

ABDUL-AZIZ, Sultan of Turkey (1861-76). Endeavouring to introduce reforms, in consequence of what he had seen in France and England, he was deposed and probably assassinated.

ABDUL HAMID II., Sultan of Turkey, began his reign in 1876. In consequence of the "Bulgarian Atrocities," Russia went to war with Turkey in 1877, and by the treaty of Berlin, in 1878, Turkey lost Bulgaria and other provinces. Abdul will go down to posterity as "The Great Assassin," on account of the massacres in Bulgaria, Armenia, and elsewhere in the course of his reign.

ABDUL-MEDJID, *b.* 1823, *d.* 1861; was Sultan of Turkey from 1839 to his death. He just managed, with the aid of the Christian powers, to avert the ruin that had threatened his father at the hands of Mehemet Ali and the Egyptians. His promised reforms gained him the support of France and England in the Crimean War, but that over, he did little to show his gratitude.

ABDUR RAHMAN, made Ameer of Afghanistan in 1880, as a friend and ally of the British, after General Roberts had, by his victory at Kandahar, crushed all who were hostile.

ABECEDARIANS, a sect of German Anabaptists of the 16th century, who despised all learning as a hindrance to religion, and regarded even the "A, B, C." with contempt. They hoped to bring in the rule of righteousness by destroying all existing governments.

À BECKET, THOMAS, a celebrated Archbishop of Canterbury, who tried to make the clergy independent of the civil powers. Refusing his consent to the constitutions of the Council of Clarendon, he was driven by Henry II. into exile. On reconciliation with the king he returned to England and was soon afterwards assassinated by four knights in Canterbury Cathedral (1170). He was canonised by the Pope, and regarded by the people in general as a martyred saint. Down to the reformation many thousands annually made pilgrimages to his shrine, and many miracles were supposed to be wrought there.

ABELARD, PETER, a famous French scholar and theologian. The story of his relations with Héloïse, a French Abbess, whom he secretly married, is well known; *d.* 1142. [See *Héloïse*].

ABEL, SIR FREDERICK AUGUSTUS, *b.* in London, 1827, *d.* 1902; a great chemist, more especially in that branch which relates to explosives. He was chemist to the War Department from 1854 to 1888, did much towards perfecting the manufacture of gun-cotton, and shares with Professor Dewar the honour of inventing cordite. He also invented the present system of testing the flash-point of petroleum, and wrote many books dealing with his special subjects. His services gained him a baronetcy in 1893.

ABERBROTHOCK, same as Arbroath, a seaport in Forfarshire, Scotland.

ABERCROMBIE, JAMES, a British general who commanded an expedition against Canada when held by the French. He was defeated by Montcalm at Ticonderoga, 1758.

ABERCROMBY, SIR RALPH, a famous British General, who was mortally wounded in the hour of victory when fighting with the French, near Alexandria, 1801. A few months later the French evacuated Egypt.

ABERDEEN, capital of Aberdeenshire, and principal town in the north of Scotland. It is the seat of a flourishing university. Being built mostly of granite, it is often called "The Granite City." It includes Old and New Aberdeen, the former on the Don, the latter on the Dee.

ABERDEEN, EARL OF, *b.* 1784, *d.* 1860, a British statesman. He was Foreign Secretary (1) under Wellington, 1828–30, and (2) under Peel, 1841–46. He was Premier, 1852–55, and was, therefore, responsible for *drifting* into war with Russia, 1854, and for the mismanagement that caused our troops in the Crimea so much needless suffering.

ABERNETHY, JOHN, *b.* in London, 1764, *d.* 1831; a clever English surgeon; did great service to medical science by insisting on the connection between local diseases and the general health, especially with regard to the alimentary system. First as assistant, and afterwards as principal surgeon to St. Bartholomew's, he attracted crowds of students to his lectures. He had also a large private practice, and was noted for the unceremonious treatment he accorded his patients.

ABERRATION OF LIGHT, a remarkable phenomenon by which stars appear to deviate a little in the course of a year from their actual places in the heavens. This is owing to the fact that the observer is being carried onwards, by the motion of the earth in its orbit, whilst the light is travelling from the stars to the earth. The discovery of the aberration of light was made by Dr. Bradley, 1727.

ABERYSTWITH, a small town on the coast of Cardiganshire, Wales, with a University College rising into importance.

ABHORRERS. In 1679, while the agitation in favour of the Exclusion Bill was at its height, many petitions were presented to Charles begging him to summon Parliament to meet in January, 1680. In reply, many addresses were presented by the Court party expressing "abhorrence" of such interference with the royal prerogative. Hence the Court party were called "abhorrers."

ABIGAIL. (1) After the death of her husband, Nabal, she became the wife of David, while wandering as an outlaw in the reign of King Saul. (2) A common name for a lady's maid, originating in the name given byBeaumont and Fletcher to a waiting woman in their play of "The Scornful Lady."

ABIOGENESIS is the origin of a living creature from non-living matter. In the present state of science we have no reason to think that this phenomenon has ever occurred in our own planet through the operation of natural law.

ABNEY, SIR WILLIAM de WIVLESLIE, *b.* at Derby, 1844, was educated for the army, and went through the R.M.A., Woolwich. He devoted himself to chemistry and astronomy, and was for some years Chemistry Instructor to the Royal Engineers. He is an authority on chemistry as applied to photography and astronomy, and has had a great hand in directing the scientific education of the country for some years.

ABO, the former capital of Finland. Here was signed a treaty between Sweden and Russia (1743), by which the latter acquired the southern part of Finland.

ABOLITION OF SLAVERY. The shameful trade in negro slaves began in the reign of Elizabeth. John Hawkins was the first Englishman to buy slaves in Africa, and to take them across the seas to the West Indies. So great did the trade become, that between 1750 and 1760 no less than 70,000 negro slaves were imported in Jamaica alone. The Quakers were the first to take active measures against slavery. The following persons took a prominent part in the movement: *Thomas Clarkson*, who wrote a "Prize Essay" on slavery; *Granville Sharp*, who presided over an Anti-Slavery Committee; *William Wilberforce*, who devoted himself in Parliament to the suppression of the slave trade; and *Zachary Macaulay*, father of Lord Macaulay. An act for the *Abolition of the Slave Trade*, passed in 1807, and an act for the *Emancipation of Slaves* in British colonies took effect on 1st August, 1838. On that day 800,000 negroes were set at liberty. Twenty millions of money were voted by Parliament as compensation to the masters for the loss of their slaves. [See *American Civil War*].

ABOUKIR BAY, scene of the battle of the Nile, in which Nelson defeated the French, 1798.

ABRACADABRA, an eastern word formerly in high repute as a charm in the case of agues and fevers. The word was written in triangular form, and the paper or parchment on which it was written was folded in the form of a cross, suspended from the neck by a strip of linen, worn for nine days, and then cast into a stream. It is now used as a term of contempt to designate a useless formula.

ABRACADABRA
BRACADABR
RACADAB
ACADA
CAD
A

ABRAHAM, the father of the Jews, whose faith in God's promises that his seed should become a great nation, and inherit the land of Canaan, caused him to leave Ur of the Chaldees, and lead a nomadic life in Palestine and the neighbouring countries. Gen. xi.-xxv.).

ABRAHAM'S BOSOM, a Jewish expression for a place of perfect happiness; the same as Paradise.

ABRAHAM, HEIGHTS OF, a plateau near Quebec, Canada, on which the British, commanded by Wolfe, defeated the French under Montcalm, 1759.

ABRASION BY RIVERS, the wasting and wearing away of the land by the mechanical action of river currents. The amount of this depends on the rapidity of the stream, the volume of water, and the quantity of rock-débris carried along. The water-worn material is transported by the river and deposited in valleys, in lakes, or in the ocean, as layers of mud, sand, and gravel. [See *Alluvium.*]

ABSALOM. He rebelled against King David his father. His forces were defeated and he himself was killed by Joab whilst suspended from an oak, in the branches of which his hair had become entangled as he fled on a mule through the forest of Ephraim.

ABSALOM AND ACHITOPHEL (ch = k), a poem by John Dryden, published 1681. It is a political satire. Absalom represented the Duke of Monmouth, and Achitophel the Earl of Shaftesbury of the time.

ABSINTHE, a powerful liqueur distilled in the Swiss Canton of Neufchâtel and in France, from an infusion of wormwood and other herbs in alcohol, and largely consumed in the latter country. Its habitual use, even in small quantities, is injurious to health.

ABU-KLEA, in the Soudan, the scene of Sir H. Stewart's victory over the Mahdi's forces, 1885.

ABY'DOS. (1) An ancient Greek town on the Asiatic side of the Hellespont (Dardanelles), famous as the home of Leander, and also as the place whence Xerxes crossed into Europe by means of a bridge of boats, 480 B.C. (2) An ancient city of Upper Egypt, near the west bank of the Nile.

ABY'DOS, BRIDE OF, a poem by Lord Byron, which refers to the story of Leander swimming across the Hellespont to visit his lover Hero.

ABYSSAL ANIMALS are those restricted to the ocean depths. These animals are distantly related to those at the surface, but in no case are they of the same species. This fact is due to the totally different conditions under which the animals of the deep sea live. Below 200 fathoms all is inky darkness, and plant life, therefore, absent. The animals below this depth are thus restricted to a carnivorous diet. At 2000 fathoms the pressure of water is two tons to the square inch, the temperature is only just above freezing point, whilst life is further handicapped by the small quantity of air which water at these depths holds in solution. These difficulties are overcome through many strange modifications of structure and habit. The scarcity of food is compensated for by a throat and stomach so distensible that one fish can swallow another larger than itself, and thus can feed on almost anything that comes in its way; the deficiency of air is met by unusually large gills; the darkness is dealt with, in most cases, in one of two ways: either by long feelers and a keen sense of smell, which render the animal independent of sight, or by huge eyes and phosphorescent organs in the skin which emit a faint light that enables the animal to find its prey. In certain fish this light can be turned on or off at will; the fish can thus hunt for food by the aid of its own search lights, but if itself attacked, it can put out the light and vanish into darkness.

ABYSSINIA, often called the "African Switzerland," a country nearly as large as France, in the north-east of Africa. It consists of an elevated plain crossed by ranges of lofty mountain chains, and possesses three distinct climatic zones. (1) the "Hot Lands," (2) a region, from 5,000 to 9,000 ft. above sea-level, with a climate resembling that of Italy, and (3) the highest belt up to 12,000 ft., capable of producing oats and barley, and pasturing large herds of cattle and sheep. The chief rivers are the Blue Nile and the Atbara. The Abyssinians are of South Arabian origin, profess a form of Coptic Christianity, and are governed by an emperor known as the Negus, or "king of kings." Lord Napier of Magdala led a successful expedition against a former ruler, King Theodore, 1868.

ACADEMY, a public garden adorned with statues, fountains, and groves, near Athens, in which Plato and other Greek philosophers taught. In modern times the name has been applied to societies formed for the study of literature, art, or science. The French Academy of forty members, founded by Richelieu in 1635, for the study and improvement of the French language, has included in its ranks most of the leading authors of France. In England, the Royal Academy for the encouragement of painting, designing, and sculpture was founded in 1768, and the Royal Academy of Music in 1822.

ACADEMY (THE ROYAL) OF ARTS. See *Royal Academy, The.*

ACADIA, a name of Indian origin, applied by the French to the district which now comprises Nova Scotia and New Brunswick.

ACCOLADE, a slight blow of a sword on the cheek or shoulder, given by the sovereign when conferring the honour of knighthood.

ACCUMULATORS. See *Electric Motor Cars.*

ACETIC ACID is obtained in an impure state in preparing vinegar from alcohol by the action of a special microbe, the *mycoderma aceti.* Acetic acid is also obtained by the destructive distillation of wood. When pure, it is a colourless crystalline solid, readily absorbing moisture, and then giving a colourless liquid. It is used as vinegar, and also in medicine and in many manufacturing processes.

ACETYLENE, a gaseous compound of carbon and hydrogen, which has a most offensive smell, but burns with a brilliant flame.

ACHAIA, at first a long narrow strip of territory extending along the south of the Gulf of Corinth, but later the whole of the Peloponnesus.

ACHA'TES, (a-tes), the attendant of Æneas during his wanderings after the fall of Troy. His fidelity was so great that "Fidus Achates" has become a proverb.

ACH'ERON. (1) A river of the lower world, and sometimes used to signify hell itself. (2) The name of two small rivers in Greece, and of one in Southern Italy, all of which, at one time or another, were thought to communicate with Hades.

ACHIEVEMENT. See *Hatchment.*

ACHIL'LES, the hero of the Iliad and the bravest of the Greeks in the Trojan War. In infancy he was dipped by his mother Thetis in the river Styx, and thus rendered invulnerable, except at the heel by which he was held. A wound in this vulnerable spot by an arrow shot by Paris is said to have caused his death.

ACHROMATIC GLASSES, lenses which produce a definite image of an object, and one that is free from a coloured border. This is attained by the combination of a double convex lens of crown glass with a concave-convex of flint glass, cemented together by Canada balsam.

ACIDS, chemical compounds of hydrogen with an element or group of elements,

which usually possess a sour taste, and have the property of turning blue colours of vegetables to red.

ACIS AND GALATE'A, an operatic work by Handel, founded on the story of Acis, a Sicilian shepherd who was passionately loved by Galatea, and was crushed to death under a mass of rock by his rival Polyphemus. At the prayer of Galatea, his blood was changed by the gods into a limpid stream.

ACOLYTE, an attendant or servant; the name given in the Roman Catholic Church to those assistants who light the candles, carry tapers, and assist the priest generally in the performance of the ceremonies.

ACONCAGUA. (1) A volcanic peak in the Southern Andes, and the highest mountain in South America. (2) A province of Chile. (3) The largest river of the province.

ACONITE, wolf's bane, or monk's hood, a poisonous plant of the Ranunculus order. See "Poisonous Plants" in *Med. Dict.*

ACOUSTICS, the science of sound. It deals with the production, nature, and transmission of sound-waves, and their translation by means of the mechanism of the ear into the sensation of sound.

ACRE, (1) A standard British measure of land, consisting of ten square chains or 4,840 square yards. (2) A seaport in Palestine on the Bay of Acre. It was captured by the Crusaders in 1104, and was the last stronghold in Palestine held by them. It was successfully defended by Sir Sidney Smith, in 1799, against Napoleon.

ACROLITHS, ancient Greek statues of wood, with the head, arms, and feet of marble, and often decorated with gold.

ACROPOLIS, the lofty citadel which formed the nucleus of, and defended ancient Greek cities; now specially applied to the rocky eminence at Athens upon which the remains of the Parthenon stand.

ACROSTIC, a poem of which the first or last letters of each line, read in order, form a name, motto, or sentence. If the arrangement extends to both the first and last letters, it is called a double acrostic.

ACTÆON, a famous hunter who watched Diana and her attendants bathing. As a punishment, he was changed into a stag, and devoured by his own dogs.

ACTINOZOA is the name of a group of animals of the Sea-anemone class.

ACTIUM, a town and promontory on the western coast of Greece, the scene of the naval victory gained by Augustus over Antony and Cleopatra, B.C. 31.

ACTON (John Emerich) **LORD,** *b.* at Naples, 1834, *d.* 1902; a distinguished historian and literary man, one of the most gifted and scholarly men of his time. Though a zealous Roman Catholic, he was opposed to the doctrine of Papal Infallibility and other extreme views. He was raised to the peerage in 1869, and became professor of modern history at Cambridge in 1895. His writings are not numerous, but display great thought and erudition. He left his valuable library to Mr. John Morley, who presented it to Cambridge University.

ACT OF SETTLEMENT, 1701, provided that, if William III. died childless, his successor should be Anne, second daughter of James II., and after her the next heir that was a Protestant. This was Sophia, wife of the Elector of Hanover, a grand-daughter of James I., and the mother of George I.

ACT OF UNIFORMITY, an act passed in 1662, which required all holders of benefices to be ordained by a bishop, to use only the Book of Common Prayer in public worship, and to declare that it was unlawful to take up arms against the king under any pretext.

ADAM'S APPLE is the projection in the front of the neck visible in men, due to the thyroid cartilage, which develops rapidly when the voice breaks. In women and children it is small. Tradition has it that when Adam attempted to swallow the apple, it stuck in his throat, and gave rise to this swelling, which all adult men have since retained.

ADAMS, JOHN, the first ambassador of the United States to the English Court, and the second president of the republic. Previously he had strongly opposed the claims of the English Parliament to impose taxes on her colonists. He seconded the motion for the declaration of independence, and was a member of the committee which drew it up. He died July 4th, 1826, the fiftieth anniversary of the Declaration of Independence. His writings contain valuable memorials of the revolution.

ADAMS, JOHN COUCH, 1819-92, a famous English mathematician and astronomer, who shares with Leverrier the honour of the discovery of the planet Neptune.

ADAM'S BRIDGE, a chain of coral reefs and sand banks which almost connects Ceylon to India.

ADAM'S PEAK, a high conical peak in the interior of Ceylon, having on its summit a natural depression roughly resembling a foot-print, which is ascribed by Brahmans to Siva, by Buddhists to Buddha, and by Mohammedans to Adam.

ADDER or **VIPER,** the only British poisonous snake. It frequents open copses, dry heaths, and sandy spots, both in England and Scotland, but is not found in Ireland.

ADDISON JOSEPH, *b.* 1672, *d.* 1719; a famous English Essayist, whose style was described by Lord Lytton as "the most perfect form of English." He contributed regularly to the *Tatler*, *Spectator*, and *Guardian*. Though it is his prose writings that are now most admired, among his contemporaries he held high rank as a poet and dramatist. His tragedy "Cato" was a successful production, and his poem, "The Campaign," on the victory of Blenheim, was rewarded by an office in the government, and he finally became one of the principal secretaries of state, retiring on a large pension. He died at Holland House, Kensington.

ADDLED PARLIAMENT, the second parliament of James I., which met 1614, and was dissolved without passing a single bill.

AD'ELA, the fourth daughter of William the Conqueror, wife of Stephen, Earl of Blois, and mother of Stephen, King of England; *d.* 1137.

ADELAIDE, QUEEN, *b.* 1792, *d.* 1849, the consort of William IV., distinguished for her virtues and acts of beneficence. Her Court was a model of purity.

ADELAIDE, the capital of South Australia, named after Queen Adelaide. Its shipping port is Port Adelaide, about seven miles distant.

ADELER, MAX, the pen-name of a popular American humorist, Charles Heber Clark, *b.* 1841. "Elbow Room," and "Out of the Hurly-Burly" are his two most popular works.

ADEN. Refer to *Index*.

ADIRONDACKS, a mountainous district in the North of New York State, U.S.A., stretching from near Lake Champlain half-way to Lake Ontario. Its scenery being remarkably picturesque, and the climate delightful, it forms the pleasure-ground of the surrounding States.

AD'JUTANT, a military officer acting as an assistant to the commanding officer of a garrison, regiment, or battalion. He promulgates the orders of his chief, receives reports intended for him, and is responsible for the routine of discipline in the body of troops to which he is attached.

ADJUTANT BIRD, a gigantic crane, standing about five feet in height, a native of the warmer parts of India, where it acts as a public scavenger, devouring offal of all kinds. Marabou feathers are obtained from beneath its wings and tail.

ADLER, HERMAN, son of Nathan Marcus Adler; he succeeded his father as Chief Rabbi on the latter's death in 1890. He has greatly distinguished himself by his labours to champion the cause of his co-religionists, and to promote the welfare of the poor Jews. He has also done much to promote education and social progress generally.

ADMIRABLE CRICHTON, James Crichton, a Scotch gentleman, educated at St. Andrew's University, who travelled in France and Italy, and was admired by all for his strength and skill in athletic exercises, and for his cleverness in debate. Killed in the streets of Mantua, 1585. The name is now applied to one who combines beauty of person with extraordinary bodily strength and brain power.

ADMIRAL, the highest rank of naval officer, of which the grades are:—Admiral of the Fleet, Admiral, Vice-Admiral, and Rear-Admiral, ranking respectively with Field-marshal, General, Lieutenant-General, and Major-General.

ADONA'I, "the lord," a name used by the Jews in place of Jehovah, which they considered too sacred to be spoken.

ADO'NIS. (1) A youth, the favourite of Aphrodite (Venus), famous for his beauty. He was killed by a boar which he had wounded, and then changed by Venus into the flower, *anemone*. (2) A plant, the *Pheasant's Eye*, belonging to the same natural order as the buttercup and anemone.

ADORATION OF THE MAGI, the worship of the infant Christ by "the wise men from the east" (Matt. ii.). Tradition says the wise men were three, Melchior, Kaspar, and Balthazar.

ADRIAN or **HADRIAN, EMPEROR,** proclaimed by the Roman legions on the death of Trajan, 117 A.D. He spent some years of his reign in visiting all the provinces of his empire, including Britain, where he caused a wall to be built, A.D. 120, between the Solway and the Tyne, to secure the Roman provinces to the south from the incursions of the Caledonians.

ADRIAN, POPE, a name borne by six occupants of the Papal chair. Adrian IV. (1154–1159), Nicholas Breakspeare, is the only Englishman who has attained to that dignity. He conferred the sovereignty over Ireland upon Henry II. of England.

ADRIAN, SAINT, one of the numerous saints martyred under the Romans. As one of the Pretorian guards, he had to superintend the execution of some Christians, and their steadfastness converted him. He was cruelly tortured in the presence of his Christian wife Natalia, who died soon afterwards (300 A.D.).

ADRIANOPLE, on the Maritza, the second largest town in European Turkey, and the capital of Eastern Roumelia. The plains around produce the famous "attar of roses."

ADRIATIC SEA, a long narrow arm of the Mediterranean, separating Italy from the western shores of Turkey, Dalmatia, and Illyria.

AD VALOREM. See *Commercial Dictionary*.

ADVOCATE, LORD, or King's advocate, a legal functionary of Scotland, with no exact counterpart in England. He combines the functions of Attorney-General and Public Prosecutor with many other powers that in England belong only to a judge: as the issuing of warrants of

arrest and imprisonment. He has also the appointment to many legal offices. He goes out of office with his political party.

ADVOCATES, FACULTY OF, the body of lawyers in Scotland answering to our barristers in England. Admission to the Faculty involves only two examinations, but they are difficult, and between them the candidate is expected to attend classes in law. Having passed these, and paid about £330 in fees, the young advocate is free to plead in any Scottish Court.

ADVOCATUS DIAB'OLI,—the devil's advocate—a functionary in the Roman Catholic Church whose duty it is to bring forward all the weak points in the character and life of a deceased person proposed for canonisation. The other side is represented by the *Advocatus Dei*—God's advocate.

ADVOWSON, the right of presentation to a "living" in the Church of England. Originally the right belonged to the lord of the manor, but as time went on it got transferred with or without part of the manorial property, so that in many cases the owner of the advowson has no territorial connection with the parish it refers to. See "Patronage" in *Index*.

ÆDILES, Roman magistrates who supervised the national games and spectacles, public buildings, markets, and the cleansing and draining of the city.

ÆGE'AN SEA, or ARCHIPELAGO, a branch of the Mediterranean washing the shores of Greece, Turkey, and Asia Minor. It contains numerous islands.

ÆGIS, a shield; especially the one made by Vulcan for Jupiter. Hence to protect any one is often figuratively called "throwing the *Ægis* over him."

ÆGRO'TAT, a Latin word signifying "he is ill." A word often used at the Universities to signify that a person is excused from lectures or examination on account of illness.

ÆNE'AS, a Trojan prince, the fabled son of Anchises and Venus, who fought bravely in defence of Troy, and, on its destruction fled from the ruins bearing his father on his shoulders, and leading his son Julus. He finally settled in Italy, and, according to tradition, was the ancestor of the Julian family, and of Romulus and Remus.

ÆNE'ID, THE, Virgil's epic poem, in which, imitating the style of Homer, he describes the life and wanderings of Æneas.

ÆOLIAN HARP, a musical instrument made of catgut strings, stretched over a wooden sound box. Sweet sounds are produced by the playing of the breeze across the strings.

Æ'OLUS is represented in Homer as the happy ruler of the Æolian Isles to whom Jupiter had given the dominion of the winds, which at his will he kept confined in a cave till he sent them forth to do his bidding.

AERATED BREAD, bread made without the aid of yeast. The sponginess is produced by carbonic acid gas supplied artificially. It is claimed for it that it is more nutritive and more easily digested than fermented bread.

AERATED WATERS, beverages prepared by impregnating water with carbonic acid gas, and the addition, in some cases, of small quantities of fruit syrups. Mineral waters used as medicines are frequently aerated to render them more palatable and exhilarating.

AEROLITES (Gr. *air-stones*), a name given to masses of stony or metallic matter falling from the sky and glowing like a star on coming into contact with our atmosphere. Most aerolites are covered with a dark glaze as if fused in passing] through it. Many specimens may be seen in the British Museum. See *Meteor*.

AERONAUTICS, the art of floating or sailing in the air by means of balloons and flying machines. The first aeronauts or balloonists were the brothers Montgolfier of France. The first ascent in a balloon was made in 1783. Balloons were inflated with hydrogen until 1821, when coal-gas came into use for the purpose. The greatest height ever attained was 37,000 ft. in an ascent by Glaisher and Coxwell in 1862. Attempts are now being made to produce a flying-machine capable of being steered, and some successful voyages have been made, especially by Monsieur Dumont, 1903.

ÆSCHINES, *b.* 389, *d.* 314. B.C.; the second greatest of the Athenian orators. He opposed Demosthenes in his efforts to get the Athenians to adopt a forward policy against Philip of Macedon. After events had proved Demosthenes to have been only too correct, Æschines had to quit Athens, and he retired to Rhodes. He always acknowledged the superiority of Demosthenes.

Æ'SCHYLUS, an Athenian soldier and poet, "father of the Greek drama." He is said to have composed seventy tragedies—seven of which are extant—and to have been rewarded with the public prize on thirteen occasions; *d.* 456 B.C.

ÆSCULAPIUS, the god of medicine in ancient mythology.

ÆSOP, a famous Greek fabulist who flourished about the middle of the sixth century, B.C. His fables were probably delivered orally and not written.

ÆSTIVATION is the summer sleep undergone by many tropical animals and plants during the height of the summer. It corresponds to hibernation in the temperate zone. Thus many crocodiles, and some tortoises, bury themselves in the mud when the water dries up, and remain asleep for weeks till aroused by the autumnal rains. Snails and other land molluscs, instead of burrowing in the mud, affix themselves to grass stems and remain quiescent during the same period.

AFFINITY, CHEMICAL. The attractive force which causes bodies to combine together to form compounds differing in properties from their components.

AFFORESTATION, the turning of land into forest which previously had few or no trees on it. The extent to which the art and science of forestry are taught and practised in Indian and most European countries, notably Germany, is considerable, and there are thousands of acres in the British Isles that, with a little well-directed impetus from the State, could be afforested with advantage.

AFGHANISTAN. This country, to the north-west of India, is important as a buffer state between British India and the Russian Empire. The inhabitants are a stubborn, brave, and arrogant race, under the despotic rule of a prince with the title of *Ameer*. It is a mountainous country bordered by the Hindu Kush (25,000 ft.), and the Sulaiman Mountains (11,000 ft.). The principal passes between it and India are the Khyber and the Bolan. Its chief towns are Kabul, Kandahar, Herat, and Ghazni.

Afghanistan has been the scene of much fighting with the British. In 1842, British troops, in withdrawing from the country, were massacred in the Kurd-Kabul Pass. A fresh army under General Pollock, having retaken Kabul and released our prisoners, then retired. In 1879 war again broke out. After a defeat of British troops at Maiwand, General Roberts restored British prestige by gaining a brilliant victory near Kandahar. Having placed Abdur Rahman on the throne as Ameer, General Roberts returned with his army to India. Since then the Ameer has remained our faithful ally, looking to us for assistance, if need be, against Russia.

AFRICA, one of the great continents, is a vast peninsula, compact in form, with no inlets opening an easy way into the interior. It is largely within the Torrid Zone, the Equator passing almost through its centre. It is 5,000 miles long from North to South, and 4,600 miles broad from West to East. Of its physical features the most remarkable are its vast deserts and large lakes. Its two chief deserts are the Sahara in the north, and the Kalahari in the south. Among its lakes are the Victoria Nyanza, Albert Nyanza, Albert Edward Nyanza, Tanganyika, Nyassa, Bangweolo (or Bemba), Chad and Ngami. It has also four rivers of great size, namely, the Nile, the Niger, the Congo, and the Zambesi.

Africa has been to a great extent parcelled out among the European Powers, especially Great Britain, France, Germany and Portugal. British possessions occupy large portions of the south, west, and east of Africa: (1) In South Africa—Cape Colony, Orange River Colony, Transvaal, Natal, British Bechuanaland, Rhodesia, and Nyassaland. (2) In East Africa—the country from Mombasa on the coast to Victoria Nyanza, and the other lakes that form the head-waters of the Nile, including the districts of Uganda and Unyora; also the islands of Mauritius, Zanzibar, and Pemba. (3) In West Africa—Gambia, Sierra Leone, the Gold Coast Colony, including Ashanti, Lagos and Nigeria; also the islands of St. Helena and Ascension.

AFRICA, ISLANDS OF. On the west coast—the Canaries and Fernando Po belonging to Spain; Cape Verd and Madeira groups to Portugal; St. Helena and Ascension Islands to Great Britain. On the east coast—Mauritius, Seychelles, and Socotra, Zanzibar and Pemba, forming parts of the British Empire; Reunion or Bourbon, and Madagascar under the dominion of France.

AFRICAN EXPLORERS. Refer to "Explorers" in *Index*.

AFRICANDER, a person of European descent, but born and having his domicile in South Africa. For years both English and Dutch Africanders had felt that some sort of union of the various States in South Africa was desirable, but mutual jealousy prevented anything being done. Then came the Boer War of 1899-1901, which put union still further off.

AFRIDIS, a warlike tribe, or rather collection of tribes, inhabiting the valleys south of the Khyber Pass. The Indian Government subsidises these tribes to guard the Pass, but in 1897 they rose in rebellion and seized all the forts and commanding positions. An expedition under Sir William Lockhart marched into the Tirah Valley, and thence sent punitive forces into the surrounding valleys, destroying the villages and forts. The campaign is the greatest in Indian history since the Mutiny, and well fulfilled its purpose.

AFTER-DAMP. See *Choke-Damp*.

AGAMEMNON. (1) Sovereign of the Peloponnesus, and commander-in-chief of the Grecian army at the siege of Troy. On his return he was assassinated by his wife Clytemnestra. (2) A tragedy of Æschylus.

AG'APÆ, the love feasts of the primitive Christians. It was customary to give the kiss of peace as a token of Christian Brotherhood.

AG'ASSIZ, JEAN LOUIS, (1807–73), an eminent Swiss naturalist, especially in the department devoted to the life-history of fishes—ichthyology. He also devoted

time to the study of glaciers. He became professor of natural history in the University of Cambridge, United States of America, 1847, which from that time became his adopted country.

AGATE, an ornamental stone used in jewellery, capable of receiving a high polish. It is sometimes called *Scotch Pebble*. It is found in Scotland, Germany, India and Brazil.

AGATHA, SAINT. A Sicilian virgin who suffered martyrdom at Palermo, 251, A.D. She is usually represented in art holding a pair of shears. Festival, February 5th.

AGA'VE, (a-ve), or American aloe, sometimes known as the "false aloe," is a native of Mexico, but has been naturalised in Southern Europe. The plant takes from ten to seventy years to arrive at maturity, flowers once, and then perishes.

AGHRIM, or **AUGHRIM,** a village in County Galway, Ireland, famous for the victory of the forces of William III., under General Ginkel, over those of James II., commanded by the French general St. Ruth, July 12th, 1691. This victory was followed by the complete submission of Ireland.

AGINCOURT, a village in the north-east of France, the scene of the victory of Henry V. of England over a greatly superior French force, October 25th, 1415.

AGIO. See *Commercial Dictionary*.

AGNES, SAINT. (1) A Roman maiden who suffered martyrdom when 12 or 13 years of age, in the reign of the Emperor Diocletian, A.D. 303. She is said to have been first exposed to the flames and afterwards beheaded. Her festival is held on January 21st. (2) The most southerly of the Scilly Isles, Cornwall.

AGNOSTICISM, a doctrine which teaches that we can have no knowledge except that acquired through the senses, and that we can know nothing of spiritual matters or of the deity; that, in fact, "we know nothing of what may be beyond phenomena." (Huxley.)

AGNUS DEI, (the Lamb of God). (1) The name of a prayer in the Mass of the Roman Catholic Liturgy. (2) A medal with the device of a lamb bearing a cross as a symbol of Christ. (3) A round piece of wax, remaining over from the Paschal candles, blessed by the Pope, and impressed with the figure of the sacred Lamb. (4) A cloth ornamented with the same figure, used to cover the communion cup in the Greek Church.

AGONY COLUMN, the portion of a newspaper devoted to secret correspondence and special advertisements, especially those for missing friends and the like.

AG'ORA, THE, the market-place or forum of an ancient Greek town.

AGRA, a town on the Jumna in the North-West Province of India, celebrated for the exquisite beauty of the Taj-Mahal, a mausoleum of pink sand stone and white marble, erected to the memory of his wife, by Shah Jehan, at a cost of three millions sterling.

AGRAM, a university and cathedral city near the left bank of the Save, and the capital of Croatia and Slavonia, Hungary.

AGRAPHIA. See *Med. Dict.*

AGRIC'OLA, JULIUS was a famous Roman statesman and soldier, who, after serving in various parts of the Empire, became governor of Britain 78 A.D. He gradually subdued the whole of the country south of the Highlands, built a chain of forts between the Forth and the Clyde, and made his victories secure by introducing much of the Roman civilisation, including the education of the sons of the British chiefs. Soon after his final victory over Galgacus near the Grampians, 84, he was recalled by Domitian, and retired into private life; *d.* 93, A.D.

AGRICULTURE, BOARD OF. Refer to *Index*.

AGRIPPA I., HEROD. A grandson of Herod the Great, over whose dominions he ruled, under the Romans, on the disgrace of his uncle Antipas. He was responsible for the martyrdom of Saint James and the imprisonment of Saint Peter; *d.* of a disease of the intestines, A.D. 44 (Acts xii).

AGRIPPA II., HEROD. Son of Agrippa I. He was present when Saint Paul made his defence before Festus at Jerusalem. Driven from the city by the revolting Jews, he joined the forces of Vespasian, and aided Titus in the reduction of Jerusalem; *d.*, probably at Rome, 94, A.D.

AGRIPPI'NA, daughter of Agrippina the Elder, and mother of Nero. Her third husband was her uncle, whom she poisoned after having persuaded him to adopt her son, and then had the latter proclaimed emperor by the army. She was murdered by the orders of Nero, A.D. 59.

AGUINALDO, EMILIO, the leader of the Philippine revolt against the Spaniards, and later of the resistance to the United States forces in their endeavours to pacify the Philippines. Having got himself proclaimed "President of the Philippine Republic" the day the Americans landed at Cavite, he wanted to co-operate with them against the Spaniards, but was not recognised. After peace was signed between Spain and America in December, 1898, he became the soul of the resistance to the latter till his capture in March, 1901.

AGULHAS, CAPE (the Needles), the most southerly point of Africa.

AHAB, the seventh king of Israel, ruled over Samaria 22 years. He married Jezebel, daughter of Ethbaal, king of Sidon, under whose influence he greatly encouraged the worship of Baal and Astarte. He was killed in a battle against the Syrians, 897 B.C.

AHITH'OPHEL, the evil adviser of Absalom in his rebellion, and the former friend and counsellor of his father David. On his counsel being rejected by Absalom, he hanged himself (2 Sam. xvii.).

AH'RIMAN, the destroying spirit to whom the Zoroastrians ascribe the origin of all evil, and all the destructive powers of nature.

AHURA MAZDA or **ORMUZD,** the spirit of good and of light, engaged in a conflict with Ahriman which is to last 12,000 years and end in the triumph of Ormuzd.

AIDAN, SAINT, the "Apostle of Northumbria," and founder of the monastery of Lindisfarne, came as a missionary from Iona on the invitation of King Oswald. *d.* 651.

AIDE-DE-CAMP, a military officer whose duty it is to convey the general's orders to any part of his command on the field of battle, and at other times to act as his secretary.

AIDS, sums paid by vassals to their feudal lords on specified occasions, the chief of which were the knighting of his eldest son, the marriage of his eldest daughter, and the ransoming of his person if taken prisoner in war.

AIKIN, LUCY, *b.* 1781, *d.* 1864, the authoress of "Memoirs of the Court of Queen Elizabeth," similar works on the reigns of James I. and Charles I., and a "Life of Addison."

AILSA CRAIG, a lofty rocky islet at the entrance of the Firth of Clyde, upwards of 1,000 feet in height.

AÏNOS, a small and primitive tribe of Japan, found chiefly in the islands of Yezo and Sakhalin. They are quite distinct from the Japanese, whom they probably preceded. They are short, robust, and hairy; the face being of the European rather than the Mongolian type. They are hunters and fishers, semi-civilised, polygamous, and seem to be dying out, being now only about 20,000 or 30,000 in number.

AINSWORTH, WILLIAM HARRISON, was a popular writer of novels of antiquarian and historical interest. His works include "Jack Sheppard," "Tower of London," "Beau Nash" and "The Flitch of Bacon"; *d.* 1882.

AIR, a mechanical mixture of gases surrounding the earth, and extending to a height estimated at from 120 to 200 miles. The two chief constituents are oxygen and nitrogen, in the ratio of nearly 21 parts of the former to 79 of the latter by volume. Oxygen is necessary to maintain all forms of animal life, and for combustion; the nitrogen acts as a diluent of the oxygen. In addition, small quantities of carbonic-acid gas, water-vapour, ammonia, and, in sea or mountain air, ozone are present. In 1894 Lord Rayleigh and Professor Ramsay announced the discovery of a new constituent, argon, resembling nitrogen in many properties, but having a greater density. The amount of carbonic-acid gas is relatively small, about ·04 per cent. of the whole. Air containing ·06 per cent. is dangerous to health. This gas is constantly being produced by the respiration of animals, and by combustion. Plants have the power of breaking it up into its constituent elements, fixing the carbon, which assists in the formation of vegetable tissues, and setting free the oxygen. The quantity of water-vapour varies from time to time, warm air being capable of holding more than air at a lower temperature. This vapour is the source of dew, fogs, clouds, rain, hail, and snow.

Air, being a material body, has weight, and therefore exerts a pressure on everything with which it is in contact. At the sea-level this pressure amounts to 15 lbs. on the square inch, and is sufficient to balance a column of mercury 30 inches or 760 m.m. in height. The pressure decreases as we ascend, owing to the fact that the upper layers of air are less compressed by the layers above them, and are therefore less dense.

AIRD, SIR JOHN, *b.* 1833, son of the founder of the firm of John Aird and Sons, the great contractors. He assisted his father in the building for the Great Exhibition, Hyde Park, 1851, and in its reconstruction as the Crystal Palace at Sydenham. He is the inventor of a "steam navvy," a machine employed with excellent results in the construction of the Manchester Ship Canal. He is a "Man of Mark" in the West of England as the constructor of the Royal Edward Dock at Avonmouth; but his fame is world-wide for the successful performance of the colossal task of damming the Nile (See *Assouan*). He was created a baronet in 1901.

AIR-SHIP. See *Flying-Machine*.

AIRY, SIR GEORGE (*b.* 1801, *d.* 1881); English astronomer-royal, was the first to state the complete theory of the rainbow.

AIX-LA-CHAPELLE, in Rhenish Prussia, one of the oldest cities in Germany, and the capital of the Empire founded by Charlemagne. Its cathedral contains his tomb.

AIX-LA-CHAPELLE, PEACE OF, between England, France, Holland, Austria, Spain, and Sardinia, brought the War of the Austrian Succession to a close, 1748.

AJACCIO, the capital of Corsica, and the birth-place of Napoleon the Great, 1769.

AJAX, the name of two Greek heroes in the Trojan War. (1) *Ajax Oileus* suffered shipwreck on his homeward voyage. (2) *Ajax Telamonius* lost his reason and com-

mitted suicide when the arms of Achilles were awarded to his rival Ulysses.

AKBAR (THE GREAT), a famous Mogul Emperor of India, distinguished for his strict impartiality, magnanimity, and toleration. A considerable part of his reign (1542–1605) was occupied in extending his kingdom, or in repressing rebellions at home, several of which were headed by his brothers and sons.

Á KEMPIS, THOMAS. See *Kempis.*

AKENSIDE, MARK, *b.* at Newcastle, 1721, *d.* 1770; an English physician, author of "The Pleasures of the Imagination," a poem in blank verse.

AKKA, a tribe of pigmies discovered by Schweinfurth in Central Africa, between the rivers Nepoko and Aruwimi. They are expert hunters, live in temporary grass huts of beehive shape, keeping no domestic animals except fowls.

AKRA, OR ACCRA, capital and chief port of the British Gold Coast Colony.

AKUPARA. In Hindu mythology, the tortoise on whose back the world rests.

ALABAMA, THE. A wooden, screw steam-vessel built at Birkenhead, 1862, for the Confederates during the American Civil War. Her destination was kept secret until she was nearly completed. The Government were so slow in acting on the information supplied by the United States' ambassador that she left Birkenhead on the day appointed for her seizure, proceeded to the Azores, where she took in guns, ammunition, and stores, received her commander, Captain Semmes, on board, and was christened the Alabama, having been known until then simply as No. "290." She then began to harass American shipping, capturing and burning merchant ships in all parts of the world. Many fast cruisers were sent after her, but she continued her destructive career for nearly two years, when she was engaged and sunk by the Kearsarge, off Cherbourg, June 19th, 1864. Americans held that their loss in shipping was due to British negligence. After considerable diplomatic correspondence it was decided to submit the matter to arbitration. The Arbitrators met in Vienna, September, 1872. The claims for indirect losses were disallowed, but the court finally awarded America 15½ million dollars (rather more than 3¼ million pounds) for actual damage done by the Alabama and two other ships, the Florida and the Shenandoah.

ALABASTER, a name given to two compounds of lime used for ornamental purposes. The alabaster mentioned in the New Testament is a carbonate of lime, is hard, and of a yellowish milky colour. The other variety is a sulphate of lime, is softer and of a pure white colour. It is much used by sculptors for making close joints in marble.

ALADDIN, the hero of the best-known tale in the "Arabian Nights." He obtains a magic lamp, builds a wonderful palace, and marries the Sultan's daughter. His lamp is the term metaphorically used as the power to do everything, and his palace as the ideal of a task hopeless to attempt.

ALAIS, PEACE OF. A treaty (1629) which put an end to the religious wars with the Huguenots in France, after La Rochelle, their stronghold, had been taken by the Catholic party under Richelieu.

ALAMEDA [Sp.: a grove of poplar trees], a name now applied very generally in Spanish America to a park or pleasure ground.

ALAND ISLANDS, a group of some 300 islands (80 of which are inhabited), at the entrance to the Gulf of Bothnia, fortified by Russia. During the winter they are connected to the mainland by ice.

AL ARAF, according to the Koran, the partition between heaven and hell, reserved for those who are neither morally good nor morally bad, or whose good and evil deeds balance each other.

AL'ARIC, a king of the West Goths, who at the end of the fourth century and the beginning of the fifth, ravaged Greece, invaded Italy, and three times besieged Rome itself. Twice he was bought off by promises of ransom, but on the third occasion, 410 A.D., he entered the city, and for six days gave it over to pillage by his followers, but sparing all buildings of a religious character; *d.* 412.

ALASKA, a mountainous district more than six times the area of Great Britain, lying to the extreme north-west of North America. The territory was purchased by the United States from Russia in 1867 for £1,440,000. The coast is broken up into fiords, here known as "canals," protected by numerous islands. The chief river is the Yukon, which rises in Canadian territory. The climate is severe, but is modified in the west, where the rainfall is excessive, by the warm Japan current. The inhabitants are chiefly Indians and Esquimos. Timber, (including yellow cedar), ice, and salmon are exported, and the seal fisheries of the Pribilov Islands to the north of the Aleutians are the most valuable in the world. Gold has been worked in the latter archipelago for many years, and in 1896 rich deposits were discovered at Klondike in the Yukon Valley, just within British territory. See *Klondike.*

ALBA LONGA ("the long white city") a city of Latium, which, tradition says, was founded by a son of Æneas 300 years before Rome. It derived its name from its position on a long narrow ridge of white limestone.

ALBANI, MADAME (née Marie Lajeunesse), the daughter of a Canadian musician, was born in 1851 near Montreal. She appeared in public at the age of twelve, and then studied at Paris and Milan. She made her début in Opera at Messina in 1870, and since then has been one of the leading sopranos both in Opera and Oratorio in Europe and America. She married Ernest Gye, the Impresario, 1878.

ALBAN, SAINT, a Roman soldier who was the first Christian martyr in Britain, 304.

ALBANIA, a mountainous district of Turkey in Europe, extending along the Adriatic Sea from Montenegro to Greece, with a breadth varying from 50 to 90 miles. The Albanians are Slavs.

ALBANY. (1) The capital of New York State on the Hudson River, and the second oldest town in the United States. (2) A town on King George's Sound, which possesses one of the finest harbours in West Australia. (3) Old name of Scotland.

ALBATROSS, one of the largest of marine birds, its outstretched wings measuring from ten to twelve feet.

ALBEMARLE, DUKE OF. See *Monk.*

ALBERT, PRINCE CONSORT, second son of Duke Ernest of Saxe-Coburg-Gotha, and cousin to Queen Victoria. He was carefully educated, at first under the personal direction of his father, and later continued his studies at the University of Bonn, paying special attention to political and natural science, and philosophy. He visited England for the coronation ceremonies in 1839, and later in the year, Queen Victoria announced to the Privy Council her intended marriage with her cousin Albert. The marriage took place at the Chapel Royal, St. James's, February 10th, 1840. The Prince became naturalised, and from the first took a deep and active interest in the welfare of the people. He rendered important services in the advancement of science and art, and the success of the Great Exhibition of 1851 was largely due to his tact, energy, and perseverance. The formal title of Prince Consort was conferred upon him in 1857. He died at Windsor Castle from an attack of typhoid fever, December 14th, 1861, and was buried in Saint George's Chapel, whence his remains were afterwards removed to the Mausoleum built by Queen Victoria at Frogmore.

ALBERT EDWARD. See *Edward VII.*

ALBERT EDWARD NYANZA, a lake forming one of the head waters of the Nile, and draining into the Albert Nyanza by the river Semliki.

ALBERT MEDAL. (1) A decoration instituted in 1866 to reward acts of gallantry in saving life at sea, and afterwards extended to acts of gallantry on land in cases of mine explosions, fires, railway accidents, etc. (2) A medal awarded by the Society of Arts to distinguished men of science, notable inventors, engineers, etc.

ALBERT MEMORIAL, a handsome monument in Kensington Gardens, opposite the Albert Hall, erected in 1866 to the memory of Albert, Prince Consort, husband of Queen Victoria. It was designed by Sir Gilbert Scott, and consists of a bronze gilt statue of the Prince over which is a Gothic canopy, surmounted by a cross, the whole, with the approaching steps, reaching to a height of 175 feet. The cost was £120,000, raised largely by public subscription.

ALBERT NYANZA, a lake in Equatorial Africa, 50 miles long and 40 miles wide, discovered by Sir Samuel Baker in 1864. It lies to the north-west of Victoria Nyanza, from which it receives the Victoria Nile or Somerset; and from its northern end the White Nile issues. It abounds with fish and crocodiles, and hippopotami frequent its shores.

ALBERTA, a province of Canada, nearly as large as Italy, lying to the east of the Rocky Mountains, and possessing a fertile soil and many large forests. The mountains are rich in minerals; capital, Edmonton.

ALBERT VICTOR, PRINCE. See *Clarence.*

ALBERTUS MAGNUS, *b.* 1193, *d.* 1280, surnamed the "Universal Doctor," "the most illustrious of the schoolmen," lectured for many years at Cologne. His knowledge was so great that he was suspected of magic.

ALBIGEN'SES, a religious sect which appeared in the neighbourhood of *Albi* in the south of France in the twelfth century. The Church looked upon its disciples as heretics, and Pope Innocent III. proclaimed a crusade against them, by means of which, and the Inquisition afterwards, they were exterminated.

ALBI'NO, a person possessing unnaturally white skin, hair, and eye-brows, and pink eyes. *Albinism* is due to the absence of pigment cells, and is found in many species of animals, but rarely in fish, though the colour of the domestic goldfish is due to incipient albinism.

ALBION (White Island), the ancient name of Britain, probably given to it by the Gauls, on account of the white cliffs of the south-east coast.

AL BORAK, an imaginary beast on which, according to Moslem tradition, Mohammed journeyed through the heavens.

ALBUE'RA, a Spanish village near Badajoz, where General Beresford defeated Marshal Soult (May 16th, 1811).

ALBU'MEN, a nitrogenous substance which is found in both animal and vegetable tissues, and exists almost pure in the

white of eggs. It is used in photography, for fixing colours in yarns and cloths, and in the process of sugar-refining.

ALCAE'US, one of the most celebrated lyric poets of ancient Greece, imitated by Horace. He flourished in the seventh century, B.C.

ALCA'ZAR, the palace of the Moorish kings, and later of the Spanish sovereigns at Seville.

ALCESTER, BARON, (Frederick Seymour), *b.* 1821, *d.* 1895; was son of Colonel Sir Horace Seymour. He entered the navy at thirteen, and rapidly rose by dint of merit, services, and influence to the highest ranks. He will be best remembered as commander of the British fleet that bombarded Alexandria in 1882, to repress the rebellion under Arabi Pasha. For his services on that occasion he received a peerage, £25,000, and a sword of honour.

ALCES'TIS or **ALCESTE,** in Greek legend the daughter of Pelias. She and her sisters put their father to death that he might be restored to youth by Medea. The latter refused to keep her promises, and the sisters fled to Admetus, who married Alceste. She afterwards sacrificed her own life to save that of her husband, and was brought back from the lower world by Hercules, an episode which forms the subject of a tragedy by Euripides.

ALCHEMY, the art which has developed into modern chemistry. The *Alchemists* set themselves three tasks: (1) To transmute the baser metals into gold by means of the philosopher's stone. (2) To discover a universal panacea for disease. (3) To discover the elixir of life, the drinking of which would confer perpetual youth and energy.

ALCIBI'ADES, 450–404 B.C., an Athenian of noble birth, handsome person, and great wealth, was brought up by his uncle Pericles, and was for a time the pupil of Socrates. He involved his country in an expedition against Sicily, and was appointed to one of the chief commands, but was recalled. In the Peloponnesian War he, in turn, served and betrayed the Athenians. He went into exile in Asia, and was assassinated.

ALCOHOL. See *Med. Dict.*

ALCUIN or **FLACCUS ALBI'NUS,** *b.* 735, *d.* 804, a most distinguished English scholar of the eighth century, born and educated at York, who became the preceptor of Charlemagne, and assisted that monarch in his endeavours to civilise his people. He improved existing schools in France, and founded others, modelling them on the one at York.

ALDERMAN, an officer associated with the mayor of a city or borough in the administration of the municipal government. The London Court of Aldermen consists of twenty-six members, who form the bench of magistrates for the city. From their members the Lord Mayor is annually elected.

ALDERNEY, the third in size of the Channel Islands, celebrated for a very fine breed of cows.

ALDERSHOT. (1) A permanent camp situated on the borders of Surrey, Hampshire, and Berkshire, established in 1855 for the purpose of instructing British troops in military manœuvres. (2) A town in Hampshire which has sprung up to the south of the barracks, immediately beyond the government ground; pop. 31,000.

ALDHELM, SAINT, an early English churchman (about 650 to 709), who did much to spread Christianity and education among the fierce Saxons of the South and West. He was Abbot of Malmesbury, and afterwards first Bishop of Sherborne, and distinguished himself by his missionary zeal and his classical learning.

ALDRED, bishop of Worcester (1044–60), archbishop of York (1060–69). He was the first English bishop to make a pilgrimage to Jerusalem. He crowned William I, over whom he exercised considerable influence.

ALEPPO, one of the three government districts of modern Syria. (2) The capital of the former. Standing at the meeting-point of several trade routes, it is the chief caravan station between the Levant and the Euphrates; and, before the discovery of a sea route to India, was one of the greatest trading cities of the world.

ALESSANDRIA, a strongly fortified town on the river Tanaro, in Piedmont, northern Italy, and the terminus of eight railways. After the defeat of the Austrians by Napoleon at Marengo, 1800, an armistice was concluded at Alessandria, by which a large portion of Upper Italy and twelve fortresses were ceded to France.

ALETSCH GLACIER, the largest of the Alpine glaciers, descends round the south of the Jungfrau into the valley of the Upper Rhone.

ALEUTIAN ISLANDS, a group of volcanic islands enclosing the Behring Sea in the North Pacific.

ALEXANDER THE GREAT succeeded his father as king of Macedonia at the age of twenty. He had been instructed in every branch of learning by Aristotle, who inspired his pupil with military ardour by the study of the Iliad. He subdued the whole of Greece, and then had himself appointed to the command of the forces against Persia. Two years after his accession he crossed the Hellespont with an army of 30,000 infantry and 5,000 cavalry. He defeated the army of Darius, subdued Syria and Egypt, crossed the Euphrates and Tigris, and routed the Persians at Arbela. He advanced into India, marched through the district now known as the Punjaub, and established Greek colonies at various points. He wished to press on to the Ganges, but the murmuring of his troops at advancing further into an entirely unknown country caused his return to Babylon, where he died of fever after an illness of eleven days, B.C. 323, aged 32.

ALEXANDER I. OF RUSSIA, *b.* 1777, *d.* 1825, was the son and successor of Paul I. He did much to promote the prosperity and civilisation of his subjects, encouraged education, promoted manufactures, and extended commerce. He joined the coalition of 1805 against Napoleon, and was present at the battle of Austerlitz. After defeats at *Eylau* and *Friedland*, he concluded the peace of Tilsit. For a time he aided Napoleon, but again entered the coalition against him in 1812, took an active part in the field, often encouraging his troops by exposing himself to great dangers, and greatly facilitated the negotiations for peace when Paris fell into the hands of the Allies. Events in other parts of Europe led to a complete reversal of his home policy, and all his plans for reform and progress were given up. He died of a fever peculiar to the country, December 1st, 1825.

ALEXANDER II. OF RUSSIA, *b.* 1818, *d.* 1881, succeeded his father Nicholas March 2nd, 1855. He first ended the Crimean War by concluding peace with England, France, and Turkey, and then set himself to improve the internal administration of the country, and to extend and consolidate his empire. His greatest achievement was the emancipation of the serfs, 23,000,000 in number, by a *ukase* of March 3rd, 1861. In the war against Turkey (1877–8), on behalf of the Slavs, the Czar took the field in person. Towards the close of his reign the spread of *Nihilism* caused him great anxiety. Several attempts were made to assassinate him, and he was at length killed while driving in the streets of St. Petersburg, by a bomb thrown by a *Nihilist*.

ALEXANDRA, QUEEN, *b.* at Copenhagen 1st Dec., 1844, daughter of Christian IX. of Denmark. She was married to the Prince of Wales (since Edward VII.), 10th March 1863. She has endeared herself to the nation by her genuine sympathy with all in distress, taking practical interest in hospitals, visiting sick and wounded soldiers, and setting on foot subscriptions and agencies for the relief and employment of those unable to find work.

ALEXANDRIA, the chief port of Egypt, was founded by Alexander the Great, 332 B.C. It was at one time the chief centre of Greek learning, and possessed the finest libraries in the world. Its commerce has decreased since the opening of the Suez Canal. It was bombarded by the British fleet, 1882.

ALEXANDRINES are rhyming verses consisting each of twelve syllables or six feet. The last line of a Spenserian Stanza is an Alexandrine, but the only English poem of importance written entirely in this measure is Drayton's "Polyolbion." French writers make free use of it in their epics and dramas.

ALFORD, HENRY, *b.* in London, 1810, *d.* 1871; Dean of Canterbury, theologian, critic and poet, had a distinguished career at Cambridge. His great work, the "Greek Testament, with Notes and Commentaries," was finished in 1861. He was the first editor of the "Contemporary Review." He wrote poems and hymns of some merit; "Come, ye thankful people, come!" is one of the latter.

ALFRED THE GREAT, born at Wantage, 849, reigned, 871–901, a grandson of King Egbert, succeeded his brother Ethelred. At his accession the country north of the Thames was completely overrun by the Danes. Alfred fought nine battles against them with varying success, but was at length compelled to take refuge in the Isle of Athelney. Seizing a suitable opportunity he fell upon his enemies suddenly, defeated Guthrum at Edington, in Wiltshire, and compelled the Danes to retreat to their fortified camp at Chippenham, and starved them into surrender. By the *Treaty of Wedmore* (878), Guthrum consented to be baptised as a Christian, and the *Danelagh* was limited to the part of England east of the Watling Street. The king now set about restoring order in his realm, rebuilt and fortified London and other cities, established a regular militia, built a fleet in order to meet the attacks of the Norsemen at sea, codified the laws, founded schools, introduced learned men into the country, translated several books into English, and made his own court a model of the life he wished his people to lead. All this was done in spite of the sufferings caused by a painful disease. Alfred died at the age of 52, and was buried at Winchester, his capital.

ALGÆ, plants of the simplest structure, which live in water, both sea and fresh, or clothe damp surfaces, such as rocks, walls, or the bark of trees. Unlike fungi all contain green colouring matter, and require light for their existence. Some consist of a single cell of microscopic size, others of long cellular filaments, while others again, such as the Laminariæ of South American seas, reach gigantic proportions, and are distinguished for their graceful branching. They have no true roots, but seem to absorb nourishment at all parts of their surface, from the water, or damp air with which they are surrounded. Diatoms, the gulf-weed, the brown sea-weeds, and Carageen or Irish Moss, may be mentioned as examples of Algæ.

AL'GEBRA, the art of performing calculations by means of symbols denoting operations, and letters which represent quantities, and may be replaced at the end of the operation by numbers.

ALGERIA, a French possession, slightly larger than Great Britain in area, in the north of Africa. The country consists of three distinct regions; the *Tell*, a broad band of extremely fertile land rising from the coast; the *Atlas Highlands*, and the *Sahara* district. Excellent crops of wheat, olives, tobacco, cotton, and rice are produced in the Tell, but the most valuable export is *Alfa*, a kind of esparto grass used for the manufacture of paper, which grows wild in abundance on the banks of the marshy lakes at the southern foot of the Atlas mountains. The chief towns are Algiers, the capital, known as the "Silver City;" Oran and Bône, two busy ports, and Constantine, the "Northampton of Algiers," the most important inland city.

ALHAM'BRA ("the red castle"), an ancient fortress and palace of the Moorish kings, built on a hill overlooking the city of Granada, Spain. It was begun in 1213 and completed in 1348. The palace is notable for the lightness and elegance of its columns and arches, the richness of its ornamentation, and its mosaic pavements.

ALI, the cousin of Mohammed, whose daughter Fatima he married, and the first convert to Mohammedanism. He became Caliph in 656, and was assassinated by a fanatic in the mosque at Bagdad, four years later. His tomb near Kufa is still a place of pilgrimage.

ALICE, PRINCESS, second daughter of Queen Victoria, nursed her father, the Prince Consort, in his last illness. She was married, 1862, to Prince Louis of Hesse-Darmstadt. In 1873 one of her children was killed by a fall from an open window. Five years later, her last great trial came. Of her six children, all except one were attacked with diphtheria, and her husband also. The princess nursed them all, and all recovered except the youngest child. At last she fell a victim to the same disease, caught by kissing her youngest boy, and died, 1878. By her special request she was buried with the English flag upon her coffin.

ALIEN. Refer to *Index*.

ALIEN IMMIGRATION. The question of alien immigration is not by any means a new one. How much we owe to the Flemish and French immigrants who taught us the woollen and silk manufactures should not be forgotten. But of late years the character and habits of many aliens in England have made it clear that some restriction is necessary to prevent paupers and criminals landing. The Alien Act, 1905, therefore, enacts that no immigrant (and the term immigrant is strictly defined) shall be allowed to land: (1) if he cannot show that he has, or can obtain, the means of supporting himself and his dependants; (2) if he is a lunatic or idiot; (3) if he is a criminal.

ALIMONY. Refer to *Index*.

ALISON, SIR ARCHIBALD, *b.* 1792, *d.* 1867; the son of a well-known Scottish Episcopal minister, was educated for the Scottish bar, where he soon made a name and fortune. His political and historical writings are his best title to fame. His "History of Europe," from 1789 to 1815, afterwards continued to the accession of Louis Napoleon, has gained world-wide repute, and his other writings are numerous.

ALIWAL, a village on the Sutlej in the Punjab, India, where Sir Harry Smith gained a brilliant victory over a superior force of Sikhs, 1846.

AL'KALI, a chemical compound of the metals sodium, potassium, or lithium, or of ammonia—the volatile alkali. It turns a litmus solution reddened by an acid, blue. All the alkalies are readily soluble in water, unite with acids to form salts, absorb moisture from the air, are extremely caustic, and, in a pure state, act as corrosive poisons.

ALKALOIDS, a series of bodies containing carbon, hydrogen, oxygen, and nitrogen, which are found in certain plants, and which possess alkaline properties in a slight degree. They are much used in medicine. Among the most familiar are morphia, quinine, strychnine, nicotine, and caffeine, the active principle of coffee and tea.

ALKMAAR, CONVENTION OF. A treaty concluded at Alkmaar, a town of North Holland, in 1799, by which the Anglo-Russian army, under the Duke of York, evacuated the Netherlands.

AL'LAH ("the one worthy to be adored"), the Arabic name of the one God worshipped by Mohammedans.

ALLAHABAD ("Abode of God"), situated at the confluence of the Jumna and Ganges, is the commercial centre of the Indian Empire. A celebrated place of Hindu pilgrimage, and an important railway centre.

AL'LEGHANY MOUNTAINS, a low range of mountains, forming part of the Appalachian System, in the East of the United States of America.

AL'LEGORY, a story which conveys a different meaning from that which is directly expressed. Parables and fables are forms of allegory. Sometimes whole works have an allegorical signification, e.g., Spenser's "Faerie Queen" in poetry, and Bunyan's "Pilgrim's Progress" in prose. Allegory is also made use of in painting and sculpture.

ALLEN, BOG OF. A name given to a series of peat bogs in King's County and County Kildare, Ireland. They stretch from within a few miles of Dublin, westward almost to the Shannon, and form the source of several rivers. The peat extends to a depth of 25 feet.

ALLEN, CHARLES GRANT, *b.* at Kingston, Canada, 1848, *d.* 1899; finished a varied education at Oxford. A brief scholastic career was the prelude to a strenuous literary life. As a popular exponent of strict science, he has few equals, and his ventures in sensational fiction had no small success. "The Woman Who Did" caused much angry discussion.

ALLEN, RALPH. An English philanthropist (1694–1764), known chiefly as the friend of Pope, Fielding, and Pitt. His memory is perpetuated by Pope's well known lines:—

> "Let humble Allen, with an awkward shame,
> Do good by stealth, and blush to find it fame."

ALLEYNE, EDWARD, born in London, 1566, a famous actor, the contemporary and friend of Shakespeare. According to Ben Jonson and other dramatists, he was the leading actor of his day, but he is best remembered as the founder of Dulwich College—"the College of God's Gift"—which was built 1613–1616, and was intended for the support and maintenance of a master, warden, four fellows, six poor men, and six women, and for the education of twelve boys. The college was reconstituted by an act of 1858, and new buildings were opened in 1870. Alleyne was also the founder of alms houses in Finsbury. He died 1626, and was buried in the College Chapel at Dulwich.

ALLIGATOR, a term applied to several species of crocodile peculiar to America. They vary in length from two to twenty feet, and abound in the lower Mississippi, and the lakes, rivers, swamps, and marshes of Louisiana and Carolina. In South America they are known as Caymans. They feed chiefly on fish. In cold weather they bury themselves in the mud, and become torpid, but are revived by a very little sunshine.

ALLITERATION, in prosody, is the recurrence of words or syllables beginning with the same letter, as in the well-known line "By apt alliteration's artful aid." (*Churchill*). Anglo-Saxon and Icelandic poetry were entirely alliterative, and Langland's "Vision of Piers Plowman" is of the same character. Indeed it was not until after the middle of the fourteenth century that the method fell into disuse. Modern writers make occasional use of alliteration with pleasing effect, e.g.,

> "With loads of learned lumber in his head."—(*Pope.*)
> "With wounded wing and bleeding breast."—(*Byron.*)

ALLOP'ATHY. See *Med. Dict.*

ALLOT'ROPY, the property possessed by a few elements, of existing in two or more forms quite distinct in outward characteristics, and often in physical properties, from one another. Thus the diamond is an allotropic form of carbon; ozone of oxygen; and sulphur, on being heated, passes into several allotropic forms.

ALLOY, a compound produced by smelting two or more metals together, the resulting product possessing properties not occurring in either of its constituents. Pure gold and silver are soft metals, but the addition of a small per centage of copper produces alloys sufficiently hard to be used as a medium of currency, or for the manufacture of articles of jewellery, etc.

Brass is harder than either copper or zinc, of which it is composed. *Bronze* is compounded of copper and tin; *Bell-metal* has the same composition with a larger proportion of tin; and *Type metal* consists of four parts lead and one of antimony.

ALLSPICE or **PIMENTO,** sometimes called Jamaica pepper, is the dried berry of a species of myrtle which grows in the West Indies. The name was given to it because it was supposed to combine the flavours of different spices, particularly cinnamon, nutmegs, and cloves. In addition to its use in cookery, it is used as an agreeable aromatic.

ALL THE TALENTS ADMINISTRATION, the coalition ministry formed by Lord Grenville on the death of Pitt, 1806. Fox was its leading member.

ALLUVIUM, a name given to the deposits of mud, sand, gravel, etc., carried down by running water, and spread over the lower lands; and also to the accumulations formed by the sea along the shore. [See *Abrasion by rivers*].

ALMA, a river in the south-west of the Crimea, which enters the Black Sea about twenty miles from Sevastopol. It is memorable for the battle, fought September 20th, 1854, in which the Russians, strongly posted on the river's steep left bank, were driven from their position at the point of the bayonet, by the British and French.

ALMACK'S, a suite of assembly rooms built in 1765 in King Street, St. James's, named after the proprietor. Admission to the dances and other functions held here was a mark of high social rank. The rooms are now closed.

ALMA MATER (L. "fostering mother") a name applied by a person to the university or college at which he has been educated.

ALMA-TADEMA, SIR LAWRENCE. Though born in the Netherlands, 1837, he may fairly be called a great British

artist, having become a naturalised British subject in 1873. Historical subjects, whether mediæval or classical, are his forte; of the former, "Fredegonda"; of the latter, "Sappho" and "The Conversion of Paula" are much admired.

ALMONDS. See *Med. Dict.*

ALNWICK, a market town, and strictly the county town of Northumberland, is 34 miles north of Newcastle. Its foundation goes back to the Roman period, and some of the ancient walls remain. Alnwick Castle, the home of the doughty family of Percy, is a grand baronial residence, and has seen much fighting; population about 7000.

ALOES. See *Med. Dict.*

ALPACA, a species of llama or American camel, which resembles a sheep in appearance, but is larger and has a long neck. It is found chiefly in Chile and Peru, and is domesticated for the sake of its long woolly hair, which has a soft, silky texture, and is used for the manufacture of shawls, linings, cloth called alpaca and umbrellas. Unsuccessful attempts have been made to naturalise the animal in Britain.

ALPHA AND OMEGA, the first and last letters of the old Greek alphabet. Thus the phrase "Alpha and Omega" signifies "the beginning and the ending" of anything; hence the sum total or "the real essence" of anything.

ALPHEGE, SAINT, *b.* 954, *d.* 1013, made Archbishop of Canterbury in 1006. The Danes, in 1013, made a raid on Kent and took Canterbury. The archbishop was seized by the marauders and held for ransom. Refusing to impoverish his people by exacting money for his ransom, he was barbarously slain by Danish soldiers.

ALPINE CLUB, founded in 1857, with a view to encouraging Alpine exploration, and of providing a centre for all interested in Alpine climbing and investigation. It numbers about 500 members, each of whom must give an account of his expedition, or of his contributions to Alpine knowledge in some form before election.

ALPS, the grandest mountain system in Europe, stretches from the Western Mediterranean to the Danube, and occupies portions of France, Italy, Switzerland, Bavaria, and Austria. The glaciers, snowfields, and lakes of the system form the greatest reservoir of fresh water in the continent, and give rise to the Rhine, Rhone, Po, and Adige. Considered vertically, the system is divided into the *Fore Alps*, extending to the limit of trees (from 5,000 to 6,000 feet); the *Middle Alps*, from that point to the snow line, containing the summer pastures of the flocks, and forming the home of the chamois, ibex, and marmot; and the *High Alps*, above the limit of perpetual snow, which varies from 8,000 to 9,500 feet. There are many chains. The grandest is the *Pennine Alps*, containing *Mont Blanc*, 15,732 feet, and *Monte Rosa*, 15,200 feet, the two highest peaks; but the chain most frequently visited is the *Bernese Alps*, the eastern half of which is known as the *Bernese Oberland*, and contains the *Finsteraarhorn* and the *Jungfrau*. The centre of the whole system is *Mt. St. Gothard*, through which has been constructed the longest tunnel in the world. Other tunnels piercing the main chain are those of *Mt. Cenis*, *Simplon* and *Arlberg*. Carriage roads traverse sixty of the Alpine passes, the best known of which are the Great St. Bernard, the Simplon, the St. Gothard, and the Furca.

ALSACE-LORRAINE, or **ELSASS-LOTHRINGEN,** a German imperial province lying along the left bank of the Rhine, and between the Moselle and the Saar, was ceded to France in 1648, and re-annexed to Germany by the treaty of Frankfort, which concluded the Franco-German war, 1871. It is a great wine producing country, and has important cotton manufactures. The chief towns are *Strasburg*, one of the strongest fortresses in the world, and containing one of the finest cathedrals in Europe, *Metz*, a strong fortress, and *Mülhausen*, a manufacturing town.

ALSATIA, Whitefriars, London. The debtor's sanctuary which formerly existed here became the haunt of bad characters, and was abolished in 1697.

AL'TAI MOUNTAINS ("Gold Mountains"). An Asiatic range forming for some distance the boundary between Siberia and the Chinese Empire. Silver and copper are abundant on the Russian side of the chain, and gold, lead, zinc, and iron are also worked.

ALTO'NA, an important town and port in the Prussian province Schleswig-Holstein, on the right bank of the Elbe, immediately opposite Hamburg.

ALTORF, the cradle of Swiss liberty, stands on the right bank of the Reuss, at its entrance into Lake Lucerne, and is the capital of the canton of Uri. It was the scene of many of the exploits of William Tell, of whom a colossal statue was erected in the town in 1861.

ALTRUISM, the opposite of egoism, or selfishness, a word coined by Comte from the Italian *altrui*, "others," and introduced into English by his positivist disciples.

ALUM, one of a series of double salts which the sulphate of aluminium forms with alkaline sulphates. The most common is potash alum, which is composed of the sulphates of aluminium and potassium, and may be prepared by dissolving the two sulphates together, and allowing the compound salt to crystallize out. It is produced on an extensive scale near Whitby, in Yorkshire, and in Glasgow. It is employed as an astringent in medicine, and has, in addition, many commercial uses. Thus it is employed in the manufacture of fast colours, as a mordant in dyeing, in calico printing, paper making, and bookbinding. Other common alums are soda alum, and ammonia alum, the latter of which is extensively prepared from the ammoniacal waste of gas works, and is used as a substitute for potash alum.

ALUM'BAGH ("Beauty of the Soul"), a domain about four miles south of Lucknow, and containing a palace, mosque, temple, and beautiful gardens. On the outbreak of the Indian Mutiny it was converted by the rebels into a fort, but was captured by a small British force, who held it until finally relieved in March, 1858. Sir Henry Havelock was buried within the grounds.

ALU'MINA, the oxide of aluminium, occurs native as the ruby, sapphire, and amethyst, and, in a less pure state, as emery.

ALUMIN'IUM is one of the most abundant of all the elements, though it has never been found in a pure state. It occurs combined with silicon and oxygen in many of the older rocks which form the crust of the earth, and in clay and slate. It is a tin-white metal, very ductile and malleable, and is not tarnished by the air under ordinary circumstances. It is now manufactured on a large scale, and its lightness and lustre have led to its being used for the metallic portions of optical instruments, and for ornamental work. Did it admit of being soldered its usefulness would be still greater. *Aluminium bronze*, an alloy of one part aluminium and nine parts copper, resembles gold in appearance, takes a high polish, tarnishes but little when exposed to the air, and is as tenacious as steel. On account of these valuable properties it is used for a variety of purposes.

ALVA, DUKE OF, *b.* 1508, *d.* 1582, a famous general during the reign of Charles V. and Philip of Spain. It is said he never lost a battle, and was never taken by surprise. As the viceroy of Philip in the Netherlands, 1567–73, he acted with extreme cruelty, and was responsible for the execution of 18,000 men.

ALVERSTONE, (Richard Everard Webster), **LORD,** *b.* 1842, educated at King's College and Charterhouse Schools, gained honours both in Mathematics and Classics at Cambridge. Becoming a barrister, he soon made his mark, and in 1885 was appointed Attorney-General, and in 1900 Lord Chief Justice of England. He represented the "Times" before the Parnell Commission, and Britain at the Behring Sea Arbitration of 1893. He has done much to promote athletics.

AM'ADIS OF GAUL. In the Middle Ages, Amadis was a favourite name for a hero of romance, and many stories of chivalry and love had an Amadis for their chief character. The origin of the romance of Amadis of Gaul is uncertain. It tells how he, a prince of Gaul, sailed to Scotland, and afterwards travelled far, having various adventures. It had a great vogue in Spain, Italy, and France in the 15th and succeeding centuries.

AMALGAM, a combination of some metal with mercury, formed by direct combination of the two metals. Thus, if silver and gold come in contact with mercury, they at once dissolve and unite with it. This fact is made great use of in silver and gold mining. The back of our mirrors is an amalgam of tin. The constituents of an amalgam can be readily separated again.

AM'AZON, the largest river in the world, 4,000 miles in length, rises in the Andes, and flows through Brazil into the Atlantic Ocean. Its basin is nearly as large as Europe, and it receives an immense number of tributaries, many of which exceed a thousand miles in length, The two chief are the Madeira, 2,000 miles long, and the Rio Negro, 1,400 miles. Its mouth is 180 miles wide, and its current is felt 150 miles out at sea. The great rainfall, combined with a high temperature, renders the Amazon basin one of the most productive regions of the globe.

AMAZONS, according to Greek mythology, were a community of women warriors, who permitted no man to dwell among them. They killed their male offspring, or sent them to their fathers among the neighbouring nations, and educated the females to war. They are said to have cut off the right breast so that it should not impede them in the use of the bow. A force of amazons under their queen, Hippolyta, was vanquished by Hercules, and another, whose queen was slain by Achilles, assisted the Trojans against the Greeks.

AMBER, a substance found in great abundance on the German coast of the Baltic Sea, especially after a storm. It is believed to be the solidified resin of extinct coniferous trees, sometimes enclosing small insects, pine-needles, etc.

AMBERGRIS is a fatty material obtained from the alimentary canal of the cachalot whale, and consists of the half digested bodies of the cuttlefish, on which the whale feeds. It is used in perfumery.

AMBLYOPIA is a term denoting dimness of sight.

AMBLYOPSIS, a kind of fish found in the celebrated Mammoth Cave of Kentucky. Its chief interest lies in the light it sheds on the question of how environment affects development; its eyes

having, in the lapse of ages, practically disappeared, while its organs of hearing and feeling have correspondingly developed.

AMBOYNA, the most important of the Moluccas, or Spice Islands, in the East Indies, has long been famous for the cultivation of cloves. The Dutch took it in 1605 from the Portuguese, and have held it ever since, except from 1810 to 1814. The massacre of the British here in 1625 was a treacherous act. Amboyna, the capital (population 10,000), has a good harbour. Cloves, sago, mango, timber and cocoa-nuts are the chief products.

AMBROSE, SAINT, Bishop of Milan, and one of the Fathers of the Latin Church, was a strong opponent of the heresy of Arius. He excluded the Emperor Theodosius from his church on account of the massacre of the rebellious Thessalonians, and imposed a severe penance upon him, extending over a period of eight months.

AMBROSIA, the food of the gods. When given to favoured mortals, it gave them immortal beauty. It was also used as an unguent, whence we speak of Jove's ambrosial locks. Hence the adjective "ambrosial" may mean delicately flavoured, *or* delicately perfumed, according as the food or the unguent is referred to.

AMBRY or **ALMERY,** (1) In churches the niche or cupboard formed in the thickness of a wall to contain the altar vessels and other valuables. (2) In dwelling-houses, a chest for keeping plate, etc.

AMBULANCE, a word of French origin, sometimes loosely used in England as the name of a carriage for the conveyance of injured persons, but more properly applied to the whole of the arrangements made for the care of the sick and wounded in war time. The system includes *base hospitals*, placed in healthy situations at a distance from the seat of hostilities; *field hospitals* which move with the army, and are fixed a few miles in its rear, and on the line of communications; *bearer-companies*, and all the necessary appliances for moving the wounded with as little discomfort as possible. A staff of surgeons, dressers, nurses, and attendants is attached to every hospital, and all have an equipment of modern appliances, including the X-ray apparatus for tracing the course and locating the exact position of a bullet. The bearer companies follow the fighting line closely, and convey the wounded as speedily as possible out of the zone of fire, beyond which they receive such treatment as may be given on the actual field. The next movement is to the field hospital, and from thence serious cases are conveyed by trains of specially constructed carriages, or by specially built waggons, to the base hospital. The organisation was completed in the Boer war, by the provision of *hospital ships* and *convalescent homes*.

Accidents are fairly frequent in busy thoroughfares, in factories, and on railways. To spread a knowledge of how "first-aid" may be intelligently rendered in such cases, the St. John's Ambulance Association was founded in London in 1878, and the St. Andrew's Ambulance Society in 1882. Lectures are given and examinations held at centres in all parts of the country, and thousands, including the police of several of the larger towns, have availed themselves of the opportunities of making themselves of service to their fellows.

AMERICA, or the "New World," stretches through four zones, for a distance of more than 9,000 miles from north to south. It consists of two immense triangular masses of land, each narrowing towards the south, joined by the Isthmus of Panama, which is but 35 miles across. The out-standing physical features of the continent are the lofty mountain ranges, which, throughout its whole length, follow the west coast at varying distances, and contain many volcanic peaks; the extensive plains, and the gigantic rivers, to which, in North America, may be added numerous lakes of immense area.

AMERICA CUP, a cup given by the Royal Yacht Squadron in 1851, in order to afford the New York yacht "America" a chance of competing against English yachts. With a little luck she won, and her spirited owner made the prize a perpetual challenge cup for the yachts of all nations. Many English sportsmen, especially Sir Thomas Lipton, have since tried to win it back, but in vain.

AMERICA, DISCOVERY OF. Danish, Norwegian, and Icelandic manuscripts show that Scandinavian navigators reached and explored portions of the mainland of North America as early as the tenth century, and that a settlement of Danes existed in Greenland in 1266. Twenty years later Icelandic missionaries visited Newfoundland. These facts were unknown to Christopher Columbus and his contemporaries, and to the Genoese sailor is ascribed the honour of the discovery of the "New World." Aided by Spain, he set out in 1492 to find a sea-route to the East Indies. He first sighted Hayling Island, and afterwards discovered San Salvador, Hayti, Cuba, and other West Indian Islands, a name given to the group by Columbus from his supposing they were in the neighbourhood of India. On a second voyage he visited Jamaica, and on a third discovered Trinidad, and surveyed a portion of the northern coast of South America. Other intrepid explorers sailed westward. In 1497 an English vessel, commanded by Giovanni Cabot and his son Sebastian, Venetians settled in Bristol, explored a portion of the coast of North America, and a year later Sebastian visited Newfoundland. The first to publish an account of the discoveries was *Amerigo Vespucci*, and the land, of which he was supposed to be the discoverer, came to be called by his name. The first settlement on the mainland was made by Spain, on the Peninsula of Florida, 1512. The Spaniards were also first in conquest. Mexico was subdued by *Cortez*, and Peru by *Pizarro*. When these conquests became known, Francis I. of France sent out an expedition which surveyed more than 2,000 miles of the coast of North America, and *Jacques Cartier* sailed up the St. Lawrence almost to the site of Montreal. In 1520, *Magellan* a Portuguese, entered the Pacific Coast by sailing through the Strait which bears his name. More than two centuries elapsed before *Behring*, a Dane in command of a Russian expedition sent out by Peter the Great in 1728, by sailing through Behring's Strait, proved the separation of America from Asia; while the existence of a "North West-Passage" between the Atlantic and Pacific Oceans, was only definitely settled by *Sir Robert M'Clure* in 1850.

AMERICANISMS, words or phrases current in the United States, but not recognised as correct English on this side of the Atlantic. Under this heading we include first the words current in both countries before the separation in 1783, but which have since become obsolete in England, or have lost in England the meaning they now have in the States; and secondly, new words introduced into American speech since that event, but not yet naturalised in England. Thus, of the first class we may mention:—*chore*, little job or errand; *sick*, meaning ill; *creek*, small stream or river; *deck*, a pack of cards; *fall*, autumn. The second class, which of course grows every day, consists of words adopted from the foreign element or from Europe to meet a real need, or manufactured from Greek or Latin for that purpose: *baggage* is American for luggage; *elevator*, for lift; *section*, for district; *locate*, for place; *exposition*, for exhibition. Some of these Americanisms are puzzling to the Englishman, as they consist of common words used in a sense to which he is quite unaccustomed. Thus a German is called a *Dutchman*, the guard of a train is the *conductor*, the engine driver is the *engineer*, the servant is the *help*, and *candy* means sweetmeat of any kind.

The following list of every-day words may be useful: *Bee*, an assembly of persons for the joint performance of some task belonging to an individual, as an *apple-bee*, to peel and core apples for drying; *biscuit*, hot roll; *bug*, an insect; *carom*, cannon (at billiards); *the cars*, a train; *clerk*, shopman; *cracker*, biscuit; *cuspidor*, spittoon; *depôt*, railway station; *dry goods*, drapery, dress stuff; *gums*, overshoes, goloshes; *lunch*, any slight, hasty meal; *mail*, to post (letters); *notions*, small things; *recitation*, lesson, or lecture; *railway*, tramway; *rubbers*, overshoes; *stage*, stage-coach; *store*, shop; *ship*, to send by train (as well as ship); *vine*, any climbing plant; *wagon*, carriage.

AMERICA, NORTH, area about 8 million square miles, extends from the Arctic Circle to well within the Tropics. The east coast is deeply indented, while the west is comparatively regular. The *Rocky Mountains* run almost parallel to the west coast throughout its whole length, and a range of less elevation, the *Appalachian System*, is found in the east. Between the two is an immense plain, stretching from the Arctic Ocean to the Gulf of Mexico, reaching its greatest elevation, "the Height of Land," along the fiftieth parallel of latitude, and on the west, merging into a sloping table-land which leads to the foot hills of the Rockies. Most of the plain consists of undulating grass-covered prairie land, but portions are well-timbered. The rivers are among the largest in the world. The Mackenzie flows into the Arctic Ocean, the Nelson into Hudson Bay, the St. Lawrence into the Atlantic, and the Mississippi and the Rio Grande del Norte into the Gulf of Mexico. Few rivers of importance flow westward. The chief are the Yukon, flowing into Behring Sea, the Fraser, and the Columbia.

The lakes include many of the largest sheets of fresh water on the globe. The Mackenzie basin contains Lake Athabasca, Great Bear Lake, and Great Slave Lake; Lakes Manitoba and Winnipeg are drained by the Nelson; and Superior, Michigan, Huron, Erie, and Ontario swell the volume of the St. Lawrence. The Great Salt Lake has no effluent.

American Indians form but a small proportion of the inhabitants, who mostly consist of the descendants of European emigrants. French is chiefly spoken in the province of Quebec; English for the most part in the rest of Canada and the United States; Spanish in Mexico, Central America, and many of the West Indian Islands.

AMERICA, SOUTH, area about 7 million square miles, is a compact mass of land in the shape of a right angled triangle, three-fourths of which lies within the Tropics. Few inlets are found on its coast, but the enormous amount of river navigation compensates for the deficiency. The giant range of the Andes extends from the Isthmus of Panama to Cape Horn, keeping close to the west coast, and ranges of lower elevation are found in the east; but South America is pre-

eminently the continent of plains. These may be considered in connection with the three chief rivers, the Orinoco, the Amazon and the La Plata or Plate. *The Llanos* of the Orinoco are almost level, a desert in the dry season, but in the wet season affording pasturage for troops of horses and herds of cattle. *The Selvas* of the Amazon valley form an impenetrable forest, the largest in the world, which provides a greater variety of trees than is found elsewhere. The *Pampas* are wide grassy plains in the basin of the Parana which support great herds of horses and wild cattle. The *Desert of Attacama*, along the coast of Chile and Peru, is a rainless region.

Whites, generally Spaniards or of Spanish descent, form about one-third of the population. With the exception of Guiana, which consists of British, French, and Dutch possessions, the land is divided among a number of republics, the largest of which are Brazil, Argentina, Bolivia, Peru, Colombia, and Venezuela.

There are few islands, the chief groups being that of Tierra del Fuego in the extreme south, and the Falkland Islands, about 250 miles to the north-east, belonging to Britain.

AMERICAN CIVIL WAR, THE, arose principally out of disputes between the Northern and Southern States, on the question of Negro slavery. The Southern States favoured the extension of the area in which slaves were held, while the Northern States resolutely opposed such extension, and many people advocated the entire abolition of the system. When, in the autumn of 1860, it became clear that the northern States would carry the presidential elections, South Carolina formally seceded from the Union, and was soon joined by ten other States. After the election of Abraham Lincoln, the seceding States formed themselves into the Southern Confederation, February 4th, 1861, and elected Jefferson Davis as their president. A large army was soon organised to defend the independence of the new confederation, but the remaining States, under the name of the Federal States, resolved to maintain the Union at any cost. A war went on with varying success during the years 1861–64; but in April, 1865, Lee, the Confederate commander-in-chief, surrendered with all his men, and the other Confederate generals soon followed his example. At the end of the war every slave in the United States found himself free, President Lincoln having proclaimed the total and unconditional abolition of slavery.

AMERICAN INDIANS, the name usually given to the various tribes who peopled the New World at the time of its discovery, and to their descendants. The term "Indian" is a mistake, and arose from the error of Columbus and other early explorers, who thought the newly-discovered land near India. The various races are characterised by a copper coloured skin, lank black hair, high cheek bones, long deep set eyes, and prominent noses. They vary in stature and physical development. The finest specimens are found among the Patagonians of South America, and the Iroquois, Pawnees, and Sioux of the United States and Canada. When the whole country was at their disposal they were clever hunters, keen observers of nature and natural phenomena, brave warriors, capable of enduring great hardships, or any form of torture, without murmuring, but cruel to their prisoners, without consideration of age or sex. Many in North America are still in a semi-civilised condition. In the United States they dwell in portions of land set apart for them, known as "reservations." Their numbers are estimated with difficulty. In North America they do not exceed ten millions, and the number is decreasing; in South America there are probably seven millions, most of whom profess Christianity.

AMERICAN WAR OF INDEPENDENCE, 1775–1783. The Seven Years' War had been waged by Britain principally for the protection of her American colonies, and, at its close, it was necessary to maintain a protecting army of 10,000 men in America. It was felt that the colonists ought to bear their share of the burden of additional taxation, and, in 1764, Grenville, the Prime Minister, imposed duties on several articles of American trade. The colonists, while admitting their liability to be taxed, maintained that the duties should be imposed by their own colonial parliaments, and resolved not to pay. The king, supported by Parliament, refused their demands, and at length both sides prepared for war. George Washington was appointed commander-in-chief of the colonial forces to be raised. Before he took up his command, the British won a victory at Bunker's Hill (1775). The colonists still professed loyalty to the crown, and sent to the king a petition known as the "Olive Branch." This having failed in its object, the colonists drew up a formal *Declaration of Independence*, in which they declared themselves a Republic, with the title of the United States of America, July 4th, 1776. War now began in earnest, and lasted with varying fortune five years. The end came with the surrender of Cornwallis and his army at Yorktown, in 1781. By the *Treaty of Versailles*, 1783, England acknowledged the independence of the United States.

AMER'IGO VESPUCCI, a Florentine gentleman who, from 1499–1505, visited the New World four times, first under the auspices of Spain, and afterwards of Portugal. He was the first to publish an account of the discoveries. Portions of this work were translated into German, and many editions were printed, a circumstance which is said to have led geographical writers to give his name to the American continent.

AMETHYST, a precious stone of a violet or purple colour. It is a crystalline form of alumina, the colour being due to traces of metallic oxides and is extremely hard. In Ancient Greece it was worn round the neck to prevent intoxication; hence the name, which means *unintoxicated*. The most valuable amethysts come from India, Ceylon, and Brazil, but the mineral is also found in Europe.

AMHERST, GENERAL, *b.* 1717, *d.* 1797, played an important part in the acquisition of Canada. In 1758 he assisted in the capture of *Louisberg*, which led to the submission of *Cape Breton Island* and *Prince Edward's Island*. The next year he led an expedition which was to reduce *Ticonderoga*, and then descend the St. Lawrence to assist Wolfe against Quebec. He accomplished the former, but was too late to form a junction with Wolfe. In 1760 he invested Montreal, and compelled the governor to capitulate, on condition that the French officers and soldiers should be sent home, and take no further part in the war. This left the English in possession of the whole of Canada.

AMIENS, on the river Somme, and on the railway from Boulogne to Paris, the old capital of Picardy, was the birth-place of Peter the Hermit. Its richly decorated cathedral, commenced in 1220, is a masterpiece of Gothic architecture.

AMIENS, TREATY OF, between England, France, Spain, and Holland, ended the War of the French Revolution, 1802. England restored to their former holders all her conquests during the war, except Trinidad and Ceylon; and France agreed to evacuate Naples and the Papal States.

AM'MERGAU. See *Ober-Ammergau*.

AMMON, an Egyptian deity, identified by the Greeks with Zeus, and by the Romans with Jupiter, whose worship spread over the whole of Egypt and parts of North Africa and Greece. He is represented as a ram, or as a human being with a ram's head or horns.

AMMONIA is a colourless, gaseous compound of nitrogen and hydrogen, having a powerfully pungent smell, by means of which it can be readily recognised. It is lighter than air and extremely soluble in water; the solution in water forms the liquid ammonia of the chemist. Ammonia is strongly alkaline, and unites with acids to form the various salts of ammonia. It is produced in the decomposition of organic matter containing nitrogen and hydrogen, and, for this reason, it is present in the air, but in small quantities, and usually in the form of the carbonate. The "ammoniacal liquor" of the gas works is now the source of all ammonia salts for commercial purposes.

AMMONITES. A genus of fossil shells, so named from their resemblance to the twisted horns in the representations of the god Ammon. The shells were chambered. Above two hundred species have been enumerated, varying in size, the largest reaching a diameter of from three to four feet.

AMOK (or *amuck*), a Malay word meaning "engaging furiously in battle"; only used in the phrase "to run amok," signifying to rush through the streets striking indiscriminately at the passers-by, an act not uncommon among the Malays when under the influence of "bhang" or opium.

AMOY, a seaport town of China, on a small island of the same name in the Straits of Fokien, possesses one of the finest harbours in the world. It was one of the ports thrown open to foreigners by the treaty of 1842, and now has a considerable trade, exporting tea and sugar, and importing opium and European goods.

AMPÈRE, the unit of measure of the strength of an electric current.

AMPÈRE, ANDRÉ, *b.* at Lyons, 1775, *d.* at Marseilles, 1836. A famous French mathematician and scientist, who distinguished himself by the application of mathematical analysis to investigations relating to electricity, magnetism, and light, and by his researches in electrodynamics, on which subject he published three separate works. He showed the connection between electricity and magnetism, and in 1821 pointed out the possibility of the construction of the electric telegraph.

AMPHIB'IA, (Gr. "having a double life"), vertebrate animals which breathe by means of gills during the process of development, but possess lungs in the adult stage. The Amphibia are arranged in four orders. In the first the body is snake-like, and without limbs, as seen in the blind worms of the Tropics; in the second, of which the newt is a type, the tail of the embryo persists throughout life; the third, which includes frogs and toads, possess neither tail nor gills when fully developed; the fourth order is extinct. In all existing species the young are produced from eggs, and all, at first, possess the form and organs of fish.

AMPHITHEATRE, a roofless building erected by the Romans for the purpose of gladiatorial combats and fights of wild beasts. The building was elliptical in

form. The central open space was the *Arena*, and was the scene of the various contests. Running round this were the vaults in which the wild animals were confined, and above these rose the gallery, with tiers of seats, and radiating gangways, which permitted easy access to all parts. The lower tiers were reserved for the senators and judges. Almost every important Roman colony bears indications of the existence of an amphitheatre. The largest is the *Coliseum* at Rome, begun by Vespasian and completed by his son Titus. The remains cover more than five acres. The second in size is the one at Verona, in which the whole of the internal architecture is well preserved, including the rows of concentric seats and the steps leading to them.

AMPHITRI'TE (tri-te), in classical mythology, daughter of Oceanus, and wife of Poseidon. She is represented as riding in a chariot of shells drawn by Tritons, or on a dolphin. The name is also used to denote the sea itself.

AMPHIT'RYON, king of Thebes. He avenged the deaths of the sons of Electryon, and in return received Alcmene, the daughter of the latter, in marriage. Zeus is said to have assumed his form in order to gain admission to his home, a story which has formed the basis of the plots of comedies by Molière and others.

AMRITSAR or **UMRITSIR,** the holy city of the Sikhs in the Punjab, N.W. India. It contains the Lake of Immortality and the Golden Temple. The former is a pond in which the Sikhs immerse themselves to be purified of sin, and the latter one of the most beautiful buildings in the world. The city is a place of great trade, and manufactures shawls and silks.

AMSTERDAM, the capital of Holland, stands at the junction of the Amstel with the Y. The greater part of the city is built on piles, the town hall standing on 13,000. Many of the piles have slipped, and, as a consequence, some of the walls of the houses are out of the perpendicular, leaning forward, backward, or to either side; and no two houses are exactly alike. Canals cut the city into ninety islands, connected by 300 bridges. Amsterdam was once the first port in the world, but its trade has declined. The special industry is diamond-cutting; population upwards of 500,000.

AM'ULET, anything worn as a charm, to protect the wearer against disease, accident, evil spirits, or witchcraft. The idea and name are both eastern in origin, but belief in the efficacy of amulets has existed among almost every nation during some period of its history. They were common among the early Egyptians, the Greeks, and the Romans. The Jews were especially addicted to their use; their phylacteries were not only badges of piety, but were frequently regarded by them as possessing protective powers. Many Christians of the first century wore amulets marked with a fish, and the council of Laodicea forbade the clergy either to wear or manufacture them, and their use was again condemned by the Church in the eighth century. The Turks and many Orientals still deem amulets of service, and belief in their powers has not altogether died out among ignorant and uneducated people in Western Europe.

AMUR or **AMOOR,** the "Great River," one of the largest rivers of Eastern Asia, flows into the sea of Okhotsk. It forms, for some distance, the boundary between Siberia and China, but its lower course is wholly in Russian territory. Its basin is fertile, and contains large forests and pasture lands. It is navigable for 2,500 miles, but the navigation is impeded by ice for eight months of the year.

ANABAPTISTS, a fanatical sect that arose in Saxony during the Reformation, and took an active part in the Peasants' War. They insisted on adult baptism and the rebaptism of all persons joining their community, and acknowledged neither civil nor ecclesiastical authority. Severe laws were passed against them, and many were put to death, but attempts at suppression and persecution served only to spread their peculiar doctrines, and disciples arose in Switzerland, the Netherlands, and in England, where several were executed from 1535–1540. In 1532, under the leadership of John Matthias and John Boccoldt, they took possession of the city of Münster in Westphalia, and were guilty of great excesses. Matthias was killed in repelling troops sent against him, and, on the recapture of the city, Boccoldt was tortured to death. The sect is still numerous in Holland, Switzerland, and parts of Germany, but contains several divisions, separated from one another by their ideas on Church discipline; though all are now characterised by habits of useful industry and purity of life. The name is sometimes wrongly applied to English Baptists, who have no historical connection with the Anabaptists.

ANACHRONISM, a violation of chronological order in a story, play, or picture. Shakespeare, in Troilus and Cressida, makes Hector quote Aristotle; the latter lived B.C. 384-322, and the former is a hero of the Trojan war, which certainly took place before 1000 B.C.

ANACOLUTHON. Refer to *Index*.

ANACONDA, the largest of the boa family, and the largest serpent found in the New World, attaining a length of 20 feet. It is destitute of poison fangs, crushes its victims by means of the powerful folds of its body, and, having dilatable jaws, swallows them whole. It lives in or near the water, chiefly in the forests of the Amazon, and in Guiana, swims well, and can remain submerged for a long time. Its skin is made into shoes, oil is procured from its fat, and the natives eat its flesh.

ANAC'REON, a famous Greek Lyric poet, *b.* at Teos about 560 B.C., *d.* 475 B.C. Some of his odes were translated into English by Moore and Cowley, but many of those usually ascribed to him are of later date and inferior workmanship.

AN'AGRAM, a word or sentence formed by rewriting the letters of another word or sentence in a different order, thus *deliver, reviled; heat, hate;* are simple forms of anagram. At one time the making of anagrams enjoyed a wide popularity.

AN'AKIM, a race of giants descended from Arba, who dwelt in the southern part of Canaan. Their chief city was Hebron, "the city of Arba," which became the possession of Caleb after he had succeeded in driving out the sons of Anak (Num. xiii., Josh. xv.)

AN'ALOGUE, a term used in anatomy to indicate an organ which performs the same function as another, though it differs from it in structure. In fish, the blood is purified by means of the *gills*, which have their analogue in the *lungs* of more highly organised creatures. The wings of birds and butterflies are also analogous, performing similar functions, but having nothing in common in their structure.

ANALYSIS is the separation of a substance or an idea into its component parts, and is the opposite of *synthesis*, which is the putting together of constituent parts to form a whole. Thus, by means of an electric current, pure water may be separated into its constituent gases, oxygen and hydrogen, or, by passing an electric spark through a mixture of the two gases, they may be made to combine to form water. Chemical analysis is concerned in discovering the elementary constituents which enter into the formation of various compounds, and the proportion in which they are combined.

ANALYST, PUBLIC, an officer, attached usually to a local authority, whose duty it is to analyse samples of food, drugs, or water submitted to him, particularly in reference to adulteration in the two former, and of impurities in the latter, and to determine the nature and quantity of such adulterations or impurities.

AN'ARCHISM (Gr. "without government" a term used to include the doctrines held by an extreme wing of socialists. They aim at the abolition of all forms of government, and the establishment of a social system based upon the absolute freedom of the individual. To attain these ends, the destruction of life and property is, in their opinion, justifiable.

ANATH'EMA, the Greek equivalent of a Hebrew word meaning *the thing devoted.* Such an object could not be redeemed: if inanimate, it became the property of the priests, and if living, it had to be sacrificed, human beings being in ancient times no exception, e.g., Jephthah's daughter (Judges xi. 31). Since, in heathen countries, offerings were also dedicated to the powers of evil, the word came to be used in the sense of *accursed*, and is usually so translated when appearing in the New Testament. In the Roman Catholic and Greek Churches, *Anathema* signifies the most serious form of excommunication, and was freely used in the Middle Ages.

ANATOLIA, i.e., Land of the Sunrise or Eastern Land, the Greek and modern name of Asia Minor, a peninsula as large as France, in the south-west of Asia. Its shores are washed by the Black Sea, the Archipelago, and the Levant. The country is a plateau, crossed by lofty mountain ranges, and produces cotton, opium, fruits, wine and silk. The population is of various races; the Turks govern, but the commerce and the professional work of the country are in the hands of Greeks and Armenians. The largest towns are Smyrna and Trebizond.

ANAXAG'ORAS, *b.* 500 B.C., *d.* 428 B.C.; a great Greek philosopher. He went early to Athens, then in the zenith of its glory, and acquired fame as a philosopher and teacher, having Pericles and Euripides among his pupils. It is curious to mark how nearly he anticipated the present "Atomic" theory of the constitution of matter.

ANCÆUS, a son of Neptune, killed by a boar.

ANCESTOR-WORSHIP. Refer to *Index*.

ANCHI'SES, the father of Æneas. He was rescued by his son from the flames of Troy, and accompanied him in his wanderings as far as Sicily, where he died.

ANCHORITE or **ANCHORET,** from a Greek word signifying "to withdraw"; a religious devotee who passed his life in a cell, or other secluded retreat, without communication with the rest of mankind. He differed from the *hermit* in never moving from his cell, while the hermit, though avoiding mankind, ranged abroad.

ANCHO'VY, a small fish of the herring family, usually four to six inches long, found abundantly in the Mediterranean, and also on the coasts of England, Holland, and France. They have to be salted as soon as caught, as the flesh soon spoils. They are usually caught at night, a light being displayed to attract them, when they are surrounded with nets.

ANCIENT MARINER, THE, one of the best poems of Samuel Taylor Coleridge. It describes the penalties a sailor was imagined to suffer for shooting an albatross.

ANCO'NA, a seaport of Italy, possessing one of the finest harbours on the Adriatic. The triumphal arch of white marble, still standing on the ancient quay, was erected by the Roman senate in honour of Trajan.

ANDALUSIA, a province in the south of Spain, slightly larger than Ireland, celebrated for its fertility and beauty of scenery. It produces large grain crops, fruits, and wines, and possesses the richest mines in Spain, many of which are worked by English companies. Huelva in the west, the chief mining centre, contains the Rio Tinto copper mines. The chief ports are Cadiz and Malaga. Seville, called by the Spaniards the "Queen of Andalusia," "the Enchantress," contains many beautiful Moorish buildings, and is celebrated for its bull fights and its tobacco factories. Granada, a very beautiful city, was the capital of the kingdom of the Moors, and was named by them the "Queen of Cities."

AN'DERMATT, a Swiss village and high valley in the Canton of Uri. The four chief Alpine roads converge here and make Andermatt one of the chief tourist centres of Switzerland.

ANDERSEN, HANS CHRISTIAN, a Danish poet, novelist, dramatist, and story writer, *b.* at Odense, 1805, *d.* 1875. His "Fairy Tales" have been translated into almost every European language, and have made him world famous.

ANDERSON, ELIZABETH GARRETT, *b.* 1836, was one of the pioneers in opening the doors of the medical profession to women; qualifying in 1865, she has for many years been in practice as a West-end physician, and till comparatively recently, was Dean of the London School of Medicine for Women.

ANDES, the most important mountain chain in South America, stretches from the Isthmus of Panama to Cape Horn, a distance of 4,500 miles. The name is probably derived from *Anta*, an Indian word meaning silver. The *North Andes* consists of three parallel chains, in which are crowded many of the loftiest peaks in America, most of them volcanoes, including Chimborazo, Antisana, and Cotopaxi. The two parallel chains of the *Central Andes* enclose lofty tablelands, separated by transverse ranges. The *Southern Andes* is a single chain, and contains the highest mountain in the New World, the volcanic peak of Aconcagua, 22,400 feet. This peak was ascended by Mr. R. Rankin, though deserted by his guides, in December, 1902. He passed the night in the open, at an elevation of 22,000 feet. Earthquake shocks are frequent throughout the whole of the Andes Range.

ANDRASSY, COUNT, a Hungarian statesman and diplomatist, *b.* 1823, *d.* 1890. He was exiled from 1848 to 1851, and became prime minister in 1867.

ANDRÉ, JOHN, *b.* in London, 1751. He was adjutant-general to the British forces in America during the War of Independence, and was appointed by General Clinton to carry on the negotiations with Arnold, who had offered to betray his command at West Point. Major André was captured when returning from an interview with the traitor, and shot as a spy, 1780. A monument to his memory was erected in Westminster Abbey.

ANDRÉE, SALOMON AUGUST, *b.* 1854, a Swedish engineer, who conceived the idea of reaching the North Pole by means of a balloon. With two others he started from Danes Island on the north-west corner of Spitzbergen, July 11, 1897. A pigeon, one of thirty-two he carried, was shot on July 22, and found to bear a message dated July 13, saying that all was well, and that they had travelled 187 miles in the two days. Since then no news has been received.

ANDREW, SAINT, the patron saint of Scotland, was a brother of Simon Peter, and a native of Bethsaida. He was a follower of John the Baptist, and became one of the first disciples of Christ. He is said to have been crucified at Patræ, in Achaia.

ANDREWES, LANCELOT, *b.* in London, 1555, *d.* 1626, an eminent English prelate, who occupied in succession the sees of Ely, Chichester, and Winchester. He was a member of the Hampton Court Conference, and one of the translators of the Authorised Version of the Bible.

AN'DROCLUS or **ANDROCLES,** a runaway Roman slave who, on his recapture, was condemned to the lions in the circus. The animal let loose against him proved to be the same from whose paw he had extracted a thorn, and with which he had lived during his brief period of liberty. The animal fawned upon him; the story became known, and the slave received his freedom and permission to lead the lion through the streets of Rome.

ANDROM'ACHE (a-che), the wife of Hector, and the noblest female character in the Iliad. She is the chief person in tragedies by Euripides and Racine.

ANDROM'EDA, a beautiful Ethiopian princess, who, on the demand of Neptune, was offered as a sacrifice to a sea-monster, because her mother Cassiopeia had declared she was as beautiful as the Nereids. She was discovered, chained to a rock, by Perseus, who slew the monster, liberated Andromeda, and claimed her as his wife.

ANEMOM'ETER, an instrument for determining the force and velocity of the wind.

ANEM'ONE, (o-ne), "the wind-flower," a plant belonging to the order, Ranunculaceæ. It is also the name, in zoology, of a sub-class of actinozoa, frequently found in rock pools around the coast. They may be watched expanding their sensitive petal-like tentacles in search of the materials that form their prey. Uncovered by the water, they contract into a rounded, firm, jelly-like mass, attached to rocks and stones by means of a flattened disc which acts like a sucker.

ANEROID, a form of barometer invented by M. Vidi in 1844. It consists of a small box of metal, exhausted of air, and made perfectly air-tight. Variations in air-pressure cause a slight movement inwards or outwards, of the thin metallic plate forming the top. The movement is conveyed to a system of levers and springs in the interior, and registered on a dial.

ANGEL. (1) A divine messenger. (2) A gold coin current in England from the reign of Edward IV. to the end of that of Charles I. The obverse side was stamped with the figure of Michael, the archangel, standing on a dragon, and piercing him through the mouth with a spear. Its value varied at different periods from 6s. 8d. to 10s.

ANGEL'IC DOCTOR, a popular name for Thomas Aquinas.

ANGEL'ICO, FRA, was an Italian painter of religious and ecclesiastical subjects, *b.* at Mugello in Tuscany, 1381, *d.* in Rome, 1455. His work, in the form of fresco painting, is to be found in all parts of Italy, but the finest examples are in the Convent of St. Mark at Florence.

AN'GELO, MICHAEL. See *Michel-Angelo.*

ANGELO, CASTLE OF SAINT, originally Hadrian's mausoleum at Rome; it has been converted into a fortress, and is connected with the Vatican quarter by the Pont Sant' Angelo.

ANGELUS, a bell rung in Roman Catholic countries at morn, noon, and sunset, to remind the faithful to recite the *Ave Maria*, as the angel's salutation to the Virgin Mary is called.

ANGEVIN LINE, the kings of England from Henry II. to Richard II. inclusive. They are also called the Plantagenet line. The name "Angevin" arose from Henry II. being the son of Geoffrey, Count of *Anjou*, who married Matilda, daughter of Henry I.

ANGLER, is a curious fish which lies concealed and entices its prey within reach of its capacious mouth by means of two lures. The lures are two tentacles situated on the head; these tentacles are kept in constant vibration and thus simulate small water creatures; when fish approach, however, they find out their mistake to their cost. In the depths of the ocean, below the level to which light penetrates, species of angler occur provided with lures tipped with phosphorescent organs, so as to attract attention in the dark. The name is derived from the habit, above mentioned, of angling for their prey.

ANGLES, a German tribe from Schleswig who took part with their neighbours, the Saxons and the Jutes, in the conquest of Britain, in the fifth century, and gave their name to England.

ANGLESEY or **ANGLESEA,** "the island of the Angles," is an island and county, separated from the mainland of Wales by the Menai Strait. Its area exceeds 180 square miles, and its population (1901 census) is 34,808. Beaumaris is the county town, but the largest is Holyhead, a packet station for Dublin.

ANGLESEY, (Henry Paget), **FIRST MARQUIS OF,** *b.* 1768, *d.* 1854; son of the Earl of Uxbridge, distinguished himself as a soldier. He led the British cavalry at the Battle of Waterloo, and contributed much to the victory. He had succeeded his father in 1812 as Earl of Uxbridge, and his new title was the reward of his services in the great battle. As Lord Lieutenant of Ireland he gained the affections of the Irish.

ANGLIA, EAST, a kingdom founded by the Angles in the east of England, comprising the counties of Cambridge, Norfolk and Suffolk, a district to which the name is still applied.

ANGLICAN CHURCH includes the Church of England and all other churches in communion with it, namely, the Episcopal Church in Scotland, the Disestablished Church of Ireland, the Protestant Episcopal Church in America, and the Anglican Churches in India and the Colonies. In these various churches there are nearly 300 acting bishops.

ANGLO-JAPANESE TREATY. The effect of the first treaty (1902) between England and Japan was undoubtedly to give Japan a "free hand" in her contest with Russia. The aim of the second, signed on August 12th, 1905, is the maintenance of the rights acquired by the two Countries in Asia, the territorial integrity of China, and equal opportunity to all nations in trading with China and Corea. Each party guarantees aid to the other in case of any existing right of theirs in Eastern Asia or India being attacked, and undertakes not to make any agreement with a third power without consulting the other. The treaty is to continue in force for ten years, and after nine years to be terminable on either party giving one year's notice.

ANGLOMANIA, a term much in use in France, Germany, and the United States to denote admiration and imitation of things English. Such a tendency was very marked in Germany in the 18th

century, in regard to English literature, and in France, just before the Revolution, in regard to English free institutions, and at the present day in regard to all kinds of outdoor sports.

ANGLOPHOBIA, a term much used in newspapers to denote the dislike and dread of England sometimes displayed by Continental nations. This feeling was very manifest during the last Boer War, especially in France, Holland, and Germany, and led occasionally to regrettable incidents.

ANGLO-SAXON, the language spoken and written in England from the time of the Teutonic settlements in the country in the fifth century, until the middle of the twelfth. It forms the basis of modern English, but differs from it in being more highly inflected, in the absence of any Latin element, in the use of words that have become obsolete, and a considerable variation in the orthography of others still in use.

ANGO'LA, a Portuguese possession on the West of Africa, to the south of the Congo. The country is very fertile, but is still undeveloped. The chief town is St. Paul de Loando.

ANGO'RA, a town in the centre of Anatolia, in a district celebrated for its animals with silky, long-haired coats, including goats, cats, dogs, and rabbits. The cloth made of the hair of the Angora goat is called *mohair*.

AN'GRA PEQ'UENA, a port on the west coast of Africa, north of the Orange River, and the principal town in German south-west Africa.

ANGUS, ancient name of Forfarshire.

ANILINE, a colourless, transparent, oily liquid, obtained from coal-tar and benzine. Since 1856 it has been extensively used in the manufacture of dyes, in Great Britain, France, and Germany.

ANIMAL'CULE, a general name still popularly applied to many forms of microscopic animal life, though it is not now used by zoologists in classifying animals.

ANIMISM. Refer to *Index*.

ANISEED. See *Med. Dict.*

ANJOU was, before the Revolution of 1789, a French province, out of which has been formed the modern department of Maine-et-Loire, and portions of two others. Anjou was a possession of the English kings from the reign of Henry II., 1154, to that of John, who lost it in 1204.

ANNAM, a French possession, three times as large as England and Wales, lying along the east coast of Indo-China in south-east Asia. It is densely populated, has a fertile soil, but, on account of the humid heat, the climate is unhealthy to Europeans. Teak, gum trees, and dyewoods are plentiful in the forests; sugar cane, cotton, and indigo are grown; and the mines produce gold, iron, tin, rubies, and sapphires. Hué, the chief town, was fortified by the French as early as 1801.

ANNAP'OLIS. (1) A sea-port of Nova Scotia, on the Bay of Fundy, dates from 1604. (2) The capital of Maryland, U.S.A. Its trade has declined owing to the rise of Baltimore.

ANNATES, or "First fruits," in ecclesiastical law denotes a sum paid by a person on his presentation to a church living, and formerly fixed at a year's income. For centuries this was claimed by the Pope. Henry VIII. annexed the payments to the crown, but Queen Anne restored them to the church by devoting the money to the benefit of the poorer clergy. The fund is now managed by the governors of "Queen Anne's Bounty."

ANNE BOLEYN, *b.* 1501, *d.* 1536, was the second wife of Henry VIII. and the mother of Queen Elizabeth. Though few have doubted her innocence, she was found guilty of adultery and executed. During the three years she was the wife of Henry she endeared herself to many of his subjects by her charitable works, by helping the Reformers, and by aiding in the circulation of the Scriptures.

ANNE OF CLEVES, the fourth wife of Henry VIII. was recommended to the king's notice by Thomas Cromwell. Her appearance was not what Holbein's portrait of her led him to expect; within six months of the marriage, parliament granted him a divorce. Anne received a pension, and a palace at Richmond, where she lived on friendly terms with the Court. She is said to have been patient, charitable, and religious; *d.* at Chelsea, 1557.

ANNE OF DENMARK, *b.* 1575, *d.* 1619, the consort of James I. of England, took but a small part in public affairs, was characterised mainly by extravagance, fondness for amusement, and frivolity.

ANNE, QUEEN, *b.* at Twickenham, 1664, *d.* 1714, was the second daughter of James II. of England, and the last of the Stuart sovereigns. She succeeded William of Orange in 1702. Her reign is characterised by the part the country played in the war of the Spanish Succession, the victories of Marlborough, and the number of men eminent in literature and science who flourished at the time. The queen's amiability of disposition gained her the title of "Good Queen Anne"; her family virtues were many, but she was lacking in energy, and was easily influenced by favourites, of whom the chief were the Duchess of Marlborough at the beginning of the reign, and Mrs. Masham towards the end.

ANNEALING is a process by which glass and many metals are rendered less brittle, and which consists in heating the object, and allowing it to cool slowly. In glass annealing, the vessels, when formed, are placed on iron trays and drawn slowly through ovens, the temperature of which is gradually raised almost to the point of fusion of glass, and then as gradually lowered, until the vessels may be taken out cold. The *tempering* of steel is another example of annealing. Metals worked by the hammer, rolled into plates, or drawn into wires, become brittle. This is remedied by annealing, and in some cases the process has to be many times repeated.

ANNUAL REGISTER, a series of volumes commenced in 1759 by a bookseller named Robert Dodsley, and continued to the present day. Each volume records the principal events of the past year, with an account of the proceedings of Parliament, and obituary notices of the distinguished persons who have died. Edmund Burke had a large share in some of the early volumes.

ANNUNCIATION, THE, the announcement of the Incarnation of Christ to the Virgin Mary by the angel Gabriel. The festival is kept on March 25th, commonly called *Lady Day*.

ANNUS MIRABILIS ("Year of wonders"). (1) A poem by Dryden, descriptive of the War with Holland and the Great Fire of London, 1666. (2) It is sometimes applied to the year 1759, which saw the fall of Quebec, the sea fight of Quiberon Bay, and many British victories in the East and West Indies.

ANODYNE, a remedy to relieve pain. See *Med. Dict.*

ANSELM, *b.* at Aosta in Piedmont, 1033, *d.* 1109, succeeded Lanfranc as Archbishop of Canterbury. During the greater part of his primacy he was engaged in quarrels with William Rufus and Henry I., the first being caused by the refusal of the king to restore to the Church the lands he had appropriated to himself; and the second by the Archbishop refusing to be invested by Henry, or to do the same homage as his predecessor had done.

ANSON, LORD, *b.* 1697, *d.* 1762, was a British naval officer who combined skill, intrepidity, and prudence. With a squadron of six vessels, inefficiently manned, he left England in September, 1740, to act against the Spaniards in the South Seas. He lost many men from scurvy, but secured a number of prizes, and reached Spithead by way of the Cape, in June, 1744, with one ship, the *Centurion*, having captured Spanish treasure to the amount of half a million sterling. Of the other vessels, two, much storm damaged, had returned to England previously.

ANSTEY, the *nom de plume* of Thomas Anstey Guthrie. *b.* at Kensington, 1856, and educated at King's College School, and at Cambridge. Trained for a barrister, he never practised, contenting himself till 1882 with short stories in magazines. In that year his "Vice Versa" made an immense hit, and has been followed by "The Tinted Venus," "The Brass Bottle," and other successes. His writings in Punch have been much admired, especially "Voces Populi" and "Baboo Jabberjee."

ANT, an insect possessing a more highly organised nervous system than any other animal of the same size, and distinguished for its intelligence and industry. Ants live in colonies composed of three sorts of individuals, the winged males and females, and the wingless workers. The latter prepare the nest, excavate galleries for the reception of the young, procure food, and wait upon the larvæ. They appear to have the power of communicating to one another the results of their observations, and may frequently be seen co-operating in the performance of a task that had proved too much for the strength of an individual. The European red ants attack other species, and carry off the workers to their own nests, where they detain them as slaves. Other species keep little insects called *aphides* or plant lice, to minister to their wants. These aphides have been called the *cows* of the ant. On being gently stroked with the antennæ of an ant, the aphis yields to it a drop of limpid liquid. The *Termites*, or *White Ants*, of tropical regions belong to a different order of insects. They build ant hills of extraordinary size and hardness. Their workers are divided into ordinary workers and *soldiers*, the latter being provided with very strong jaws, and thus adapted for protecting their community from the attacks of their enemies.

ANTARCTIC OCEAN, THE, lies round the South Pole, and from it radiate the Pacific, Indian, and Atlantic Oceans. It is supposed to contain the coldest parts of the earth, and sends out an immense number of icebergs. An intensely cold current, the Antarctic Drift Current, proceeds from it. The centre of the ocean is supposed to be occupied by a circular continent, named by Sir James Ross, *South Victoria*. This continent is larger than Australia, devoid of vegetation, and covered with perpetual snow. A lofty range of mountains has been seen, containing two volcanic peaks, Mt. Erebus, almost constantly active, and Mt. Terror, extinct. Three expeditions for scientific observations have visited the Antarctic in recent years, a German, a Swedish, and a British. The Swedish expedition of 1902 was commanded by Dr. Otto Nordenskiold. He took with him a movable house in which he and his followers spent twenty months of solitude. Speaking of the Antarctic winter, Nordenskiold has said:—"To be outside the house was an impossibility, for one could not proceed

against the wind, which took away one's breath, while sharp crystals of frozen snow stung one's face beyond endurance."

In August, 1901, the "Discovery" under the command of Captain Scott, proceeded due south from New Zealand, reached the Antarctic Continent in January, 1902, and explored the coast. Sledge expeditions penetrated to a point in 82° 17′ south latitude, which is 207 miles nearer the Pole than had been reached previously. In 1902, the relief ship "Morning" took out fresh supplies of food, and brought home invalids. In 1903 the "Morning" and the "Terra Nova" sailed with the intention of releasing the "Discovery" from the ice. They were successful in this, and the three vessels reached Lyttelton, New Zealand, on April 1st, 1904.

ANT-EATERS, a family of mammals found chiefly in South America and South Africa. The American species is toothless, but the African has molar teeth. They have a small circular mouth, and a long cylindrical tongue, which is covered with a viscid secretion. The tongue is thrust into the ant-hills, and withdrawn covered with the insects, which are then swallowed.

ANTELOPES are animals closely allied to the sheep and the goat, and in many cases, notably in that of the chamois of the Alps, closely resembling the latter in appearance and habits. The limbs are slender and graceful, and the hoofs small and cloven. The horns differ from the antlers of deer in being persistent. Antelopes are generally gregarious and migratory in their habits, timid, watchful, and cautious, with the senses of sight, hearing, and smell highly developed. Some species favour wide plains, such as the steppes of central Asia, or the karoos of South Africa; others are found only in mountainous districts; while others again select deep forests or dense jungle as their habitat. Though Africa may be looked upon as the head-quarters of the family, the common antelope, or black buck, is found all over India, and is hunted with the *cheetah*, a kind of leopard.

ANTENNÆ are sense organs attached to the head of many crustaceans and most insects. They consist of feeler-like processes, two or four in number, furnished with sensory hairs. Their function varies in different animals, being used for touch in some cases, for smell and hearing in addition in others, whilst in some of the smaller crustacea they are used as oars for swimming.

ANTHOL'OGY, the name given to a book containing an unconnected series of gems of thought, briefly and poetically expressed. The term is especially appropriated to a collection of Greek verses first printed at Florence in 1494. Asiatic literature is extremely rich in anthologies. The oldest in the world is one of the canonical books of the Chinese, containing a collection of songs collected by Confucius, but most nations possessing a literature have their own anthologies.

ANTHONY, SAINT, *b.* at Koma, in Upper Egypt, 251, *d.* 356, was the founder of monachism. He spent many years of his life in retirement in a lonely ruin, and strange stories of his temptations by fiends during this period, and of miracles worked by him, are related by Athanasius. Early in the fourth century several hermits united with him, and formed the first community of monks.

ANTHRACITE, also known as blind coal and glance coal, differs from the ordinary variety in that it contains but little hydrogen, in fact Welsh anthracite contains more than 94 per cent. of pure carbon. It is much more difficult to light than other coal, burns slowly and without flame, and is used where a smokeless fire is necessary. Large deposits occur in South Wales, near Kilkenny, in Ireland, and in parts of Scotland, but the most extensive beds are those of the Pennsylvania coal fields, U.S.A.

ANTHRAX, an infectious disease to which cattle, sheep, horses, and other animals are liable, due to the presence in the blood of a disease germ known as the *anthrax bacillus*. The disease is communicable to man through the poison entering the blood, and is popularly known as *wool sorter's disease* (which see in *Med. Dict.*)

ANTHRO'POID APES, literally, "man-like apes," comprise a small group of animals which approach man closely so far as their mere anatomy is concerned. At the present day they include the gorilla and chimpanzee of West Africa, the orang of Borneo, and the gibbons of Eastern Asia. Man presents certain peculiarities in his structure which enable him to stand erect. These peculiarities are shared by these apes to some extent, and a semi-erect posture is often adopted; the gibbon alone, however, commonly walks erect, balancing itself by the aid of its outstretched arms. The structure of the brain, especially in the orang, is remarkably human, but the ape's brain is far smaller. Believers in palmistry may be interested to know that the chief lines from which they infer so much are present also in the palm of the ape. The apes are fairly intelligent animals, but when compared with the lowest savage, they are hopelessly outclassed. If man and ape have ever had a common ancestor, it must have been in the remote past. Wallace still maintains that however true evolution may be in the animal and vegetable world, it required, in addition, a separate creative act to change an ape into a man.

ANTHROPOMOR'PHISM, the representation of the Deity under the form of man, and the ascription to God of human affections and passions. The Scriptures apply many terms to God which properly relate to human beings; thus we read of the hand, arm, eye, and ear of God, and of his forgetting or remembering. He is also represented as a richly attired king, seated upon a throne, surrounded by his attendants and messengers. The Greeks and Romans imagined their gods as possessing human forms, and differing from men in their immortality only. The Egyptians included the forms of animals, which they sometimes combined with those of men. The whole subject of anthropomorphism arises from the difficulty of forming conceptions of spiritual matters except by analogy from natural experiences.

ANTHROPOMETRY, the science which has for its object the systematic measurement of the height, girth, lung capacity, weight, muscular development, and other physical characteristics of the human body. Since the appointment by parliament of a committee to enquire into the alleged physical deterioration of English people, it has been suggested that an anthropometric census of the country should be taken, with the object of discovering districts and callings that fall below the average standard, so that efforts might be made to improve the physical well-being of the people concerned. In France, since 1880, a branch of anthropometry has been applied to the identification of criminals. A series of measurements is taken of every person sentenced for crime, and a record kept. The system has been much improved by the use of finger impressions, as suggested by M. Bertillon. See *Finger Prints.*

ANTICHRIST, a word meaning the enemy of the Messiah, and applied in the epistles of St. John to those who opposed the doctrine of the Incarnation. In the Apocalypse the enemy is spoken of as "the beast," which has been taken to represent the Roman Empire as the head of the heathen world. Many of the early reformers saw the rise of Antichrist in the increased power and ambition of the Papacy; and members of the Greek Church hold the same belief with regard to Mohammedanism.

ANTICLIMAX, the opposite of *climax*, which see.

ANTI-CORN LAW LEAGUE, a league formed in 1839 to promote agitation for the repeal of the Corn Laws, i.e., the laws imposing a tax on corn coming into this country. Its head-quarters were in Manchester, where some merchants had begun an association of the kind in 1838, but with the adhesion of Cobden, Bright, and Villiers, the League was formally constituted and so successfully worked that the Corn Laws were repealed in 1846.

ANTICYCLONE. See *Cyclone.*

ANTIG'ONE, (o-ne), was a daughter of a king of Thebes. She was condemned to be buried alive for having covered with earth the exposed body of her brother, contrary to the commands of the usurper Creon, but she committed suicide on hearing the sentence.

ANTI'GUA, the most important of the Leeward Antilles, is a British possession with an area of 108 square miles. The island possesses several good harbours, is very productive, and exports sugar and rum.

ANTILEGOM'ENA (Gr. *spoken against*), certain books of the New Testament not at first generally accepted. They are the Second Epistle of St. Peter, those of St. James and St. Jude, the Epistle to the Hebrews, the Second and Third Epistles of St. John, and the Revelation.

ANTILLES, the West Indian Archipelago, curving round from North America to South America, and enclosing the Caribbean Sea. The northern islands form the Greater Antilles; the eastern, which are divided into the Leeward Islands and the Windward Islands, are known as the Lesser Antilles.

AN'TIMONY is a bright, bluish-white, crystalline, brittle metal, which is found pure in many parts of the world, notably in Borneo. The chief sources of the metal are *stibnite*, or grey antimony ore, antimony bloom, or white antimony, and antimony ochre. The alloys of antimony are much used in the arts. In the act of solidifying from a molten condition the metal expands, and thus possesses the property of taking very fine and sharp castings. This valuable quality it imparts to its alloys, the most important of which are type metal, stereotype metal, and Britannia metal. As an ingredient of tartar-emetic it has figured in many poison trials.

ANTINO'MIANISM, "Against the law," a name first applied to the doctrines propounded by John Agricola, who, in a disputation at Wittenburg in 1537, maintained that, since faith in Jesus Christ is alone necessary to salvation, the observance of the moral law by Christians is unnecessary. He was strongly opposed by Luther and compelled to retract. Passages in the Epistles seem to show that there was a tendency to such a doctrine in the early church. Some of the Anabaptist sects held similar views, and in England, in 1648, severe laws were passed against all who professed such opinions.

AN'TIOCH, the ancient capital of Syria, on the left bank of the Orontes, 20 miles from the sea. Its position on the main road from west to east made it a city of considerable trade. Its splendour and extent led the ancients to name it "the Beautiful" and the "Queen of the East."

It became one of the chief seats of the Christian religion, and it was here the disciples were first called *Christians*. Ten church councils were held at Antioch in the third and fourth centuries.

ANTI'OCHUS EPIPH'ANES, (an-es), i.e., the "Illustrious," a surname adopted by himself, but his subjects, on account of his cruelty and tyranny, named him "Epimanes," the madman. He governed Syria from 175 to 164 B.C. His persecution of the Jews, and the defilement of the Temple at Jerusalem, by setting up therein an image of Jupiter, caused the revolt of the Maccabees. He died in a delirium at Tabæ, in Persia.

ANTIP'ATHY, "a feeling against," the aversion certain individuals have to things harmless in themselves or even agreeable to the majority of people. In some cases antipathies arise from habits, and may be overcome by the practice of contrary habits; but in others, they are due to peculiarities of constitution. Thus, symptoms of poisoning have immediately followed the eating of a perfectly wholesome form of food, when an individual has attempted to overcome an apparently unreasonable loathing to the particular article of diet. Shakespeare, in the Merchant of Venice, Act iv, Scene i., refers to the effect the sight of certain animals produces on some persons. Lord Roberts dislikes and fears cats and camels, and has also an aversion to blue stamps. Lord Rosebery is averse to pink, and the sight of a lady in a pink dress has caused him to lose the thread of his argument in a political speech.

ANTIPHON, "alternate singing," a sacred song sung by two parties, each answering the other. In the Roman Catholic Church it is applied particularly to the verse, first sung as a solo, and then repeated by the whole choir, after the two sides of the latter have sung the Psalm in alternate verses.

ANTIP'ODES (o-des) lit. means those who stand feet to feet, as people do who inhabit any two places on the earth that are diametrically opposite to each other, e.g., London and a small island to the south-west of New Zealand. Such places have a difference of twelve hours in their time, and their seasons are reversed, unless both places are situated on the equator.

ANTI-SEMITIC PARTY, THE. a political party in Russia and the east of Germany who are opposed to the Jews on account of the great influence they have exercised in national affairs. Such a party has recently arisen in France, and in the prosecution of Captain Dreyfus played an active part.

ANTISEPTICS. See *Med. Dict.*

ANTITOXIN. See *Med. Dict.*

ANTITYPE, the person in whom a prophetic type is fulfilled; thus Christ is said to be the antitype of Isaac, of the Brazen Serpent, and of the Paschal Lamb.

ANTLERS are the horns of deer. They are restricted to the male sex, except in the reindeer, and are borne by all species except the musk-deer. An antler is composed of bare dead bone. Each year it is shed, and a new outgrowth from the skull-bone beneath springs up, carrying up the skin with it, which is known as the *velvet*. When fully formed, the blood supply is cut off, the skin and the bone thus die, and the former peeling off in shreds, leaves the bone bare and insensitive. In many species the antlers are branched, each branch being termed a *tyne*. In these cases the antlers usually bear one pair of tynes more each year, so that the age of a stag can be judged from his antlers.

ANTONI'NUS. See *Marcus Aurelius.*

ANTONI'NUS PIUS, *b.* at Lavinium, near Rome, 86, *d.* 161, A.D. He was adopted by Hadrian, and succeeded him as emperor, 138. In private life he was simple in his habits, generous to the needy, and an admirer of virtue and wisdom. His rule was just and moderate; he suppressed the persecution of the Christians; and throughout his reign the empire enjoyed unbroken peace.

ANTONY, MARK, *b.* 83 B.C., *d.* 30 B.C., was a capable soldier and a strong supporter of Julius Cæsar. After the murder of the latter, he so roused the people by his funeral oration that the murderers, including Brutus and Cassius, were compelled to leave the city, and Antony became for a time the foremost man in Rome. He became Triumvir in the year 43 B.C., sharing the government of the empire with Lepidus and Octavius. He defeated Brutus and Cassius at Philippi, but, becoming enamoured of Cleopatra, he followed her to Alexandria. Octavius became sole ruler in Rome and prepared an expedition against Antony, whom he defeated in the naval battle of Actium, 31 B.C. Antony deserted his troops and fled with Cleopatra, and afterwards, on being falsely told that the queen was dead, he committed suicide by falling on his sword. Octavius became emperor as Augustus Cæsar, 27 B.C.

ANTONY AND CLEOPATRA, one of the most wonderful of Shakespeare's historical plays, the materials for which he gathered from a translation of Plutarch's life of Marcus Antonius, (Mark Antony.)

ANTRIM. A mountainous county in the province of Ulster, Ireland, having an area of upwards of 1,100 square miles, and a population exceeding 460,000, still increasing. The Giant's Causeway lies on the north coast, and there is some picturesque scenery in the interior. The staple manufactures are the weaving of linen and cotton goods, to which in Belfast, the largest town, must be added ship-building and tobacco.

ANTWERP, on the Scheldt, is the principal port of Belgium. In 1905 a scheme was adopted for extending the present shipping accommodation fourfold, at a cost of £10,000,000. It is a great place for diamond-cutting. It was the birthplace of Peter Paul Rubens, and the beautiful Gothic Cathedral contains that artist's masterpiece, "*The Descent from the Cross*"; population about 287,000.

AOSTA, a town of Italy, in Piedmont, in the midst of beautiful scenery, was the birthplace of Anselm. It contains several Roman remains, including a triumphal arch, a round tower, and an amphitheatre.

APE, a term used to distinguish the anthropoid or man-like monkeys from other members of the tribe. The apes include the Orangoutang, the Chimpanzee, the Gibbon, and the Gorilla, all of which are distinguished by the absence of a tail and of cheek pouches, and by the great relative length of the fore limbs.

APEL'LES, a celebrated Greek painter who flourished in the fourth century, B.C., and painted many portraits of Alexander the Great. His great work, "*Aphrodite Anadyomene*," represented the goddess (Venus) rising out of the sea.

AP'ENNINES, a spur of the Maritime Alps, which forms the back-bone of Italy, running through the whole of the peninsula, and sending out many minor spurs at right angles to the main chain. Monte Corno, the summit of a mass known as the "Great Rock of Italy," 9,600 feet, is the highest peak.

APHA'SIA. See *Med. Dict.*

APH'IDES, (i-des), or plant-lice, a family of insects which feed on the juices of plants by means of suctorial mouths. They are marvellously prolific, and many species commit extensive depredations on garden and farm crops. The family includes the phylloxera, the pest of the vineyard, the hop-fly, the American blight of the apple orchard, the green fly of the rose tree, and the cochineal and lac insects. A solution of quassia chips is used to destroy them.

APHO'NIA. See *Med. Dict.*

APH'ORISM, a sentence which expresses briefly and forcibly some moral truth or rule of life, as "All the world's a stage." "They also serve who only stand and wait."

APHRODI'TE, the Greek name of Venus, the goddess of love and beauty. A poetical myth represents her as being born from the sea foam. As the queen of beauty, she received from Paris the award of the golden apple.

APIS, the bull worshipped by the ancient Egyptians as the embodiment of Osiris, the god of the Nile. The chosen animal, which was not allowed to live more than twenty-five years, must be black, have a white triangular mark on the forehead, the figure of an eagle on the back, and a knot in the form of a beetle under the tongue, requirements which led to frauds on the part of the priests.

APOC'ALYPSE, the last book of the New Testament; also called "The Revelation of St. John the Divine." The authorship is generally attributed to the apostle St. John.

APOCALYPTIC WRITINGS, THE, a branch of literature which began in the second century, B.C., consisting of visions and symbolical images intended to portray impending events, which would, it was fervently believed, bring about the realisation of "the hope of Israel,"—the coming of the mighty Deliverer, the long wished-for Messiah. The model for this kind of literature was the book of Daniel.

APOC'RYPHA, (literally "hidden"), books whose authorship was obscure, and whose authority was unreliable—for authority mostly depended on authorship. *The Apocrypha* is a collection of fourteen books, enumerated in Article VI. of the Articles of Religion, and there accepted for "example of life and instruction of manners," but not used to "establish any doctrine." These books were composed in Greek by Jews of Alexandria, during the two centuries before our era, and incorporated with the Septuagint (the Alexandrine translation of the Hebrew O.T. into Greek), as a kind of appendix to it: still the Jews did not receive the Apocrypha as canonical. But the early Christian Fathers, as they mostly used the Septuagint, came not to distinguish its Apocryphal from its Canonical books, both kinds of books being admitted into the Vulgate or Latin translation. St. Augustine's undiscriminating acceptance of them became stereotyped in the church, and the Council of Trent, in 1546, pronounced the Apocrypha part of the Canon, while most of the Reformers repudiated it, and the Church of England, as usual, steered a middle course in accordance with primitive authority.

APOLLINA'RIANS, a sect who accepted the teaching of Apollinarius, bishop of Laodicea, 362 to 382, who denied the humanity of Christ, and held that the *Logos*—word of God—in him took the place of the human soul, and that his body was not composed of ordinary flesh and blood. The teaching was condemned as heretical by various councils, including the ecumenical council at Constantinople, 381.

APOLLINARIS, when genuine, water from a spring near Nauenahr, 25 miles from Coblentz.

APOLLO, called also *Phœbus*, was the god of the fine arts, and is reputed to have originated music, poetry, and oratory. When a few days old he destroyed with an arrow the serpent Python. Sculptors represented him as a young and handsome man holding a bow from which an arrow has just been discharged.

APOLLO BELVEDERE, an ancient statue of Apollo, discovered in the ruins of Antium in 1503, and now in the Belvedere Gallery of the Vatican. The statue, which exceeds seven feet in height, is considered one of the finest pieces of sculpture extant.

APOLLYON, the Greek name of the Hebrew *Abaddon*, the angel of the bottomless pit. In the "Pilgrim's Progress." Christian has a terrible combat with him.

APOLOGETICS is that branch of theology which seeks to prove the doctrines of Christianity, and defends them against the attacks of scepticism, infidelity, and opposing systems of philosophy.

AP'OLOGUE, "a novel story contrived to teach some moral truth." (Johnson.) The term is synonymous with fable.

AP'OPHTHEGM, a kind of *aphorism* (which see), being a short, pithy saying so framed as to arrest the attention; e.g., "It is as natural to die as to be born." Bacon's Essays abound in apophthegms.

APOS'TATE, a term applied to a person who, for any reason, renounces his opinions and practices and adopts others of an opposite character. It was originally applied to those who changed their religion, either by conviction or from unworthy motives. The Emperor Julian is surnamed *the Apostate*, because, though educated as a Christian, he preferred Paganism. The term is now sometimes employed for a person who changes his political views.

"A POSTERIO'RI" REASONING consists in reasoning *back* from effects to cause, or from a number of observed facts to the natural law on which they depend. Thus from the facts observed in regard to the tides, it is inferred that they are due to the combined action of sun and moon, in which action the latter is the chief factor.

APOSTLE OF FREE TRADE. See *Cobden, Richard*.

APOSTLE OF TEMPERANCE. See *Matthew, Theobald*.

APOSTLES' CREED. See *Creed*.

APOSTOL'IC COUNCIL, THE, was held at Jerusalem in 52 A.D., under the presidency of James, to determine how far Christian Gentiles were under the obligation of observing the Mosaic Law. See *Acts* xv.

APOSTOL'IC FATHERS, THE, were those teachers in the early Christian church who received their instruction in the faith from the Apostles. Portions of the writings of six of these are extant, viz., Barnabas, Clement of Rome, Ignatius of Antioch, Polycarp of Smyrna, Papias of Hierapolis, and Hermas.

APOSTOL'IC SUCCESSION, the doctrine of the transmission of ministerial powers from Christ to the Apostles, and, through them, from bishop to bishop in unbroken succession.

APOS'TROPHE, (o-phe), "a turning away from." (1) An invocation by name, during the course of a speech or narrative, e.g., "God of Battles: was ever a battle like this in the world before!" (2) A comma used to mark the elision of part of a word, as in e'er for ever, or the possessive case, as in man's disobedience.

APOTHEO'SIS, Gr. "a deification," the raising of a mortal to the ranks of the gods. Greek mythology gives many instances of this, and, among the Romans, Romulus was deified, and Cæsar Augustus and many of his successors were worshipped as gods after their death.

APPALACHIAN MOUNTAINS, a system of mountain ranges in the east of the United States, extending from Alabama in a north-easterly direction to the St. Lawrence. Coal and iron abound in parts of the system. The chief ranges are the Alleghanies, highest peak, Mount Mitchell, 6,088 feet, and the Blue mountains.

APPARITIONS are appearances in bodily form contrary to the known laws of nature. Some forms of apparitions are the creation of the "heat-oppressed brain." Of this type are the visions seen by mad people and by those suffering from delirium. In these cases, and also in the case of persons of a highly strung, nervous, or hysterical temperament, the heated imagination reproduces past feelings and impressions so vividly as to shut out, wholly or partly, the impressions of surrounding objects, and to create illusions which take their place. Many reputable persons have made statements that they have received visits from dead relatives or friends. In such cases, the time at which the apparition is seen frequently coincides with the time of the death of the individual. A belief in such apparitions has gained ground in recent years, and in 1882 the Society for Psychical Research was founded to enquire into these and all kindred phenomena.

APPENDICI'TIS, an inflammation of the vermiform appendix. The appendix is a small blind attachment to the large intestine, at the point where the small intestine enters the large, on the right side of the abdomen. A few days before the date fixed for his coronation, it was found that Edward VII. was suffering from appendicitis. The king was operated on by Sir Frederick Treves, and was sufficiently recovered to go through the ceremony of his coronation on August 9th. [See *Med. Dict.*]

AP'PIAN WAY, the oldest and most celebrated Roman road, leads from Rome to Brindisi, a distance of 350 miles. The portion as far as Capua was laid down by Appius Claudius, B.C. 312. From the perfection of its construction, it has been named the "queen of roads."

APPLES are cultivated in most civilised countries of the temperate zones, and now form a valuable article of commerce. The fruit is imported into Great Britain in considerable quantities, from Canada, the United States, the Continent of Europe, and from Australia and Tasmania, and, inasmuch as the seasons are reversed in the northern and southern hemispheres, a supply may be obtained throughout the year.

APRICOT, a fruit of the plum tribe, resembling a peach in appearance and flavour, but slightly smaller in size. It grows wild in abundance in parts of northern Africa, and is cultivated in the warmer countries of the temperate zones. In England the crops are precarious, owing to frosts in the early spring, when the trees are in blossom.

APRIL (L. *aperire* "to open"), so called probably because it is the month when the buds open. The observance of 1st April as "All-fools' day" seems to be widely spread.

"A PRIO'RI" REASONING consists in arguing from some accepted truth that certain consequences will follow. Thus as soon as it was proved that tides were due to the combined attraction of sun and moon, it might have been inferred—*before* it was actually verified—that the highest tides would occur when sun and moon pulled in the same direction, namely, at the time of new moon.

APSE, a semi-circular recess which terminates the choir or chancel of many cathedrals and churches. It corresponds to a similar recess, in which sat the presiding magistrate in a Roman Basilica. The apse is more common in the churches of Italy, France, and Germany than in England, but examples are to be seen in the cathedrals of Canterbury, Rochester, Peterborough, and Norwich, and in Westminster Abbey.

APSLEY HOUSE, the town residence of the Duke of Wellington at Hyde Park Corner. It was presented, in 1820, to the Great Duke as part of the national reward for his services.

AP'TERYX, "wingless," a running bird of the same class as the ostrich, nocturnal in its habits, peculiar to New Zealand. Its wings are rudimentary, its feathers hair-like, loose, and pendent, and it is destitute of a tail. It lays an egg of extraordinary size compared with its own size. Four species are known, two in North Island and two in South Island.

AQUA FORTIS. See *Nitric Acid*.

AQUÆ SOLIS, (*L.* "Waters of the sun,") the Roman name of Bath, Somersetshire. Extensive remains of the Roman baths have been discovered in recent times, and great modern baths, supplied from warm natural springs, erected near the site.

AQUARIUM, any vessel in which either marine or fresh water animals and plants are kept alive. At first it was simply a domestic toy. In 1872 a large building was opened at Brighton, where the public were able to watch various kinds of fish kept alive in large tanks fitted with glass fronts. This building was acquired by the Municipal Council late in 1901, and is now well stocked with fish. The Westminster Aquarium, now demolished, was of the same type. In their latest development, aquaria have become places for the scientific study of water species, and for the observation of the habits of fish used for food, with a view to the improvement of sea fisheries. The oldest aquarium of this kind is at Naples. The station of the Marine Biological Society at Plymouth is conducted on similar lines.

AQUEDUCT, an artificial channel for conveying water for the supply of towns, or for purposes of irrigation. Aqueducts supplying Rome were carried across valleys on rows of arcades supporting the waterway, and through hills and rocks by means of tunnels. Remains of such structures are also seen in many places that formed part of the Roman Empire. In Great Britain, aqueducts are usually constructed of concrete and brickwork, or of iron pipes. Among the best known are those supplying Manchester from Thirlmere, Liverpool from the river Vyrnwy in North Wales, and Glasgow from Loch Katrine. Aqueducts constructed of wood are met with in America and are called *Flumes*.

AQUEOUS ROCKS are rocks, such as chalk and the various limestones, sandstones, and slates, which owe their origin to the action of water or ice. They are usually stratified, and many kinds abound in fossil remains.

AQUI'NAS, THOMAS, surnamed the "Angelic Doctor," *b.* near Aquino, in Italy, 1225, *d.* 1274; a celebrated writer and lecturer on theology. His greatest work, "Summa Theologiæ," is still a standard authority in the Roman Catholic Church.

AQUITAINE, an ancient province in the south of France, comprising the modern departments of Dordogne, Lot, Aveyron, and part of Tarn-et-Garonne. From the reign of Henry II. to 1453 it was a possession of the English kings.

ARABESQUE, a Moorish ornamental frieze or border, consisting of plant forms, figures, foliage, flowers, and tendrils, but no human shapes, interlacing often in a most fantastic manner. Fine specimens are seen in the Alhambra and other Moorish palaces of Spain, and in some of the Spanish cathedrals.

ARABI PASHA, *b.* in Lower Egypt, 1839, was the leader of an insurrectionary movement in Egypt, in 1881. He armed the forts at Alexandria. These were bombarded by the British fleet, and Arabi was defeated by Sir Garnet Wolseley at Tel-el-Kebir. He pleaded guilty of rebellion, and was banished for life to Ceylon, but was permitted to return to Egypt in 1901.

ARABIA, a compact peninsula in the south-west of Asia, washed by the Red Sea and the Persian Gulf. Much of the country is rainless; there are extensive deserts, stony in the north, sandy in the south; rivers and lakes are altogether wanting, the climate being hot and dry. The country produces frankincense, myrrh and gum-arabic. Many of the people are nomadic Bedouins, living in tents, and moving from one camping ground to another. The principal towns are:—*Mecca*, the birth-place of Mohammed; *Medina*, containing the prophet's tomb; *Muscat*, a busy seaport, and *Mocha*, once famous for its coffee.

ARABIAN NIGHTS' ENTERTAINMENT, or the "Thousand and one Nights," a collection of Eastern tales, first made known in Europe in 1704, and since translated into most of the languages of the continent. The tales are said to have been told in portions, to her lord, by the Sultana Sheherazade. They give a vivid picture of Arab and Persian life, manners, customs, and character.

ARABIAN SEA, an extensive portion of the Indian Ocean, enclosed on three sides by the coasts of India, Persia and Arabia, and Africa. From Aden in the west to Bombay in the east is 1800 miles.

ARABIC, the language of the Arabs, which has contributed to English the words coffee, tariff, algebra, almanac, alcohol, zero, talisman, etc.

ARACH'NE, a Lydian maiden whom Athena changed into a spider because she had challenged her ability to weave as artistic a piece of work as she was engaged upon.

AR'AGO, FRANCOIS, *b.* 1786, *d.* 1853. An eminent French mathematician, astronomer, and physicist, made important discoveries in electricity, magnetism, and optics. He refused to take the oath of allegiance to Louis Napoleon, but was permitted to retain his office of director of the Paris Observatory.

AR'AGON, a province in the north-east of Spain, having an area of nearly 15,000 miles. Minerals are plentiful, but few mines are worked. The mountains abound in timber, and the forests shelter the bear and the wolf. The industries are unimportant.

ARAL, SEA OF, i.e., "Sea of Islands." A salt water lake, rather larger than the Irish Sea, in Russian Turkestan. It receives the rivers Sir and Amoo, but there is no effluent. Nevertheless the lake is shallow and its waters are drying up.

ARAM, EUGENE. See *Eugene Aram.*

ARAMA'IC, the language of the Aramæans or Syrians which became the language of trade and diplomacy in the neighbouring countries, supplanting Assyrian in Assyria and Hebrew in Palestine, being the common dialect there in the time of our Lord.

ARARAT, MOUNT, an isolated volcanic cone in Armenia, rising to a height of nearly 17,000 feet. The only recorded eruption took place in 1840. According to tradition, the mountain was the resting-place of the ark, and it is still known to the Persians as "Noah's Mountain."

ARAUCARIA, a genus of coniferous trees found in various parts of the Southern Hemisphere. The family includes the Chile pine, or monkey-puzzle, the Brazil pine, and the Moreton Bay pine.

ARBALEST, a crossbow introduced into England probably by the Normans. It consisted of a steel bow set in a shaft of wood, and was provided with a trigger. The arrows used were square-headed, and were known as *quarrels.*

ARBELA, now Arbil, a small town of Asiatic Turkey, about 40 miles east by south of Mosul. Here was fought, B.C. 331, the decisive battle by which Alexander overthrew the Persian power, and won for himself and his successors the Empire of the East. Alexander's army consisted of about 50,000 Greeks, who routed about a million Persians, and took booty amounting, it is said, to thirty million pounds.

ARBITRAGE. See *Commercial Dictionary.*

ARBITRATION, INTERNATIONAL, the settlement of differences between independent countries by referring the matter in dispute to selected persons, who pronounce judgment after hearing the evidence tendered by both sides, it being understood that the award must be in accordance with international law. Many efforts have been made to establish permanent arbitration courts, and, in 1873, a motion was carried in the House of Commons, that the Powers should be urged to agree to such an arrangement. On the suggestion of the Czar a peace conference was held at the Hague, in 1899, to which nineteen states sent delegates, and an international tribunal, known as the "Hague Court," was agreed to. Each State signing the convention had the power of nominating four persons of eminence in international law, who were willing to serve as arbitrators. In October, 1903, the French Ambassador and Lord Lansdowne, the British Foreign Secretary, signed an agreement, that questions of a judicial character, or relating to the interpretation of treaties, arising beween Great Britain and France, should be referred to the Hague Court. That tribunal met on November 13th, 1903, to consider matters in dispute between Venezuela on the one hand and England and other European powers on the other. There is a growing tendency in favour of referring international disputes to arbitration, as is shown by the fact that, during the three years ending 1903, more than fifty cases were so referred.

ARBLAY, MADAME D', *b.* at Lynn Regis, in Norfolk, 1752, *d.* at Bath, 1840. An English novelist, the writer of Evelina, Cecilia, Camilla, the Wanderer, and the Memoirs of her Father, Dr. Burney. Her husband, Count d'Arblay, was a French *émigré.*

ARBOR DAY, a day first set apart in Nebraska, U.S.A., in 1872, for tree-planting by school children to encourage the growth of trees in certain districts. The usage has now spread all over the States and Canada, though the same day is not adhered to by all. In 1886 Arbor Day was established in South Australia, and is now generally observed.

ARBOR VITÆ, (*L.* "Tree of Life") a genus of evergreen conifers allied to the cypress, natives of North America and Eastern Asia. The common arbor vitæ is frequently seen in our ornamental shrubberies.

ARBROATH or **ABERBROTHOCK,** i.e., Mouth of the Brothock, is a thriving manufacturing town and seaport in Forfarshire, Scotland. Twelve miles off the coast is the Bell Lighthouse, built on the Inchcape Rock.

ARBUTHNOT, JOHN, *b.* in Scotland, 1667, *d.* 1735; was one of the noted wits of Queen Anne's reign. Having gained his M.D. degree in his native country, he came to London, and soon gained notice both for his literary and scientific ability, and became physician to Queen Anne. Many of his humorous works were published anonymously, but he is, undoubtedly, the author of "Memoir of Martinus Scriblerus" and the "History of John Bull," as well as of some able scientific treatises.

ARCADIA, a tableland and mountainous district forming the heart of the Peloponnesus, and now called Tripolitza. The Arcadians were celebrated among the Greeks for simplicity of character, and are represented by the poets as leading an ideal, pastoral life, so that *Arcadian simplicity* has passed into a proverb. (2) A pastoral romance by Sir Philip Sidney.

ARC DE TRIOMPHE DE L'ETOILE, a splendid triumphal arch standing in the centre of the Place de l'Etoile, Paris. It is dedicated to the glories of the French army, and is adorned by sculptures representing battle scenes and personages connected with French military history.

ARCHÆOL'OGY, the systematic study of antiquities, and the weaving of the earliest history of nations and peoples from the remains of buildings, burial places, implements, utensils, and ornaments belonging to periods of which we have few or no written records.

ARCHÆOPTERYX is the most primitive bird known. It is found fossilised in the Solenhofen slates. Resembling a bird in the possession of feathers and in its general structure, it resembles a reptile in the possession of teeth and of a long bony tail. It is thought that birds are descended from reptiles, and that this species is a connecting link [Refer to *Birds* and *Icthyornis*].

ARCHANGEL, the oldest port in Russia, stands on the right bank of the river Dwina, forty miles from its entry into the White Sea, and is the capital of the largest province in European Russia.

ARCHBISHOP, a metropolitan or chief bishop. There are two archbishops of the established church in England. The Archbishop of Canterbury is styled the *Primate of all England.* He is the first peer of the realm, and has the power of conferring all the degrees that may be granted by a British University. The Archbishop of York is styled *Primate of England.*

ARCHDEACON. Refer to *Index.*

ARCHER, FRED, *b.* 1857, *d.* 1886; a celebrated jockey. He won his first Derby in 1877, and held the foremost place on the race-course for ten years. He committed suicide during an attack of fever.

ARCHERY, the art of shooting with bow and arrow. The practice of archery may be traced to remotest times. Ishmael, the son of Abraham by Hagar, became an archer (Gen. xxi. 20.). Homer makes frequent mention of the use of the bow among the ancient Greeks. The Swiss were famous bowmen, and the English victories of Crecy, Poictiers, and Agincourt, and successes against the Scots were credited to the superiority of her archers. Archery continued as a fashionable amusement in England and Scotland, after the bow ceased to be used as a war weapon.

ARCHES, COURT OF. See *Court of Arches.*

ARCHIME'DES, *b.* at Syracuse, 287, *d.* 212, B.C., the greatest mathematician of antiquity. Several of his works are extant. More than forty mechanical inventions have been attributed to him, including the endless screw and the spiral pump. He discovered the principle that a body immersed in a liquid loses in weight as much as the weight of the liquid displaced.

ARCHIPELAGO, GREEK, the islands lying in the Ægean Sea, between the shores of Greece and Asia Minor. There are two groups, the *Cyclades*, the largest of which is Naxos, which yields marble and emery powder; and the Sporades, the most famous of which is Rhodes, though Mitylene is the largest.

ARCHIPELAGO, INDIAN OR MALAY, the largest group of islands in the world, stretching between the south-east of Asia and Australia, includes Borneo, Sumatra, Celebes, Java, New Guinea, and the Philippines. The tropical heat is modified by sea breezes. The islands are, for the most part, very fertile; spices, sugar, coffee, rice, and tobacco are cultivated, and the cocoanut, banana, bamboo, and sago palm are the best known trees. The whole district displays great volcanic activity. The inhabitants are chiefly Malays.

ARCHITECTURE. Refer to *Index*.

ARCHIVES, a place where public documents are kept, or the documents themselves that are kept there. The great repository of public documents in England is the Public Record Office in Fetter Lane, London. Here can be seen Domesday Book; Pipe Rolls, giving the revenue and expenditure of the kingdom from Henry II. onwards; Patent Rolls, an account of all royal grants, whether of office, land, or favour, from John's time; and other valuable historical matter.

ARCOT. (1) A district in the Madras Presidency, India, having an area of 12,000 square miles. (2) The former capital of the Carnatic, 65 miles south-west of Madras, was captured by Clive and brilliantly defended by him, 1751. It was afterwards occupied by the French, and was retaken by the British under Colonel Coote, 1760.

ARCTIC CIRCLE, THE, an imaginary circle drawn round the earth, at a distance of 23½ degrees from the North Pole. When the sun is vertical to the Tropic of Capricorn its rays cannot reach beyond this line, and all that part of the world between it and the pole is in darkness.

ARCTIC EXPLORERS. Refer to *Index*.

ARCTIC OCEAN, THE, lies round the North Pole, between the continents of Europe, Asia, and North America, and has an area of about 5½ million square miles. It is connected with the Atlantic by a broad expanse of water to the east of Greenland, and to the Pacific by Behring's Strait. The ocean contains numerous islands, the largest of which is Greenland. On the western shores of this island many glaciers reach down to the sea, the ends are broken off by the action of the waves, and form icebergs. The whole ocean is covered by ice-fields, a great part of which drifts about in the summer. There is abundance of animal life. Polar bears, Arctic foxes, the ermine, musk-oxen, reindeer, whales, and walruses are found, and flocks of birds make it their summer resort.

ARDEN, one of the largest of the ancient British forests, is said to have extended from the Avon to the Trent, and westward to the Severn. The name is still applied to the best-wooded portion of Warwickshire.

ARDENNES, FOREST OF, an extensive tract of hilly and well-wooded land extending over a large portion of the south west of Belgium and the north-east of France, and intersected by numerous valleys and deep narrow gorges.

AREOPAGITICA, one of the finest of Milton's prose works, appeared in 1644, and was aimed against the appointment of a censor of literature. Its scope is indicated in the sub-title, "A speech for the liberty of unlicensed printing."

AREOP'AGUS. (1) The Hill of Ares, the Mars Hill of the New Testament, a rocky eminence at Athens, separated from the Acropolis by a narrow valley. (2) The Upper Council of the Ancient Greeks, which held its meetings on the hill.

A'RES, the Greek god of battle, loved fighting for fighting's sake, identified with Mars by the Romans. He is frequently mentioned in the Iliad, but not often in other Greek poetry.

ARETHUSA, in classical mythology, a nymph of Artemis (Diana), whom her mistress changed into a fountain to enable her to escape the pursuit of the river-god Alpheus. The island of Ortygia, near Syracuse, has a famous fountain which bears her name.

ARGAND, AIME', *b.* at Geneva, 1755, *d.* 1803, a Swiss physician and chemist. His great invention, the Argand lamp, provided for a steady supply of oil to the wick, and for complete combustion, by the use of a circular wick and a chimney glass, thus causing a current of air to ascend through and around the flame.

ARGENTINE REPUBLIC, or **ARGENTINA,** a federal republic in the south of South America, extending from the Andes eastward to the Atlantic, having an area of 1,117,000 square miles, and a population exceeding 4½ millions, including a large number of European immigrants, chiefly Italians. The Pampas cover a large proportion of the country. The chief industry is the rearing of sheep and cattle, but in three provinces colonists have introduced wheat cultivation with great success, and an increasing quantity is finding a market in England. The exports are wool, skins, hides, corn, beef and mutton. The chief towns are *Buenos Ayres*, the capital, population 895,000, on the river Plate; *Cordova*, the second city, and *Rosario*, a rising port on the Parana, in regular communication with Europe.

ARGON, a clear, colourless, transparent gas, announced to the British Association by Lord Rayleigh and Professor Ramsay, in 1894, as a newly discovered constituent of the air. It has since been found in the mineral clevite, and the gas arising from the mineral springs of Wildbad and Carterets. Argon closely resembles nitrogen in its inertness and other properties. Berthelot, a French chemist, has succeeded in making the gas combine with the elements of benzene, and it has been liquefied by Professor Olszewsky, of Cracow.

AR'GONAUTS, ancient heroes who sailed with Jason in the "Argo" to Colchis, to recover the "Golden Fleece," which was guarded by a sleepless dragon. The venture proved successful through the help of Medea, the king's daughter, who became the wife of Jason.

ARGOS, the capital of Argolis, is considered the most ancient city of Greece. The city played an important part in the early history of the country, and still possesses architectural remains of great interest to archæologists.

ARGUS. (1) A fabulous monster surnamed the "All-seeing." He possessed a hundred eyes, of which only fifty slept at a time. He was killed by Hermes, who lulled his eyes to sleep, one by one, by playing on the shepherd's pipe. Hera, who had set him to keep guard over Io, transferred his eyes to the tail of her favourite bird, the peacock. (2) The dog of Ulysses, the only creature who recognised his master on his return from twenty years of wandering.

ARGYLL, (George Douglas Campbell,) **DUKE OF,** *b.* 1823, *d.* 1900, scientist, author, and statesman; had a leading part in the government of the country during the middle of last century. From about 1850 to 1881 he held office in all Liberal administrations, severing himself from his party in the latter year over the Irish Land Bill. His scientific and political writings include "The Reign of Law," "The Unity of Nature," and "The Philosophy of Belief."

ARGYLL, MARQUIS OF. (1) ARCHIBALD CAMPBELL, *b.* 1598, tried to combine loyalty to Charles I. with strong opposition to his treatment of the Scots in religious matters. He openly supported the Covenanters and became their political head. In the Civil War he fought on the side of the king, was defeated by Montrose at Inverlochy, 1645, crowned Charles II. at Scone, 1651, opposed Cromwell in Scotland, and refused submission to him as Protector. In spite of all this, on the restoration, he was tried by the Scottish parliament for treason, and executed at Edinburgh, 1661. (2) ARCHIBALD, son of the above, fought against Cromwell at Dunbar, and continued in arms after the battle of Worcester. His father's titles and estates were restored to him in 1663. He offended the Duke of York by accepting the Test Act with a reservation, was indicted for treason and condemned to death, but escaped in disguise. He co-operated with Monmouth in his rebellion against James II., invaded Scotland, and was captured and beheaded, 1685.

ARGYLL or **ARGYLE,** a Scottish county characterised by its mountains, moors, islands, and deeply penetrating arms of the sea; area upwards of 3,100 square miles, population, 73,642. The chief towns are *Inverary*, the county town, and *Oban*, the terminus of the West Highland Railway, and a great tourist centre. *Glencoe*, the scene of the massacre of the Macdonalds in 1692, is in the north-east of the county.

ARIAD'NE, daughter of Minos, king of Crete. She gave Theseus a clue by means of which he escaped from the labyrinth, and killed the minotaur. She was afterwards deserted by Theseus at Naxos, where, according to one tradition, Bacchus married her, and, on her death, placed her among the gods, and hung her wedding wreath in the sky as a constellation of seven stars.

ARIANS, the followers of Arius, a presbyter of Alexandria, in the fourth century, who denied that our Lord was co-equal or co-eternal with God the Father, but only the first and highest of finite beings. The teaching was condemned as heretical by a Synod which met at Alexandria, 321, and by a general council at Nice, 325.

A'RIES, "the Ram," the sign of the Zodiac which the sun enters at the spring equinox, and the first 30° of the ecliptic measured from the point of entrance. This point varies from year to year owing to the precession of the equinoxes, and moves about 50" westward annually. For this reason the *Constellation of Aries* is not now within the limits of the sign, and nearly 24,000 years will elapse before the two once more coincide.

ARIOS'TO, LUDOVICO, *b.* at Reggio, Lombardy, 1474, *d.* 1532, one of the greatest of Italian poets, spent most of his life at Ferrara. His great work, "Orlando Furioso," is a romantic epic

which describes the loss of reason by the hero, on account of the marriage of Angelica with another. Ariosto also wrote several comedies and satires, sonnets, and other poems.

ARISTI'DES THE JUST, a famous Athenian statesman and general, who received his surname from the manner in which he discharged the duties of his office as one of the chief magistrates of the city. Owing to the influence of Themistocles he was banished by ostracism, and remained in exile ten years. He was recalled three years after the invasion of Xerxes, and fought at Salamis and again at Platæa. He died in poverty, 468 B.C., and was buried at the public expense, his children becoming a charge on the bounty of the state.

ARISTOC'RACY, "the government by the best" or most worthy. The term was originally applied to a government in which the power was in the hands of a minority consisting only of the highest class in wealth, birth, and culture; in this sense the Italian states of the Middle Ages were aristocracies. In English, the word has lost its political signification, and is applied to the nobility and wealthy, or, in a more restricted sense to the titled alone.

ARISTOPH'ANES, (an-es), *b.* at Athens 444, *d.* 384 B.C., the greatest of the Greek comic dramatists. In his works he ridiculed all reforms. He wrote sixty-four plays, eleven of which are extant. In "The Wasps" he attacked the popular courts of justice; "The Clouds" was aimed at Socrates, "The Acharnians" and "The Frogs" at Euripides, and in "The Knights" he held Cleon the Tanner up to ridicule.

ARISTOTLE, *b.* at Stagira in Thrace, 385, *d.* 322 B.C., the founder of the Peripatetic School of Philosophy at Athens. He was the pupil of Plato, and became the tutor of Alexander the Great. His writings were numerous, and included works on logic, physics, natural history, psychology, and language.

ARIUS. See *Arians.*

ARK OF THE COVENANT, a chest of shittim wood overlaid with pure gold, in which were preserved the tables of stone on which the commandments were inscribed, Aaron's rod, and a pot of manna. On the lid, called the "mercy seat," were two figures of angels, with outstretched wings, between which appeared a bright light called the *Shechinah*, regarded as the symbol of the divine presence. Its ultimate fate is unknown.

ARKWRIGHT, SIR RICHARD, *b.* at Preston, 1732, *d.* 1792, was apprenticed to a barber, but took great interest in the machinery used in the cotton manufacture. He invented the spinning frame, and made other improvements in the processes of carding and spinning. With the help of two wealthy partners he established mills at Nottingham and at Cromford in Derbyshire, and amassed a large fortune. He was knighted by George III. in 1786.

ARMA'DA, THE INVINCIBLE, the fleet fitted out by Philip II. of Spain for the invasion of England, in 1588. It consisted of 130 ships mounting 2,430 guns, and carried 20,000 soldiers. The English fleet under Howard, Drake, Hawkins, and Frobisher permitted the Spaniards to pass up the Channel, maintained a running fight with the hindmost, and cut off all stragglers. When the Armada anchored in Calais Roads, fire ships were sent in amongst them, which threw them into confusion; many ships were wrecked in consequence, and a storm completed the defeat. Other ships were lost in an attempt to retreat round the north of Scotland, and, of the whole fleet, only 53 damaged vessels returned to Spain.

ARMADILLO, a family of *edentata*, ("without teeth";) though not truly toothless, peculiar to S. America. They dig burrows for dwellings, feed on vegetables, insects, worms, small snakes, and carrion, and are nocturnal in their habits. The body is protected by plates of bony armour developed in the skin. Six genera are known to naturalists.

ARMAGEDDON, the name given in the Revelation of St. John to the final battlefield between Christ and Antichrist.

ARMAGH, the county town of Armagh, in Ulster, was the capital of Ireland from the fifth to the ninth century, and is still the ecclesiastical capital. Its cathedral is said to have been founded by St. Patrick, 445.

ARMENIA, an extensive district south of the Caucasus, and the Black Sea, now divided among Persia, Russia, and Turkey, the territories of the three empires meeting at Mount Ararat. The Armenians, many of whom have emigrated, are chiefly engaged in banking and commercial pursuits. Turkish Armenia has in recent years, 1893–96, been the scene of terrible massacres, the victims being Christian Armenians, who suffered at the hands of Turkish Mohammedans. The Turkish troops, sent avowedly to restore order, also massacred the poor Christians unmercifully, acting under secret orders from "The Great Assassin," Abdul Hamid II., Sultan of Turkey. More than 20,000 are said to have perished in these massacres.

ARMINIANS, an anti-Calvinistic sect, the followers of Jacobus Arminius, professor of divinity in the University of Leyden, 1603–9.

ARMITAGE, EDWARD, *b.* 1817, *d.* 1896; historical painter; was educated chiefly abroad, and commenced his career as a painter in Paris. He had great success in the competitions for cartoons and frescoes for the New Houses of Parliament in 1843, and subsequent years. He was also very successful with military pictures and Scriptural subjects. "Samson." "Hagar." and various Crimean scenes show his powers best.

ARMORIAL BEARINGS. In ancient days, when knights in battle were completely encased in armour, it was necessary to have some distinctive mark by which each should be known. This was usually painted on the shield and surcoat of the possessor, and at first belonged to him only individually, but became hereditary in course of time. So, too, the custom grew up of having some such distinguishing mark for the flag or banner of a country, province, borough, etc. These latter are *public* armorial bearings, or coats of arms, as distinguished from those of a family, the *private* coat of arms.

ARMOUR, a name given to any form of dress worn to protect the wearer against the attacks of an enemy. Among uncivilised tribes the materials used were chiefly leather and skins, but highly civilised nations adopted brass, iron, or steel for the purpose. The Britons seem to have used only the shield, while the full Roman armour consisted of helmet, shield, coat-of-mail, and greaves. The armour of the Anglo-Saxons and the Danes was of a light nature. The Normans made use of ring and tegulated armour, the latter consisting of small overlapping plates. Great improvements were introduced by the later Plantagenets, and in the reign of Edward II. mixed armour of plates and rings was common. Chain armour fell into disuse in the fifteenth century, being superseded by plate armour, which reached the highest state of perfection in England in the reign of Richard III. The use of armour began to decline soon after the accession of James I., and at the time of the death of Cromwell only a helmet and cuirass were worn. The Tower of London contains a fine collection of arms and armour illustrating progress from a very early date.

The modern battle ship is covered with plates of solid armour. At first these were made of iron, but improvements in guns rendered iron plates useless, and plates of steel, or of iron faced with steel, were introduced.

ARMOURER. (1) An armour smith, or a maker and repairer of armour. (2) In the army, a man attached to each regiment whose duty it is to repair the arms. (3) In the navy the ship's armourer is a petty officer who, under the gunner, has charge of the small arms, and is responsible for their being kept ready for use.

ARMSTRONG, (William George), **BARON,** *b.* at Newcastle-on-Tyne, 1810, *d.* 1900, practised as a solicitor, and devoted his leisure to mechanical subjects. He invented the hydraulic accumulator, the hydraulic crane, and the hydro-electrical machine. He was one of the first in England to achieve success with breech loading guns, and is best known as the inventor of the Armstrong gun. It was composed of bars of wrought-iron, raised to a white heat, twisted spirally round a steel core, and welded together. The barrel was rifled, and the projectile conical in shape. The improvements on the older type consisted in the decreased weight of the gun and charge, and increased range and accuracy of fire. The weapon was adopted by the British government in 1857. The inventor was knighted in 1858 and raised to the peerage in 1887.

ARNE, THOMAS AUGUSTINE, *b.* in London, 1719, *d.* 1778. A composer of songs, sonatas, operas, and two oratorios. The national air, "Rule Britannia," was originally one of the numbers in a popular work composed by him, called the *Masque of Alfred.*

AR'NICA. See *Med. Dict.*

ARNO, an Italian river, rises in the Apennines, and flows westward past Florence and Pisa, through a fertile and well cultivated valley, into the Gulf of Genoa. Its length is 150 miles.

ARNOLD, BENEDICT, *b.* at Norwich, Connecticut, 1740, *d.* in London, 1801, was a general in the army of the Colonists during the American War of Independence. He distinguished himself in several of the earlier engagements, and was placed by Washington in command of the important post of West Point. Piqued by charges that had been brought against him, he entered into negotiations with General Clinton for the surrender of his post with all its military stores. On the capture of Major André, who acted as Clinton's messenger, Arnold fled to the English lines, and afterwards served against the Americans.

ARNOLD, DR. THOMAS, *b.* at Cowes, 1795, *d.* 1842, was a famous headmaster of Rugby school, 1828–42. He introduced many reforms. While retaining the classics as the basis of the education given, he greatly extended the curriculum, and introduced a high moral and religious tone, insisting that the school must be "a school of Christian gentlemen." The year before his death he was appointed professor of modern history at Oxford. His published works include an edition of Thucydides, and five volumes of sermons; his great work, a "*History of Rome,*" was unfinished at his death.

ARNOLD, MATTHEW, *b.* at Laleham, near Staines, 1822, *d.* suddenly at Liverpool, 1888, the eldest son of Dr. Thomas Arnold, was an eminent poet, essayist, and

critic, who has been called the "Apostle of sweetness and light." In addition to his poems, his published works include: "*Essays on Criticism*," "*Culture and Anarchy*," "*St. Paul and Protestantism*," "*Friendship's Garland*," and "*Literature and Dogma*."

ARNOLD OF WINKELRIED. See *Winkelried*.

ARNOLD, SIR EDWIN, *b.* at Gravesend, 1832, *d.* 1904. Poet, oriental scholar, and journalist; for forty years on the editorial staff of the *Daily Telegraph*. His principal poem is the "Light of Asia."

ARNOTT, NEIL, *b.* at Arbroath, 1788. *d.* 1874; was educated at Aberdeen Grammar School and Marischal College. Having chosen medicine as a profession and science as a study, he came to London and soon gained fame as a doctor and scientist. His works on Natural Science were widely read, and his practical inventions numerous. The water-bed, the Arnott stove, and the Arnott ventilator were all distinct advances on existing contrivances. Many honours were awarded him: the medal of the Royal Society, a gold medal at the Paris Exhibition, and the cross of the Legion of Honour.

AROMAT'ICS are products of the vegetable kingdom which have a spicy smell, due to a volatile oil, and usually a warm pungent taste. They assist digestion by increasing the flow of the digestive juices, and by quickening the muscular action of the intestines. They also improve the circulation, and act as nerve stimulants. Their use is more necessary in warm climates than in cold; hence the free use made of curry and similar preparations by Europeans residing in the Tropics. The principal aromatics are calamus, ginger, cinnamon, nutmegs, pepper, pimento, cloves, and vanilla.

AR'QUEBUS or **HARQUEBUS,** the first form of hand gun that possessed a contrivance for conveying the match to the touch hole. In the earlier forms of hand guns the match was applied by hand, The arquebus was fired from the chest, so that it was difficult to bring the eye low enough to take proper aim. It was a common weapon in the English army in the time of Richard III.

ARRACK, RACK, or **RAKI,** names common in the East for a strong spirit distilled from rice, the unexpanded flowers of the cocoa-nut and other palms, or from molasses. Great quantities are produced in Ceylon and Java, and it is largely consumed in India and throughout the East generally. In Ceylon, the flowers of the cocoa-nut palm are bruised by blows from a small mallet twice every day for a week, are then cut, and the sweet juice which exudes, and which is known as "toddy," is collected and allowed to ferment, after which the toddy is distilled in copper or earthenware vessels.

ARRAN, "lofty isle," is the largest island in the Firth of Clyde, and forms with Bute a Scotch county. Its area is 165 square miles; its chief height, Goat Fell, 3,000 feet. There are many Druidical and Danish remains, and the island, which is a popular summer resort, possesses interesting features for the geologist and the botanist.

ARROWROOT, a kind of starch extracted from the root-stocks of a plant native to South America, but now cultivated both in the West and East Indies, and in Queensland. It forms a valuable article of diet, particularly for children and invalids, but its nutritive properties are not high. The substance is said to have been so named because it was used by the Indians of South America as an antidote to the poison of poisoned arrows.

ARSENAL, an establishment for the manufacture and storage of munitions of war. The factories of Armstrong and Whitworth in England, and of Krupp in Rhenish Prussia, have a world-wide reputation. Guns and explosives are stored at all the British Royal Dockyards. The government small arm factory is at Enfield; explosives are manufactured at Waltham Abbey; but the great arsenal is at Woolwich. This establishment covers more than 330 acres, and includes gun factories, a laboratory for the manufacture of shells, fuses, cartridges, rockets, torpedoes, etc., and a carriage department.

ARSENIC, is a brittle, steel-grey substance closely resembling the metals in many of its characteristics, and capable of forming alloys with them. It is found in the free state in nature, but is usually combined with sulphur, or with the metals, or with both. The chief ores are arsenical iron, tin white cobalt, arsenical pyrites, and white mundic. It is present in small quantities in most samples of iron-pyrites, and occurs in the smoke from coal fires, being derived from the pyrites in the coal. During the prevalence of fogs in large towns, there is an appreciable quantity of arsenic present in the atmosphere. The addition of a small quantity of arsenic to lead renders the melted metal more fluid, and, on solidifying, the alloy is considerably harder than pure lead. On account of these properties the alloy is used in the manufacture of shot. For arsenic in beer, see "Beer" in *Med. Dict.*

ARSON, the act of wilfully and maliciously setting fire to any building. The punishment is imprisonment not exceeding two years, or penal servitude for from three years to a life sentence.

AR'TEMIS, the goddess of the moon, was, according to Greek mythology, the twin sister of Apollo. The Greek artists represented her as a huntress armed with bow and quiver. The Romans identified her with Diana.

ARTEMUS WARD, the pseudonym of Charles Farrar Browne (which see).

ARTESIAN WELLS, so named from Artois, a French province where they were first extensively used, are borings made by means of boring rods, through the various strata of the earth, until a supply of water is reached, the source of which is at a higher level than that of the mouth of the boring. Their action is due to the principle that water seeks to find its own level. The fountains in Trafalgar Square are supplied by a boring which penetrates the chalk of the London Basin at a depth of 400 feet. The water supply of some of the London breweries is derived from a similar source. The French have made use of the system to obtain a supply of water for the arid districts of their colony of Algeria, and the same principle has been applied in the districts of Queensland, lying to the west of the Great Dividing Range.

ARTHUR, a chief of the British tribe, Silures, flourished in the sixth century, and fought many battles against the Saxons. He was mortally wounded at the battle of Camlan, in Cornwall, 542, in repressing a revolt raised by his nephew Modred. He is the hero of many romantic legends, the most famous of which were woven by Tennyson into the "Idylls of the King."

ARTHUR, DUKE OF CONNAUGHT, third son of Queen Victoria, was born in 1850. He passed through the Woolwich Military Academy, and joined the Rifle Brigade in 1869. He received an allowance of £15,000 a year from Parliament on attaining his majority in 1871, and £10,000 a year more on marrying in 1879 Princess Louise Margaret of Prussia. In 1882 he commanded the Guards in the Egyptian Expedition, and was present at the Battle of Tel-el-kebir. Since then he has done good work in India as commander of the Bombay army, and at home as Commander-in-Chief at Aldershot, and in Ireland.

ARTHUR'S SEAT, a hill rising to a height of 822 feet, close to Edinburgh. The view from the summit is extensive, varied, and beautiful.

ARTICLES, THE THIRTY-NINE. Contain what the Church of England considers the leading Christian doctrines as taught in Holy Scripture, together with a condemnation of what she considers the principal errors of the Roman Catholic Church, and of certain Protestant sects. All candidates for ordination in the Church of England are required to subscribe to these Articles.

ARTILLERY, heavy guns of all kinds, together with the machinery and stores connected with them; also that branch of the army whose duty it is to serve the heavy guns. The most powerful British gun at present is the 12-inch naval gun, in the construction of which 122 miles of wire ribbon is used to give it strength and elasticity. It can throw its projectile, weighing 850 pounds, nearly 20 miles, or cause it to penetrate 32 inches of iron at 2,000 yards. The lightest gun in use is the "pom-pom," which throws a one-pound shell.

The garrison artillery is employed to man the various fortresses for coast defence, and to work guns of heavy calibre used in sieges. Horse artillery and field artillery accompany the cavalry and infantry into the field, and prepare the way for their advance or cover their retreat. They are divided into batteries, each armed with 6 twelve or fifteen-pounders. The great desiderata in the construction of these guns have been lightness combined with strength; but the use of the naval 4·7 guns, firing a shell weighing 45 pounds, and having an effective range of 12,000 yards, and the mobility of the Boer heavy pieces, pointed to the need of other qualities, and this branch of the service is being rearmed with improved quick-firing guns, of greater range, and fitted with non-recoiling telescopic sights.

AR'UNDEL, a small town in Sussex, four miles from the mouth of the Arun. The castle is the residence of the Duke of Norfolk.

ARUWI'MI, a tributary of the Congo, joins the main stream below the Stanley Falls.

ARYAN, synonymous with Indo-European, a name used to designate one of the main divisions of the human family, and the languages spoken by the different peoples of which it is composed. The home of the race is thought to have been in Central Asia, east of the Caspian, and north of the Hindu Kush. Branches of the family spread westward into Europe, and southward into Persia and the Ganges valley, and gave rise to the Greek, Latin, Celtic, Teutonic, Slavonic, Persian, and Hindu races. Their origin from a common stock is attested by scholars from a comparative study of their respective languages.

AS, the Roman *libra*, corresponding in weight to an English pound. The name came to be applied to a Roman coin weighing about half an ounce.

ASAFŒTIDA. See *Med. Dict.*

ASBES'TOS, "unconsumable," a mineral substance usually of a fibrous texture. From it the ancients prepared a cloth in which they enshrouded the dead before placing them upon the funeral pyre. It was also used as a wick for their temple lamps. It is now employed in gas fires, as a covering and packing for steam pipes

and boilers, and in the preparation of paints used for rendering wood-work fire-proof. It is largely imported from Italy, Canada, and Australia.

AS'CALON, a coast town of Palestine, 40 miles S.W. of Jerusalem, now in ruins, was the birth-place of Herod the Great. It was a stronghold of the Crusaders, and on the plains a great battle was fought between them and the Saracens.

ASCENSION ISLAND, a mass of volcanic rock rising to a height of nearly 3,000 feet, and having an area of 35 square miles. It lies in the Atlantic, 900 miles off the coast of Africa, and on the steamer route between England and the Cape. It was acquired by the British in 1815, and is used as a coaling and victualling station for the navy.

ASCET'ICISM, a word used by the ancient Greeks to describe the special training by abstinence and exercise undergone by athletes. The word was subsequently applied to the practice of self-denial, abstinence from sensual enjoyments, and the habit of severe virtue that characterised the Pythagorean and Stoic philosophers. The practice passed to the early Christians, and in the second century the belief was common, that special happiness hereafter was to be obtained by celibacy, penance, fasting, and continual prayer. This idea gave rise to the various forms of Monasticism. That Asceticism still has a deep hold on those who endeavour to attain to a lofty ideal of religion, is seen in the rigorous simplicity of life practised by the Puritans, Quakers, and early Methodists.

ASCHAM, ROGER, *b.* near Northallerton, 1515, *d.* 1568, a great classical scholar, who became the tutor, and afterwards the Latin secretary of Queen Elizabeth. His reputation rests chiefly on a treatise on Education, "The Schoolmaster," which, according to Dr. Johnson, "contains, perhaps, the best advice that was ever given for the study of language."

ASCOT, a celebrated race-course, in Berkshire, 6 miles S.W. of Windsor.

ASEPSIS. See *Med. Dict.*

ASH, a deciduous tree belonging to the same natural order as the lilac, is common in England, and is highly valued on account of the rapidity of its growth and the usefulness of its timber. The wood is white, tough, and hard, and is much used by the wheel-wright, coach builder, joiner, and cabinet maker. Cultivation has produced many varieties of the tree, including the *weeping ash*, in which the branches grow downward and produce a natural arbour. The *mountain ash* is not a true ash, but is a member of the rose family.

ASHAN'TI, an extensive district in West Africa lying to the north of the Gold Coast. The country is well watered and extremely fertile, the greater part being covered with forests and dense bush. The climate is unhealthy to Europeans. Palm oil and rubber are exported, and gold is worked in many parts. The Ashantis are cruel, warlike, and ferocious, and human sacrifices were frequent when the country existed as a negro monarchy. Sir Garnet Wolseley led an expedition against the Ashantis in 1874, and captured and burnt Kumasi, the capital. A second expedition was necessary in 1895, after which a British governor was appointed, and the territory was attached to the Gold Coast Colony. The Ashantis besieged the governor in Kumasi in April, 1900. He succeeded in leaving the city in June, and the small British garrison was finally relieved in July.

ASHBURTON TREATY, THE, named after the special ambassador who concluded it, August, 1842. The treaty settled the boundary between the state of Maine and Canada; the United States acquired a strip of territory, and the English secured a better military frontier. Provisions were also made for putting an end to the African slave trade, and for the mutual extradition of suspected criminals.

ASHBY-DE-LA-ZOUCH, a market town in Leicestershire, contains medicinal springs, the waters of which are recommended in cases of scrofula and rheumatism. The ruins of Ashby Castle, where Mary Queen of Scots was a prisoner, lie to the south of the town. Coal and iron are found in the immediate neighbourhood.

ASHDOWN, a place in Berkshire, where Alfred and his brother King Ethelred defeated the Danes, 871.

ASHE'RA, a wooden image or symbol of the goddess *Ashtoreth* (which see).

ASHLAR, a term in masonry applied to squared stones used in building, both to those roughly squared before leaving the quarry, and to those prepared by expert workmen for facing walls.

ASHLEY COOPER. See *Shaftesbury.*

ASHMOLE, ELIAS, *b.* at Lichfield, 1617, *d.* 1692. A celebrated antiquary, authority on heraldry, and writer of works on astrology. In 1679 he presented to the University of Oxford a collection of curiosities that had been bequeathed to him, on condition that a building should be erected to receive them. The collection formed the nucleus of the treasures of the Ashmolean Museum, the building of which was completed in 1683.

ASH'TORETH or **ASTAR'TE,** the goddess of the Phœnicians, symbolised by the moon. The rites connected with her worship were performed in shady groves devoted to the purpose.

ASH WEDNESDAY, the first day of Lent, so named from the custom in the early Christian Church of placing ashes on the head as an expression of humility and repentance, a custom derived from the Jews. The custom still holds in the Roman Catholic Church. In the Church of England, the Commination Service is appointed to be read as a solemn warning against impenitent sinners.

ASIA, the largest of the continents, has an area of 17¼ million square miles, or nearly one-third of the land surface of the globe. It is joined to Europe and Africa, and approaches within 36 miles of America. It is the home of the oldest civilisations and the cradle of the great religions of the world. It has the largest population, estimated at 850 millions, and the greatest variety of races and languages of all the continents. Asia is a continent of contrasts. It contains the highest plateaux and mountains in the world, and the deepest depressions. Stretching beyond the Arctic Circle in the north, it almost touches the Equator in the south, and hence possesses every variety of climate and productions. Near Verkhoyansk, in north-eastern Siberia, is the pole of greatest cold, the average temperature for the year being 30° below freezing point. Parts of the continent are rainless, whilst a district north of the Bay of Bengal has an average rainfall exceeding 600 inches.

ASIA MINOR. See *Anatolia.*

ASIATIC RUSSIA embraces Caucasia, which includes a portion of Armenia; the Transcaspian Provinces, between the Caspian Sea and Persia and Afghanistan, area 214,000 square miles; Turkestan, stretching into the Pamir Region, and almost touching the sphere of British protection north of Cashmir, area 409,000 square miles, population 3½ millions; the two vassal states of Bokhara and Khiva; Siberia, occupying the whole of the north of Asia, from the Ural mountains to the Pacific Ocean, area 4,826,000 square miles, population 6 millions. The Trans-Siberian railway has now been completed. The length from Moscow to Vladivostock is about 5,500 miles.

ASIATIC TURKEY, the lands lying eastward from the Mediterranean Sea to Persia, and stretching southward from the Black Sea to the Red Sea and Persian Gulf. It includes Asia Minor, Armenia, Syria, Palestine, Kurdistan, Mesopotamia (all of which refer to for details), besides a strip of Arabia bordering on the Red Sea, and another strip, El Hasa, on the western side of the Persian Gulf. The total area of this vast domain is about 700,000 square miles, with a population of 16 or 17 millions. The inhabitants are composed of Turks, Arabs, Greeks, Jews, and Armenians. In Asia Minor the inhabitants are mostly Turks, but in the rest Arabs predominate. The Turks and Arabs are Mohammedans, the Greeks and Armenians are Christians.

ASKEW, ANNE, *b.* in Lincolnshire, 1521, *d.*, by burning, 1546; one of Henry VIII.'s victims; was driven from home by her husband, named Kyme, because of her obstinate adherence to the new faith. Coming to London, she was arrested as a heretic, and burned at Smithfield, after having been racked to extort a recantation.

ASMODE'US is described in the Talmud as the prince of demons, and is said to have been compelled to assist in the building of the Temple for having driven Solomon from his kingdom. He has been referred to as the evil genius of matrimony, because the book of Tobit represents him as causing Sarah to strangle seven husbands.

ASMONE'ANS. See *Maccabees.*

ASP, a species of viper found in Egypt, in the vicinity of the Nile. It has the power of distending the loose skin of the neck when irritated. When disturbed it raises a considerable portion of its body above the ground. It is found carved in this position on the portals of ancient Egyptian temples, and painted on mummy cases. Its bite causes death quickly and almost painlessly. Cleopatra is said to have committed suicide by means of a bite of an asp. The name is also given to another species of viper common in Europe.

ASPASIA, a native of Miletus, in the fifth century, B.C., became famous in Athens for her wit, beauty, culture, and eloquence. She became the wife of Pericles; her house was the resort of the most famous men in Greece, including Socrates; and though the charge of Aristophanes, that she led the Greeks into two wars, may not be true, she undoubtedly exercised a great influence over the whole nation.

ASPHALT, a mineral pitch of a black or brownish colour, consisting chiefly of carbon. It is found in many parts of the world, but the largest natural deposit is the Pitch Lake of Trinidad, which is 99 acres in extent, and of unknown depth. In a liquid state it was formerly taken from the surface of the Dead Sea. Asphalt rock, a species of limestone impregnated with bitumen, is found in various parts of Europe, particularly in the Swiss canton of Neufchatel, and is much used for street paving.

ASPIRATE, THE. Refer to *Index.*

ASS. The domestic variety was supposed by Darwin to have sprung from the wild ass of Abyssinia, while other naturalists consider it to be a descendant of the *onager*, which inhabits the mountainous regions of Tartary. The animal is especially adapted for work in dry and comparatively barren countries. During the recent, long and disastrous drought in

Australia, donkeys throve in districts from which horses, sheep, and cattle had to be removed, and hundreds are now employed in drawing supplies from the coast to the Western Australian gold fields. The finest domestic asses are those of Arabia, the best found in Europe are those of Spain and Malta. In England, the animal is smaller than these, and seems to have deteriorated with long-continued ill-usage. The mule is a hybrid between the male ass and the mare, and the hybrid produced by the horse and the female ass is known as a hinny. There is far more of the ass in a mule than a hinny, the latter having the ears, tail and hoof of the horse, showing as far as horse and ass are concerned the predominant influence of the male parent. In some countries mules are more highly prized than horses on account of their greater hardiness, but the hinny is an inferior animal, and is seldom seen.

ASSAM, a district in the north-east of British India, watered by the Brahmaputra and its tributaries, having an area of 49,000 square miles and a population exceeding 5½ millions. It contains the principal tea growing districts of India, and also produces large quantities of rice. The mineral resources are not fully developed, but they include coal, iron, and petroleum.

ASSASSINS, THE, a military and religious order formed in Persia in the eleventh century. They devoted themselves to the assassination of all who opposed the Moslem faith. A branch existed in Syria, and many of the Crusaders met their deaths at the hands of its members. The Persian assassins were exterminated by a Tartar force in 1256, and the Syrian band, by the Sultan of Egypt, fourteen years later.

ASSAYE, a small town in the Deccan, S. India, near which Sir Arthur Wellesley gained a great victory over the Mahrattas, commanded by the French general Péron, in 1803.

ASSAYING or **ESSAYING,** the chemical analysis of the ore of a metal for the purpose of discovering the exact quantity of any particular substance it contains, without reference to the other constituents. The term is often restricted to the estimation of gold or silver.

ASSEGAI, the favourite weapon of the Zulus and other South African tribes. They are made of hard wood, and tipped with iron. Some are for hurling, and some for stabbing; the former are often barbed.

ASSEMBLY, THE GENERAL, the supreme court of the Established Church of Scotland, is a representative body consisting of both clergymen and laymen, and attended by a representative of the king. It holds its sittings in Edinburgh in May, disposes of the general business of the Church, and exercises judicial and legislative functions, reviewing the findings of the lower ecclesiastical courts, determining appeals, and amending the existing laws, or framing new ones, for the government of the Church and its members.

ASSEMBLY, NATIONAL, the Commons' section of the States-General of France, which met May 5th, 1789. The nobles and clergy refused to deliberate with the members of the third estate in a common chamber, and the latter formed themselves into the National Assembly, which sat until September, 1791. They gave a new constitution to the country, divided it into provinces, introduced many reforms in the laws, in the incidence of taxation, and in the finances of the country generally, and completely changed the existing ecclesiastical system.

ASSER, JOHN, a monk of Saint David's, Wales, who became the tutor, companion, and biographer of Alfred the Great. He assisted the king in translating various works into English, and was promoted by him to the episcopal see of Sherborne; *d.* 910.

ASSESSORS, persons who "sit by" a judge, or other person charged with judicial functions, to aid him with their technical knowledge. A bishop is usually aided in his court by the chancellor of the diocese. In Admiralty and Patent cases it is usual to call in the aid of a specialist on the points at issue. Also the Inland Revenue Officer who assesses income, etc., for purposes of taxation, is called an assessor.

ASSIEN'TO, i.e., assent or agreement. The word is especially applied to agreements made by Spain with the Flemings, the Genoese, 1580, the Portuguese, 1696, and the French Guiana Company, 1702, by which these people were granted the monopoly of importing slaves into the Spanish American colonies for a fixed period. By the Treaty of Utrecht, 1713, the monopoly was acquired by the English government, and was transferred to the South Sea Company, who relinquished their rights in 1750, receiving compensation from Spain to the extent of £100,000, and certain commercial concessions.

ASSIGNMENT. See *Commercial Dictionary.*

ASSINIBOIA, a territory, rectangular in shape, lying to the west of Manitoba, with an area of 90,340 square miles, cut out of the North-West Territory of Canada in 1882. The land is mostly prairie; Eastern Assiniboia forms part of the great Canadian wheat belt, and the southern portion is suitable for cattle ranching. The winters are comparatively mild, the summers hot and dry. Settlers are attracted in increasing numbers by the free grants of farms of 160 acres made by the government. The principal rivers are the south fork of the Saskatchewan, and the Assiniboine, a tributary of the Red River. The capital, *Regina,* is situated on the Pacific Railway, which runs through the centre of the territory.

ASSOCIATION OF IDEAS. See *Ideas, Association of.*

AS'SOUAN or **ASWAN,** situated near the First Cataract of the Nile, about 600 miles above Cairo, is famous for the gigantic dam constructed here to form a great reservoir for irrigation in the times of "low Nile." The dam measures 1¼ miles in length, is nearly 100 feet thick at its base, with a maximum height from its foundation of about 130 feet; the greatest difference of level of water above and below the dam is about 67 feet. It is built of local granite, set in Portland cement; the total weight of masonry is over one million tons. The dam has 180 sluice openings, through which could pass 15,000 tons of water per second. These sluices are left open when the river is in flood, but when the discharge has fallen to 2,000 tons per second, the sluice-gates begin to be closed, and the reservoir—that is, the river above the dam—begins to fill up. When full, the reservoir contains 1,000 million tons of water, affecting the depth of the river for 140 miles above the dam. The dam was opened in 1902. Navigation is provided for by a ladder of five locks, each 260 feet long and 32 feet wide.

ASSYRIA, one of the earliest of the great nations of antiquity. The country at first consisted of a track of territory on the left bank of the Tigris. The boundaries were extended by conquest until the Assyrians governed that portion of Asia extending from the Mountains of Armenia to the Arabian Desert, and from the Kurdistan Mountains to the Mediterranean Sea. Their policy, in all their conquests, was to transplant the mass of the inhabitants of the conquered territory to the central provinces of the empire, and to replace them by Assyrian colonists. This policy was carried out by Shalmaneser when he conquered Samaria. The flower of the tribes of Israel were carried into captivity. The Assyrians were polytheists; their supreme god being Asshur, the deified patriarch of the race. Such civilisation as they possessed was acquired from Babylon. The country was at the height of its power under Esar-haddon and his son Asurbanipal. The latter reigned from 667 to 625 B.C., and did much to encourage learning and the arts. After his death, Assyria began to decline rapidly, and was finally conquered by the allied forces of the Medes and Babylonians, who captured and burned the capital, Nineveh, about 620 B.C. Much of our knowledge of Assyria and its people is due to the work of archæologists in excavating the ruined cities, and in deciphering the cuneiform inscriptions on tombs, monuments, etc.

ASTAR'TE. (1) See *Ashtoreth.* (2) A genus of bivalve molluscs, now found chiefly in the Arctic and North Atlantic Ocean. Twenty living species are known, but fossil species are more numerous, and are particularly interesting because, from the positions in which they have been found on Welsh and Scotch mountains, they indicate that Great Britain was at one time submerged to a considerable depth below the ocean.

ASTEROIDS, or minor planets, are a large number of small bodies which revolve round the sun, in orbits lying between those of Mars and Jupiter. Vesta, Juno, Ceres, and Pallas are the principal ones. Even the largest are invisible to the naked eye, their diameters being not more than 300 miles. Upwards of 400 have been discovered, the more recent by the use of photographic plates.

ASTIGMATISM, a defect in vision due to a want of symmetry in the curvature of the cornea, in consequence of which the rays of light are focussed on the retina as a diffused spot. It is often the cause of headache, and may be remedied by the use of suitable spectacles. See *Med. Dict.*

ASTLEY, PHILIP, *b.* 1742, *d.* 1814, a famous circus performer and manager. He assisted Franconi in establishing the *Cirque Olympique* in Paris.

ASTOR FAMILY. JOHN JACOB ASTOR, the founder of the greatness of this family, was born near Heidelberg, in Germany, in 1763. In 1783 he went to America and began trading in furs. Having prospered, he formed the Pacific Fur Company, with head-quarters at Astoria, in Oregon, and connections all over the world. At his death, in 1843, he left about one million pounds to his son William, and £70,000 to found a public library in New York. WILLIAM ASTOR devoted himself to improving his property in New York, so that when he died his fortune was about three times as great as he had received. WILLIAM WALDORF ASTOR, a great grandson of John Jacob, has become a naturalised Englishman, and now owns the beautiful estate of Cliveden, on the Thames.

ASTRAKHAN. (1) A government in the south-east of European Russia, north of the Caspian Sea, covers an area of 85,000 square miles on both sides of the Volga. The land consists chiefly of Steppes, and there are extensive salt marshes. (2) The capital of the former, on an island in the Volga, about 30 miles from its mouth. The fisheries are extensive, and large quantities of fish, caviare, and

isinglass are exported. (3) The fleece of the lambs of a variety of black sheep found in the above province, in Persia, and on the Asiatic Steppes. The wool of the lamb is curled, and closely resembles fur.

ASTRAL SPIRITS, according to eastern myths, existed as the souls of all the heavenly bodies, for which reason the sun, moon, and stars were worshipped. In the Middle Ages, when witchcraft and a belief in demons were rife, the astral spirits were conceived as hovering through space, and influencing men for good or evil.

ASTROLABE, a name given by the Greeks to any circular instrument for observing the stars. An instrument of this kind was employed by astrologers, and formed the badge of their office. Later the name was given to a circular plate of metal having the circumference divided into degrees, and with sights attached; it was used in navigation until superseded by the sextant.

ASTROLOGY is the pseudo-science that pretended to foretell events, especially the destiny of men, by means of the position of the stars. The heavenly bodies were regarded as the agents whereby the Creator regulated the course of events in the world. The more ignorant considered the stars themselves as the moving causes. By means of great circles, astrologers mapped out space into twelve equal portions called "houses." The principal circles were the horizon and the meridian. The other four were drawn equally distant from these, and passed through their points of intersection. The circles were considered immovable, so that all the heavenly bodies passed through the twelve houses every twenty-four hours. Certain powers and influences were ascribed to the sun, moon, and planets, but these were modified by the particular house occupied by the body at the moment. In "casting a person's nativity" the astrologer found the position of the various heavenly bodies at the moment of birth, and then, assuming that he knew the power inherent in each, and the influence derived from its position, he foretold the course of that person's life and its termination. Astrology is generally believed to have originated among the Chaldeans, and to have spread from them to the other nations of antiquity. In the Middle Ages its teachings were universally accepted, and many families retained an astrologer to "read the horoscope" of each child almost as soon as it was born.

ASTRONOMY is the study of the heavenly bodies, their magnitude, distance, composition, movements, the forces regulating those movements, etc. This science, of which astrology may be looked upon as the infant stage, is known to have been cultivated among the Chinese, Hindus, Chaldeans, Egyptians and Greeks previous to the Christian era, but the Greeks were the only people who did not connect it with politics, religion or soothsaying. The theory of the universe laid down by Ptolemy (130–150 A.D.), that the heavens circle round the earth as a fixed centre once in twenty-four hours, was universally accepted until Copernicus, in the 16th century, propounded the system known by his name. In his "De Orbium Revolutionibus," published in 1543, he attempted to prove what is the first principle of modern astronomy—that the sun is the centre of the solar system, and that the earth and the other planets circle round it. That system was afterwards developed and established by the labours of Tycho Brahé, Kepler and Galileo. Galileo was the first to employ the telescope for astronomical observations. His first study of the heavens with its aid was made January 7th, 1616, and resulted very soon in the discovery of Jupiter's moons, and in the resolution of the "Milky Way" into a host of fixed stars. Newton's discovery of the laws of gravitation, published in 1687, gave a clear insight into the forces that regulate the motions of the planets. The mathematician and the observer have co-operated in adding to our knowledge. Modern astronomers, in addition to determining distances and magnitudes with certainty, have devoted themselves to verifying or correcting, by means of greatly improved instruments, the observations of the earlier workers. Spectrum analysis has made known the composition of the various bodies, while the photographic plate has revealed the presence of stars that were invisible to the eye in the field of the most perfect telescope.

ASURBANIPAL. See *Assyria*.

ASYLUMS BOARD, METROPOLITAN. Constituted under the Metropolitan Poor Act of 1867, it provides and manages asylums for the reception and treatment of imbeciles, and of persons suffering from fever and small-pox. The ambulances, with "M.A.B." on them, are familiar in the streets of London, and there is also a service of river ambulances at convenient points.

ATAHUAL'PA, the last of the Incas of Peru. He fell into the hands of the Spaniards through treachery, was tried on the charge of giving secret commands to his subjects to arm against the invaders, and strangled by the orders of Pizarro, 1533.

AT'AVISM or **REVERSION,** the tendency in improved breeds of domestic animals to "hark back," or revert to the characteristics of the parent stock. The subject is treated of in Darwin's "Variation of Animals and Plants under Domestication." Among other experiments, he paired a black Spanish cock and a white silky hen, and found that, in many cases, the offspring showed the peculiar orange-red markings natural to the Himalayan progenitors of our domestic fowls.

ATALANTA, in classical mythology, daughter of the Arcadian Iasus. Her father, disappointed in not getting a son, exposed her on the hills, but she was suckled by a she-bear. When grown up, and sought by many suitors, she promised to wed the man who should outstrip her in the foot race, she being the fleetest of mortals. She was at length overcome by Milanion, aided by three golden apples given him by Venus, which he dropped one by one during the race, and so gained time while Atalanta was picking them up.

ATBA'RA, or "Black River," rises in the mountains of Abyssinia, and joins the Nile at El Damer, bringing with it large quantities of black mud. The bridge carrying the Cairo-Khartoum Railway crosses the river near the confluence. This was the scene of General Kitchener's defeat and capture of the Emir Mahmud, one of the Khalifa's principal generals, April 8th, 1898.

ATHABASCA, a territory in North-West Canada, to the north of Alberta, has an area of 251,300 square miles, and is watered by the Peace and Athabasca rivers, the valleys of which include an enormous wheat growing area. Vast petroleum fields are said to exist, but as yet these are undeveloped. The greater part of Lake Athabasca lies outside the area.

ATHANASIAN CREED, THE, sets forth the Catholic Faith with respect to the nature of God, the Incarnation of Christ, and man's future state. It was for a long time supposed to be the work of Athanasius, but it is now generally admitted to belong to the fifth century. The title "Athanasian" was probably given to it because it expresses the teaching of Athanasius as opposed to the Arian heresy. The Creed was in use in the Church of England before the close of the eighth century, and became general throughout the Church of Rome in the middle of the tenth. At the Reformation it was retained in the Prayer Book, and ordered to be read at certain festivals.

ATHANASIUS, SAINT, *b.* at Alexandria, 296, *d.* 373, early came under the influence of Saint Anthony, and for a time adopted asceticism. In the council held at Nice he strongly opposed the teaching of Arius, and so drew upon himself the hatred of the Arians. He was appointed to succeed Alexander, as bishop of Alexandria, but the persecutions and accusations of the Arians drove him from his bishopric several times, and he spent 20 out of his 46 years of office in exile. His writings consist of treatises bearing on the Arian controversy, and valuable contributions to the history of the early church.

ATHELSTAN, *b.* 895, *d.* 941; crowned at Kingston on Thames, 925; was the first to adopt the title of King of England. By his victory at Brunanburgh in Northumbria, he secured the submission of Northumbria, and afterwards that of Wales and Cornwall. He extended his political influence to the Continent, and at home laboured to improve the conditions of the people on the lines of his grandfather, Alfred. He improved the laws, favoured the building of monasteries and the translation of the Scriptures. He also encouraged commerce by conferring the rank of a thane upon every merchant who made three sea voyages on his own account.

ATHENÆ'UM, the temple erected at Athens to the goddess Athene. This became the resort of poets, philosophers, and orators, who there gave readings of their works. The name was also given to the school established by Hadrian at Rome, and held in high repute until the fifth century. The name is now commonly applied to institutes for the study of literature and science.

ATHENÆUM CLUB, London, an association of persons interested in arts, literature, or science in any way. The artist, the literary man, and the scientist look to admission to the Athenæum Club as a kind of hall-mark of their genius. Also noblemen and gentlemen who have shown devotion to these pursuits are eligible. It was founded in 1824, John Wilson Croker being one of its founders.

ATHE'NE, the Greek goddess of wisdom, war, and all the liberal arts, was said to have sprung fully armed from the head of Jupiter. She is usually represented wearing a plumed helmet, and carrying a spear in one hand and a shield, with the head of Medusa on it, in the other. By the Romans she was known as Minerva.

ATHENS was the capital of Attica, the seat of ancient Greek culture, and the resort of poets, philosophers, artists, and orators. The city was built on and around several low hills, rising from the plain of Attica, the chief eminences being the Acropolis, the Areopagus, and the Hill of the Museum. On the *Acropolis* were erected the Parthenon, dedicated to Athene, the Erechtheum, dedicated to Poseidon, and other temples and statues. The western end of the hill was covered by the Propylæa, a white marble building approached by a stair-way 70 feet wide. The largest temple in Athens was that dedicated to Zeus Olympius, the outside of which was adorned with 120 fluted columns, 60 feet in height. All the temples contained statues, and the

walls were ornamented with reliefs. The *Areopagus* was the meeting place of the supreme court of Athens. The seats occupied by the judges, and the places reserved for the accused and his accuser, are still to be seen. Not far off, the Pnyx, where the freemen of the city met for their deliberations, exists almost in its original state. Near the city were the Academy where Plato taught, and the Lyceum, where Aristotle founded the Peripatetic School. Athens is the capital of modern Greece, the seat of a university, and the residence of the king of Greece.

ATHOS, MOUNT, or Monte Santo, is the highest peak, 6,780 feet in height, in the chain of mountains running through the peninsula of Salonica, Turkey. The sides of the mountains are covered with monasteries connected with the Greek church. The monks, who number about 6,000, and form a kind of republic, under the protection of the Sultan, are occupied in gardening, fishing, and the manufacture of amulets and crucifixes. They collect alms from the many pilgrims who visit them, with which to pay the heavy taxes imposed on them by the Porte. Many literary treasures, particularly manuscripts, are preserved in the libraries of the monasteries.

ATLANTIC CABLE. The first was laid in 1858 between Valentia, Ireland, and Trinity Bay, Newfoundland, but it failed to work. A second cable, much heavier, was lost in mid-ocean in 1865; a third was successfully laid in 1866 and answered its purpose. The lost cable was also recovered. Since then more than a dozen cables have been stretched across the Atlantic, and now the world is girdled with telegraph cables, one of which is "all-British."

ATLANTIC OCEAN, the most important of the oceans, lies between the Old World and the New, and is 9,000 miles long, with an average breadth of 2,700 miles, and an average depth of 15,000 feet. It is characterised by the length of its coast-line, the size and number of the inland seas, gulfs, and bays connected with it, and the number of large rivers it receives. These circumstances, combined with the great fertility of the countries on its shores, make it the greatest commercial highway of the world. The principal currents are the Equatorial Current, which crosses from the coast of Africa to the shores of South America; the Gulf Stream, which at first flows parallel to the coast of North America, but turns eastward first at C. Hatteras, and next at the Banks of Newfoundland, and laves the shores of the British Islands and Scandinavia; and the cold Labrador Current which meets the Gulf Stream off Newfoundland, and then flows between it and the coast of North America. The circular motion of the waters of the North Atlantic leads to an accumulation of drift-wood, sea-weed, and other floating matter, and favours the growth of the "gulf-weed." The central portion is known as the Sargasso Sea. Here the weed is so densely packed as to impede the passage of ships. A similar Sargasso Sea exists in the South Atlantic.

ATLAS. (1) The leader of the Titans, who attempted to storm the heavens and to dethrone Zeus. For this he was condemned to bear the heavens on his head and shoulders. (2) The first vertebra which supports the skull.

ATLAS MOUNTAINS, two parallel ranges in Morocco and Algeria, North Africa. The Little Atlas is close to the coast; the Great Atlas is farther south, and in Mount Miltsin reaches an elevation of 11,400 feet.

ATMOSPHERE. See *Air*.

ATOLL, a coral island consisting of a ring enclosing a central lagoon. The slope into the sea on the inner side is very gradual, while that on the outside plunges rapidly into deep water. Atolls are numerous in the Pacific Ocean, and form several archipelagoes.

ATOM, the smallest portion of matter that can exist and still retain the properties of the substance of which it is composed. Recent experiments prove that the atom is not the ultimate division of matter, but that each is composed of a number of smaller particles, possibly thousands, which scientists have named "electrons," or corpuscles.

A'TRIUM, the principal court of a Roman dwelling house. It was near the entrance, and lighted from the roof, which sloped towards an opening in the centre, from which the rain flowed into a cistern in the floor. The atrium served as an audience chamber, and contained the *focus* or family fire, the *lares* or household gods, the family pictures, and the spinning wheel of the mistress of the house.

ATROPOS. See *Lachesis*.

ATTAINDER, BILL OF, a means of reaching offenders whom the ordinary process of law, or an impeachment, would probably fail to touch, for want of legal proof, or some other technicality. A bill is brought in, and has to pass through both Houses of Parliament, declaring that the accused has been guilty of treason in certain acts, and the accused is allowed to defend himself before both Houses. If it passes, and then receives the Sovereign's assent, the ordinary consequences of a conviction for treason follow.

ATTAR OF ROSES. See *Otto*.

ATTERBURY, FRANCIS, *b.* in Buckinghamshire, 1662; *d.* in Paris, 1732; gained a great reputation as a preacher; he was a keen churchman and ardent Jacobite. In 1715 he refused to sign the bishops' declaration of allegiance to George I., and became involved in several minor plots for the restoration of the Stuarts. In 1722 he was charged with treason. A bill of pains and penalties passed through both houses of parliament, and Atterbury was deprived of all his offices and condemned to perpetual banishment.

AT'TICA, the most famous of the states of ancient Greece, had Athens for its capital. The district was triangular in shape, less than 900 square miles in area, with a surface diversified by hills and narrow plains. It was made a Roman province by Vespasian, and conquered by Alaric, the Goth, 396. Attica, with Bœotia, forms a department of modern Greece.

AT'TILA, king of the Huns, surnamed the "scourge of God." He and his army of 700,000 men inspired terror throughout the civilised world. He overran the eastern portion of the Roman Empire, and extorted a heavy tribute from the Emperor Theodosius. He then advanced into Gaul and was defeated by the combined Roman and Frankish armies near Chalons-sur-Marne, 451. Contemporary historians say the number of killed exceeded 250,000. The following year he laid waste the whole of northern Italy, but Rome itself was spared by the intervention of Pope Leo I. In 453 he prepared for another invasion of Italy, but died suddenly, either of hæmorrhage of the lungs, or by assassination.

ATTOCK, a town and fortress in the Punjab, India, near the junction of the Kabul and Indus. It was captured from the Sikhs in 1840. An important railway bridge crosses the Indus at this point.

ATTORNEY, one appointed or authorised to act on behalf of another. As a legal designation, it is now replaced in England by the word Solicitor (which see). We still use the term in certain expressions as "Power of Attorney," a document authorising one to sell property or do some other act on behalf of another.

ATTORNEY-GENERAL, the highest law-officer of the Crown. He represents the Crown as an ordinary attorney would his principal. He has to advise the Government on legal questions, and generally to appear as counsel in cases where the interests of the Crown, or the peace or welfare of the kingdom, are at stake. Refer to *Attorney-General* in *Index*.

ATTORNEY, POWER OF. See *Commercial Dictionary*.

ATWOOD'S MACHINE, an instrument designed to illustrate the laws of motion. In its simplest form it consists of a graduated vertical column supporting a nearly frictionless pulley. A fine string, to the ends of which equal weights are attached, passes over the pulley. Motion is given to the weights by placing a small piece of metal known as a "rider" on one of them. When motion has continued for one second, the rider is removed mechanically, and the distance through which the weights move during the next second is carefully measured. In this way the relation that exists between the force causing motion, the mass moved, and the resulting rate of motion is experimentally determined.

AUBER, DANIEL FRANCOIS, *b.* at Caen, 1782, *d.* 1871; a prolific writer of the light French opera, so characteristic of the middle of the 19th century. In "Masaniello," indeed, he seemed to strike a deeper vein, but "Fra Diavolo" and its successors show him in the old light. He wrote forty operas, among them "Le Domino Noir," "Les Diamants de la Couronne," and "Haydée."

AUCKLAND, in North Island, is the largest city in New Zealand, and possesses an excellent harbour, an arm of the Gulf of Hauraki. It was formerly the capital of the colony.

AUCTION. See *Commercial Dictionary*.

AUCTION, DUTCH, a very popular form of sale with street vendors. The would-be seller asks a high price for the article in question, and then gradually comes down until some one agrees to give the price he mentions.

AUCTIONEER. Refer to *Index*.

AUCU'BA, the variegated or Japanese laurel, is a hardy evergreen shrub, and is particularly valuable for gardens and shrubberies in large towns, as it thrives in spite of the impure air.

AUDITOR. See *Commercial Dictionary*.

AU'DUBON, JOHN JAMES, *b.* in Louisiana, 1780, *d.* 1851, a celebrated American naturalist. His two great works, the "Birds of America" and the "Quadrupeds of America," were illustrated by drawings made by himself in the natural haunts of the animals.

AUGE'AN STABLE, the stable in which Augeas, the legendary king of Elis, housed 3,000 oxen. For a payment of 300 oxen, Hercules undertook to cleanse the stable of its accumulated filth of 30 years, in a day. He accomplished his task by turning the rivers Alpheus and Peneus through the stable. Payment for the task was refused and a war ensued, in which Augeas was killed by Hercules.

AUGSBURG, a busy commercial town and banking centre on the river Lech, Bavaria. The articles of faith drawn up by Melancthon in conference with Luther, were laid before the Emperor, Charles V., at the diet held here, in 1530. The document is known as the "Confession of Augsburg." Its 28 articles contain the

principal doctrines of Christianity, as accepted by the Lutherans at the time, but the advances made in the study of Theology and Ecclesiastical History have considerably modified the views held by the majority of that community.

AU'GURIES and **AU'SPICES,** (i-ces), the practice of divination, as exercised among the Romans by priests specially trained in the college of Augurs. The forecasts were made by noting natural phenomena, and by observing the flight, cries, and behaviour of birds, particularly the eagle, vulture, raven, owl, and domestic fowls. Predictions founded on the observation of birds were properly called *auspices*. The practice grew to such importance, that no great undertaking was begun without first consulting the will of the gods through the Augurs. An augur accompanied the army in the field, and a general could not cross a river or begin a battle without first consulting the birds, which were conveyed in coops. The right of so determining the future rested with the commander-in-chief. His subordinates fought under his auspices; the honour of victory or blame for defeat was ascribed to him alone. The augurs possessed great political influence; for having the right to declare the omens, or signs, unfavourable, they were able to interpose in the execution of any important transaction.

AUGUST, SEXTILIS, the sixth month of the Roman year, which began with March, received its present name from the Emperor Augustus, on account of the many fortunate events connected with his life that occurred during this month.

AUGUSTINE, SAINT. (1) Born at Tagasta, in Numidia, 354, *d.* 430, the greatest of the Latin fathers of the Church, was the son of a pagan father and a Christian mother. After a vicious youth he was converted to Christianity, and baptized by Ambrose, Bishop of Milan, 387. He was consecrated Bishop of Hippo, 396. He took an active part in the religious controversies of the age, was a keen opponent of the Manichæans, Donatists, and Pelagians, and exercised a very great influence on Christian thought and teaching throughout the Church. His "Confessions" are of the nature of an autobiography. His "City of God," completed in 426, is usually considered his greatest work. (2) The "Apostle of England," was sent with 40 monks, by Pope Gregory, 596, to preach Christianity to the Anglo-Saxons. They landed in Kent and were well received by Ethelbert, whose wife was a Christian. Augustine was consecrated the first Archbishop of Canterbury and Metropolitan of England; *d.* 605.

AUGUSTUS, CÆSAR (Caius Octavius), *b.* 63 B.C., *d.* 14 A.D.; the grand-nephew of Julius Cæsar, who, by his will, made him his adopted son and heir. After the assassination of his great uncle he shared the government of the Empire with Antony and Lepidus. Lepidus was soon deprived of his province, and the defeat of Antony at Actium, 31 B.C., gave Octavius the supreme power as Emperor of Rome. The title of *Augustus* was conferred upon him by the Senate, 27 B.C. During his reign of 40 years, the empire made great commercial progress, the city was improved, and art and literature received such encouragement, that the "Augustan Age" stands out as the most splendid in the history of Roman letters. After his death, Augustus was deified by the Romans, and temples and altars were raised to his memory.

AUK, a marine bird of the same genus as the razor-bills, guillemots, and puffins. The *Great Auk* was at one time a frequent visitor to the Orkneys, the Hebrides, and Iceland, but no living specimen has been seen for more than 60 years, and the bird is believed to be extinct. It was about 3 feet in length; its rudimentary wings served as paddles; its legs were short, and placed so far back in the body, that, when standing, the bird assumed an erect position. The egg was as large as that of a swan, yellowish-white in colour, with black markings. It is now highly prized by collectors, as much as 300 guineas having been paid for a single specimen. The *Little Auk* is a native of the Arctic Ocean.

AULIC COUNCIL, one of the two supreme courts of the Holy Roman Empire, was first formed in 1495. It consisted of a president, vice-president, and 18 councillors, all of whom were elected and paid by the Emperor. Its functions were of a judicial character. It ceased to exist with the Holy Roman Empire, 1806.

AURELIUS, MARCUS. See *Marcus Aurelius.*

AUREOLE, the whole golden setting with which holy figures are surrounded in sacred art to suggest the holy radiance emanating from them. Refer to "Symbolic Light" in *Index*.

AURO'RA, the mother of the winds and of the morning star, the Roman goddess of the dawn, corresponding with the Greek Eos, whose duty it was, with rosy fingers to raise the veil of night. (2) A city in Illinois, U.S.A., which is credited with being the first town to apply electricity to street lighting.

AURO'RA BOREA'LIS, or Northern Lights, are tremulous bands of light that appear towards the north, in the form of an arc, during the long dark winter within the Arctic Circle. The name "merry dancers" is commonly, and not inaptly, applied to the phenomenon. Many theories as to the cause have been suggested, but all agree that it is electrical in its origin, and this is corroborated by the fact that the most brilliant displays are accompanied by magnetic storms, and the upsetting of electric telegraph apparatus. The most recent theory is that put forward by Sir William Ramsay, 1904. He suggests that the light is due to the myriads of electrons continually thrown out by the sun. These act on the krypton and helium in the atmosphere, and excite into intense activity the internal motions of the atoms of those elements, and so produce the bands of variously coloured light. In the southern hemisphere, the phenomenon receives the name of *Aurora Australis.*

AURUNGZEBE, *b.* 1618, *d.* 1707; the last great Mogul Emperor of India. The third son of Shah Jehan, he played off his two elder brothers against each other when the father was seized with an apparently mortal illness, and obtained supreme power. He then imprisoned his father and executed his brothers, and finally caused himself to be proclaimed emperor in 1658. He had great successes at first, but dissensions with his sons ruined his power, and he died a fugitive before the Mahrattas, then just becoming a powerful State.

AUSPICES. See *Auguries.*

AUSTEN, JANE, *b.* at Steventon, Hampshire, 1775, *d.* 1817; a celebrated English novelist. Her first novels, "Sense and Sensibility," "Pride and Prejudice," and "Mansfield Park" were published anonymously. "Northanger Abbey" and "Persuasion" appeared after her death, and with her name on the title page.

AUSTERLITZ, a small town near Brünn, in Moravia, made famous by the victory gained by Napoleon over the allied forces of Austria and Russia, December 2nd, 1805.

AUSTIN ALFRED, *b.* 1835, the present Poet Laureate, may be said to have touched every branch of literature. His first essay in poetry, "The Season," was published in 1861. "The Golden Age," "The Human Tragedy," "Alfred the Great," and "Flodden Field," are among the more important of his poems. As a prose writer he has gained success, "Veronica's Garden," and "The Garden that I love," being much admired.

AUSTRALASIA comprises Australia, Tasmania, New Zealand, New Guinea, Fiji and the neighbouring islands.

AUSTRALIA. Refer to *Index.*

AUSTRIA-HUNGARY, an empire lying almost in the middle of Europe, includes altogether more than 50 states, and contains many races of people—Germans, Italians, Magyars, Roumanians, Czechs, and other Slavs, speaking twenty different languages. Area exceeds 250,000 square miles, and population is upwards of 47 millions, more than half of whom belong to the Slav race. Next to Switzerland, it is the most mountainous country in Europe. The coast line is short, but this is partly compensated for by the Danube, and the proximity of great commercial nations. The internal trade is very great. The principal exports are grain, flour, horses, and other live stock, wine and wool. Austria and Hungary have each a separate parliament, but are united under one monarch, and the army, navy, diplomatic, telegraphic, and postal services are common to both.

AUSTRO-PRUSSIAN WAR, known as the "Seven Weeks' War," arose out of a dispute about the division of the provinces Schleswig-Holstein, ceded by Denmark to the German Confederation in 1864. The Prussians, in alliance with Italy, were everywhere successful, and the victory of Sadowa, July 3rd, 1866, opened the road to Vienna, and the Austrians sued for peace. By the Treaty of Prague, Italy acquired Venetia; Hanover, Hesse, and other provinces were added to Prussia: and the German Confederation was dissolved.

AUTO-DA-FE', a Portuguese term meaning, literally, "Act of Faith," a ceremony which preceded the execution of those condemned as heretics by the Spanish Inquisition. The condemned, clothed in a hideous robe known as the "San Benito," and followed by black coffins, containing the bones of those who had been executed, walked in a procession of priests and monks to a church, where a sermon was preached on the true faith. The execution took place later in the day. Those who recanted were strangled and then burnt, while those who held out were burnt alive. The first Auto-da-fé took place in 1481, the last in 1826.

AUTOGRAVURE, a process of photographic engraving invented by J. R. Sawyer, an eminent London photographer, in 1884.

AUTOL'YCUS, a Greek astronomer who flourished in the fourth century B.C., and wrote works on the revolving sphere, and the rising and setting of the fixed stars. (2) In mythology, the maternal grandfather of Ulysses, a famous thief who possessed the power of making himself and the things he stole invisible. (3) A delightful rogue, in Shakespeare's "Winter's Tale," a "picker-up of unconsidered trifles," who sells gewgaws at the sheep-shearer's feast.

AUTOMATON, a name generally reserved for machines acting in certain respects as human beings or animals, and so constructed as to go through certain natural motions without the operating

agency being revealed. Of late years Mr. Maskelyne's automata have been unsurpassed, as "Psycho," the whist player, and "Zoe," the artist.

AUTOMOBILE, a mechanically propelled carriage which carries its own motive power. The chief methods of propulsion in use are steam, the explosion of a mixture of air and petrol vapour, and electricity. (See *Electric Motor Cars.*) Steam is particularly suitable for heavy lorries, trucks, etc. The machinery consists of the boiler, fire, the engine, and some form of gearing for transmitting the motion to the axles of the road wheels. The boiler is usually a modification of the water-tube boiler, known as a "*flash*" boiler. This consists of a number of flattened steel tubes passing through the fire-box. A small quantity of water is injected into the tubes by the stroke of a pump, and this is almost instantly converted into steam. The supply of steam to the engine is controlled by the amount of water with which the tubes are fed. The advantage of such a boiler is its lightness, and the small space it occupies in proportion to the amount of heating surface. A large majority of automobiles, including *motor cycles*, make use of petrol. The essential parts are the tank, carburettor, cylinder, a heavy fly-wheel, sparking apparatus, and belts or cogs for transmitting the motion to the wheels. By means of a pipe of small bore, a regulated supply of petrol is conveyed from the tank to the carburettor. It there meets with a current of air, is volatilised, and the mixture of atmospheric air and petrol vapour rises into the cylinder, and is exploded by an electric spark. The explosive force drives the piston forward. The inertia of the fly-wheel, which has previously been set in motion by physical force, returns the piston to its former position, and the spent gases are driven out of the cylinder. The continued swing of the fly-wheel sends the piston forward again, and a fresh supply of the explosive mixture is drawn into the cylinder. This is compressed into the head of the piston by the return of the piston, and exploded as before. This cycle of movements is continued as long as the engine is kept running.

AUTONOMY, "self-rule." Every place, whether parish, city, or province, enjoys a certain amount of autonomy, and the extent to which this is carried is, in a measure, a criterion of the degree of liberty a country has attained. But the term is generally used now-a-days to express the privilege that a Sovereign State, as Turkey, confers on a subordinate province, as Crete, of managing entirely its own internal affairs.

AUTOPLASTY. See *Med. Dict.*

AUTOTYPE, a reproduction of a photograph or picture in printer's ink, or other permanent pigment. The method of production depends on the fact that, while gelatine combined with bichromate of potash is ordinarily soluble in water, exposure to sunlight renders it insoluble. A film of the compound is spread over a rigid plate for support. A negative on glass is placed above it, and the whole is exposed to sunlight, which penetrates the lights of the negative, and renders the underlying gelatine insoluble; the gelatine covered by the darks of the negative remains soluble. After treatment with water it is found that the insoluble gelatine will freely receive and impart printers' ink. The film is hardened by the admixture of gums, and so a plate is obtained that may be used in the printing press.

AVALANCHES are masses of snow and ice that become detached from the sides of mountains, and slide or roll into the valleys below. They are frequent in the Alps. During winter, the dry snow is often set in motion by the wind. At other times pieces of partly melted snow begin to roll, and the mass gathering in volume and velocity as it proceeds, creates great devastation, the accompanying wind being strong enough to uproot trees and to overturn houses. In spring, after a long thaw, the whole mass of snow on the side of a mountain becomes detached from its base by the percolating water, and, carried along by its own weight, slides into the valley. Ice avalanches consist of masses detached from glaciers. They are frequently seen and heard in Switzerland, in July and August.

AV'ALON, in Celtic mythology, an island situated in the region of the setting sun, and looked upon as the heaven of all heroic souls.

AVATAR', the incarnation of a Hindu deity. Hindu poetry contains a large number of instances of their gods assuming earthly shapes for purposes of retribution, or to right the wrong. The best known is the eighth avatar of Vishnu, in the form of Khrishna, which forms the subject of the Sanscrit epic poem, the Mahabharata.

AVEBURY, a small village in Wiltshire, about 6 miles from Marlborough. Near it are the remains of what was formerly, it is believed, a large Druidical temple.

AVEBURY (John Lubbock), **LORD,** *b.* 1834, F.R.S., scientist, writer, banker, and formerly Member of Parliament for the University of London. His work on ants suggests that they possess reason as well as instinct, whilst his researches on Stonehenge show that it dates from the bronze age, and not merely from the time of the Druids as formerly thought. We are indebted to him for our Bank holidays, as owing to his efforts, an Act of Parliament was passed, authorising the closing of banks on certain days. Of his many writings, the most popular are "The Pleasures of Life," and "Ants, Bees, and Wasps."

A'VE MARI'A, "Hail Mary," the first two words of the Latin translation of the salutation addressed by the angel to the Virgin, (Luke i. 28), and in the Roman Catholic Church, the name of a prayer in which the Virgin is invoked. (2) Each of the smaller beads of a rosary is called an *Ave Maria.*

AVER'NO, a lake about 1½ miles in circumference, occupying the crater of an extinct volcano near Naples, Italy. The noxious vapours that arose from its surface were said to prove fatal to birds flying over it. This story, combined with its gloomy appearance, led the ancients to regard it as the entrance to the infernal regions.

AVESTA, the sacred writings of the Parsees. Refer to *Index.*

AVIGNON, a French town on the left bank of the river Rhone, near its junction with the Durance, manufactures silk, and has a considerable trade in wine, oil, and fruits. It contains a very ancient cathedral and the palace which formed the home of the Popes from 1309 to 1376. Many Roman antiquities are found in the neighbourhood.

AVO'CA, VALE OF, a beautiful river valley in County Wicklow, Ireland, made famous by Moore's poem, the "Meeting of the Waters."

AVON, the name of several small rivers in Great Britain. (1) The Upper Avon flows past Stratford, and joins the Severn at Tewkesbury. (2) The Lower Avon separates Somersetshire and Gloucestershire, passes Bath and Bristol, and flows into the Bristol Channel. (3) The East Avon, after a course through Wiltshire and Hampshire, passing Salisbury on the way, enters the English Channel at Christchurch.

AXENSTRASSE, (stras-se), a picturesque mountain road, hewn out of the solid rock, along the shore of the Lake of Lucerne, between Tell's Chapel and Flüelen.

AYE'SHA, *b.* 610, *d.* 677, the favourite wife of Mohammed, styled by Mohammedans the "Mother of the Faithful." On the death of the prophet, she resisted the accession of Ali by force of arms, but was defeated and captured. Ali restored her to liberty, with permission to live in any town in Arabia, provided she took no further part in state affairs.

AYTOUN, WILLIAM EDMONSTONE, *b.*, at Edinburgh, 1813, *d.* 1865; poet, critic, and professor of literature. His "Lays of the Scottish Cavaliers" has seen many editions, and he wrote many of the "Bon Gaultier" ballads. He was a frequent contributor to "Blackwood."

AZA'ZEL, either the Hebrew name of the scape-goat, that was led out to the wilderness, laden with the sins of the people, or a term for Satan, to whom the sin-laden goat was abandoned.

AZ'IMUTH, THE, of a star, is the angle measured along the arc of the horizon, between the meridian of the observer and the plane of a vertical circle passing through the star.

AZORES or **WESTERN ISLANDS,** a group of nine volcanic islands belonging to Portugal, situated in the North Atlantic, 800 miles west of Lisbon. St. Miguel and Fayal are the best known. The islands are covered with orange groves; oranges, lemons, and other fruits, together with wine and brandy, are exported.

AZOV, SEA OF, in the south of Russia, is the shallowest sea in the world, and is gradually silting up with the mud brought down by the river Don. The fisheries are very valuable, and large quantities of caviare and isinglass are produced. In August, 1903, the Russian government signified its approval of a plan for connecting the Caucasus with the Crimea, by a bridge spanning the Strait of Yenikale, which joins the Sea of Azov to the Black Sea.

AZTECS, the ruling race in Mexico at the time of the Spanish invasion and conquest under Cortez, 1519.

BAAL, the sun-god of the Phœnicians and the Canaanitish nations. His worship was introduced into Israel by Jezebel, wife of Ahab (1 Kings xviii.).

BAALBEC, the Heliopolis of the Greeks, an ancient Syrian city, situated 35 miles north-west of Damascus. Its name means the "City of the Sun." The city was one of the largest and most splendid in Syria, but is now in ruins. The temple of the sun-god, now in ruins, is justly regarded as one of the wonders of the world.

BABBAGE, CHARLES, *b.* at Teignmouth, Devon, 1792, *d.* 1871, a celebrated mathematician and inventor. He devoted much time to the invention of a calculating machine, and received grants from government to defray part of the cost, but the machine was never completed. His principal work was the "Economy of Manufactures and Machinery." He also published "Tables of Logarithms," and an autobiography entitled "Passages from the Life of a Philosopher."

BAB-EL-MANDEB, "Gate of Tears," the strait, 15 miles in width, uniting the Red Sea to the Indian Ocean, was so called on account of the dangers of its navigation. A lighthouse has been erected by the British government on the island of Perim in the middle of the strait.

BABER, *b.* 1483, *d.* 1530, the founder of the Mogul Empire in Hindustan, was

a descendant of the great Tartar chieftain, Timur or Tamerlane. On his third invasion of India he defeated the Sultan Ibrahim, near Delhi, 1526, and captured Agra a month later. In addition to being a skilful general, he proved himself an able statesman and administrator, displayed a taste for science and art, and wrote in the Tartar language a history of his life and conquests. The dynasty of which he was the founder, governed northern India for three centuries.

BABINGTON, ANTHONY, a Roman Catholic gentleman of Derbyshire, who entered into a conspiracy to assassinate Queen Elizabeth, and to set Mary Queen of Scots on the throne. The scheme was known to Walsingham, the conspirators were arrested, Babington confessed his participation in the plot, and was executed at Tyburn, 1586.

BABOO or **BABU,** an Indian term equivalent to Mr., used by Anglo-Indians to denote a Bengali, who parades his knowledge of English and English literature, all unconscious that his style of speaking is devoid of good taste, even when free from grotesque blunders.

BABOON, a species of monkey found in most parts of Africa. The head is large and dog-like, with powerful jaws and projecting teeth. The animals inhabit rocky and mountainous districts in preference to forests. They congregate in troops, and display great skill and daring in their attacks on gardens and grain fields. They possess a remarkable instinct for finding water, and in South Africa have been employed for this purpose.

BABUL TREE, an Indian acacia yielding a hard timber used for railway sleepers. A medicinal and edible gum is obtained from it.

BABYLON. (1) The Shinar and Chaldæa of the Bible, first existed as a small state to the north of the Persian Gulf. Thence the nation spread along the rivers Tigris and Euphrates, the seat of government moving in the same direction, until it was finally fixed at Babylon, in the eighteenth century, B.C. For a time, the country was tributary to Assyria, but Nabopolassar asserted his independence, 625 B.C., and in the reign of his son, Nebuchadnezzar, Babylon reached the zenith of its power. In the year 538 B.C., it was conquered by Cyrus, and from that time its history was merged in that of Persia. (2) The capital of the former was built on both banks of the Euphrates. It is said to have covered an area of 200 square miles, and to have been surrounded by walls 300 feet in height, and more than 80 feet in thickness, strengthened with 250 towers, and pierced by 100 gates of brass. Its walls and hanging gardens were accounted among the seven wonders of the world. (3) The name was frequently applied to Rome by the early Christians, and is now sometimes used for any large centre of population.

BABYLONIAN CAPTIVITY. When Nebuchadnezzar took Jerusalem in 586 B.C., he deported the inhabitants to Babylon, where they remained in tolerable comfort for more than fifty years. After the taking of Babylon by Cyrus, permission was given the Jews to return, a privilege which was accepted by about 50,000 of them. During the period of captivity, they were generally free to exercise their religion, and many rose to positions of political dignity and wealth.

BACCHANTES, devotees of the god Bacchus, in whose revels and processions they are depicted as taking a riotous part.

BAC'CHUS, the son of Jupiter and Semele, was the god of wine, and is generally represented crowned with vine leaves, and sitting in a car drawn by tigers.

BACH, JOHANN SEBASTIAN, *b.* in Eisenach, 1685, *d.* 1750; the most distinguished of a remarkable family of musicians. He gained a great reputation throughout Germany as a performer on the harpsichord and organ, and was particularly skilful in extemporising. His compositions are mostly of a religious nature, and include cantatas, motets, and numerous pieces for the organ. His fugues are well known to all lovers of that instrument.

BACILLUS is a microbe shaped like a rod. [See "Bacteria" in *Med. Dict.*]

BACKWELL, EDWARD, a goldsmith of the 17th century, who had banking transactions with Cromwell and Charles II., and was probably the founder of banking in England, although, according to Lord Avebury, the system was practised on the Continent as early as 1400.

BACON, FRANCIS, Lord Verulam, *b.* in London, 1561, *d.* 1626; one of the founders of inductive philosophy, which makes well-ascertained facts the basis of truth. In the reign of James I. he became, in succession, Attorney-General, Privy Councillor, Lord Keeper, and Lord Chancellor. He was most extravagant in his mode of life, and this led to his accepting bribes from suitors. A parliamentary enquiry led to his conviction, on his own written confession, of twenty-three acts of corruption, and he was deprived of his office. He devoted the remainder of his life to literature and science. His greatest works are the "Advancement of Learning" and his "Novum Organum." His Essays, remarkable for their terseness, display a keen observation of human nature.

BACON, ROGER, *b.* at Ilchester, 1214, *d.* 1294, a Franciscan friar, who, on account of his extensive knowledge, received the name of "Doctor Mirabilis." Natural philosophy was his principal study, and he is credited with being the inventor of the telescope, the camera obscura, and gun-powder. His knowledge of astronomy led him to discover certain errors in the calendar; he prepared a corrected calendar, a copy of which is preserved in the Bodleian Library. His discoveries were regarded as the result of witchcraft, and the jealousy of the other monks led to his being denounced before the court of Rome, and to his undergoing two terms of imprisonment, the second lasting for ten years.

BACTERIA, microscopic fungi. See *Med. Dict.*

BADAJOZ, on the Guadiana, Spain, surrendered to Soult in 1811, and was retaken by Wellington, 1812.

BADEN-BADEN, a popular summer resort in the duchy of Baden, Germany, in the midst of lovely scenery. Its hot mineral springs were known to the Romans.

BADEN-POWELL, ROBERT STEPHENSON, *b.* 1857, made a great reputation as a leader of scouts in India and Africa. He successfully held Mafeking, which was invested by the Boers a few days after the outbreak of war, until its relief, 18th May, 1900. He then took part in the general advance on Pretoria. Later, as commander of the South African Police, he did much for the pacification of the country. On his return to England he was appointed Inspector-General of Cavalry.

BADGE, originally the mark by which the followers of one knight were distinguished from those of another; it afterwards became a sign of authority. Badges have similar applications now in the British army; the men of certain regiments are distinguished from those of another by a badge worn on the collar or shoulder straps, and the rank of officers is indicated in a similar manner, by a badge consisting of one or two stars, a crown, or a star and a crown. Members of colleges and large schools also adopt a distinguishing badge. The rose, thistle, harp, or shamrock are the national badges of England, Scotland, and Ireland respectively.

BADGER, an animal belonging to the same family as the otter and the skunk, and closely allied to the bear, is common throughout northern Europe and Asia. It is about two feet in length, of powerful build, and walks with the whole of the foot on the ground. Its burrow, constructed within the cover of plantations and woods consists of a long passage leading to several chambers, the last of which is lined with dried grass, etc. Here the badger passes the day, leaving it at night to seek for food, which consists of vegetables, insects, and small birds. Badger-baiting was formerly a popular sport in England.

BADMINTON, a game played by means of a battledore and shuttlecock. The players stand on opposite sides of a net, as in lawn tennis. The shuttlecock is "served" by one player to an opponent on the other side of the net, and a point is scored against that player who fails to return it.

BAEDEKER, KARL, *b.* 1801, *d.* 1859, a printer of Coblenz, who published a series of excellent guide books to almost every European country.

BAFFIN, WILLIAM, *b.* 1584, *d.* 1622, an English Arctic explorer who discovered and explored Baffin's Bay, Smith Sound, and Lancaster Sound, 1616.

BAGDAD, on the river Tigris, in Asiatic Turkey, is one of the most prosperous and ancient cities in the Turkish Empire. The first meeting of the board of the Bagdad Railway Company was held in Constantinople, 1903. The completion of the line, designed to connect the Bosphorus with a port on the Persian Gulf, will make Bagdad a city of first-rate importance.

BAGPIPE, a wind instrument still in use among the peasantry of several parts of Europe, and very popular in the Highlands of Scotland, and at gatherings of Scotsmen. Pipers are attached to the Highland regiments, and are also retained by some Scottish noblemen. The instrument consists of a leathern bag, inflated by means of a mouthpiece, with three or four pipes attached; the one with finger-holes, called the *chanter*, produces the tune, whilst the *drones* emit a single low note each.

BAHA'MAS, a group of twenty inhabited islands, and several thousand rocks, of coral formation, lying between the isthmus of Florida and the island of Cuba, form part of the British possessions in the West Indies. There is a considerable trade in sponges and turtles; pineapples and other fruits are exported. *Nassau*, population 12,000, on New Providence, is the capital, and is a great resort for invalids.

BAHI'A, on the Bay of All Saints, was, until 1771, the capital of Brazil, and is still one of the chief ports, carrying on a considerable trade in sugar, cotton, coffee, hides, etc.

BAIKAL, LAKE, in the south of Siberia, is about half the size of Scotland. Its waters, which in places reach a depth of 4,500 feet, are frozen for six months of the year to the thickness of five feet.

BAILIE, a Scottish term denoting a magistrate of a municipality or royal borough, the provost and bailies of a municipal corporation in Scotland corresponding to the mayor and aldermen of an English borough.

BAILIFF. See *Commercial Dictionary.*

BAILMENT. See *Commercial Dictionary.*

BAIRAM, the name of the two festivals annually celebrated by Mohammedans. The first, which ends the period of fasting rigorously observed by the faithful, lasts three days. The second, which occurs 70 days after the first, commemorates the offering of Isaac by Abraham.

BAIRD, SIR DAVID, *b.* at Newbyth, Aberdeenshire, 1757, *d.* 1829, joined the army at 15, and saw considerable service in India and Egypt. He commanded the force which seized Cape Colony in 1806, and served under Moore as second in command at Corunna, where he lost an arm. He four times received the thanks of Parliament for his services, was knighted in 1804, and created a baronet in 1809.

BAJAZET', *b.* 1347, *d.* 1403, Sultan of the Turks, received the name of *Ilderim*, that is "lightning," from the rapidity with which he pursued his conquests. He conquered nearly the whole of the Balkan Peninsula, and subdued Asia Minor. He was finally defeated by Timur, 1401, and remained in captivity until his death.

BAKER, SIR BENJAMIN, *b.* 1840, a celebrated civil engineer. He was joint engineer with Sir John Fowler for the Forth Bridge; also engineer for the Central London Railway ("the twopenny tube"). He is consulting engineer to the Egyptian Government, and the dam at Assouan and the barrage at Assiout were carried out under his directions.

BAKER, SIR SAMUEL, *b.* in London, 1821, *d.* 1893, travelled extensively in India, Cyprus, and Africa, and discovered the Albert Nyanza. His book "Ismailia" contains a description of an expedition he commanded in the Soudan. An account of his travels was published in five volumes.

BAKSHISH, a Persian word meaning a present. Its commonest use is to denote a "tip" given to an Arab.

BAKU, the Caspian port of Trans-Caucasia, is in the centre of a district rich in petroleum. More than 700 oil-wells have been sunk, and connected by pipes with the refineries in the town. The district was formerly a resort of Persian fire worshippers.

BALAAM, a Midianitish prophet, to whom Balak, king of Moab, sent an embassy, offering him large bribes to curse the Israelites. He consented, at last, to go with the ambassadors to Balak, but was constrained to pronounce a blessing instead of a curse (Num. xxii.–xxiv.).

BALAKLA'VA, a small port with a land-locked harbour, in the south-west of the Crimea, about six miles from Sevastopol. It formed the British base of operations during the Crimean War, and a valley near the town was the scene of the charges of the "Heavy Brigade," and of the "Six Hundred," 25th October, 1854.

BALANCE OF TRADE. See *Commercial Dictionary*.

BAL'DACHIN, a canopy, supported on pillars, suspended from the roof, or projecting from the wall, as a cover to an altar. The most celebrated is the Baldachin of bronze, 95 feet in height, in St. Peter's, Rome.

BÂLE. See *Basel*.

BÂLE, COUNCIL OF, a council of the Roman Church that met at intervals during 1431–43, with the object of promoting such reforms in the Church as would reconcile the Hussite reformers. It caused a schism, however, by deposing Pope Eugenius IV., and electing a rival, Felix V. The latter resigned on the death of Eugenius IV., and acknowledged as his successor Nicholas V.

BALEAR'IC ISLANDS, the "Fortunate Isles" of the ancients, a group of five islands forming a Spanish province in the Mediterranean. The largest are Majorca, Minorca, and Iviza; the chief towns Palma, population 32,000, and Port Mahon.

BALEEN consists of from 300 to 400 horny plates which grow from the palate of certain species of whales and hang down into the mouth.

BALFE, MICHAEL WILLIAM, *b.* at Dublin, 1808, *d.* 1870; an operatic singer, and the composer of several tuneful operas, the best known of which is the "Bohemian Girl."

BALFOUR, ARTHUR JAMES, *b.* 1848, son of a Scotsman and nephew of the Marquis of Salisbury, who employed him as his Private Secretary at the Berlin Congress, 1878. Mr. Balfour was Chief Secretary for Ireland, 1887–91, became Leader of the House of Commons in 1891, and held the office of Prime Minister, 1902–5. As Irish Secretary he showed unexpected strength. His energetic and judicious management of the Congested District Board, the construction of Light Railways, and the Zetland Fund for evicted tenants won general approval. The chief measures of his premiership were the Education Act of 1902, and the Licensing Bill of 1904. Losing his seat at East Manchester in the General Election of 1906, he was provided with one in the City of London by the retirement of the Hon. Alban Gibbs. His chief literary works are "A Defence of Philosophic Doubt," and "The Foundations of Belief."

BALIOL, SIR JOHN DE, of Barnard Castle, Durham, fought against Simon de Montfort under Henry III., and died in exile, 1269. In order to escape a scourging at the doors of Durham Cathedral he founded Balliol College, Oxford.

BALIOL, JOHN, son of the former, *b.* 1259, *d.* 1314; became a claimant for the throne of Scotland on the death of Princess Margaret, 1290. Edward I., king of England, who had been called in as arbitrator, decided in his favour, and Baliol did homage to him as the feudal overlord of Scotland, 1292. He found his position full of indignities, and attempted to recover the independence of Scotland. The Scotch were defeated at Dunbar, 1296, Baliol was captured, and, together with his son, was imprisoned in the Tower of London for three years, after which he was permitted to withdraw to his estates in Normandy, where he died.

BALKANS, THE, a mountain range extending from the borders of Servia to the Black Sea, and now forming the southern frontier of Bulgaria. In the Russo-Turkish War, 1877–8, a Russian army forced a passage across the range, and a Turkish force of 32,000 men surrendered to them in the Shipka Pass.

BALKAN PENINSULA, THE, the most easterly of three great peninsulas in the south of Europe, situated south of the Danube, and terminating towards the south in the secondary peninsula of Greece. The Balkan States comprise Roumania, Servia, Montenegro, Bulgaria with East Roumelia, and Turkey. The population of these States includes amongst others Turks, Albanians, Greeks, Bulgarians, Armenians and Jews. This mixture of races with its accompanying hostility of creeds leads to incessant unrest, and is the prime cause of the political problem known as the "Eastern Question."

BALL, JOHN, an excommunicated priest, who became associated with Wat Tyler in the popular insurrection against the government of Richard II., 1381. Ball roused the people by preaching to them on the text "When Adam delved and Eve span, who was then the gentleman?" He was captured and executed.

BALL, SIR ROBERT, *b.* 1840, astronomer and mathematician, was educated at Trinity College, Dublin. He became Astronomer Royal of Ireland, 1874, and director of the Cambridge University Observatory, 1892, and has held the office of President of the Royal Astronomical Society. He has done more than any one, both by writing and lecturing, to popularise the study of Astronomy, as witness his popular books, "The Story of the Heavens," "Time and Tide," and his "Atlas of Astronomy." He is an authority on applied mathematics, and has written a "Treatise on the Theory of Screws."

BALLAD, originally a song that accompanied a dance, now denotes a narrative poem in a simple rhymed metre. The mediæval ballads of England were the work of minstrels rather than scholars, and were made for the people. Bishop Percy in 1765, published his "Reliques of Ancient English Poetry," and this collection of native ballads restored to favour that forgotten form of art.

BALLARAT, the second city in the province of Victoria, Australia, was a famous gold mining town. At first the gold was procured by washing the soil; this source is now exhausted, and the metal is obtained by crushing the quartz derived from deep mines. The value of the output in 1902 was £3,062,000.

BALLAST. (1) The material placed in light cargo vessels to ensure stability, by sinking the hull to a sufficient depth in the water. Iron, stone, gravel, sand, and water are commonly used. Water is sometimes enclosed in water-tight bags, which are laid on the floor of the hold, or it is confined beneath a false bottom in the ship, or contained in reservoirs that are at other times used for the conveyance of cargo. (2) The loose material, consisting of broken slag, stones, etc., placed as a packing between railway sleepers to give them stability, and to assist in the drainage of the line.

BALLISTA, a Roman instrument of war used for hurling heavy stones. It was a kind of heavy bow fixed on a platform on which rested the missiles.

BALLOON. See *Aeronautics*.

BALLOT, a method of secret voting. The voter in an election receives from the presiding officer of the polling station a voting paper, which bears the names of all the candidates. He places a cross against the names of those he supports, folds the paper, and deposits it in a locked box. The principle of public voting by ballot was first adopted in England at the election of school boards in 1870, and was extended to parliamentary and municipal elections by the Ballot Act of 1872. A similar method is made use of in electing members of clubs, scientific societies, etc., but balls of different colours sometimes take the place of voting papers.

BALME, COL DE, a famous pass off the Rhone Valley between Chamonix and Martigny, commanding magnificent views; greatest height above 7,000 feet.

BALMERINO, a village in Fife from which the Elphinstones took their title. The last (sixth) Lord Balmerino was beheaded on Tower Hill, in 1764, for complicity in the '45 Rebellion.

BALMORAL CASTLE, the Highland residence of the king, on the right bank of the river Dee, Aberdeenshire. The estate was purchased by Queen Victoria in 1851, and the present castle was erected from the designs of the Prince Consort, 1853–5.

BALSAM, an exudation from plants of the bean family growing in tropical America. The exudation contains resin, a volatile oil, and either benzoic or cinnamic acid. Balsam of Peru is an

exudation from the stem after the removal of the bark; Balsam of Tolu is obtained by making incisions in the bark. Both are used in medicine in cases of bronchitis, rheumatism, and asthma. The Balm, or Balsam of Gilead, referred to in the Old Testament and by ancient writers, is a liquid, resinous substance obtained from a small tree growing in Arabia, etc. It was highly prized for its fragrance and for its medicinal properties, being considered a cure for many diseases.

BALTHAZAR. See *Belshazzar*.

BALTIC, THE, an inland sea in the north-west of Europe, about twice the size of England and Wales, washing the shores of Sweden, Russia, Germany, and Denmark, and opening into the North Sea. The sea is very shallow, and its waters are fresher than the ocean, owing to the numerous rivers it receives. From December to April the navigation is closed by ice.

BALTIMORE, on Chesapeake Bay, is the most flourishing commercial city and manufacturing centre in the state of Maryland, U.S.A., and is the seat of the Johns Hopkins University. It exports grain, flour, and tobacco. Early in 1904 a fire destroyed a large part of the commercial section of the city, the damage being estimated at £20,000,000; population before the fire, 525,000.

BALUCHISTAN, area 132,000 square miles, population rather more than one million tribesmen, extends from the south of Afghanistan to the Persian Gulf, and from British India to Persia. Independent Baluchistan is ruled by the Khan of Kelat, who receives an annual subsidy of 100,000 rupees from the Indian government, to whom, in 1903, he granted a perpetual lease of certain border lands for an additional annual payment. Quetta and the Bolan Pass District have been held on lease since 1883. The country is chiefly a desert plateau, peopled by two races, the Baluchis, who are robber nomads, and the Brahuis, of Mongolian descent. A railway is being constructed from Quetta for 93 miles along the principal trade route.

BALZAC, HONORÉ DE, *b.* at Tours, 1799, *d.* 1850, a brilliant French novelist who aimed at depicting in his works every phase of human life, but died before completing his scheme. After his death, his works were published in 45 volumes, with the collective title of the "Comedy of Human Life."

BAMBINO (Ital.="babe") a term applied especially to a figure of the infant Christ bedecked with jewels in the Church of the Ara Coeli at Rome. This image is venerated for its supposed healing powers, and annually, on the Epiphany, is shown with great ceremony to the people.

BAMBOO, a species of giant grass, common in most tropical countries. In the East it is put to many economic uses, furnishing materials for house building, furniture, domestic utensils, masts of boats, etc. Paper is made from the sheaths and leaves, and the stems are used as water-pipes.

BAMPTON LECTURES, a course of eight divinity lectures delivered triennially at Oxford, for the endowment of which John Bampton, canon of Salisbury, left property to the University, which yields an income of £200 a year. The course, first delivered in 1780, and until recently given annually, was founded "to confirm and establish the Christian faith and to confute all heretics and schismatics."

BANANA, a plant native to the tropics of the Old World, but now distributed throughout the hot regions of America. The seedless fruit forms a valuable food in hot countries, and large quantities are now exported to England from the West Indian Islands. The fibres of the stem and leaves are used for the manufacture of textile fabrics, and for cordage. The plant, which is closely allied to the plantain, is cultivated from suckers, and the produce of fruit is enormous

BANBURY, a market town in Oxfordshire, famous for its cheese, cakes, and ale; population about 13,000.

BANCROFT, GEORGE, *b.* 1800. *d.* 1891. American historian and diplomatist. He was educated in Germany where he associated with Goethe and Humboldt. His "History of the United States" was issued in ten volumes during a period of over forty years. Meanwhile he was ambassador to Great Britain and to Germany.

BANDANA, originally an Indian spotted silk handkerchief, but now a kind of printed handkerchief, extensively made in Britain, usually of cotton. The cloth is first dyed red, and then the spots are produced by applying bleaching powder under pressure.

BAND OF HOPE, an organisation for promoting the teaching of temperance among children. It was founded in 1855. It has about 30,000 branches and a membership of over three millions.

BANDY, hockey played on ice, with rules similar to those of hockey on land. It is played extensively in the colder parts of the United States.

BANFF. (1) A port on the Moray Firth, 44 miles north-west of Aberdeen, forming one of the Elgin burghs. Duff House, the seat of the Duke of Fife, is situated near the town. (2) A small town in Alberta, Canada, at the foot of the Rockies, on the Central Pacific Railway. At Banff Station travellers alight for the Canadian National Park, 20 miles by 10 miles, containing scenery unsurpassed for grandeur and beauty.

BANGKOK, the "Venice of the East," on the delta of the river Menam, is the capital of Siam, and the commercial centre of the country, the trade being almost wholly in the hands of foreigners. The chief exports are rice and teak-wood; population about 400,000.

BANGWEOLO, or **BEMBA,** an oval-shaped lake, a little larger than Wales, in Equatorial Africa, forming the head waters of the Congo, at an elevation of 3,690 feet. The lake was discovered by Livingstone.

BANK HOLIDAYS, or general holidays, so called because on those days, chiefly through the efforts of Sir John Lubbock (Lord Avebury), the banks of England and Ireland are authorised by Act of Parliament (1871) to be closed on Easter Monday, Whit Monday, the first Monday in August and Boxing Day, in addition to Good Friday and Christmas Day, as formerly. In Scotland bank holidays occur on New Year's Day, and the first Mondays in May and August, in addition to Good Friday and Christmas Day. The Stock Exchange keeps holiday also on May 1 and November 1.

BANK OF ENGLAND, THE, was established by charter in 1694, and at first enjoyed exclusive privileges, as no other banking company was allowed to do business in the kingdom. The charter was renewed in 1708, but with a more limited monopoly. Yet it was not until the passing of the Banks Bill of 1826 that joint-stock banks began to be established in England; indeed, the first business of the kind in London did not begin operations until 1833. The Bank of England still enjoys a monopoly of certain business, and for this privilege pays to the government £180,000 annually, and the profits arising from the issue of notes beyond a certain sum. In addition to the business it does with private customers, it acts as the Government Banker, manages the National Debt, and pays its dividends. It issues Exchequer bills and government loans, and also manages much of the financial business of the Indian and Colonial Governments. All bankers dealing with the London Clearing House have accounts with the Bank of England, the net profits of which, for the half-year ending August, 1903, amounted to £715,767. Since 1816 the capital of the Bank has stood at £14,553,000, and on December 9th, 1903, there was a reserve of £3,148,604. Since the Gordon Riots of 1780, when the bank premises were considered to be in danger of attack, a military guard has been nightly stationed there. Refer to *Index*.

BANK NOTES are printed promises, made by the issuing bank, to pay to the bearer on demand a certain sum in cash. £1 and £2 notes have been in circulation from time to time, but at present, notes are not issued in England for a smaller sum than £5, though the Bank of Scotland and the Bank of Ireland still issue £1 notes. The holder of a note is protected against loss by the legal requirement that the issuing bank must hold a reserve, either in gold, Bank of England notes, or Government stock, to cover a large proportion of the amount for which it issues notes. By the Bank Charter Act of 1844, the Bank of England was permitted to issue notes to the amount of £14,000,000, since increased to £18,450,000, an amount covered by the £11,015,100, to which extent the Government is indebted to the Bank, and by other 'gilt-edged' securities. Every note issued in excess of £18,450,000 must be covered by gold coins or bullion deposited in the vaults of the Bank. According to the "Banker's Magazine" for December, 1903, the fixed issue of bank notes by the banks of the United Kingdom amounts to £29,370,328. No Bank of England note is issued twice. In the manufacture of bank notes, every care is taken to render forgery difficult, or easy of detection, by the employment of peculiar paper and ink, water-marks, and peculiarities in the design.

BANKS, SIR JOSEPH, *b.* in London, 1743, *d.* 1820, a celebrated naturalist, who was president of the Royal Society for forty-one years. He collected botanical specimens from all parts of the world, and on his death bequeathed his collection, and a valuable library, to the British Museum. He was created a baronet in 1781.

BANNER, a flag bearing a coat of arms, or some other device, and attached to a pole. From a very early period banners have been used for directing the movements of troops. In the Middle Ages, the banner indicated the rank of the bearer. Its use was not confined to warriors. Bishops and abbots had their banners, bearing the effigies of saints, borne before them in religious processions. Every regiment in the British army is provided with banners, called "colours," bearing the regimental badge, and inscribed with the names of battles in which the regiment has taken part.

BANNOCKBURN, a village in Stirlingshire, manufactures carpets and tartans. The village was the scene of the victory of Robert the Bruce over Edward II., 1314, by which the independence of Scotland was secured.

BANSHEE, a fairy who, according to the legends of Ireland, Scotland, and Brittany, was attached to a particular family, and by her wailings foretold the approaching death of a member of the house.

BANTING, WILLIAM, a London merchant who, in 1863, published a pamphlet

on a method of reducing corpulence by dieting. He recommended the use of lean meat, fish, and dry toast, and the avoidance of food rich in starch, sugar, or fat.

BANTU, the language of the natives of the interior of Tropical Africa. It differs from every known family of languages, the inflections being usually placed at the beginning of the words.

BANYAN, the Indian fig. The branches of the tree throw out supports which take root when they reach the ground, and grow into trunks which, in their turn, produce similar branches. One banyan is said to have sheltered 7,000 men.

BA'OBAB, a native of Tropical Africa, is one of the largest trees in the world. Its trunk is often 30 feet in diameter, but the tree is not proportionately tall. It produces an acid pulpy fruit, known as monkey-bread, the juice of which forms a refreshing beverage, and is considered a specific in cases of fever. The bruised leaves are also used medicinally.

BAP'TISTERY, a building or portion of a building in which the rite of baptism is, or was, performed. Among the early Christians the baptistery was detached from the Church to which it belonged, and was polygonal or circular in shape. Remarkable specimens are to be seen at Florence and Pisa.

BAPTISTS, a denomination of Christians who hold that the proper mode of baptism is by immersion, and that the only persons suitable to receive the rite are those old enough to exercise an intelligent faith. Each congregation, with its pastor and deacons, is self-governing; church membership is conferred by baptism, and every member has the right of voting on any question brought before a church-meeting. In 1903 the denomination possessed 6,764 places of worship in the United Kingdom, and 377,747 members. (Refer to "Baptists" in *Index.*)

BARBA'DOS, the oldest and healthiest of the British Colonies in the West Indies, was acquired in 1605, and is, next to Jamaica, the most valuable of our West Indian possessions. The chief exports are sugar and molasses. In 1902 the Imperial Government allotted £80,000 to the island, for the relief of the sugar growers: population nearly 200,000, of whom less than one-tenth are whites.

BARBARA, SAINT, a Christian martyr of the third century, and the patron saint of artillery. She was beheaded by her father, who is said to have been struck dead by lightning immediately after the act.

BARBARY, a general name applied to the north of Africa, from Egypt to the Atlantic, and from the Mediterranean to the Sahara. It includes Morocco, Algeria, Tunis, and Tripoli.

BARBAULD, ANNE LETITIA, *b.* in Leicestershire, 1743, *d.* 1825, English author. She first became known as a writer of hymns and of poems for children, but her most elaborate work was a collection of English novels with biographical and critical notes.

BARBER. (1) Formerly the practice of blood-letting was recognized as a legitimate part of the barber's profession, and their company was incorporated under the name of "Barber-Surgeons." This connection was dissolved in 1745, but the barber's pole may still be seen with its chin basin dangling as symbol of the old function of surgery. (2) A keen winter wind which, laden with particles of ice that cut the face, blows at certain times in the Gulf of St. Lawrence.

BARBETTE. (1) In a fortress a platform from which guns can be fired over the parapet instead of through an embrasure. (2) In war-ships a platform provided with a heavy-armoured breastwork behind which the guns are revolved and over which they are fired. The barbette system has superseded that of the turret since 1893, when armoured hoods were first employed to revolve with the guns. In the earlier barbette ships the whole gun was exposed except when in the loading position.

BARBICAN, a strong flanking tower or outwork guarding the approaches to a castle or fortress, and intended especially to protect the drawbridge. At Alnwick, York and Warwick are still to be seen good examples.

BARCAROLLE, a species of song peculiar to the Venetian gondoliers. The name is applied to musical compositions for the voice or piano, written in imitation of these songs. The swaying rhythm is intended to convey the idea of the plying of the oar and the motion of the gondola.

BARCELO'NA, on the Mediterranean, is the principal port of Spain and its largest manufacturing town. The staple industry is the cotton manufacture; population about 540,000.

BAREBONE'S PARLIAMENT met July 4th, and resigned its power into the hands of Cromwell December 13th, 1653. The members were selected by Cromwell and the Council, from names forwarded by the congregational churches as being those of persons, "faithful, fearing God, and hating covetousness." The parliament was named after one of the members for London, "Praise-God Barebones."

BARENTZ, WILLIAM, a Dutch Arctic explorer who discovered Spitzbergen, and explored the coasts of Nova Zembla; *d.* 1596.

BARHAM, RICHARD, *b.* at Canterbury, 1788, *d.* 1845, a minor canon of St. Paul's, is chiefly remembered as the author of the "Ingoldsby Legends," a series of humorous tales in verse, which first appeared in "Bentley's Miscellany," in 1837, and have been republished many times since.

BARIL'LA, an impure carbonate of soda obtained by burning plants grown in salt marshes or on the sea coast. The preparation formerly employed a number of people in the countries bordering on the Mediterranean, but the industry has declined owing to the discovery of methods of preparing the carbonate from common salt.

BARING-GOULD, SABINE, *b.* 1834, divine, traveller, novelist and music writer. He is one of the most prolific writers of our day, his subjects including religion, folk-lore, topography, history and romance. His most important work is "The Lives of the Saints" (15 vols.). Of his novels "Mehalah," "John Herring," and the "Broom Squire" are popular. Still more so are his hymns "Onward, Christian Soldiers," "Now the day is over," and "Through the night of doubt and sorrow." His versatility may be judged from his most interesting works on Dartmoor, Brittany, the Riviera, Iceland, Mediæval Myths, and Virgin Saints.

BARLEY, a species of grass more hardy than wheat. In Europe and America it is chiefly cultivated for making malt for brewing and distilling. It is also used for feeding cattle. Pearl-barley is barley freed from the husk, in a mill, and is used for thickening soups and broth.

BARMECIDE'S FEAST, an imaginary banquet. The phrase is derived from a story in the Arabian Nights' Entertainment. Schacabac, a hungry beggar, applied to a wealthy Barmecide for charity, and was invited to partake of a sumptuous feast. Several rich dishes were called for in succession by the host, and a pretence was made of serving each, but none actually appeared. The beggar displayed great good humour, expressed his delight with each course, as it appeared in the form of an empty dish, and finally won for himself a real meal and a position in the household.

BARMOUTH, a favourite Welsh watering-place, standing on the estuary of the river Mawddach, Merionethshire.

BARNABAS, SAINT, also known as Joses, a native of Cyprus, is mentioned in the Acts of the Apostles as a companion of St. Paul, and is supposed to have founded the first Christian community at Antioch. According to tradition he was stoned to death at Cyprus, 61, A.D.

BARNACLE, a genus of crustaceans commonly found adhering to logs of wood, and to the bottoms of ships. Barnacles begin life as active larvæ. In the adult stage the creature surrounds itself with a multivalved shell. The six pairs of limbs remain free, and are capable of slight protrusion, while the mouth, with its mandibles, lies at the bottom of the shell cavity. The acorn barnacle covers our piers at the seaside with a white crust of shells.

BARNARDO, THOMAS JOHN, commonly called Dr. Barnardo, *b.* 1845, *d.* 1905, a distinguished philanthropist. While a medical student he founded his home for waifs and strays in Stepney. In 1899 the institution was incorporated under the title "The National Incorporated Association for the Reclamation of Destitute Children." His ruling principle was that no destitute child should ever be refused admission. He established four branch missions, and 140 homes, of which four are in Canada. There are 8,000 children at present (1906) in residence, the daily expenditure being £240. Over 17,000 have been settled as emigrants in Canada, and 60,000 have passed through the institution.

BARNATO, BARNETT ISAACS, *b.* 1852, of Jewish parentage in London, *d.* 1897. He went out to South Africa in 1873, and with his brother, Harry Barnato, settled in Kimberley, where they made a fortune in the diamond industry. His firm, "Barnato Bros.," amalgamated with the De Beers Company under Cecil Rhodes. He built a magnificent mansion in Park Lane, which, however, he never occupied. Returning from South Africa in broken health, he threw himself overboard.

BARNES, WILLIAM, *b.* near Salisbury, 1800, *d.* 1886, a poet and scholar. He lived a quiet life as a Dorsetshire incumbent, and made a reputation as a pastoral poet by his "Poems of Rural Life in the Dorset Dialect" and "Hwomley Rhymes." He gives a true picture of human life, with its quaintness and humour, as well as of nature in all its varied beauty, within the limits of his secluded parish.

BARNET, a town in the south of Hertfordshire, is celebrated for its horse and cattle fair. In the battle fought here in 1471 the Lancastrians were defeated by the Yorkists, and Warwick, the "king maker," was slain. An obelisk now marks the spot where Warwick fell; population about 10,000.

BARNUM, PHINEAS, *b.* in America, 1810, *d.* 1891, began his career as a showman in 1834, by exhibiting George Washington's nurse. "Tom Thumb" proved another success, and by his "Jenny Lind" Concerts, in 1849, Barnum realised a fortune, which he afterwards lost. In 1871 he organised his "Greatest Show on Earth," with which he toured the United States and Europe, and amassed another fortune.

BARODA, a native state under a prince known as the Gaekwar, in the province of Bombay; area 8,570 square miles;

population 1,950,000. The capital, of the same name, is 250 miles north of Bombay in the centre of the State.

BAROM'ETER, an instrument for measuring the pressure of the air. In its simplest form it consists of a vertical glass tube about 33 inches in length, closed at one end. This is filled with mercury, and inverted, with its open end under the surface of more of the same liquid contained in a shallow vessel. The mercury in the tube falls until it reaches a point about 30 inches above the mercury in the cup. The distance from the surface of the liquid in the cup to the top of the mercury in the tube is called the height of the barometer. A height of 30 inches indicates an atmospheric pressure of fifteen pounds to the square inch, and a variation of one inch in the height marks a change of half a pound in the pressure. In the *Syphon Barometer* the open end of the tube is bent into the shape of the letter U, and the cup is dispensed with. Also see *Aneroid.*

BARON, the lowest degree in the peerage of the United Kingdom. In feudal times the barons were the tenants in chief of their feudal overlord, the king, and had a seat and vote in the royal courts and tribunals. From the time of Edward II. the word has had a more restricted meaning, and is now applied only to those peers who take precedence after the dukes, marquises, earls, and viscounts.

BARONET, the lowest hereditary title in the United Kingdom. The order was instituted by James I. in 1611, for the purpose of raising money for the province of Ulster, and all baronets are still entitled to bear on their coats of arms the bloody hand of Ulster.

BAROTSE LAND, lies to the north of Matabele Land, on the Upper Zambesi, and forms the north-west part of Rhodesia, a territory controlled by the British South Africa Company. The inhabitants, like the Matabele, are a Bantu people.

BARRATRY. See *Commercial Dictionary.*

BARRIE, JAMES MATTHEW, *b.* 1860, at Kirriemuir, Forfarshire, a village that he immortalised as "Thrums." The life of his mother and his own early aspirations are recorded with singular beauty in "Margaret Ogilvy." He migrated to the Midlands where he worked as a journalist. Thence he came to London and wrote for several newspapers. He won popularity by his "Auld Licht Idylls" and "A Window in Thrums" and "The Little Minister." It is as a dramatist, however, that he has achieved his chief successes. "Walker, London," "The Professor's Love Story," "The Admirable Crichton." "Little Mary," and "Peter Pan," with all their whimsicality and humour, represent a series of successes that would be hard to parallel in recent English drama.

BARRIER REEF, a reef of coral found some distance from the shore. The Great Barrier Reef of Australia lies off the coast of Queensland, and consists of a series of reefs stretching for a distance of 1,200 miles, and having a width of 100 miles in the south. The channel between it and the shore is from 20 to 70 miles wide. The barrier is broken by several deep channels, which occur opposite the mouths of rivers, where the flow of fresh water prevents the growth of coral.

BARROW, a mound heaped over the burial place of a person of distinction, or of warriors slain in battle. Barrows are found in many parts of the world. In England they are scattered over the open downs, and along the ridges of Wiltshire, Dorset, and parts of Hampshire. The excavations of a large number of British barrows by Dr. Greenwell led to the discovery of many remarkable pieces of ancient ware, which are now to be seen, along with other prehistoric relics, in the "Greenwell" cases at the British Museum.

BARROW IN FURNESS, a seaport in North Lancashire, opposite Walney Island, has the largest steel manufactures in the kingdom. The town owes its rapid growth —less than 60 years ago it was a hamlet inhabited by 100 people—to the discovery of iron in the neighbourhood; population about 60,000.

BARROW, ISAAC, *b.* in London, 1630, *d.* 1677, a celebrated English theologian, mathematician, and astronomer; made Master of Trinity College in 1672.

BARROW, SIR JOHN, *b.* near Ulverstone, Lancashire, 1764, *d.* 1848, occupied the position of Secretary to the Admiralty, 1804–45, and devoted his leisure to literature and geographical science. He published biographies of Drake, Anson, and Howe; Voyages of Discovery and Research within the Arctic Regions; and an Autobiography, written at the age of 83.

BARRY, SIR CHARLES, *b.* at Westminster. 1795, *d.* 1860, was the architect of the Houses of Parliament, and was knighted in 1852.

BARRY, SIR JOHN WOLFE, *b.* 1836. civil engineer, the youngest son of Sir Charles Barry. He designed the Blackfriars, Kew, and Tower Bridges over the Thames. He is consulting engineer to several railway companies, and has acted on many important public commissions. He was knighted in 1894 on the opening of the Tower Bridge.

BAR SINISTER. Refer to *Index.*

BARTH, HEINRICH, *b.* at Hamburg, 1821, *d.* 1865; a distinguished African traveller, explored a considerable portion of the north and centre of the continent, and published an account of his travels, and an important work on the languages of the countries he visited.

BARTHOLOMEW, SAINT, an apostle of Christ, and probably the Nathanael of St. John's Gospel. He is said to have laboured in the south of Arabia and in Armenia, and to have suffered martyrdom by crucifixion, at Albania Pyla, (now Durbend), in Russia.

BARTHOLOMEW FAIR, an annual market formerly held on St. Bartholomew's Day, at Smithfield. The fair was instituted by Henry I., in 1133. In course of time it lost its business character, became an occasion of revelry and debauchery, and was finally abolished in 1855.

BARTHOLOMEW, MASSACRE OF SAINT, the massacre of the Huguenots in France by the orders of Charles IX. and his mother, Catherine de Medici. The massacres began in Paris on St. Bartholomew's Day, 1572, extended to the whole of France, and continued for thirty days in most of the provinces; 30,000 Protestants are said to have been slaughtered.

BAR'TIZAN, a small turret projecting beyond the face of the main building in mediæval fortifications.

BARTOLOMEO, FRA, *b.* 1469, *d.* 1517. a Florentine painter who owed much to the influence of Leonardo da Vinci, and in his turn greatly influenced Raphael. He was a follower of the reformer Savonarola, after whose death he became a monk. His best works are in Florence; the Louvre at Paris, and the National Gallery in London can each boast of only one of his pictures. He is said to have invented the lay-figure.

BARTOLOZZI, FRANCESCO, *b.* at Florence 1727, *d.* 1815, a celebrated engraver. He was induced to settle in England, where he soon established a permanent fame as a master of line-engraving. The diploma still issued by the Royal Academy was engraved by him from a design by Cipriani, and is considered one of his masterpieces. He spent his last years in Lisbon, at the head of the royal school of engravers.

BARTON, ELIZABETH, the "holy Maid of Kent," a servant girl subject to trances, during which she made use of incoherent words and phrases, which were looked upon as Divine inspirations. For uttering pretended revelations against the divorce of Henry VIII. from Catherine of Aragon, and the ecclesiastical changes in the country, she was executed, 1534.

BARTON, SIR EDMUND, *b.* 1849, an Australian statesman and lawyer. He was premier of the first Federal Cabinet in 1901, and was present at the Colonial Conference in London in 1902. The federation of the Australian colonies was largely due to his energetic advocacy.

BASALT is a dark rock produced by the solidification of molten lava. In cooling it frequently has separated into vertical columns as in the Giant's Causeway and Fingal's Cave.

BASE-BALL, an American ball game developed from the English game of "rounders." The game has become highly organised, and is largely played by "professionals." It is as much the national game of the United States as cricket is the national game of England.

BASEL or **BÂLE,** on both banks of the Rhine, on the borders of Switzerland, has extensive manufactures of silk and chemicals, and is one of the great financial centres of the world. An important ecclesiastical council was held here, 1431–43.

BASHI-BAZOUKS, irregular troops in the pay of the Sultan of Turkey, and recruited principally from the Asiatic provinces. They are turbulent and ill-disciplined, and at various times have been guilty of great atrocities.

BASHKIRTSEFF, MARIE, *b.* 1860. *d.* 1884. a Russian painter and diarist. Her "Umbrella" and "The Meeting" in the Luxembourg, Paris, display her genius, and her "Journal" and "Further Memoirs" disclose a nature and temperament at once emotional, vain, and supersensitive.

BASIL, surnamed "the Great," *b.* 329, *d.* 379, the most distinguished of the fathers of the Greek Church. He led a life of asceticism, and his rules for monastic orders are still followed in the Eastern Church. He became bishop of Caesarea, in Cappadocia, 370, and was a powerful advocate of the orthodox faith in the struggle with Arianism.

BASIL'ICA. (1) Originally denoted a king's palace, but the name was applied by the Romans to a hall in which justice was administered or business transacted. The hall usually included a nave, aisles surmounted by galleries, and a semicircular apse at one end. Many Roman Basilicas were afterwards adapted for use as Christian Churches, and the plans for new places of worship followed similar lines. (2) A code of laws compiled by Basil I., Emperor of the East, and his son Leo, first published in sixty books in 887.

BAS'ILISK, a mythical serpent, also called a *cockatrice,* that inhabited the deserts of Africa, and killed plants and animals by its breath, and men by its direct gaze, so that it could be approached only by the aid of a mirror. (2) A genus of harmless lizards inhabiting Guiana and other parts of South America, and also the Indian Archipelago. The creature is adapted for tree climbing and for swimming. The *crested basilisk* is over three feet in length. Its flesh is said to be wholesome, as tender as chicken, and to possess the flavour of venison.

BASQUES, a people inhabiting the districts in Spain and France at the western end of the Pyrenees. Differing in language and characteristics from the peoples of the rest of Europe, they represent, it is thought, a primitive stock that has survived the Aryan invasions. They are of excellent physique and make capital sailors. They are industrious and lively in disposition. Their national game "pelota," is becoming generally known. Many have emigrated to South America, where they number more than 200,000. The home population is 650,000.

BASRA, a river port on the Euphrates, 70 miles from the Persian Gulf. It is situated in marshy and low ground, and is the furthest point navigable for sea-going vessels. It does a large export trade in rice, barley and dates.

BAS-RELIEF, or "low relief," a term in art denoting sculptures slightly projecting above the general surface. The metopes and frieze of the Parthenon (see *Elgin Marbles*) are in *alto relievo* or "high relief," that is, they are almost detached. In *mezzo-relievo* the proportion of detachment is half, and in low-relief or *basso-relievo* proper, the detachment is slight.

BASS ROCK, a circular rock about a mile in circumference, rising to a height of 420 feet, at the entrance to the Firth of Forth, and inaccessible except at the south-east. Many prominent Covenanters were imprisoned in its castle, and the Rock was the last place in Britain to yield to William III.

BASS STRAIT, the channel, 150 miles across, separating Tasmania from Australia, named after the commander of the boat's crew that first sailed through it.

BASSOON', a wind instrument, the speaking part of which is a double reed. The instrument consists of a tube of wood nearly eight feet in length, bent sharply upon itself, so that the bell is brought into position above the metal mouthpiece, which contains the reed. It is very effective in an orchestra, forming the bass of the "wood wind."

BASTILLE, THE, was built, 1370–83, as a fortress for the defence of Paris, and was also used as a state prison. The building was protected by towers, and was surrounded by a moat. On 14th July, 1789, it was attacked by the populace of Paris. Its fall was the signal for a general uprising of the people throughout France, against the Government, and the inauguration of the great French Revolution. A column, bearing the names of 654 persons who took part in the attack, marks the site.

BASTINADO, a punishment common over the whole East, consisting of blows with a stick, generally upon the soles of the feet.

BASTION, a bulwark projecting in front of the general line of fortifications, and so designed, that its guns command the country in front, and may also be trained along the line of ramparts, so as to protect the latter from assault.

BASUTOLAND. Refer to *Index*.

BATAVIA, on the north coast of Java, is the capital of the island, and of the Dutch East Indies; population 150,000.

BATH, on the Lower Avon, is the largest town in Somersetshire, and is built almost entirely of Bath stone, a species of sand-stone quarried in the neighbourhood. The town derives its name from the hot baths and mineral springs that have helped to make it a fashionable watering place from the time of the Romans to the present day. The abbey church was begun in the reign of Henry VII. and completed in 1609; population about 50,000.

BATH, ORDER OF THE. Refer to *Index*.

BATHOS, a sudden descent from the sublime to the ridiculous. Usually this fault is committed unwittingly by writers aspiring to be impressive, but Byron has a fine satirical example:—

"With eagle pinions soaring to the skies
Behold the ballad-monger Southey rise."

BATHS. See *Med. Dict.*

BATH-STONE, a yellow limestone quarried extensively in Wiltshire and Somersetshire, and taking its name from Bath, where it has been extensively used. It works easily, hardens on exposure, but in London perishes quickly.

BATHURST. (1) The centre of a pastoral, agricultural, and gold-mining district in New South Wales; it stands in the middle of the chief wheat-growing district of the colony. The first discovery of gold in Australia took place in 1851, about twenty miles from the town; population about 10,000. (2) The capital of British Gambia, West Africa, stands at the mouth of the river Gambia; population about 9,000.

BATOUM, a seaport in Trans-Caucasia, has the safest harbour on the eastern shores of the Black Sea. The town was ceded to Russia by Turkey in 1878.

BATTALION, a unit of command in infantry for tactical purposes. In the British army every territorial regiment is intended to consist of two battalions of regular troops, each consisting of from 800 to 1,000 men, and commanded by a lieutenant-colonel, two militia battalions, and the affiliated volunteers. The battalion is divided into ten service companies, which are again subdivided into sections.

BATTENBERG, a small town in Prussia, about 40 miles west of Cassel. It is from this place that the late husband of our Princess Beatrice, (youngest daughter of Queen Victoria), drew his title.

BATTENBERG, PRINCESS HENRY OF See *Beatrice, Princess*.

BATTENS, a term now applied by importers to all pieces of sawn timber having a cross section of from 6 to 27 square inches. Any piece of wood nailed across jointed boards to prevent warping is also called a batten.

BATTERING-RAM, a heavy beam used in sieges in ancient and mediæval times. It was shod at one end with a "ram's head" of heavy metal, which by continued impacts broke in the wall. The beam was either swung or rolled, and the operators were protected by a roof.

BATTERY. (1) In artillery, a number of guns, and the complement of men, horses, gun-carriages, ammunition-waggons, etc., required to work them. In the British, French, and German armies a battery consists of six guns; in the Russian army, of twelve. (2) All the lines of a fortress behind the parapets of which guns are placed. (3) Any raised platform, which may be either floating or fixed, on which cannon are mounted. (4) In law, an assault by beating or wounding.

BATTLE, a market town in Sussex, seven miles north of Hastings, so called from the battle of Senlac, in which William the Conqueror defeated Harold, 1066. To commemorate his victory, he founded and richly endowed the abbey, the ruins of which still show the gate-house, hall, almonry, the refectory, a portion of the cloisters, and remains of the church; population about 3,000.

BATTLEMENTS are parapets surmounting the walls of a town, castle, or tower, with regularly intervening spaces originally intended for the discharge of weapons. The interstices are called *embrasures* or *crenelles*, and the uprights, *cops* or *merlons*. Crenellations or battlements came to be used extensively as an ornament by church builders of the 14th and 15th centuries.

BATTUE, a method of killing game by beaters driving them to a place occupied in advance by the sportsmen, each of whom is usually provided with two guns, which are re-loaded by an attendant as soon as discharged. In fact, a battue is designed to give as little labour as possible to the sportsman.

BAUCIS AND PHILEMON. According to Greek mythology, they were two poor people of Phrygia, who entertained Jupiter and Mercury, after those gods, who were travelling in disguise, had been refused hospitality by their neighbours. They and their cottage were saved from the deluge which destroyed the other inhabitants of the country. The cottage was transformed into a temple, in which Philemon and Baucis officiated as priest and priestess.

BAUR, FERDINAND, *b.* near Stuttgart, 1792, *d.* 1860; a celebrated German theologian, and founder of the "New Tübingen School of Theology." He published works on various Christian dogmas, including the Atonement, the Holy Trinity, and the Incarnation, criticisms on the Gospels and certain of St. Paul's Epistles, and a history of Christian doctrine to the end of the 18th century. His views have had a great influence on modern theology.

BAVARIA, the second in size and population of the German states, is situated in the south of the empire, and consists chiefly of a high tableland crossed by ranges of mountains and hills. The area is 29,286 square miles, and the population about 6¼ millions, 50 per cent. of whom are engaged in agriculture, and about 25 per cent. in mining and manufactures. The capital is Munich.

BAXTER, RICHARD, *b.* at Rowton, in Shropshire, 1615, *d.* 1691, was the most eminent English divine of the 17th century. He ministered as parish priest of Kidderminster for 19 years, though his sympathies were always with the Puritans. In the Civil War he sided with the Parliamentarians, and became chaplain to one of the regiments; nevertheless he openly expressed his disapproval of the execution of Charles, and of the position taken by Cromwell. On the Restoration he became a chaplain to the king, and was offered the see of Hereford. The Act of Uniformity at length drove him from the English Church, and, in 1682, he was tried for sedition, because certain passages in his commentary were deemed hostile to episcopacy. Jeffreys condemned him to be imprisoned until a fine of 500 marks was paid, but he was released after nearly 18 months, and spent the remainder of his life in peace. His writings were numerous. The most popular were:—"The Saints' Everlasting Rest" "Dying Thoughts," and the "Call to the Unconverted." The last was translated into nearly every European language.

BAYARD, CHEVALIER DE, *b.* in the Château Bayard, near Grenoble, France, 1475, *d.* 1524; "the Good Knight, without fear and without reproach," the descendant of many generations of warriors. He won renown in the wars of Charles VIII., Louis XII., and Francis I., the last of whom, at his own request, received the honour of knighthood at his hands, after the battle of Marignano, 1515. Bayard, who was distinguished for his courage, justice, generosity, modesty, and loyalty, was mortally wounded while defending a pass near the river Sesia, in Italy, when he ordered himself to be placed facing the enemy, with his back to a tree.

BAYEUX, a Norman town in the province of Calvados, France, manufac-

tures lace and hosiery, and possesses an ancient Gothic cathedral. In the public library is preserved the Bayeux Tapestry, which represents scenes connected with the Norman conquest of England, commencing with Harold's visit to the court of William, and ending with his death at the battle of Senlac. It is supposed to have been worked by Matilda, the wife of the Conqueror, and her attendants.

BAYONNE, a strongly fortified town in the south-west of France, about four miles from the Bay of Biscay, was held by the English from 1152 to 1451. Its cathedral church dates from the 12th century. The "bayonet" is said to have received its name from being invented at Bayonne, about the year 1640.

BAYREUTH, the home of Wagner, is in Bavaria. The town, well situated on the Red Maine, has a handsome palace of the Duke of Würtemburg, and a beautiful national theatre built in 1875 for the performance of Wagner's operas. Bayreuth was the home also of Jean Paul Richter, whose house, as well as that of Wagner, is a centre of attraction.

BAZAAR, an Eastern word signifying a market-place, or an "exchange." The bazaars of India are permanent, and here one has to go for all the necessaries of life. The same term is applied to the institutions which answer to our "Exchange." The bazaars of Constantinople and Cairo are renowned.

BAZAINE, FRANCOIS, *b.* at Versailles, 1811, *d.* 1888, distinguished himself as a soldier in Algiers, the Crimea, and Mexico, and became a marshal of France. He commanded the army of the Rhine at the beginning of the Franco-German War, 1870–1; but, after the fall of Sedan, was surrounded in Metz, and compelled to surrender with the whole of his forces. After the conclusion of the war he was tried by court-martial and condemned to death. The sentence was commuted to imprisonment for life. He escaped to Madrid, and wrote a book justifying his action at Metz, but its sale was prohibited in France.

BEACHY HEAD, about two miles south-west of Eastbourne, is the highest headland on the south coast of England, rising to a height of 570 feet. Off this cape a combined English and Dutch fleet suffered defeat at the hands of the French, 1690.

BEACONSFIELD, EARL OF. See *Disraeli.*

BEADS are small balls of glass, wood, metal, etc., pierced for stringing, and used as articles of adornment, or, in the form of a rosary, for counting the number of prayers recited. Their use as an ornament is of very ancient date. Specimens have been found in the ruins of Assyrian temples, on Egyptian mummies, and in the graves of ancient Greeks Romans, and Britons. The manufacture of glass beads is an important industry in Venice, where more than 6,000 persons are employed in the business. Large quantities are also produced in Birmingham.

BEAGLE, a small species of hound, stoutly and strongly built, with drooping ears and possessing a very keen scent, formerly used for hunting hares. The smaller breeds were highly valued, and at one time a whole pack could be covered with a sheet. Their place has now been taken by harriers.

BEAN FEAST, an annual outing taken together, generally at the employer's expense, by the employees of large firms. The origin of the word is uncertain.

BEAR-BAITING was formerly a popular and fashionable sport in most European countries, and it is recorded that Queen Elizabeth was a frequent attendant at the bear gardens. The animal was chained to a post and worried by specially trained mastiffs. The practice was finally abolished in England by an Act passed in 1835.

BEARD. The fashion in beards has varied at various times and among different nations. By the Levitical law, the Jews were forbidden to "mar the corners" of the beard. (Lev. xix. 27.) Its growth was generally cultivated among Eastern peoples. The figures on the Babylonian cylinders are bearded, the Persian kings are said to have interwoven their beards with gold thread, and down to the present time the Turks have considered the beard as a mark of great dignity, and its removal as a degradation. The Greeks wore beards until the time of Alexander the Great, and the Romans followed the same practice until the year 296 B.C., after which, the first day of shaving was considered as the entrance upon the state of manhood, and was kept with great festivities. The ancient Britons wore moustaches only; the Anglo-Saxons permitted the growth of the whole beard and whiskers; while the Normans not only shaved the whole of the face themselves, but imposed the same rule upon the conquered. In England, in the time of Elizabeth, the beard received great attention. It was cut and trimmed in a most fantastic manner, the members of the various professions adopting a distinctive pattern. Its growth became less common after the restoration of Charles II., and gradually the practice of clean-shaving spread over the whole of Europe. During the Napoleonic wars, the soldiers permitted their beards to grow, and continued to do so when they returned to civil life, with the result, that the practice again became general, and to-day, every individual follows his own inclination. Physicians recommend that men who are liable to inflammatory diseases of the throat and lungs should permit the beard to grow, as a protection to those organs.

BEATON, DAVID, CARDINAL, *b.* 1494. *d.* 1546, the man who did most to hinder the spread of Reformation doctrines in Scotland, and to prevent the proposed alliance of England and Scotland by the marriage of Mary to Edward VI. He was chiefly instrumental in getting the great preacher, George Wishart, burnt, and was soon after assassinated.

BEATRICE, PRINCESS, *b.* 1857, youngest daughter of Queen Victoria, married Prince Henry of Battenberg, and was left a widow in 1896. She succeeded her late husband as governor of the Isle of Wight. Her daughter Victoria Eugénie, married Alphonso XIII., of Spain in 1906.

BEAUFORT, HENRY, *b.* 1370, *d.* 1447, was a natural son of John of Gaunt, and half-brother of Henry IV. He was made bishop of Lincoln, and afterwards succeeded William of Wykeham in the see of Winchester. In 1426 he received a cardinal's hat, and was appointed papal legate in England and Ireland. He four times filled the office of Lord Chancellor, and played a prominent part in all the political movements of his time. His great opponent, Humphrey, duke of Gloucester, accused him of amassing his great wealth by dishonest means. He left many charitable bequests, and endowed the hospital of St. Cross at Winchester.

BEAUHAR'NAIS, EUGENE HORTENSE DE, *b.* in Paris, 1780, *d.* 1824, the son of Josephine by her first husband, was adopted by Napoleon, and accompanied him on his campaigns in Italy and Eygpt. When Bonaparte became Emperor, Eugène was created a prince of the new empire, and appointed viceroy of Italy. He took an active part in the wars of the empire, and, in the retreat from Moscow, succeeded in maintaining some show of order and discipline in his own corps. On the fall of Napoleon he retired to the court of his father-in-law, at Munich.

BEAUHAR'NAIS, JOSEPHINE. See *Josephine.*

BEAUMONT AND FLETCHER, two dramatists, contemporaries of Shakespeare and Ben Jonson, whose works were more popular during their lifetime than those of the two great writers named. In all they wrote 52 plays. Beaumont excelled in tragedy and Fletcher in comedy. The "Maid's Tragedy" and the "Knight of the Burning Pestle" are considered the finest of their works in their respective classes. Beaumont died in 1616, Fletcher in 1625.

BEAVER, a rodent of aquatic and gregarious habits found both in the Old and New Worlds, and valued for its fur, and for a peculiar substance called *castoreum*, used in perfumery. The fur varies in colour from a glossy brown to almost black. During the eighteenth and part of the nineteenth century as many as 200,000 skins were annually exported from America. The fur was largely used in the manufacture of hats; an Act of 1638 prohibited the use of any other material for the purpose in England. The flesh is an article of food among the trappers and hunters in the districts where the animals are abundant.

BÊCHE DE MER, or **TREPANG,** a sea-slug, often called sea-cucumber, found on coral reefs in Eastern seas. They much resemble in appearance a very prickly cucumber, and vary from 8 to 21 inches in length. Being cut open, gutted and dried over a fire or in the sun, they are shipped to China, the only market for them.

BECHUANALAND. Refer to *Index.*

BECKET. See *à Becket, Thomas.*

BEDE, THE VENERABLE, *b.* about 673, *d.* 735, an English monk who received the title of "The Venerable," on account of his great talents and virtues. He was educated at a monastery at Wearmouth, and there, and at Jarrow, where he founded a monastery, he spent the whole of his life from the age of seven, devoting himself to study, and to writing and teaching. His most valuable work is the "Ecclesiastical History of the English Nation," which incidentally contains almost all we know of the earlier Saxon rulers.

BEDFORD, the county town of Bedfordshire is a well-built town on the Great Ouse, 50 miles N.N.W. of London. It dates back to early times, but its present importance is due to its educational institutions, which owe their origin to a gift made by Sir W. Harpur in 1561; population over 36,000. The county is noted for its market-gardens.

BEDFORD LEVEL, a low-lying tract of land in the east of England, exceeding 400,000 acres in extent, extending inland from the Wash, and occupying portions of the counties of Norfolk, Suffolk, Cambridge, Huntingdon, Northampton, and Lincoln. It includes nearly the whole of the Fen District. It received its name from Francis, Earl of Bedford, who, in 1634, obtained a charter to drain the morass which then occupied the district, on condition of receiving 95,000 acres of the reclaimed land. Modern improvements in the art of drainage have been more effective than the plans adopted by the earl, and a great part of the level is now under cultivation. The marshy tracts are frequented by aquatic birds, and during the winter yield a rich harvest for the London markets.

BEDLAM is a hospital for the treatment of the insane, now situated in the Lambeth Road, London. It has been devoted to its present use since the year 1547, when the monastery of St. Mary of Bethlehem—of which word "Bedlam" is a popular corruption—was granted to the citizens of London for the purpose.

BEDOUINS are nomadic tribes dwelling in the deserts of Arabia, Egypt, and North Africa. They live in tents, huts, caverns, and ruins, remote from towns and villages, and are organised in families under sheiks, or under emirs, in tribes that are continually moving from district to district in quest of fresh water and pasture. Some are given to open robbery, and even murder, but all hold the claims of hospitality sacred, and the traveller, who has once received shelter from them, may rely upon their protection and assistance.

BEECH, one of the handsomest of our forest trees, forms whole forests in many parts of Europe. The wood is hard and brittle, but soon decays when exposed to the air. It resists the action of water, and for this reason is much used in the construction of weirs and sluices, and for making the *sabots* of the French peasantry. Cabinet makers find it particularly useful. The fruit, known as *beech mast*, yields a sweet oil, which is considered equal to the best olive oil, and is extensively manufactured in many parts of France.

BEECHER, HENRY WARD, *b.* in Connecticut, 1813, *d.* 1887, was a celebrated American preacher, and the minister of the Plymouth Congregational Church, Brooklyn, from 1847 till his death, although his denial of the doctrine of eternal punishment had led to his secession from the Congregational body. He was also engaged in religious journalism, and was closely identified with the anti-slavery and temperance movements.

BEECHER-STOWE, HARRIET. See *Stowe, Beecher.*

BEEFEATERS. (1) A name applied to the yeomen of the guard, whose duty it is to attend on the sovereign at royal banquets, and on other state occasions. Their costume has undergone but slight alteration since their institution in the reign of Henry VII. (2) The warders of the Tower of London, who are a separate body, and of more recent origin than the yeomen of the guard. (3) A genus of African birds that feed on the larvæ of gadflies which they find in the hides of oxen, camels, and other large animals.

BEEHIVE, THE, usually contains three kinds of occupants, a single perfect female or "queen" bee, the drones or males, and the workers or imperfect females. The working bees, in addition to visiting flowers in search of honey and pollen, attend on the queen, make and prepare the cells for the reception of the eggs, and feed the larvæ and young bees. The cells are built of wax, which is elaborated in the wax-pockets situated in the abdomens of the working bees, and are combined to form combs. Each comb consists of two layers of cells, one on each side. The cells take the form of a regular hexagonal prism, terminating internally in a triangular pyramid, a form calculated to combine the greatest strength and space with economy of material. The majority of the cells in a comb are fitted for breeding workers, but there are always some larger drone cells, and sometimes a special cell for the hatching and rearing of a queen bee. The latter is generally placed at the edge of the comb, is much larger than the others, and is oval in shape. The combs form vertical layers, with sufficient space between each pair for the bees to move freely. The wax is elaborated in the form of small scales, which the bees take into their mouths and draw out into a minute thread, which is passed backward and forward through the mouth until a special secretion has rendered it fit for its work, when it is deposited in the place where it is needed. The cells and combs are strengthened by a substance known as *propolis*, which the bees obtain from the viscid buds of trees.

BEELZEBUB, "god of flies," a deity worshipped by the Philistines at Ekron. In the Gospels we find the name signifies the chief of evil spirits.

BEER, a name which embraces a number of intoxicating drinks produced by the fermentation of an aqueous solution of a vegetable substance containing sugar. In this country the materials employed consist of malt prepared from barley, water containing certain inorganic matter in solution, a ferment to convert the sugar into alcohol, and hops, which supply the necessary flavour, and act as a preservative. The amount of alcohol varies from one to ten per cent., according to the length of time fermentation is permitted to go on. In South America maize-malt is employed; rye is used for the same purpose in Russia, and millet seed in Arabia and many parts of Africa.

BEERSHEBA was the most southerly village in Canaan, and is mentioned in the Old Testament as early as the time of Abraham. The phrase "from Dan even unto Beersheba," meant the whole of Palestine. Its site is marked by ruins, and by two circular wells of pure water.

BEESWAX is a secretion of the bee, used in the construction of the cells or honey-comb in which the honey is stored and the young reared. By melting the honey-comb, yellow wax is obtained, and by bleaching this white wax is produced. Wax is acted on by very few chemicals and is impervious to water; it thus forms a useful protective coating for many objects in daily use.

BEESWING, a gauzy film which forms on good port wine after bottling.

BEET, a genus of plants, natives of the temperate regions of the Old World, which produce a large succulent root. The *red beet*, when boiled and cut in slices, forms an excellent addition to salads, and is also used as a pickle. The *white beet* is extensively cultivated in France, Germany, Austria, the Netherlands, and Russia, for the production of sugar, and its leaves form a substitute for spinach. A coarse variety of beet, the *mangold wurzel*, is a valuable food for cattle.

BEE, THE HIVE. This kind of bee comprises queens (perfect females), drones (males), and workers (imperfect females). Drones are thought to arise from eggs that have not been fertilised. Queens or workers are produced at pleasure, all depending on the sort of food supplied, and the size of the cell in which the grub is confined. The queen has no sting, the mechanism for depositing eggs taking its place. See *Beehive, The.*

BEETHOVEN, LUDWIG VAN, a German by birth but of Dutch descent, *b.* at Bonn, 1770, *d.* 1827, one of the greatest musical composers. He published his first composition in 1795, and from that year to his death produced a series of symphonies, sonatas, operas, and overtures of surpassing beauty. In his later years he was afflicted with deafness, so that some of his greatest works he only heard mentally.

BEHISTUN, or **BISUTUN,** a precipitous mountain in Persian Kurdistan, remarkable for the inscriptions and sculpture cut upon one of its rocks. These were deciphered by Sir H. Rawlinson in 1846, and found to refer to the genealogy, dominions, and victories of Darius Hystaspes, and to date from 516 B.C.

BEHRING SEA ARBITRATION. The seal fishery in Behring Sea has been a source of contention between the United States and England ever since the former took over Alaska from Russia in 1867. In 1893 the rival claims came to arbitration at Paris, when the English gained the day, and the sea was declared open outside the usual territorial limits. Regulations were made to prevent the extermination of the seals, by establishing a close season and by prohibiting their capture within a zone of 60 miles around the Pribylov Islands.

BEHRING STRAIT, about 50 miles wide, connects the Pacific and the Arctic Oceans, and separates America from Asia. The strait was discovered by Vitus Behring, a Danish navigator, in 1728, and was explored by Cook in 1788.

BEIRUT, or **BEYRUT,** the port of Damascus, is the greatest commercial city in Syria. It is the centre of the silk trade, and exports fruit, wool, and olive-oil, as well as the goods brought to it by caravan.

BEIT, ALFRED, *b.* at Hamburg, 1853, *d.* 1906, went out to Kimberley soon after its foundation, and has been connected with the diamond mines and most other important undertakings in South Africa. He aided and approved the movement known as the Jameson Raid, and warmly supported Cecil Rhodes in all his schemes for British predominance in South Africa. He amassed an enormous fortune, amounting to many millions.

BELFAST, in County Antrim, at the head of Belfast Lough, is the centre of the Irish linen and cotton manufactures. Its ship-building yards employ a large number of men, and are capable of building iron ships of the largest class. There are also important tobacco factories. It is supplied with coal from the Cumberland coal-field. Belfast carries on an extensive cross-channel trade, and its foreign trade exceeds that of Dublin; population about 360,000.

BELFORT, a strongly fortified town which defends the entrance into France, through the opening between the Vosges and the Jura Mountains. After a siege of three months the town capitulated to the Germans in 1871, when its defenders were allowed to march out with full military honours.

BELGIUM, a small kingdom cut out of Holland in 1830, is the most thickly populated and most industrial country of Europe. Its mines produce coal in abundance, besides iron, zinc, and lead; marble also is plentiful. The manufactures are important, and no country in the world is more carefully cultivated. In spite of its small size, 11,373 square miles, and comparatively large population, 6,800,000 in 1902, the country exports corn and other food products. The land is a network of railways, and is well equipped with canals, which play an important part in the commercial life of the country. There are two distinct races: the Flemings, belonging to the Teutonic family, who inhabit the north and west, and the Walloons, of Celtic origin, who are found chiefly in the east and south-east, and speak a French dialect. The official language is French. Brussels is the capital. Other important towns are Antwerp, Ghent, and Liège.

BELGRADE, the capital of Servia, is a strongly fortified town crowning a rocky eminence at the junction of the Save with the Danube. The palace was the scene of the murder of King Alexander and Queen Draga, 1903; population about 70,000.

BELGRAVIA, a fashionable residential district in the west end of London, in the neighbourhood of Buckingham Palace.

BELISA'RIUS, *b.* in Illyria, 505, *d.* 565, A.D., a celebrated general under the Emperor Justinian. He defeated the Persians, conquered the Vandals, and captured their leader Gelimer, with all his treasure, and subdued the Goths. He is said to have suffered defeat on one occasion only, in a battle against a superior force of Persians. He was accused of conspiracy but acquitted. The story that he was deprived of his sight and condemned to beg in the streets of Constantinople is discredited.

BELL, ANDREW, *b.* at St. Andrews, 1753, *d.* 1832, an educationist, one of the founders of the monitorial system of instruction. The system received the name of the "Madras System," because it was adopted by Bell when he was superintendent of an orphanage in Madras. Being without qualified assistants, he employed the more advanced pupils to impart under his supervision, the mechanical instruction to their fellows. His system was widely adopted in this and other countries.

BELL, ALEXANDER GRAHAM, *b.* at Edinburgh, 1847, became an American professor in 1872. Four years later he exhibited his telephone. He also invented the photophone. [See *Telephone* and *Photophone*].

BELLADONNA, or the deadly nightshade, is an extremely poisonous wild plant, not to be confounded with the woody nightshade of our hedges. It is a very rare herbaceous plant 2 or 3 feet high. It has only one large, violet-black fruit, and large leaves, nearly a foot long. Preparations from the plant are very valuable in medicine, and are applied both externally and internally. Belladonna is in constant use by oculists for dilating the pupils of the eye previous to an examination of that organ, and for rendering the retina less sensitive to light. See "Poisonous Plants" in *Med. Dict.*

BELLARMINE, ROBT. FRANCIS, *b.* 1542, *d.* 1621, a learned Cardinal and theologian of the Roman Catholic Church. His writings did much to maintain the Catholic cause in the 16th century, and he is regarded as the champion of the Ultramontane party, who uphold the Pope's authority in all things.

BELLE-ALLIANCE, LA, a farm-house about 13 miles south of Brussels, the head-quarters of Napoleon, and the centre of the position occupied by the French army at the battle of Waterloo, June 18th, 1815.

BELLER'OPHON, a mythical hero of the Greeks, who, having accidentally killed his brother, fled to his kinsman, Prœtus. The latter became jealous of his guest, and dispatched him to Iobates with a sealed message requesting that he should be put to death. Iobates imposed upon him the apparently impossible task of slaying the Chimæra. Bellerophon ascended into the air, mounted on the winged steed, Pegasus, slew the monster with his arrows, and on his return received the daughter of Iobates to wife.

BELLO'NA, the Roman goddess of war, is described by the poets as being related to Mars, as sister, wife, or daughter. She was represented as armed with a bloody scourge in one hand, and a torch in the other, whilst inspiring her votaries with an enthusiastic war-spirit.

BELL ROCK. See *Inchcape Rock.*

BELLS are formed of an alloy of copper and tin in slightly varying proportions, but usually consisting of four parts of copper to one of tin. Each bell consists of the body or barrel, the ear or canon, and the clapper, which may strike the bell either from within or from without, the former producing by far the finer effect. Bells have been in use from the earliest times of which we have any record. They were worn by the Jewish high-priests (Ex. xxviii., xxix.). The Egyptians inaugurated the festivals in honour of Osiris by the ringing of bells. The Greek priests employed them, and they were used in the camps and garrisons of the Greek troops. The Romans announced the hour of bathing by the ringing of a bell. The custom of summoning worshippers to church by the ringing of bells originated in Italy, at the beginning of the 5th century, and was introduced into this country by the abbot of Wearmouth about 680. They were probably hand-bells, as the practice of hanging bells in towers was not known before the ninth century. The *Curfew* bell, which William the Conqueror is said to have ordered to be rung in England at eight o'clock every evening, as a signal to extinguish all fires, is probably of much earlier date, and was intended not only to prevent meetings of conspirators, but also to reduce the number of conflagrations. In the Roman Catholic Church, the *Sanctus* is still rung during the mass, and the *Angelus*, morning, noon, and night, when the faithful are required to repeat an "Ave Maria." On board ship, bells are rung every half hour to mark the progress of each watch.

The largest bells in the world are found in Russia. The Czar Kolokol, "king of bells," at Moscow, weighed nearly 200 tons. In 1737 a fire caused its fall, and it remained on the ground, cracked and useless, until 1837, when it was made to serve as the dome of a church which was excavated beneath it. The "New Bell," which was cast in 1817, hangs in a tower near the former, and is nearly as heavy. "Great Paul," the heaviest bell in England, was cast and hung in Saint Paul's Cathedral in 1882. It weighs 16¼ tons, and is rung only on special occasions. "Big Ben," the hour-bell at Westminster, originally weighed 14 tons, and was cast in 1856. A crack and a flaw in the metal necessitated recasting, and 2½ tons less material was used in the process; the clapper weighs 6 cwt. After a time the second bell developed a crack, which has been cut out. The quarters are rung by bells weighing 4½ tons, 2 tons, 1½ tons, and 1 ton respectively. "Great Tom," at Oxford, weighs 7 tons 12 cwt., and the principal bell in Exeter Cathedral is 4 cwt. heavier.

BELL, SIR CHARLES, *b.* 1774, *d.* 1842, an anatomist and surgeon. Educated in Edinburgh, he came to London and became surgeon to the Middlesex Hospital. His researches on the nervous system form a valuable contribution to our knowledge. Of his many writings—"The Hand," in the Bridgewater Treatise, is probably the best known to the public.

BELOOCHISTAN'. See *Baluchistan.*

BELSHAZZAR, the grandson of Nebuchadnezzar, and the last of the Chaldean kings of Babylon, was slain at the capture of the city by Cyrus, who commanded the armies of Darius the Median, about 538, B.C. (Dan. v.).

BELT, THE GREAT, about 12 miles wide and 70 miles long, lies between the islands of Funen and Zealand, and is the only strait leading into the Baltic that is deep enough for war vessels. The navigation is difficult, owing to the presence of numerous shoals and small islands.

BELT, THE LITTLE, between Funen and Jutland, is another gateway into the Baltic, and is about 80 miles in length, with a width varying from one to eight miles. Similar causes render its navigation even more dangerous than that of the Great Belt.

BENAR'ES, on the Ganges, is a Holy City of the Hindus, and the centre of Hindu learning. The city is a labyrinth of narrow winding streets, and is crowded with palaces, temples, and mosques. Altars and shrines are set up at almost every corner. The "Ghats," or flights of steps leading down to the river, are constantly crowded with pilgrims who have journeyed from all parts of India to bathe in the sacred stream.

BENBOW, JOHN, *b.* at Shrewsbury, 1653, *d.* 1702, served at first in the merchant service, but afterwards joined the navy, and finally became an admiral. In 1702 he commanded the English fleet in the West Indies, and lost a leg in an action with the French. When the wound had been dressed he caused himself to be carried on deck, and continued the fight. The desertion of some of his ships enabled the French fleet to escape. The wound received in the action, combined with his mental suffering at his failure to capture the enemy, caused the admiral's death.

BENDIGO. See *Sandhurst.*

BENEDI'CITE (i-te), the canticle used at certain seasons in the English Church service instead of the "Te Deum." It takes its name from the first word *Benedicite* in the Latin version, which means "bless ye." It is said to be the song of praise sung by the three Jewish youths in the fiery furnace, and is given as such in the Septuagint version of the Old Testament.

BENEDICT, SAINT, *b.* near Spoleto, Italy, 480, *d.* 543, was the founder of monachism in the West. The rule for his monks, first introduced into the monastery on Monte Cassino, near Naples, was adopted by all the western orders. In addition to their ordinary religious duties, the brethren were called upon to give instruction in many subjects, and in the mechanical arts. The aged and infirm were employed in copying manuscripts, and, in this way, assisted in preserving many literary treasures.

BENEDICTUS, or Song of Zacharias, a canticle used in the Morning Service of the Church of England. It is so called from the first word *Benedictus* in the Latin version, which means "blessed."

BENEFICE, the revenues of the rector, vicar, or perpetual curate of a parish, usually derived from tithes, lands, or other endowments, and popularly known as the church living.

BENEFIT OF CLERGY, in England, formerly exempted clergymen guilty of felony from punishment by a secular court, leaving them to be dealt with in the bishop's court. At first the privilege was allowed only to those who were *bona fide* clergymen, but the claim was afterwards allowed to all who could prove, to the satisfaction of the court, their ability to read; and this practice continued till the reign of Queen Anne. A layman could claim the privilege once only. He was discharged after being branded with a hot iron on the "brawn of the left thumb." The privilege was so much abused, that an Act of Queen Elizabeth empowered a judge to order the detention in prison, for a period not exceeding a year, of any person discharged by the court on claiming his "clergy," and the privilege was finally abolished by an Act passed in 1827.

BENEFIT SOCIETIES. See *Friendly Societies.*

BENEVOLENCES, a convenient name for loans extorted by the king or his agents from wealthy subjects in the Middle Ages. The *name* owes its origin to Edward IV., but the practice goes much further back. The practice was expressly forbidden by Act of Parliament in 1484, but it persisted until the reign of James I.

BENGAL. Refer to *Index.*

BENI-HASSAN, a village in Middle Egypt, near the left bank of the Nile,

is remarkable for its rock-cut catacombs, about 30 in number, which are supposed to have been the cemeteries of the principal families of Hermopolis, a town facing them on the opposite bank of the river. The walls and columns of the catacombs are adorned with paintings representing the pursuits, sports, and pastimes of the ancient inhabitants.

BENNETT, JAMES GORDON, *b.* at Keith, Scotland, 1795, *d.* 1872, a distinguished journalist and newspaper proprietor. At the age of 19 he emigrated to America, and found employment as a proof-reader in Boston. In 1835 he founded the "*New York Herald*" and acted as its editor, and succeeded in making the paper the leading American daily. His son, bearing the same name, is the donor of the cup annually competed for by the most skilful and daring motorists of the world.

BENNETT, SIR WM. STERNDALE, *b.* at Sheffield, 1816, *d.* 1875; English pianist, composer and teacher. After being a chorister in King's College Chapel, he entered the Royal Academy, where he studied hard and successfully. He went to Germany in 1836 on the invitation of Mendelssohn, who did much to cause his genius to be recognised. After his return to England his success was undoubted. He became Principal of the Royal Academy in 1868, and was knighted in 1871. His cantata "The May Queen" is greatly admired, and his pianoforte pieces are models of grace and finish.

BEN NEVIS, in the Grampians, near the southern entrance of the Caledonian Canal, is the highest mountain, 4,406 feet, in the British Isles.

BENSON, EDWARD WHITE, *b.* near Birmingham, 1829, *d.* 1896. Archbishop of Canterbury. Educated at King Edward's School, Birmingham, and Trinity College, Cambridge, he was from 1858 to 1872 Head Master of Wellington College. He was first bishop of the restored diocese of Truro, which he left in 1882 to succeed Dr. Tait as Primate.

BENTHAM, JEREMY, *b.* in London, 1747, *d.* 1832, a distinguished writer on politics and jurisprudence, who advocated wholesale changes in criminal and civil legislation, taking as the cardinal principle of his philosophy, "the greatest happiness of the greatest number." His literary works were arranged and translated into French by his friend M. Dumont, and, at the time, found a better reception in France than in England.

BENZENE, a colourless, highly inflammable liquid, a compound of carbon and hydrogen, having a peculiar smell. It is obtained from coal-tar, and is extensively used in the production of aniline. It is also invaluable on account of its solvent action on organic substances, such as fats, indiarubber, etc., and on this account is employed by manufacturers of india-rubber and guttapercha.

BEOWULF, the hero of a long Anglo-Saxon poem of about 6,000 lines, which commemorates the hero's various great deeds, especially against the *Grendel*, a monster inhabiting the damp fen country.

BERANGER, PIERRE JEAN DE, *b.* in Paris, 1780, *d.* 1857; a great national song-writer of France. His political songs had a hold over the French populace that has never been rivalled. The gaiety and grace of his other lyrics gained him unbounded popularity, and his songs are still widely sung in France.

BERBER, a town on the Nile, just below the confluence of the Atbara, is the starting point of the principal caravan route from the Middle Nile to the Red Sea. A railway will soon connect Berber with Suakim, a port on the Red Sea.

BERBERS, the name given by the Arabs to the original inhabitants of the Atlas Mountain region in North Africa. The race is of great antiquity, and has maintained its ancient language and habits to the present time. The people have light complexions and fair hair, are robust, proud, and revengeful, and live in a state of almost perfect independence of the rulers of the various states in which they dwell, being governed by their own hereditary chiefs. In religion they are Mohammedans.

BERESFORD, LORD CHARLES, *b.* 1846, second son of the Marquis of Waterford, entered the Royal Navy in 1859. He commanded the "Condor" at the bombardment of Alexandria in 1882, and contributed greatly to the successful result. He served in the Nile Expedition of 1884 with great distinction. In 1905 he became commander-in-chief of the Mediterranean fleet. As an M.P. he has done much to promote the efficiency and increase the strength of the Navy.

BERGAMOT is one of the essential oils extracted from the rind of the fruit of a species of Citrus. The tree is cultivated in Calabria, Italy, whence almost the entire supply of the oil is obtained. It is used in perfumery.

BERGEN, once the most important seaport of Norway, is now surpassed by Christiania. From the oldest times it has been the chief place in Northern Europe for the fishing trade; population about 70,000.

BERG WIND, a dry, hot wind that frequently blows from the north along the coast lands of Cape Colony. It derives its name from the *berge*, or mountains, which lie in the centre of the Colony, and its dryness and heat from the arid Karroo over which it passes.

BERI-BERI. See *Med. Dict.*

BERKELEY CASTLE, about 16 miles south-west of Gloucester, is chiefly memorable as the scene of the confinement and brutal murder of Edward II., 1327.

BERKELEY, GEORGE, *b.* at Kilkoin, Ireland, 1685, *d.* 1753, was bishop of Cloyne, in Ireland, and became famous through his works on philosophy and mathematics, and his self-sacrificing philanthropic schemes. In his "Treatise on the Philosophy of Human Knowledge," he maintained that the universe, as man sees it, is not the creation of matter, but merely impressions made on the mind by the direct act of God.

BERLIN, on the river Spree, is the capital of Prussia and of the German Empire. It is famous for its glass, jewellery, and metal works; is one of the cleanest, brightest, and healthiest cities in Europe, and possesses a magnificent system of street cars and railways. Near the centre of the city are the imperial palace, the university buildings, the national gallery and museums, and the arsenal. The most attractive promenade is the street called "Unter den Linden," a broad thoroughfare nearly a mile in length, with two double rows of lime trees running from end to end. Berlin is growing more rapidly than any other European city. At the beginning of the 19th century its inhabitants numbered 182,000, while in April, 1904, the population was estimated at two millions.

BERLIN, CONGRESS OF, the diplomatic conference of the European Powers, which met at Berlin, in 1878, at the conclusion of the Russo-Turkish War, and concluded the Treaty of Berlin. The treaty made important modifications in the Treaty of San Stefano, which had already been agreed to by the belligerents.

BERLIN DECREES, THE, were issued by Napoleon from Berlin in 1806. Their object was the destruction of British commerce. The British Islands were declared to be in a state of blockade, and all commerce and correspondence between Great Britain and the countries under his government were prohibited.

BERMUDAS. Refer to *Index*.

BERN, or BERNE, on the river Aar, has been the federal capital of Switzerland since 1849. The city commands magnificent views of the Bernese Oberland and of the Jura Mountains; population 64,864.

BERNADOTTE, JEAN BAPTISTE JULES, *b.* 1764, *d.* 1844, who became eventually King of Sweden, was the son of a French lawyer, and had received a good education. He fought his way up from a private in the Republican armies to be Marshal of France and Minister of War. His chivalrous conduct in the field had gained him much admiration, and in 1810 he was invited to become Crown Prince of Sweden and heir to the aged and childless Charles XIII, whom he succeeded in 1818. His duty to Sweden made him oppose Napoleon in the great campaign which ended at Leipzig in 1813.

BERNARD PASS, GREAT ST., a celebrated pass leading from Martigny in Switzerland over the Pennine Alps to Aosta in Piedmont, at a height of 8,200 feet above the sea. Here is the celebrated hospice of St. Bernard, inhabited by a dozen young and strong monks who take turns in going out every morning with dogs to seek for travellers.

BERNARD, SAINT, *b.* at Fontaines, in Burgundy, 1091, *d.* 1153; became abbot of the monastery of Clairvaux, and drew around him many who afterwards occupied positions of eminence in the church. He attacked several heresies, including some of the teachings of Abelard, whom he defeated in a public controversy. His persuasive eloquence roused the king and nobility of France to undertake the Second Crusade. Luther said of him—"If there ever lived on the earth a God-fearing and holy monk, it was St. Bernard of Clairvaux." He was canonized by Pope Alexander III., 1174.

BERNESE OBERLAND, the southern part of the canton of Bern in Switzerland, containing some of the best of the beautiful Alpine scenery. Majestic mountains, as the Jung-Frau, Finsteraarhorn, Schreckhorn, Wetterhorn, Mönch and Eiger; lovely valleys, as Grindelwald and Lauterbrunnen; beautiful waterfalls, as Handegg and Giessbach make it unsurpassable for picturesque scenery. Tourists visit it in increasing numbers every year.

BERNHARDT, SARAH, *b.* in Paris, 1846; a famous French actress, considered by many the greatest tragedienne of the age.

BERSERKS, or BERSERKERS, a name applied to men of ungovernable temper. It originated with Berserker, a hero in Scandinavian mythology, who raged like a madman in battle and when excited. He had eight sons as uncontrollable as himself.

BERTILLON SYSTEM. See *Anthropometry*.

BERWICK-ON-TWEED, a walled town on the Scottish side of the mouth of the river Tweed. During the Border Wars it frequently changed hands. In 1482 it was finally taken by the English. For many years it was treated as an independent county, separate from England and Scotland, but since 1835 it has been included in Northumberland; population 13,437.

BERYL, a mineral usually found crystallised in hexagonal prisms. It varies in colour—green, bluish-green, yellow, and white. The bright green variety produces the gem known as the *emerald*, the blue-

green that known as the *aquamarine*. The *cairngorm* is another variety of beryl. The regions most productive of the mineral are Brazil, Siberia, and Saxony. Specimens are found in the mountains of Aberdeenshire, and in the Mourne Mountains of Ireland.

BESANCON, a frontier town of France on the river Doubs, a tributary of the Rhone, is considered one of the strongest military positions in Europe. Watchmaking employs some 15,000 of its inhabitants, and there are also manufactures of porcelain and carpets. It was an important Roman military station; many of the streets still bear their old Roman names, and the Roman antiquities include a triumphal arch, an aqueduct, and an amphitheatre.

BESANT, SIR WALTER, *b.* at Portsmouth, 1838, *d.* 1901; a novelist and antiquary, who was greatly interested in the people and history of London. His book, "All Sorts and Conditions of Men," is generally thought to have been the prime cause of the erection of the "People's Palace." His earlier novels were written in collaboration with James Rice. Sir Walter was the founder of the Authors' Society, for the protection and maintenance of authors' rights.

BESSEMER, SIR HENRY, *b.* at Charlton, Hertfordshire, 1813, *d.* 1898, was an eminent engineer and inventor. His process for converting pig-iron into steel has revolutionised the iron trade. The process consists in passing a blast of atmospheric air through the molten cast iron, until the carbon and silicon contained in it are completely burnt up. The exact quantity of molten cast iron necessary to supply the carbon required to convert the whole charge into steel is then added, the blast is again turned on for a few moments in order to thoroughly mix the materials, and the contents are cast into ingots. By this process, several tons of cast iron can be converted into steel in less than half-an-hour, an operation that would occupy several days if the older process were employed.

BETEL is the leaf of a climbing plant of the pepper family grown in the East Indies. It closely resembles the ivy leaf, but is full of a narcotic juice. The natives, almost without exception, chew it, either alone or, after treatment with lime, wrapped round slices of areca nut. Men and women carry it about with them in white boxes, and offer it to each other much in the same way as a past generation of Europeans presented their snuff boxes. The habitual use of betel reddens the gums and lips and blackens and destroys the teeth.

BETHANY, a village on the eastern slope of the Mount of Olives, about two miles from Jerusalem. Among the ruins, visitors are shown what is said to be the house of Martha and Mary and the grave of Lazarus. (St. John xi.)

BETHEL, a place now in ruins, situated about eleven miles north of Jerusalem, where Jeroboam set up the Golden Calf as an object of worship.

BETHLEHEM, a village about five miles south of Jerusalem, was the birthplace of King David and of our Saviour. The present inhabitants are mostly Christians, and are employed in the manufacture of rosaries and crucifixes for sale to the numerous pilgrims. The Church of the Nativity is said to have been built by the Empress Helena, 327 A.D., over the place where Christ was born. Separate portions of it are now allotted to the Greek, Latin, and Armenian branches of the Christian church, each of which has a monastery close to the building. In the crypt under the choir a marble trough is shown as the manger in which Jesus was laid after his birth.

BETTING, particularly on horse racing, is indulged in by all classes of society, and thousands of pounds change hands over every important race. Acts have been passed for the regulation of public betting, and persons indulging in the practice in any public place are declared to be rogues and vagabonds, and may be punished accordingly. Bets are usually made with a professional betting man, known as a *bookmaker*, who is prepared to bet against any particular horse winning the race. The odds he offers against the horse are determined by the number of people, known as *backers*, who wish to back it, and the amount of money they are prepared to risk. In proportion as the horse is favoured by backers, so are the odds offered by the bookmaker shortened. In this way, and by encouraging bets on horses that have found few backers, by the offer of long odds against them, he so arranges his *book* that, whichever horse wins, he stands to lose nothing; in other words, the money paid to the winners is provided by the backers of the losing horses. Should he find he has laid too much against a horse, he sometimes covers himself by backing the same horse with another bookmaker. This is known as *hedging*. A backer who, some time before the race is to be run, obtained long odds against a horse that has improved in favour, may also "hedge" part of his bet, by laying against the same horse at the shorter odds. On the day of the race, numerous bets are made with bookmakers who stand in an enclosed place on the course, known as the "Ring." Others stand outside and do their business with those visitors to the races who have not paid for admission to the betting ring. Dishonest members of this latter fraternity, who find their "book" in an unsatisfactory condition, occasionally decamp with their clients' money while the race is being run. These are termed *welshers*. If their attempt at swindling is noticed they receive but short shrift from the crowd.

BETTWS-Y-COED, in Carnarvonshire, is one of the most popular resorts in Wales for artists, anglers, and tourists. Among the natural attractions of the neighbourhood are the Swallow Falls, the Fairy Glen, and the Conway Falls. Bettws-y-Coed is one of the best starting points for the exploration of the Snowdon range.

BETTY, WILLIAM HENRY, *b.* 1791, *d.* 1874, a phenomenally successful actor of the early 19th century. At the age of eleven he made a successful appearance at Belfast Theatre. This was succeeded by other engagements in Ireland, Scotland, and England, where he frequently commanded fifty guineas a night. Pitt once adjourned the House that the Commons might see him act. He retired in 1824, and for fifty years enjoyed the fortune he had so rapidly earned.

BEUST, COUNT FREDERICK VON, *b.* in Dresden, 1809, *d.* 1886; a German statesman who, as foreign minister of the kingdom of Saxony, showed great friendship for Austria, and eventually became Chancellor of the Austro-Hungarian Empire, from which position he retired in 1871.

BEVERLEY, a town in the East Riding of Yorkshire, stands on the edge of the Yorkshire Wolds, and is the centre of an important agricultural district. The Minster Church is superior to many cathedrals in size and architectural beauty, and the west front has been described as the finest in the perpendicular style in England; population about 13,000.

BEWICK, THOMAS, *b.* at Cherryburn, near Newcastle, 1753, *d.* 1828, was a distinguished wood engraver. The illustrations to his "History of Quadrupeds" and "British Birds" were considered superior to any wood engraving that had been previously produced. With the assistance of his brother, he also illustrated Goldsmith's "Traveller" and "Deserted Village," Somerville's "Chase," and other works.

BEYRUT. See *Beirut*.

BEZANTS, or **BYZANTINES,** coins of the Byzantine Empire, so called from Byzantium or Constantinople. They passed current in most countries in the Middle Ages. The value of the gold bezant was from 10s. to 20s., and that of the silver one from 1s. to 2s. We find them frequently mentioned in Middle English, and in books dealing with that period.

BEZA, THEODORE, *b.* in Burgundy, 1519, *d.* 1605, the most influential of the Geneva reformers, after the death of Calvin. His influence led the king of Navarre to assist the persecuted French Protestants, and he presided over synods of the French Reformers at Rochelle and Nimes. His best known works are a translation of the New Testament into Latin, and a "History of the French Protestants" from 1521 to 1563.

BHANG, the Indian name for the common variety of hemp. In hot countries the plant develops narcotic and intoxicating properties, on which account its leaves and seeds are often chewed. An intoxicating drug, often called *hashish*, is obtained from a resin that exudes from the plant.

BHUTAN is a small independent state on the southern slopes of the Himalayas, having an area of about 13,000 square miles, and a population of 25,000, chiefly Bhuddists. The leading chiefs are subsidised by the Indian Government to the extent of 50,000 rupees annually.

BIARRITZ, a fashionable watering-place on the Bay of Biscay, about five miles south-west of Bayonne. It was the favourite summer resort of Napoleon III. and the Empress Eugénie. Till patronized by them it was an obscure fishing-village.

BIBLE SOCIETY, THE (British and Foreign), was founded in 1804, with the object of encouraging a wider diffusion of the Scriptures. Up to the year 1903 the society had issued upwards of 180,000,000 Bibles and portions of Bibles, in 370 languages and dialects; and to celebrate its centenary, a fund of 250,000 guineas was raised to extend its work in all departments. The society works through the various missionary societies, and has, in addition, some thirty agents in foreign countries, under whom a staff of nearly 900 colporteurs is engaged in distributing the society's publications.

BIBLIOMANCY, divination by means of the Bible. One way was to name a certain page and line, and to seek for guidance or information from the sentence there found. The stern Puritans are said to have been much addicted to Bibliomancy. The ancients used to draw inspiration from the works of Virgil in the same way.

BIBLIOTHÈQUE NATIONALE, the most important library in Paris, is situated in the Rue Richelieu, and contains one of the largest and finest collections in existence, including printed books, manuscripts, engravings, cartoons, coins, and medals.

BICYCLE. See *Cycling*.

BIDDER, GEORGE PARKER, *b.* 1806, *d.* 1878, a great engineer who had a hand in most of the engineering works carried out between 1835 and 1870. As a boy he was remarkable for his calculating powers, and his father made much money by causing him to exhibit them. He became associated with Robt. Stephenson early in

life. The Victoria Docks, London, were constructed under his direction.

BIDDING PRAYER, a formula of public prayer found in ancient liturgies and in our own service books, in which the preacher tells the people what and for whom to pray, always ending with the Lord's Prayer.

BIDDLE, JOHN, *b.* in Gloucestershire, 1615, *d.* 1662; was the founder of English Unitarianism. The publication of his views on the personality of the Holy Ghost, in 1647, led to his imprisonment, and an Act was passed imposing the death penalty on all who denied the doctrine of the Trinity. The hostility of the army to the Act rendered it inoperative. Biddle was released by Cromwell, began preaching in London, and soon gathered a congregation around him, the members of which took the name of "Unitarians." He suffered further terms of imprisonment and banishment, on account of his views, and eventually died in jail.

BIG BEN. The name given to the big bell in the clock-tower of the Houses of Parliament. It was cast in 1858.

BIGLOW PAPERS, THE, a poetical satire on the invasion of Mexico, and the slavery question in the United States, written in the Yankee dialect, by J. R. Lowell.

BILBA'O is the principal town in the Basque province of Biscay, in Spain, and an important port for the export of iron-ore.

BILLETING is a method of providing food and lodgings for troops on the march, in towns where there is no barrack accommodation. Formerly private householders were liable to be called upon to make such provision, but the Army Regulation Act of 1879 limits the liability to the holders of licensed premises. A list of houses, liable under the Act, is kept in every town, and, on the application of the commanding officer made to him some time in advance, the chief of the police allots a certain number of men to each. On their arrival the soldiers are provided with a written order termed a billet, addressed to the person who has to provide for them. In return for a day's food, which includes one hot meal, and a bed, the owner of the house receives the sum of 1s. 4d. for each man accommodated. All payments are made by the regimental paymaster, and the officers visit the various houses at dinner-time, to see that the food is of a satisfactory nature.

BILLINGSGATE, the most extensive fishmarket in the world, is situated on the Thames, just below London Bridge. The fish arrives at the market both by way of the river and by land, and is consigned to salesmen, who supply the retail dealers. The busiest time is from 5 to 9 a.m.

BILL OF EXCHANGE, HEALTH, LADING, ETC. See *Commercial Dictionary.*

BILL OF RIGHTS. Before the throne was offered to William and Mary in 1688, a document was presented to them, generally known as the "Declaration of Rights," setting forth the chief "rights" of the people as against the king, such as freedom from all taxes not imposed by Parliament. After their accession, it was passed through Parliament and assented to by their Majesties, and thus became the law of the land.

BILNEY, THOMAS, one of the earliest martyrs of Henry VIII.'s reign. Ordained in 1524, he was arraigned in 1527 for speaking against the reverence paid to saints and relics, but recanted. Being set free, he again preached the new doctrines, was apprehended and burned. He was instrumental in converting Latimer to Protestantism.

BIMETALLISM is the employment of two metals, gold and silver, in the currency of a country as legal tender to any amount. To render its universal adoption possible, it is first necessary that a fixed relative value between the two metals should be arrived at by international agreement. The Americans suggest that the ratio between the two should be fixed at 16 to 1. Bimetallists, who include in their ranks many eminent statesmen and economists, contend that the growth of commerce and population demands that the comparatively limited supply of gold should be supplemented by a greater use of silver, as a medium of exchange. Several international congresses have considered the question, but no settlement has yet been arrived at.

BINGEN, a town on the Rhine, 16 miles west of Mainz. In the neighbourhood are the ruins of the castle where the Emperor, Henry IV., was imprisoned by his brother, in 1105; and in the middle of the river, opposite the town, stands the "Mouse Tower," in which, according to an old legend, Bishop Hatto, a cruel oppressor of the poor, was devoured by rats, 963.

BINNACLE, a box or case on board ship in which the compass is kept. It is placed just in front of the wheel, or steering-apparatus, that the steersman may see it without moving.

BIOGRAPH, THE, known also as the *Bioscope* and *Cinematograph*, is an apparatus for exhibiting in rapid succession a series of photographs of moving objects. The effect depends on the fact that the impressions which light makes on the eye continue for a short time after the cause of the impression has ceased to act. In the case of these "animated photographs," each separate picture remains impressed on the retina until the following one appears. The camera used for taking the photographs is fitted with two dark chambers. A long strip of sensitive film, wound on a drum, is placed in the upper of these chambers. One end is passed through the camera so that the light is focused on it, and is attached to an empty drum in the second dark chamber. When the mechanism of the instrument is set in motion, it unwinds from the upper drum exactly the amount of film needed for one picture. It retains this in position behind the lens while the shutter is opened and closed again; it then draws down another portion, and continues to repeat this series of operations several times in a second; the film loosened from the upper drum is wound round the lower one. When the film is developed it contains the negatives of a sequence of pictures of the same object, taken at intervals of a small fraction of a second. A positive film for exhibition is printed from this negative. To exhibit the pictures, the same, or a similar piece of apparatus, is fixed in front of the condenser of a powerful magic-lantern, and worked in the same way as before. To produce the best effect, the pictures should be thrown on the screen at the same rate of speed as they were taken.

BIOLOGY is the study of life. The nature of life being at present unknown, this subject resolves itself into a study of living things and thus embraces Botany, Zoology, and Physiology.

BIRCH, an exceedingly hardy tree, is indigenous to all parts of the north temperate zone, and is found nearer to the North Pole than almost any other tree, though in a dwarfed condition. Its timber, which is light in colour and of a tough texture, is applied to a variety of purposes, e.g., coach builders use it for the bodies of carriages. The bark is used for tanning and for preserving fishing-nets. It is to the birch bark used in tanning that Russia leather owes its peculiar scent. It is also made into canoes by the American Indians, and in the north of Europe, roofs of huts and houses are constructed of it. Birch wine is produced from the sap, and the twigs are made into besoms.

BIRD OF PARADISE, a family of birds inhabiting New Guinea and the neighbouring islands, and distinguished in the case of the male-birds for the extraordinary beauty and lustre of their plumage.

BIRDLIME, a sticky substance with which twigs, etc., are besmeared for the purpose of ensnaring birds when they settle thereon, which they are attracted to do by the song of a decoy, or tame bird placed near. The birdlime is prepared from holly-bark or the stem of the mistletoe, by boiling.

BIRDS' NESTS vary considerably in form, in the materials of which they are composed, and the situation chosen for building. All birds of the same species adopt the same plan of construction, and choose similar situations. Some always prefer the topmost branches of lofty trees, others select bushes, others the tall grass in meadows, and others again the dry trunks of old trees. The nests of the larger birds are for the most part roughly constructed. Those of the eagle, the crane, and the stork are mere platforms of twigs and other materials, while the nests of wood-pigeons and rooks resemble loosely-made baskets. Many of the smaller birds display great ingenuity of workmanship. The thrush plasters the inside of its nest with clay or cow-dung, and many species carefully line them with down, feathers, and wool. The house martin constructs a hollow ball of clay and sand beneath the sheltering eaves of houses, and lines it with hay and feathers. The sand martin burrows a hole in a sandbank, and constructs its nest at the end of the passage, which sometimes exceeds three feet in length. The tailor-bird forms its home by sewing leaves together. The nests of a species of swift, found in the Malay Archipelago, are constructed of a mucilaginous substance having the appearance of isinglass, and which seems to be secreted by the birds in special glands. They resemble the nest of the common swallow in shape, and are built in caves in sea cliffs. These are the edible birds' nests so much prized by the Chinese. Many birds, e.g. gulls, make no nest.

BIRDS, DESCENT OF. According to those who hold the theory of evolution, birds owe their origin to certain reptile forms. The evidence on which the claim is based consists in the close resemblance existing in the anatomical structure of both classes; the reptilian characteristics of the earliest known bird, the "archæopteryx;" the existence of a series of fossil forms which connect the winged lizards with the toothed birds; and the fact that the reptiles form the next lowest class of vertebrates. The whole of this evidence is corroborated by the careful study of the development of the embryo; for in passing through its embryonic state, each individual is said to pass through the life history of the race.

BIRDS, DEVELOPMENT OF. All birds are developed from eggs which are hatched after they have passed from the body of the mother, who in most cases supplies the necessary warmth by sitting on them. The embryo is produced from a single microscopic cell, the fertilised *ovum*, and the whole of the structures and organs result from its repeated divisions. The food for the growing embryo is obtained from the yolk-sac, which gradually shrinks, and is eventually absorbed into the body cavity, the walls of which gradually grow

together. At the broad end of the egg is an air-space, which enlarges as development proceeds, and on the fourteenth day of incubation, in the case of fowls, though the period varies in different species, the chick moves so as to lie with its beak pressing against the inner wall of the air space. On the twentieth day the beak penetrates the wall, and the chick, which until then has obtained the necessary oxygen by means of an embryonic respiratory organ, begins to breathe the contained air through its lungs. Finally, the chick breaks the egg-shell with its beak, and is hatched.

BIRDS, MIGRATION OF. With the exception of tropical varieties, most birds change their homes with the seasons. Even those species that are with us throughout the year, such as the sparrow, are now known to migrate from district to district at certain fixed periods, so that the species is represented by different individuals at different parts of the year. The migratory habit is more easily observed in those birds that spend one portion of the year in one country, and the remainder in another having different climatic conditions. The cuckoo, the nightingale, the swallows, and swifts arrive in England in spring, spend the summer here, and leave again in the autumn, for warmer latitudes. Our winter visitors include woodcocks, field-fares, and many aquatic birds. These arrive from more northerly regions, to which they again return on the approach of warmer weather. In all cases the young birds are reared in those countries where the summer is spent. Some species, as the swallows, migrate in large flocks; others in straggling groups; and, in the northward flight, the male birds frequently travel first. The departure and arrival of the flocks take place with such regularity that the dates may be fixed beforehand. As the day for departure approaches, the birds assemble in certain localities from all parts of the country. In their flight they take certain well-defined lines always following the same route. In crossing the North Sea, it has been observed that the route is not the shortest possible, but is over a series of shallows. The flight is usually made against the wind, and some species are known to delay their departure for a few days, if the direction of the wind is unfavourable. The majority go north to breed.

BIRETTA, a four-cornered cap worn by the clergy of the Roman Catholic Church, and by some in the English Church. The biretta worn by priests is black, by bishops purple, and by cardinals red.

BIRKBECK, GEORGE, *b.* at Settle, in Yorkshire, 1776, *d.* 1841, a member of the Society of Friends who took an active part in the foundation of mechanics' institutes in various parts of the country. The idea for this class of institution arose out of a series of free lectures delivered by Birkbeck to mechanics in Glasgow, where the first institute was established in 1823. The London Mechanics' Institute was founded in December of the same year, and Dr. Birkbeck, who had acquired a large practice in London, was elected president for life. The institute is now known as Birkbeck College.

BIRKENHEAD, a seaport in Cheshire, on the estuary of the Mersey, opposite Liverpool, with which it is connected by the Mersey tunnel, about 4½ miles in length. Numerous ferry steamers also ply across the river. The town owes its rapid rise to its extensive docks, ship-building yards, and engineering works. The shipping returns of Birkenhead are included in those of Liverpool; population 236 (1821), 110,926 (1901). (To compare population, etc., see p. 902.)

BIRKENHEAD, THE, a British ship that struck on a rock off the Cape of Good Hope, 1852. The soldiers on board, under the command of Colonel Seton, drew up on deck, while the two boats were filled with the women and children. About 400 brave men went down with the ship.

BIRMINGHAM, in Warwickshire, is the fourth largest city in England, and the greatest hardware manufacturing town in the world. It owes its prosperity to its proximity to extensive beds of coal and iron, combined with a splendid system of railway and canal traffic. In hardware, it manufactures everything from a pin to the heaviest engine or ship's anchor. The manufacture of jewellery, and of gold and silver plate, employs a large number of hands. Glass making and staining are important industries, and there are extensive chemical works. The Birmingham University was incorporated by royal charter in 1900, and includes faculties in science, arts, medicine, and commerce; and in 1905 was founded the bishopric of Birmingham. (For population, etc., see p. 902.

BISCAY, BAY OF, between the west coast of France and the north coast of Spain, is one of the stormiest seas in the world, owing to the fact that it is exposed to the prevailing south-west winds, and that the currents within it run in opposition to the tides.

BISHOP, ISABELLA (*née* Bird), *b.* 1832, *d.* 1904, a celebrated lady traveller and philanthropist. Beginning at the age of twenty-two, she travelled almost continuously to the end of her life, and has done much to promote the establishment of medical missions. She was the first lady fellow of the Royal Geographical Society. "The Englishwoman in America," "Six months in the Sandwich Islands," and "Unbeaten Tracks in Japan" are among her works.

BISLEY, a village in Surrey, near Woking. Not far distant is Bisley Camp, the scene of the National Rifle Association competitions in July. Compelled by the increasing range of rifles to find a spot for shooting, more remote than Wimbledon, the Association opened here in 1890. The chief competition is that for the "King's Prize." The winner receives £250 and a gold medal.

BISMARCK, PRINCE VON, *b.* at Schönhausen, Prussian Saxony, 1815, *d.* 1898, was the greatest statesman of modern times. His political career began in 1846, when he was elected a member of the Prussian Diet. From the first he expressed strongly Conservative views, supported the absolutism of the monarch, defended the privileges of the landed aristocracy, and opposed every democratic principle. From 1859 to the spring of 1862 he was Prussian ambassador at the court of St. Petersburg, but he still exercised considerable influence over Prussian politics, to which he returned as foreign minister in the autumn of 1862. His plans for the reorganisation of the army were severely criticised by the Liberal party; but when, after the annexation of Schleswig Holstein, he explained to the Diet his plans for expelling Austria from the German Confederation, and for promoting the unity of the North German States under the leadership of Prussia, he won the confidence and support of his former opponents. The successful termination of the Seven Weeks' War with Austria, 1866, further strengthened his position. Prussia and the smaller states of Germany, under his guidance, formed an offensive and defensive alliance. And when, in the course of the Franco-German War, the king of Prussia was crowned German Emperor in the palace of Versailles, 1871, Bismarck was appointed Imperial Chancellor, and raised to the rank of a prince. On the conclusion of peace with France he set himself the task of effecting a reconciliation with Austria, and eventually concluded a triple alliance between that country, Italy, and Germany. He presided over the Berlin Congress in 1878, and did much to promote peace. In his foreign policy he received the almost universal support of his countrymen, though his plans for internal reforms were frequently thwarted. Backed as he was by the king, his will became law in the end, and he succeeded in reforming the coinage, strengthening the army, establishing protection, and, at any rate temporarily, repressing the rising wave of socialism. His steadfastness of purpose gained for him the title of the "Iron Chancellor." Soon after the accession of William II., in 1888, he ceased to be chancellor, and retired into private life, an event which "Punch" commemorated by its well-known cartoon, "Dropping the Pilot."

BISON, an animal of the same genus as the ox, differs from it in the possession of a large hump behind the neck. The name is more correctly used to denote the American bison or buffalo, which at one time roamed the American prairies in immense herds. From its flesh and fat was produced the *pemmican* which formed the chief food of the fur hunters. See *Buffalo.*

BITON AND CLE'OBIS were the sons of Cydippe, the chief priestess of Hera (Juno) at Argos. We are indebted to Herodotus for the story of filial affection which prompted these two youths to draw their mother's chariot in a procession to the temple of the goddess, the customary white oxen not having arrived. As a reward Cydippe prayed the goddess to confer on them the best gift that could be given to mortals. While they were still in the temple a gentle sleep fell upon them, from which they never awoke.

BITUMEN, a name applied to various mineral substances with apparently very different qualities, but all composed principally of carbon and hydrogen. Naphtha, petroleum, mineral caoutchouc, and asphalt are the principal varieties and they vary in solidity with the proportion of oxygen they contain, asphalt containing the most. Bitumen is of vegetable origin.

BLACK BESS, the mare on which Dick Turpin is said to have ridden from London to York in sixteen hours.

BLACK, WILLIAM, *b.* at Glasgow, 1841, *d.* 1898, began life as a journalist, but is chiefly celebrated as a writer of novels descriptive of life and scenes in the Western Highlands and islands of Scotland. Among the most popular are a "Daughter of Heth," "Madcap Violet," "Macleod of Dare," and "A Princess of Thule."

BLACKBURN, one of the oldest cotton manufacturing towns of Lancashire, about 9 miles east of Preston. Hargreaves, the inventor of the spinning jenny, was born there. The town has also important iron manufactures, and is rapidly growing. (For population, etc., see p. 902.)

BLACKCOCK, a species of grouse common on the moors of the north of England and of Scotland, and very abundant in parts of Scandinavia, Russia and Siberia. The female is known as the "Gray Hen."

BLACK COUNTRY, THE, a tract of country in South Staffordshire, rich in iron and coal, extending from Wolverhampton to the outskirts of Birmingham in one direction, and from Walsall to Dudley in another. Here every stage of the iron manufacture may be seen in constant operation, from the production of crude pig-iron, by smelting, to the most highly finished articles of iron and steel, for the sale of which Birmingham is the centre.

In this district are situated many large and important towns, including Wolverhampton, population 100,000; Walsall, 92,000; West Bromwich, 68,000; Dudley, 50,000; Wednesbury, 30,000; and Bilston, 25,000.

BLACK DEATH, a name given to a series of epidemics that devastated Europe, Asia, and Africa in the 14th century. It took its name from the black spots which covered the skin at one stage of the disease. The sufferers usually died within two or three days of being attacked. In the epidemic of 1348 England lost one-third of its inhabitants, and it is estimated that upwards of 20,000,000 perished in Europe.

BLACK FOREST, THE, a forest-clad range of mountains in the German provinces of Würtemberg and Baden, running almost parallel to the eastern bank of the Rhine. The district is famous for its picturesque scenery, is rich in minerals, and contains several well-known mineral springs.

BLACK FRIARS. (1) The Dominican order of mendicant and preaching friars founded by St. Dominic. They were so named from their black dress. (2) A district in London which formerly contained a Dominican monastery.

BLACKHEATH, a rapidly growing suburb of London with a large common, adjoining Greenwich Park. The heath was the scene of the insurrections of Wat Tyler in 1381, and of Jack Cade in 1450, and was for many years infested by highwaymen.

BLACK HOLE OF CALCUTTA, a room about twenty feet square, and ventilated by two small windows only, in which Surajah Dowlah confined 146 English prisoners on the night of June 18th, 1756. When the doors were opened in the morning only twenty-three were found alive.

BLACKING, a mixture of finely powdered boneblack, oil, raw sugar, or molasses, vinegar, and sulphuric acid, used for producing a black polish on leather.

BLACKLEAD is the common name of *graphite* or *plumbago*, one of the natural forms in which carbon appears. The mines in Borrowdale, in Cumberland, are now practically exhausted. It is abundant in Siberia, Ceylon, and various parts of India and California. In addition to its use for the manufacture of ordinary lead pencils, it is employed as a lubricant for machinery where oil is inadmissible, in the processes of electro-typing, and as a coating for ironwork to prevent rusting.

BLACKLETTER, the Gothic, or Old English alphabet. As printing was invented in Germany, naturally the first books were printed in that character, and this is why book-collectors are so enthusiastic about books in "blackletter" characters. But as the art of printing was diffused, the simpler characters now in use, called Roman type, became general.

BLACKMAIL, a rent or tribute formerly paid by farmers and others living in the neighbourhood of the Scottish Highlands, in the Border counties, and in other districts subject to the incursions of bands of cattle thieves. It was sometimes paid to a neighbouring chief for protection against the depredators, and at other times to the robbers themselves to buy off their molestation.

BLACK MARIA, the popular name for the police van in which prisoners are conveyed from the police courts to prison.

BLACKMORE, RICHARD DODDRIDGE, *b.* at Longworth, Berkshire, 1825, *d.* 1900; a novelist who gained a great reputation by his romance of Exmoor, "Lorna Doone." "Christowell," a Dartmoor story, is almost equally famous.

BLACKPOOL, a favourite Lancashire watering-place, a few miles north-west of the Ribble Estuary. The excellence of the sands, together with the splendid piers and promenade, attracts thousands of visitors. The air is bracing, and the amusements of the town well organised; population about 50,000.

BLACK PRINCE, THE, *b.* 1330, *d* 1376; eldest son of Edward III., was described by old writers as the "mirror of knighthood, the first and greatest of heroes;" but the merciless slaughter of the people of Limoges, for admitting a French garrison into the town, has left a great blot on his name. The prince won his spurs at the battle of Crecy, 1346, where he was the nominal leader of the first division of the English army; and ten years later he defeated a French force five times as numerous as his own, at Poictiers. He was the first Prince of Wales to adopt as his crest three ostrich feathers, with the motto *Ich dien*, I serve. His tomb is in Canterbury Cathedral.

BLACK ROD. Refer to *Index*.

BLACK SEA, a land-locked sea lying to the south of Russia, between Europe and Asia, and having an area twice as great as that of Great Britain. It communicates with the Mediterranean by the Bosphorus and Dardanelles. It receives the drainage of nearly one-third of all Europe. The sea has no noticeable tides, is remarkably free of islands, reefs, and shoals, possesses excellent fishing grounds, but is subject to dense fogs and sudden storms.

BLACKSTONE, SIR WILLIAM, *b.* in London, 1723, *d.* 1780; an eminent lawyer and judge, lectured on Law at Oxford, and became the first Vinerian professor at the University. His "Commentaries on the Laws of England" appeared in 1765, and contained a clear exposition of English Law free from technical phraseology.

BLACK WATCH, the popular name of the "Royal Highlanders," the 42nd and the 73rd regiments. They were organised in 1739 out of the six companies that had previously been entrusted with the "watching" of the Highlands, and the maintenance of law and order among the Highlanders.

BLACKWOOD (FREDK.), MARQUIS OF DUFFERIN, *b.* 1826, *d.* 1902; an eminent statesman and diplomatist, who devoted nearly fifty years to the service of his country. He held office as British ambassador at St. Petersburg, Constantinople, Rome, and Paris, and became Governor-General of Canada, and afterwards of India.

BLAKE, ROBERT, *b.* at Bridgewater, 1598, *d.* 1657; an English admiral who did much to give England the command of the sea. During the Civil War he served in the army, and first took to the sea in pursuit of Prince Rupert, whose ships he finally destroyed. To Blake fell the task of organising the navy of the Commonwealth, and he set himself to man the fleet with the same type of men that had made Cromwell's Ironsides so successful. In the war with the Dutch he defeated Van Tromp off Dover, and De Ruyter in the Downs, in 1652, Van Tromp off Portland, and again off the North Foreland, and the combined fleets of Van Tromp and De Ruyter, off the Texel, in 1653. His greatest success was the destruction of the Spanish treasure ships in the harbour of Santa Cruz, 1657.

BLAKE, WILLIAM, *b.* in London, 1757, *d.* 1828; a poet, painter, and engraver, who held very peculiar views, and imagined that he was able to converse with the spirits of Moses, Homer, Virgil, Dante, Milton, and others. His principal works were the "Songs of Innocence" and the "Songs of Experience," poems illustrated by original etchings and borderings tinted by the artist. He illustrated Young's "Night Thoughts," the "Book of Job," and his own "prophetic books."

BLANC, JEAN LOUIS, *b.* at Madrid, 1811, *d.* 1882, a French journalist and writer on Socialism. He founded the "Revue de Progrès," in which his articles on the "Organisation of Labour" first appeared. For a time he lived in exile in England, where he completed his great work, the "History of the French Revolution." Returning to Paris after the fall of Napoleon III. he was elected a member of the Chamber of Deputies, a position he continued to occupy until his death.

BLANKETEERS, a term applied to a number of mill operatives, who met in St. Peter's Fields, Manchester, in 1819. They intended to join a similar contingent from Derby, and march on London, with the object of pressing the demands for parliamentary reform. The name arose from the circumstances that each man had provided himself with a blanket for camping. The meeting was dispersed by the yeomanry, and several of those who took part in it were imprisoned.

BLANKETS are composed either entirely of wool or of a cotton warp and wool weft. The latter are known as "Union" blankets. The heavy pile on both sides, produced by the aid of teazles, conceals the cotton warp. The kind known as "Scotch Blankets" is composed entirely of wool, but there is so little pile that the twilled pattern beneath shows through. Dewsbury is the principal seat of the blanket manufacture in England.

BLANK VERSE, unrhymed verse, depending on metre alone. This was the principle on which all the ancient Greek and Latin poems were written. The earliest example of blank verse in English is a translation of a part of the Æneid, which appeared in 1547. The dramas of Shakespeare are in this form, and since his time, dramatic writers in verse, with the notable exception of Dryden, have adopted this form.

BLARNEY, a village and castle dating from the 15th century, about five miles north-west of Cork. The "Blarney Stone" is set in the parapet wall on the western side of the tower, and, according to tradition, possesses the power of conferring the gift of eloquence on all who kiss it.

BLASPHEMY. Refer to *Index*.

BLASTING, the most efficient mode of removing, or breaking up large masses of rock in the operations of mining, quarrying, or engineering. The old method was to bore a hole in the rock by means of suitable instruments, insert a charge of gunpowder in the end of this, tightly pack the remainder of the hole with chips of stone, clay, etc., and then fire the charge by means of a train of powder. The first great improvement on this early method was the employment of loose sand instead of tight packing, and safety fuses for firing; and the risk of accidents has now been reduced to a minimum by the use of electric currents for that purpose. More powerful explosives in the form of gun-cotton, dynamite, and blasting-gelatine are now used.

BLAVATSKY, HELENA PETROVNA, *b.* 1831, *d.* 1891, Russian adventuress and Theosophist, has travelled much, and had a varied experience of men and manners. Married at seventeen, she soon separated from her husband, after which she traversed Europe, Asia, and America, posing as a spiritualistic "medium." In 1875 she founded the Theosophical Society which has gained some converts with much better balanced minds than her own.

BLAZON. Refer to "Heraldry," in *Index.*

BLEACHING is the art of removing colouring matter from cotton, linen, woollen, and other fabrics. This was done formerly by boiling the material with soap or an alkali, and then exposing it to sunlight—a process that occupied many weeks or even months. The modern method of bleaching cotton or linen goods is to soak the materials in a solution of bleaching powder, and then to pass them through dilute hydrochloric or sulphuric acid. In this way the colouring matters are oxydised into colourless compounds. Wool, silk, and straw are hung in closed rooms, on the floor of which sulphur is burnt. Hydrogen-peroxide is also now used as a bleaching agent.

BLENHEIM, a village in Bavaria, near which Marlborough and Prince Eugene gained a decisive victory over the French and Bavarians, 1704.

BLENHEIM PALACE, the seat of the Marlborough family, is near Woodstock, in Oxfordshire. The grateful Parliament voted half-a-million after the victory of Blenheim to erect a mansion for the victor. The majestic building, designed by Sir John Vanbrugh, has a front of 348 feet, and the interior is in keeping with its outward magnificence. In front stands a column 130 feet high crowned with a statue of the hero, and bearing inscriptions around the base. The area of the park is 2,700 acres.

BLESSINGTON, MARGUERITE, COUNTESS OF, *b.* in Tipperary, 1789. *d.* 1849, the daughter of an impoverished Irish squire, for many years swayed the literary and intellectual portion of London Society. After the death of her husband, she lived at Gore House, Kensington, for many years receiving at her reunions all the famous men of the time, and adding to her considerable income by writing fashionable novels and sketches.

BLIND FISH. It is well known to biologists that organs tend to become atrophied from want of use. Specimens obtained by the "Challenger Expedition" showed that those fish whose natural habitat is now at a greater depth than that to which light can penetrate possessed only rudimentary organs of sight. The lancelet, the lowest order of fish, that burrows in the sand along the shores of the Mediterranean, has very imperfectly developed eyes, and examples of blind fish have also been obtained from caves in Kentucky and from the subterranean pools of Cuba.

BLIND-WORM or **SLOW-WORM,** a small reptile, usually about a foot in length, closely resembling a snake in appearance, but the existence of rudimentary pelvic and shoulder girdles connect it with the lizards. It is found all over Europe, except in Ireland, and also in Western Asia and Northern Africa. It feeds on insects, earth-worms, slugs, etc., and is perfectly harmless, in spite of Shakespeare's description, "the eyeless, venom'd worm." The smallness of its eyes gave rise to the fallacy of its blindness.

BLIZZARD, a cold and bitter wind accompanied by driving snow, which makes it almost impossible to sustain life long outdoors. The true home of the blizzard is Montana and Dakota in the north-west of the United States, where the thermometer has been known to go down 100° in twenty-four hours, and the wind driving ice-needles before it to blow for 100 hours incessantly at the rate of 40 miles an hour. Some die of suffocation rather than cold from the difficulty of breathing the ice-laden air.

BLOCKADE, the closing in of a town by surrounding it with troops or ships in such a manner as to prevent those inside from leaving it, and outsiders from entering. The declaration by a Power that a place is blockaded, makes it unlawful for a neutral to attempt to trade with it, and places him in the position of an enemy if he attempts to do so. In the event of capture, the goods he is attempting to take in, or to bring away, are liable to be seized by the investing force.

BLOCKHOUSE, a small temporary fort composed of logs of wood or other easily acquired material, roofed in, and loopholed for rifle fire. It is sometimes surrounded by a trench, and entirely covered with earth to render it bomb and fire-proof. In the guerilla stage of the Boer War, large areas were enclosed by lines of blockhouses, constructed of corrugated iron, connected together by barbed-wire fencing, and surrounded by barbed-wire entanglements. The whole zone within the line of blockhouses was then crossed by a line of troops, the object being to drive any of the enemy within the area, on to the line of blockhouses, and so ensure their capture.

BLOCK SYSTEM, a method of preventing collisions on railways. According to this system, two trains on the same line of rails cannot approach each other nearer than the distance between two signal boxes; for the signalman at one box keeps the signal against the one until he has been informed by telegraph that the preceding train has passed the next box, and so entered the succeeding "block."

BLOEMFONTEIN, "Flowery Fountain," is the capital of the Orange River Colony. The town was occupied by Lord Roberts, 13th March, 1900; population 6,500.

BLONDEL, a minstrel and confidential servant of Richard Cœur de Lion. He is said to have discovered the place of his master's confinement in Austria, by singing outside the tower the first stanza of a love ballad that the two had composed together. Richard replied from within, and Blondel at once took steps to restore the king to liberty.

BLONDIN, CHARLES, *b.* at St. Omer, France, 1821, *d.* 1897; a celebrated acrobat and rope dancer, whose most daring feat was the crossing of Niagara Falls on a tight rope, stretched from side to side.

BLOOD-RAIN, a red rain often seen to descend on the seas to the north and west of the Sahara. After a prolonged drought, the minute particles of red sand are caught up by whirlwinds and carried away sometimes hundreds of miles by horizontal currents of air. Then the rain falling through these dust-clouds is impregnated with it, thus becoming red.

BLOOD, THOMAS, *b.* about 1628, *d.* 1680; served with Cromwell's army in Ireland. Soon after the Restoration he headed a daring plot for seizing Dublin Castle and killing the Lord-Lieutenant. Later he attempted to steal the crown and regalia from the Tower of London, but was captured and confessed his guilt. Charles II. visited him in prison, and was persuaded to pardon him. The king also granted him a pension of £500 a year.

BLOODHOUND, a variety of hound, taller, stronger, and more compactly built than the foxhound, remarkable for its keen sense of smell. Owing to this circumstance, bloodhounds were employed to track the cattle raiders of the border counties, and for the pursuit of criminals. They were also used in the United States for tracing fugitive slaves.

BLOODY ASSIZE, the special sessions held in the western counties, by a commission consisting of Chief Justice Jeffreys and four other judges, for the trial of those who assisted in the Monmouth Rebellion of 1685. More than 300 persons were condemned to death, and nearly 1,000 were sold as slaves in the West Indies.

BLOOMFIELD, ROBERT, *b.* at Honington, near Bury St. Edmunds, 1766, *d.* 1823; a poor shoemaker with the gift of poetry. His earliest poems, the "Milkmaid" and the "Sailor's Return," appeared in the London Magazine. The "Farmer's Boy" was written in a London garret, and published by the aid of friends, who afterwards secured for him a subordinate post in a government office, which he was compelled to relinquish on account of ill health.

BLOUET, PAUL. See *Max O'Rell.*

BLOW-FLY is a common fly in Great Britain; infesting sheepfolds it lays its eggs in the wool of the sheep; the maggots, which hatch from these eggs, burrow into the skin of the sheep; ulcers are thus produced which may cause the death of the sheep, if they are not treated promptly.

BLOWPIPE. (1) A metal tube with a smaller tube fitted with a fine orifice, projecting at right-angles from its lower extremity. The instrument is used in many of the arts, and in chemical analysis, for directing a jet of flame on any object to be heated. The current for directing the flame is provided by the breath of the operator, or by some form of bellows. A portable lamp, provided with a blow-pipe, is used by plumbers for soldering and by painters for burning off old paint. The blow-pipe used by the glass-blower consists of a long, straight, metal tube. (2) A blow-pipe, from 8 to 12 feet in length, and consisting of a double tube, made from two stems of a species of palm fitted one within the other, is a most effective weapon in the hands of certain tribes of South American Indians, either in warfare or for hunting. A small arrow, having its pointed end notched and poisoned, and made to fit the tube exactly, by being wound at the other end with a little soft down from the silk-cotton tree, is expelled by the breath of the hunter, and proves fatal to birds and other game, the flesh being in no way injured by the poison of the arrow. A similar weapon is in use among the Dyaks of Borneo and other native tribes of the Indian Archipelago.

BLÜCHER, MARSHAL VON, *b.* at Rostock, Prussia, 1742, *d.* 1819; served first in the Swedish army, but afterwards joined that of Prussia, and eventually became a field-marshal. In 1813 he commanded a combined force of 60,000 Russians and Prussians operating against the French, which, after gaining several victories, formed the left wing of the army of the allies in the pursuit of Napoleon, who was then retreating on France. In 1815 he commanded the Prussian army in Belgium. On June 16th he was defeated at Ligny, but reformed his men. His opportune appearance on the field of Waterloo completed Wellington's victory. His courage, impetuosity, and resolution after defeat gained for him the title of "Marshal Forwards."

BLUEBIRD, so called from the rich blue colour of its upper plumage, is common over the whole of North America, except the extreme north, and is the harbinger of spring to the Americans. It makes its appearance in the United States in February or March, leaves again in November, and probably winters in Brazil and Guiana. It is a sweet songster.

BLUE-BOOK, any volume of reports and other official documents published by parliament, and so named from the circumstance that they have blue covers. Some fifty or sixty volumes are issued during a single session.

BLUE COAT SCHOOL. See *Christ's Hospital.*

BLUE GOWNS, the popular name of a class of privileged beggars formerly existing in Scotland. Their correct designation was the *king's bedesmen*. On the king's birthday each of them received a gown of blue cloth, a loaf, and a purse containing a penny for every year of the king's life. Their appointment has been discontinued since 1833, and the last allowance was paid in 1863.

BLUE MOUNTAINS. (1) A range from 5,000 to 7,000 feet in height traversing the island of Jamaica from east to west, and containing some picturesque scenery. (2) A range forming part of the Appalachian system in the east of the United States. (3) A range running parallel to the coast of New South Wales, reaching a height of 4,100 feet, and producing copper, tin, lead and coal.

BLUE-PETER, a flag with a blue ground and a white square in the middle. It is hoisted when a ship is about to sail, for the double purpose of recalling absent sailors, and warning all who have accounts to settle with any one on board, to do so at once.

BLUE RIBBON. From the fact that the emblem of the highest order of knighthood in England is a dark blue ribbon, has arisen the custom of applying the term to the most valued prize to be obtained in any profession or form of sport. Thus, the Lord Chancellorship is spoken of as the Blue Ribbon of the Law; a Field Marshal's baton, as the Blue Ribbon of the Army; winning the Derby, as the Blue Ribbon of the Turf; and the America Cup, as the Blue Ribbon of Yacht Racing, etc.

BLUNDERBUSS, a short gun, having a bore wide enough to throw three or four bullets at once. It was introduced into England in the reign of Charles II., probably from Holland.

BOA, a family of serpents destitute of poison fangs, but of immense size and strength. It is peculiar to the warmer regions of South America. The largest species is the Anaconda. The *Boa Constrictor* is much smaller, rarely exceeding 12 feet in length. It is a native of Brazil and the West Indian Islands, and is frequently seen hanging by the tail from a branch of a tree, waiting for its prey, which consists of the smaller mammals of the country. It never enters the water, but lies concealed in burrows, and is hunted by the Brazilians for its skin and fat.

BOADICE'A, the queen of the Iceni, a British tribe who inhabited Norfolk and Suffolk. Roused by the indignities offered to her and her people by the Romans, she raised an army, attacked several Roman settlements, and reduced London to ashes. She was eventually defeated by the Roman governor Suetonius, and committed suicide by poison A.D. 61.

BOANER'GES, "Sons of Thunder," a title given by Christ to James and John, the sons of Zebedee, on account of their fervent zeal.

BOAR, THE WILD, is found in many parts of Europe and Asia, and differs from the domestic variety, of which he has been the progenitor, in possessing greater intelligence. He has also a longer snout, shorter ears, and well developed tusks. Boar hunting, a favourite amusement in many countries, is known in India as pig-sticking. The droves of wild hogs that roam the forests of South America are descendants of the domestic variety introduced from Europe.

BOATSWAIN, a naval warrant officer, who has charge of certain stores belonging to the ship to which he has been appointed. He superintends the men, summons the crew to their duties by the sound of a whistle known as the boatswain's pipe, relieves the watch, and, in rough weather, pays special attention to the boats and anchors.

BOCCAC'CIO, GIOVAN'NI, *b.* at Paris, 1313, *d.* 1375; was designed by his father, a Florentine merchant, for a mercantile career, but devoted himself to story-telling in prose and verse, and contributed largely to the revival of classic literature in Italy. His "Decamerone" is the earliest prose work written in pure Italian, and furnished the material for Chaucer's tale of "Griselda." The "Falcon," a pathetic love story, was dramatised by Tennyson.

BODENSEE, the German name of Lake Constance, which see.

BODLEIAN LIBRARY, the public library of Oxford University, was founded by Sir Thomas Bodley, and opened in 1608. It contains many rare oriental, Greek, Latin, and Hebrew books and manuscripts, and under the Copyright Act possesses the privilege of receiving a copy of every book printed in Great Britain or Ireland. All graduates of the University, and literary persons who have been duly recommended, are permitted to read and make extracts from the works in the collection.

BOEHM, SIR JOSEPH EDGAR, *b.* at Vienna, 1813, *d.* 1890, sculptor, came to London in 1862 after studying in Vienna, Paris and Italy. He had great success at the Exhibition of that year, and this made him resolve to settle in England. He executed a statue of Queen Victoria for Windsor Castle, of Carlyle for the Thames embankment, and the equestrian statue of Wellington at Hyde Park Corner. His masterpiece was the effigy of Dean Stanley for the Abbey.

BOERHAAVE, HERMANN, *b.* near Leyden, 1668, *d.* 1738; a celebrated physician and the author of several medical works, who became Professor of Medicine, Botany, and Chemistry in the University of his native town. He gained a European reputation, and included among his patients Pope Benedict VIII. and Peter the Great.

BOER WAR, THE, arose out of the unfair treatment meted out to British residents in the Transvaal, and the determination of the Boers that the Dutch should be the predominant race in South Africa. The war began with the Boer invasion of Natal, 11th October, 1899. In a short time the Boer forces laid siege to Ladysmith, Kimberley, and Mafeking. The earlier operations of the British army were directed to the relief of these three places. General Buller directed the operations in Natal, and Lord Methuen in Cape Colony. In one black week in December our troops suffered three serious reverses, at Stormberg and Magersfontein in Cape Colony, and at Colenso in Natal. The whole empire was now thoroughly stirred. Troops were sent from the Colonies, Volunteer and Yeomanry regiments were dispatched, in addition to the regular forces. Lord Roberts, with Lord Kitchener as his chief-of-staff, took the chief command, and after making due preparations, took the field, and swept the enemy before him. On the 15th February, 1900, General French relieved Kimberley; on the 27th, Cronjé was compelled to surrender with 4,000 men at Paardeburg; on the same day General Buller opened the way to Ladysmith by the capture of Pieter's Hill; Bloemfontein was entered by Lord Roberts on March 13th; and on May 17th Mafeking was relieved by a flying column under Colonel Mahon.

The Transvaal was now invaded by our victorious troops, who entered Johannesburg on 31st May and Pretoria on 5th June. One immediate result was the liberation of 3,200 British prisoners of war. Roberts and Buller were now able to join forces and to make a combined attack upon the main Boer army under General Botha. It was only after a long series of engagements, lasting until the end of September, that the Boer army was completely broken up, their excellent artillery captured or destroyed, and their President (Kruger), an exile in Europe.

A guerilla war ensued, and for 18 months longer the stubborn struggle went on. Meanwhile Lord Roberts returned to England, leaving Lord Kitchener "to fight to a finish." The end came on 31st May, 1902, when peace was signed at Pretoria. As a result, the two Boer States—the Transvaal and the Orange Free State—now form part of the British Empire.

BOG, land covered with peat, a substance produced by superimposed layers of a species of moss. Each layer, as it died, has been succeeded by another layer of living plants, until a mass, many feet in thickness, and of a very spongy texture, has been produced. Peat is capable of holding a large quantity of water, and for this reason most bogs partake of the nature of quagmires; indeed some parts of the centre of Dartmoor are almost impassable. The largest bog in the British Islands is the Bog of Allen, in Ireland. The peat is valuable for fuel, and also as a principal ingredient in manures for certain purposes. At the base of the peat the remains of oak trees are sometimes found. The wood is of a deep ebony black colour, and in parts of Ireland is used for the manufacture of small ornaments.

BOGIE, a low truck placed in front of a locomotive-engine or railway carriage to facilitate the movement around curves, and to lessen the danger of the train running off the rails.

BOG-OAK is the oak which is found buried in peat. As the bog enlarges it spreads over the surrounding land and in the course of ages buries the trees growing thereon. Oak, which has thus lain immersed in bog for countless centuries, is stained black. It is much prized by the cabinet-maker.

BOGOTA', the capital of the South American Republic of Colombia, is within 5° of the equator, but owing to its elevation, 8,600 feet above sea-level, enjoys a climate of perpetual spring; population 120,000.

BOHEMIA, a state in the north-west of the Austrian Empire, consists of a lozenge-shaped plateau surrounded by ranges of mountains, and has an area of about 20,000 square miles. Minerals are abundant and the manufactures of importance. Czechs, a race of Slavonic origin, form nearly two-thirds of the inhabitants. The capital is Prague, with a population of over 180,000.

BOILERS for the production of steam for driving machinery were at first heated by means of a cylindrical fire-box passing through the boiler from end to end. The earliest improvements consisted in providing a greater heating surface by employing two inner fire-tubes, and afterwards a number of flues were added. These flues are small tubes, which not only convey the furnace gases to the chimney, but also transmit the heat of the gases to the water of the boiler. In *Water-tube Boilers* the water is heated in a number of tubes which pass through the furnace, and communicate at their ends with larger vessels which act as reservoirs of water and steam. The *Belleville Boiler*, which has been fitted to many of our warships, is of the water-tube variety. It

consists of a number of "elements." Each element is composed of a vertical, zigzag, steel tube, which communicates above with the vessel in which the steam collects, and at its lower end with the adjoining element. The heat is sometimes further economised by the use of an "Economiser." This consists of elements similar to those composing the boiler, fixed in the space above the boiler, through which the furnace gases escape. The "feed" water passes through the economiser, and is thus raised in temperature by the heated gases before reaching the boiler proper. Another variation of the water-tube boiler, known as the *Flash Boiler*, is used for the propulsion of motor cars. [See *Automobiles*].

BOILING POINT is the temperature at which the tension of the vapour of a liquid is equal to the pressure it supports. When such a temperature is reached, the vapour escapes in bubbles at the surface of the liquid. Under the ordinary atmospheric pressure of 15 lbs. to the square inch, alcohol boils at 173° F., water at 212° F., and mercury at 662° F.

BOLAN PASS, a deep, narrow mountain gorge lying between Quetta, in Baluchistan, and Kandahar, in Afghanistan.

BOLEYN, ANNE See *Anne Boleyn*.

BOLINGBROKE, VISCOUNT. (Henry St. John) See *St. John, Henry*.

BOLÍVAR, SIMON, *b.* at Caracas, 1783, *d.* 1830, has been called the "Liberator" and the "Washington of South America," owing to the part he played, as soldier and statesman, in gaining the independence of Venezuela, New Granada, and Bolivia. In 1819 he became the first president of Colombia, and in 1824 was appointed dictator of the newly formed republic of Northern Peru, which was afterwards known as Bolivia, after his name. Unable to control the fiercely contending factions, and broken in health, he retired into private life.

BOLIVIA, a republic consisting of an immense tableland, extending from the eastern slopes of the Andes to Brazil. The area is about 567,000 square miles, and the population 2½ millions, about half of whom are Indians. The country is possessed of great mineral wealth, particularly copper, tin, and silver; and exports, in addition to these, wool, rubber, and coffee. This state has no access to the Pacific, having lost its sea coast in the war with Chile, 1875–80; the exports are mostly shipped at Buenos Ayres. Its largest town is La Paz; population 63,000.

BOLOGNA, the chief city of the Italian province of the same name, is a walled town, situated in a fertile plain north of the Apennines. Its university is the oldest in Italy.

BOLTON, a town on the Lancashire coal-fields, about eleven miles north-west of Manchester, has extensive cotton factories. (For population, etc., see p. 902.)

BOLTON ABBEY, now in ruins, is beautifully situated on the Wharfe, in Yorkshire, about 21 miles north-west of Leeds. It was founded in the 12th century for Augustine Canons. There are remains dating from the Early English to the Perpendicular Period. It has been celebrated by Wordsworth in "The White Doe of Rylstone."

BOMB, a hollow ball or shell filled with explosive material, and fired by means of a time-fuse or clock-work mechanism. Bombs were formerly used in warfare for setting fire to buildings, magazines, etc., and were thrown from mortars or howitzers. The conical shell has now replaced the ordinary bomb-shell. Bombs have been employed for the destruction of life and property by the nihilists, anarchists, and Fenians.

BOMBA, KING, a nickname given to Ferdinand II., king of the "Two Sicilies," i.e., Naples and Sicily, who succeeded to the throne in 1830, and, during the civil war that broke out in 1848, cruelly bombarded his own cities.

BOMBARDIER. A bombardier was an artilleryman who, in battles or sieges, had to attend to shells and fuses and serve mortars and howitzers; now the lowest rank of the artillery non-commissioned officers.

BOMBASTES FURIOSO, an opera by Thomas Rhodes, written in the inflated style of the popular dramas of his day.

BOMBAY. (1) The western presidency of India, extends from Baluchistan to Mysore, and has an area exceeding 120,000 square miles, and a population of upwards of 18½ millions. (2) The capital of the presidency stands on a small island, connected with the mainland by an artificial causeway, and possesses the finest harbour in India. Two neighbouring islands, Salsette and Elephanta, contain the remains of marvellous temples hollowed out in the native rock. Bombay formed part of the dowry of Catharine, wife of Charles II. During the American Civil War it became the principal cotton mart of the world, and the opening of the Suez Canal gave a great impetus to its trade, so that it promised to rival Calcutta. In recent years the very serious outbreak of bubonic plague has dislocated its trade and industry, and the census of March, 1901, showed that the population had decreased from 822,000 to 776,000. Since then the evil has increased, the outbreak of 1903 having lasted longer, and caused a heavier mortality, than any previous visitation.

BOMBAZINE, a cloth woven of silk and worsted. The manufacture was introduced into England by a colony of Flemings who settled in Norfolk, and set up their principal factories in Norwich. It is now produced principally at Halifax and Kidderminster, and is largely exported to Spain and South America.

BONAPARTE FAMILY, THE, a family of Italian origin, settled in Corsica, that has given the following crowned heads to European countries:—Napoleon I., emperor of the French, 1804–14; Joseph, king of Spain, 1808–13; Louis, king of Holland, 1806–10; Jerome, king of Westphalia, 1807–13; Charles Louis (nephew of Napoleon I.), emperor of the French, 1852 to 1870. François Joseph, son of Napoleon I., *b.* 1811, was proclaimed king of Rome, while still an infant, but his father's fall after his defeat at Waterloo put an end to his career as a prince.

BONAPARTE, NAPOLEON EUGÈNE, the "Prince Imperial," *b.* 1856, was the son of Napoleon III. He was present with his father at one of the earlier battles of the Franco-German war, but withdrew to Paris, and after the capitulation of Macmahon's army at Sedan, and the capture of his father, he and his mother secretly repaired to England and took up their residence at Chiselhurst, where they were joined by the emperor in 1871. The Prince Imperial volunteered for service with the British army in South Africa, and was killed in the war with the Zulus, 1879.

BONAVENTURA, ST., *b.* 1221, *d.* 1274, called the *Seraphic Doctor*, was a Franciscan monk, and one of the most eminent of the schoolmen. His learning was immense and his influence in ecclesiastical matters very great. See *Schoolmen*.

BONDED WAREHOUSES. See *Commercial Dictionary*.

BONHEUR, ROSA, *b.* at Bordeaux, 1822, *d.* 1899, was a celebrated animal painter. She first studied under her father, and her first picture was exhibited when she was 19. "Ploughing with Oxen" is considered her finest work, though the "Horse Fair" is equally well known.

BONIFACE, SAINT, *b.* at Crediton, Devon, 680, *d.* 755, the "Apostle of Germany," spent 30 years in civilising and Christianising the people of that country, being assisted in his work by fellow-countrymen from Britain. He established numerous monasteries, founded four cathedrals, and became archbishop of Maintz. In 755 he attempted to convert the people of Friesland, but he and his companions were attacked by a party of heathens and massacred.

BONNER, EDMUND, *b.* at Hanley, Worcestershire, 1495, *d.* 1569; became bishop of London, and at first assisted in the reformation of the church. On the accession of Edward VI. he opposed Cranmer on points of dogma, was deprived of his bishopric, and committed to prison. He was restored by Queen Mary, and much odium has clung to his name, owing to the number of people put to death in his diocese, on account of their religious convictions. He refused to take the oath of supremacy to Elizabeth, was again deprived of his bishopric, and confined in the Marshalsea, where he died.

BOOKMAKER. See *Betting*.

BOOK OF COMMON PRAYER. It combines in one volume all the offices of the Church of England. It is based on the Second Prayer Book of Edward VI., published in 1552, but certain modifications and additions were made in the reign of Elizabeth, 1599, after the Hampton Court Conference, 1604, and after the Savoy Conference, 1661. Its contents were compiled from existing service-books, and translated into the "vulgar tongue." More than a half is taken direct from the Scriptures, and most of the prayers and collects are translations of those that had been repeated in Latin from very early times.

BOOK OF THE DEAD, an ancient Egyptian work consisting of a collection of prayers composed at various periods. Copies were placed in mummy cases in order to free the departed from the influence of evil spirits, and to give him safe conduct through the lower world.

BOOK OF MARTYRS was written by John Foxe, a prebendary of Salisbury Cathedral, in the reign of Queen Elizabeth. The book, which treats of the persecutions suffered by Protestants, was first published on the Continent, and in Latin. The English translation appeared in 1563.

BOOK OF SNOBS, a series of papers, marked by keen irony and playful humour, which Thackeray contributed to the early numbers of "Punch."

BOOM. (1) In a ship, is a spar jutting out from a support such as the mast, and forming an attachment for the lower edge of a sail. Booms are named after the sail that is attached to them; thus the main-boom serves as an attachment for the main-sail. (2) In the defence of a harbour, a boom is a strong chain stretched across the fair-way, firmly moored at each end, and floated by means of logs of wood. (3) In commerce, and on the Stock Exchange, the term is applied to a sudden strong rise in prices. The opposite condition is known as a "slump." Both terms are Americanisms.

BOOMERANG, a missile used in hunting and fighting by the aborigines of Australia. It consists of a piece of hard wood, parabolic in shape, with rounded ends, and having one side flat and the other convex. When thrown by an expert, it ascends into the air with a spiral motion, stops, and returns to the thrower.

BOOT AND SHOE TRADE. The invention of the sewing machine gave a

great impetus to the manufacture of boots and shoes, both in England and in the United States. Large factories were erected, and have been fitted with a machinery plant capable of performing every operation in the making of a boot or a shoe. The leather is cut by one machine, the uppers are stitched by others, and then sewn, pegged, riveted, or screwed to the soles by others; in fact, the machines are able to turn out a welted boot that resembles the hand-sewn article in appearance. Northampton is the centre of the British boot trade, and the factories of Leicester, Stafford, and Norwich also employ many hands.

BOOTH, CHARLES, *b.* 1840, an eminent writer and student of sociological questions. His chief work is "Life and Labour of the People of London;" others, "The Aged Poor," "Pauperism," and "Old Age Pensions."

BOOTH, WILLIAM, *b.* at Nottingham, 1829, resigned his ministry in the Methodist New Connexion in 1861, in order that he might work as an evangelist among those who attended no place of worship. In 1865 he established a Christian mission in the East End of London, and out of this has grown the organisation known as the "Salvation Army." An International Congress of the "Army," held in the Strand in June, 1904, was presided over by "General" Booth, and was attended by delegates from China, Japan, India, Australia, America, and most of the European countries. His book, "In Darkest England and the Way Out," published 1890, has been widely read, and Mr. Booth has vigorously prosecuted his scheme for the amelioration of the social condition of the "submerged tenth," with great success.

BOOTLE. See *Liverpool.*

BORAX, a compound of sodium and boracic acid, is a white crystalline substance easily soluble in water. It occurs naturally as *tincal*, and is largely exported from Tibet, Persia, Tuscany, and parts of North America. It is used as a preservative, in the manufacture of enamels, glass, and artificial gems, for glazing pottery, and in soldering. It is sometimes used to adulterate milk, with poisonous results.

BORCHGREVINK, CURSTEN, *b.* 1864, at Christiania, emigrated to Australia. He was one of the first to land on the Antarctic Continent in 1895, and in 1898 he commanded the Southern Cross Expedition to the same regions.

BORDEAUX, the chief wine shipping port of France, stands on the left bank of the Garonne. Wine, brandy, and fruits are the principal exports. The Gothic cathedral dates from the 13th century. The Black Prince, as governor of Aquitaine, held his court at Bordeaux, and the town was the birth-place of his son, who became Richard II. of England.

BORDEREAU (F.), a detailed memorandum. In the Dreyfus case, Captain Dreyfus was condemned for sending (as was alleged) a bordereau revealing military secrets to the German government. See *Dreyfus.*

BORDERS, THE, the territory on both sides of the boundary between England and Scotland. There were frequent wars between the two countries for the possession of the Border lands, and, up to 1237, the boundary was not fixed. The Borders were consequently the scene of more battles and sieges than any other part of Britain. They were rich in abbeys, the most famous being Jedburgh, Melrose, Kelso, Dryburgh and Lindisfarne. Other places famous in history were Roxburgh, Berwick-on-Tweed, and Alnwick.

BORE. (1) A phenomenon observed at the season of spring tides in certain rivers that possess a gradually widening estuary. The tidal wave enters the estuary, rises higher and advances more rapidly as the volume of water becomes restricted in width by the narrowing banks, until, when it reaches the mouth of the river it presents the appearance of a wall of water, which pursues its course in opposition to the current of fresh water. The height of the bore varies from two or three feet in the case of the Severn, Trent, Solway, and Dee of our country, to more than 12 feet in the Brahmaputra of India. (2) The hollow inside the barrel of any form of gun. This was formerly smooth, but in modern weapons is grooved or rifled. The term is also applied to the diameter of the barrel; thus, 12" bore expresses the fact that the barrel (inside measure) has a diameter of 12 inches.

BORGIA, CESARE, the son of Pope Alexander VI., has become notorious for his cunning, viciousness, and cruelty. He is suspected of having murdered his own brother, that he might succeed to the dukedom of Beneventum. With the aid of Louis XII. of France he made himself the independent sovereign of Romagna, the Marches, and Umbria, murdering every noble who fell into his hands, and sometimes even those who had assisted his designs. He was driven from Rome by Pope Julius II., and imprisoned in Spain. He made his escape, joined the army of Navarre, and was killed in the war against Castile, 1507.

BORGIA, LUCREZIA, the sister of Cesare Borgia, has been accused of almost as many crimes as her brother, though contemporary Italian poets praised her many virtues, and modern historians have endeavoured, with some success, to clear her reputation. She is the subject of a drama by Victor Hugo, and of an opera by Donizetti, in both of which her character is painted in the blackest colours.

BORING is the art of penetrating rocks, etc., in the formation of artesian wells, oil wells, and tunnels. In *well-boring*, soil-pipes are driven into the ground until the hard rock is reached, and then drilling tools are employed. The cutting tool, known as a bit, is attached to a combination of jointed rods by screw connections, and at various points contrivances known as "jars" are introduced for the purpose of lessening the jar on the rod at each downward stroke. The whole is attached by a rope to a beam at the surface, which is raised and depressed by engine power. In *boring modern tunnels*, the harder kinds of rock have been penetrated by means of a shield furnished with diamonds as cutting instruments. The shield is pressed against the face of the rock and made to revolve. The rock is worn away, but, owing to their extreme hardness, the diamonds are not even scratched. In *tunnelling under rivers*, to prevent the works being flooded, the device has been adopted of working the shield in a compressed air chamber. In the event of water being tapped, the pressure of the air is sufficient to keep it back until the tubes have been placed in position, and the space between them and the rock has been filled in with concrete.

BORNEO, the second largest island in the world, is situated in the East Indian Archipelago. Its area is estimated at 300,000 square miles, and the population at nearly two millions. Little is known of the interior, but the parts near the coast possess a fertile soil, and are rich in valuable timber trees, fruits, and spices; diamond, gold, coal, iron, and antimony mines are worked. The Dutch claim the west, south, and east of the island. Great Britain has established protectorates over Sarawak, Brunei, and British North Borneo, where a large area has been placed under tobacco cultivation.

BORODINO, a village lying about 70 miles to the west of Moscow, was made famous by the sanguinary battle in which Napoleon defeated the Russians, 1812.

BORORÓS, THE, a race of men of gigantic stature, averaging over 6 feet 4 inches in height, and inhabiting large territories in the south-west of Brazil. They are the tallest people in the world, and probably racially connected with the Patagonians.

BOROUGH ENGLISH, a custom existing in certain ancient English boroughs, by which property within the borough descends to the youngest son in preference to his elder brothers.

BORROMEO, CARLO, SAINT, *b.* 1538, *d.* 1584, was a nephew of Pope Pius IV, by whom he was made a cardinal, and archbishop of Milan. His labours for the improvement of ecclesiastical discipline, and for the reformation of morals in his archbishopric, roused the monastic orders to open hostility. In the famine of 1570, and during the plague of 1576 he devoted all his energies to the alleviation of distress, and in giving spiritual consolation. He spent large sums in beautifying the cathedral and in founding schools, libraries, and hospitals. His canonisation took place in 1610 in consequence of the miracles that were supposed to be worked at his tomb.

BORROW, GEORGE, *b.* in Norfolk, 1803, *d.* 1881. As agent for the British and Foreign Bible Society he travelled through nearly the whole of Europe, and over many parts of Africa. His book, the "Bible in Spain," rendered him famous. He made a close study of the gipsies in various parts of Europe, and published an account of those in Spain. "Lavengro," i.e., the "word-master," a title applied to him by the gipsies on account of his wonderful knowledge of languages, is generally regarded as an auto-biography. The "Romany Rye" was a sequel to it.

BORROWDALE, a village and valley of great natural beauty, near Keswick, West Cumberland. The valley, which is traversed by the river Derwent, has the largest rain-fall in England, averaging 163 inches per annum. The Borrowdale mines formerly produced the finest black-lead in the world, but no more is now obtainable here.

BOSCAWEN, ADMIRAL, *b.* in Cornwall, 1711, *d.* 1761, distinguished himself in naval engagements at Puerto Bello, Carthagena, and Cape Finisterre. In 1748 he commanded the fleet that took possession of Madras; and in 1758 he co-operated with Generals Wolfe and Amherst in the capture of Louisburg, Cape Breton island. His courage won for him the title of "Old Dreadnought."

BOSPHORUS or **BOSPORUS,** is the strait leading from the Sea of Marmora to the Black Sea. The name means "ox-ferry." A gulf on the northern shore, known as the Golden Horn, forms the harbour of Constantinople.

BOSSUET, JACQUES BENIGNE, *b.* at Dijon, 1627, *d.* 1704, made himself famous as an eloquent preacher and religious controversialist. The care he bestowed on the education of the dauphin was rewarded with the bishopric of Meux. He wrote a "Discourse on Universal History," the "Story of the Diversities (i.e., in dogma), in the Protestant Churches," and "Politics founded on Holy Scripture." He was greater as an orator than as a writer, and his funeral orations at the tombs of the Duchess of Orleans and Condé have always been considered masterpieces.

BOSTON. (1) A small port near the mouth of the river Witham, Lincoln-

shire. The name is a contraction of St. Botolph's Town, and was derived from the name of the monastery founded by St. Botolph, 654, and destroyed by the Danes, 870; population 16,000. (2) Boston, on Massachusetts Bay, is the capital of the state of Massachusetts, and the chief commercial centre of the New England States. Education has always occupied a foremost place in the policy of the town, so that it is pre-eminent throughout America in literature and science, and possesses excellent literary, scientific, historical, and artistic societies. For this reason it has been named the "Athens of America."

BOSWELL, JAMES, *b.* at Edinburgh, 1740, *d.* 1795; was described by Macaulay as the "first of biographers." His fame rests on his "Life of Johnson," a work remarkable for its minuteness and accuracy, and its wealth of literary anecdotes.

BOSWORTH, a market town in Leicestershire. The battle of Bosworth Field, fought about three miles from the town brought the Wars of the Roses to an end, 1485. Richard III. was killed, and after the battle his opponent, the Earl of Richmond, was crowned as Henry VII. on a part of the field still known as Crown Hill.

BOTANY BAY is situated on the coast of New South Wales, and received its name from the number of new species of plants discovered here by the first explorers, 1770. It was selected as a site for a penal settlement, but the convict colony was really established at Port Jackson, about ten miles to the northward, on the site of Sydney.

BOTHA, LOUIS, *b.* 1862, in the Orange Free State, came into note in the Boer War of 1899–1902. He at first fought under Meyer, but afterwards had a separate command against General Buller on the Tugela. He succeeded Joubert as commandant general, and this office he retained till the end of the war.

BOTHWELL BRIDGE, about a mile from the village of Bothwell, Lanarkshire, was the scene of the decisive defeat of the Scottish Covenanters by the royal forces commanded by the Duke of Monmouth, 1679.

BOTTICELLI, SANDRO, *b.* at Florence, 1447, *d.* 1515; changed his own name of Alessandro Filipepi for that of the master with whom he studied gold and metal work. He became one of the leading artists of the day, and was summoned to Rome by Pope Sextus IV. to work on the frescoes on the walls of the Sistine Chapel. He was greatly influenced by the teaching of Savonarola, abandoned painting, and is believed to have died in poverty.

BOTTLES were formerly made of leather or skins, and most of the bottles mentioned in the Bible were of this kind. The Arabs employ the skins of goats and kids for the purpose, and in Spain, wine-skins are still in use.

BOTTOMRY. See *Commercial Dictionary.*

BOULANGER, ERNEST GEORGE, *b.* 1837, a French soldier and political adventurer. In the Franco-German War he became a lieutenant-colonel under the Government of National Defence. In 1884 he was chief in command of the French army in Tunis. He became Minister of War in 1886 and introduced democratic reforms in the army. He took the lead in the policy of revenge against Germany, demanded a revision of the constitution and aimed at being dictator. In 1889 he left Paris for Brussels, and in his absence was prosecuted for treachery and fraud and condemned to expatriation. In 1891 he shot himself in a cemetery in Brussels.

BOULDERS, ERRATIC, are large blocks of water-worn stone that have been removed some distance from the parent rock, usually by the ice-drifts of the glacial period. They often weigh many tons.

BOULOGNE, a favourite French watering place, and a fortified sea-port on the English Channel, is connected with Folkestone by a daily service of steamers. In 1803 Napoleon collected here a large flotilla for the invasion of England. A new dock is in course of construction, one of the quays of which will be able to accommodate ocean-going ships at all states of the tide.

BOULTON, MATTHEW, *b.* at Birmingham, 1728, *d.* 1809, an eminent engineer and mechanician. He invented an improved process for inlaying steel and an apparatus for coining. He and his partner, James Watt, established the famous steam-engine factory at Soho, near Birmingham, in 1769.

BOUNDS, BEATING THE. On Ascension Day the clergyman of the parish, with the parish officials, school-boys, and others perambulated the boundaries of the parish, which the boys struck with peeled willow wands, they themselves being also beaten at important points to make them remember. This custom, now obsolete, was called "Beating the Bounds."

BOUNTY, THE, a vessel despatched by the British Government in 1787 for the purpose of conveying plants of the bread-fruit type from Tahiti to Jamaica. On the voyage from Tahiti, 25 of the crew mutinied, set Captain Bligh and 18 members of the crew adrift in a boat, and returned with the ship to the island. Nine of the mutineers fled to Pitcairn Island, where one of their number, John Adams, and the descendants of the others, were discovered by an American ship in 1808. Of the 16 who remained at Tahiti, ten were captured and brought to England. Here they were tried, and three were executed.

BOUNTIES. See *Commercial Dictionary.*

BOURBON, HOUSE OF, a family of French origin that, since 1589, has always had one or more of its members reigning in some part of Europe. Bourbon kings governed France from 1589 to the Revolution, and again, from the Restoration to 1830, when Charles X. was banished, and the Orleans branch of the family came into power, and occupied the throne until 1848. Spain has been ruled by Bourbon kings, with the exception of the period from 1808 to 1813, from 1700 to the present day. Other members of the family were kings of Naples and Sicily from 1734 to 1860, when the government of Francis II. fell before Garibaldi.

BOURNEMOUTH. Few towns can boast of so rapid a rise as Bournemouth, a favourite health resort on the coast of Hampshire, close to Dorsetshire. From being a fishing village in 1850, it has grown into a handsome town of over 65,000 inhabitants. (See p. 902.) This rise it owes to its mild climate, its sands, and its pine-clad slopes, which attract visitors from all parts in search of health and recreation.

BOURSE. See *Commercial Dictionary.*

BOWDLER, THOMAS, *b.* 1754, *d.* 1825; an English physician, who by editing editions of Shakespeare and Gibbon from which all passages that he considered inconsistent with morality were carefully expurgated, gave rise to the expression "Bowdlerism."

BOWDLERISM. See *Bowdler, Thomas.*

BOWER BIRD, the name given to a group of Australian birds of the starling family. Under the shelter of the overhanging branches of trees the birds construct bower-like galleries, which they adorn with highly coloured feathers, rags, shells, bones, etc. The bowers are not used for nests, but seem to be places of amusement, and are much resorted to in the breeding season.

BOXERS, a party in China strongly opposed to foreign influence. They were organised in the year 1896 by the prefect of Shantung, who, on account of local disaffection, enrolled a kind of militia. The occupation of certain strategic positions by European powers, the granting of mining and railway concessions to foreigners, a severe drought and famine, combined with troubles in the court, roused them to great excesses. Finding the murder of a missionary went almost unpunished, they aimed at the destruction of all foreigners in the country. Railways were destroyed, and early in 1900 the Boxers marched through the country pillaging and murdering native Christians and missionaries. The movement was openly supported by a number of the princes, and encouraged by the empress, whilst the Imperial troops did nothing to stop the outbreak. The Boxers advanced to Pekin, murdered the chancellor of the Japanese Legation and the German Minister, and besieged the Legations. The Powers sent a combined force of 50,000 men to defend their subjects. Tien-tsin, which had been invested, was retaken, and the Legations were relieved on August 14th, 1900. A peace protocol was signed on September 7th, by which the emperor agreed to pay a large indemnity to the powers concerned, and also to grant certain further concessions

BOXING. See *Prize-fighting.*

BOXWOOD, the wood of an evergreen shrub or tree, is pale yellow, hard and smooth, and is used in cabinet making, wood engraving, and in making mathematical and musical instruments. It is imported from Spain, Portugal and Turkey.

BOY BISHOP. In the Middle Ages, cathedral choristers were allowed to elect on St. Nicholas' Day (December 6), a mimic bishop from their number, and his jurisdiction lasted till Innocents' Day, December 28.

BOYCOTTING, a system adopted under the "Land League" in Ireland to prevent any person from taking or working a farm or building from which a tenant had been evicted for the non-payment of rent. Labourers were forbidden to work for the "land-grabber," shop-keepers and tradesmen refused to deal with him, and in many cases cattle were maimed, crops destroyed, and personal assaults committed. The first victim of the system was Captain Boycott, a landlord's agent, with whom the inhabitants of the Connemara district refused to have any dealings on account of disagreements between him and the tenants.

BOYLE ROBERT, *b.* at Lismore, 1626, *d.* 1691; an eminent scientist and writer on theological subjects. He was one of the founders of the Royal Society, and became its president in 1680. He left an estate to provide payment for the delivery of a series of eight sermons in defence of Christianity. The first "Boyle Lectures" were delivered by Richard Bentley, in 1692.

BOYNE, a river in the east of Ireland, rising in the Bog of Allen, and flowing into the Irish Sea. On its banks, about three miles west from Drogheda, William III. defeated James II., 1690. An obelisk marks the spot where General Schomberg, the commander of William's troops, fell.

BOYS BRIGADE, THE, an organization commenced by Mr. W. A. Smith, of Glasgow, and intended to promote in boys habits of obedience, discipline, reverence and self-respect, so making them manly Christians. The members

now (1906) number some 60,000 in the United Kingdom.

BRADDOCK, EDWARD, *b.* in Perthshire, 1695, *d.* 1755, commanded the forces operating against the French on the Ohio, 1755. He was taken in an ambuscade in an attempt to capture Fort Duquesne. Nearly half his troops fell, and he himself received a mortal wound.

BRADDON, MARY ELIZABETH (Mrs. John Maxwell), *b.* in London, 1837, at a very early age began literary work, chiefly in the form of verses, political squibs and parodies. Her first novel was "The Trail of the Serpent," but she became at once famous when "Lady Audley's Secret" appeared. Her other novels are very numerous, the most popular being "Aurora Floyd" and "Henry Dunbar."

BRADFORD. (1) One of the largest towns in the West Riding of Yorkshire, stands on the river Aire. It is the chief seat of worsted spinning and weaving in England, and also manufactures alpaca, silk, velvet, and mixed cotton and silk goods; population compared p. 902. (2) A small town in Wiltshire, on the river Avon, manufactures "West of England Cloth." Its chapel of St. Lawrence has been pronounced "the one perfect Saxon church in the country." (For population, etc., see p. 902.)

BRADLAUGH, CHARLES, *b.* in London, 1833, *d.* 1891; served as a private soldier. He afterwards became a lecturer and writer on secularist and social subjects. He was three times elected M.P. for Northampton, but at first was not permitted to take his seat because he refused to take the oath. Afterwards he was not allowed to take the oath because he considered it would not be binding on his conscience. On the third occasion, he took the oath and proved a useful member.

BRADSHAW, GEORGE, *b.* 1801, *d.* 1853, was a Manchester engraver who, in 1839, published "Bradshaw's Railway Time-tables," the first book of the kind. In 1840 it was enlarged and called "Bradshaw's Railway Companion." This appeared at irregular intervals and it was not till 1841 that "Bradshaw's Monthly Railway Guide" was published, now known all over the world as "Bradshaw."

BRADSHAW, JOHN, *b.* at Stockport, 1586, *d.* 1659, was president of the High Court of Justice that tried and condemned Charles I. He became obnoxious to Cromwell and was deprived of the chief-justiceship of Chester. On the death of the Protector he became president of the council that undertook the government of the country. At the Restoration, his body was exhumed and hung on a gibbet.

BRAGANZA, HOUSE OF, the dynasty that has governed Portugal since she threw off the authority of Spain in 1640, when the eighth Duke of Braganza became John IV. of Portugal.

BRAHE, TYCHO, *b.* 1546, *d.* 1601; an eminent Danish astronomer, who for 20 years made most careful observations of the stars at the observatory built at the expense of King Frederick II., on the island of Huen. After the death of the king, the persecutions of the nobles, who resented one of their order being a mere scientist and the husband of a peasant, caused him to leave Denmark. He continued his observations in the Castle of Banach, near Prague, where he had Kepler as his pupil and assistant. His work was marked by its extreme accuracy and the patience with which he accumulated innumerable facts.

BRAHMA is the first person in the Hindu Trinity, and the "creator of all the worlds." The other persons are Vishnu the Preserver and Siva the Destroyer. Brahma is represented as having four heads and four arms, and his image is frequently placed in temples devoted to other deities. He is looked upon as the author of the Vedas, and as the great lawgiver and teacher of India.

BRAHMANISM. Refer to *Index*.

BRAHMAPUTRA, THE, one of the great rivers of India, rises in Tibet, near Lake Manasowar. It runs under the name of Sanpo, about 1,000 miles eastward, then turns south-east through the Himalayas, and enters the valley of the Ganges. It sends a part of its waters to the Ganges, and forms with that river a vast delta at the head of the Bay of Bengal. Its total length is 1,800 miles, and for about 800 miles it is navigable for steamers.

BRAHMA SOMAJ, a religious society founded in India in 1830. Their principal tenets are that there is but one God, and that all knowledge of him must be derived from nature or by intuition; they have no sacred writings. The members acknowledge no distinction of class, but look upon all men as equally the children of God. They have many branches throughout India, and spread their teaching by means of their schools and journals.

BRAHMINS or **BRAHMANS.** Refer to *Index*.

BRAHMS, JOHANNES, *b.* at Hamburg, 1833, *d.* 1897, was equally distinguished as a musical composer of the severely classical school and as a pianist. His works appeal more to the trained musician than to the ordinary listener.

BRAILLE, LOUIS, *b.* at Paris, 1809, became blind at the age of three. In 1826 he became professor at the Paris School for the Blind. Dissatisfied with the alphabets for the blind then in use, he set to work and invented one in which letters were represented by variations in the arrangement of six raised dots, and which could be read or written more easily than the existing alphabets.

BRAKES are contrivances for overcoming the momentum of moving machinery and bringing it to a standstill. Pneumatic brakes are in use on most passenger trains. The majority of the British railway companies employ some form of "automatic vacuum" brake. Brake-blocks are fitted to the wheels of every coach on the train, and these are applied by means of levers connected with a piston working in a cylinder under the coach. A continuous pipe connects the cylinders with the engine, and the pipe and a vacuum chamber under each carriage are kept exhausted of air. The vacuum in the pipe is destroyed by the intentional opening of a valve or by any accident to the tube itself. The atmospheric pressure at once presses the pistons forward in their cylinders, and the brake-blocks are applied by means of the connecting levers. In the Westinghouse brake the pistons are brought into action by means of compressed air, supplied by a force-pump on the engine, and from compressed air reservoirs placed under each vehicle. The advantages claimed for this type are rapidity of action, and a greater force than can be obtained from the ordinary atmospheric pressure. In 1878 the Board of Trade reported that this form of brake was the only one that fulfilled all the official requirements for an effective brake, and the latest type of the Westinghouse quick-acting brake is now being gradually adopted by the North-Eastern and other railway companies which make use of compression brakes.

BRAMAH, JOSEPH, *b.* in Stainborough, in Yorkshire, 1749, *d.* 1814, is distinguished for the value of his many mechanical inventions which included the hydrostatic press, safety locks, the apparatus used in public houses for raising liquids from the cellar to the counter, the printing machine used for numbering Bank of England notes, and improvements in pumps, fire-engines, steam-engines, and the manufacture of paper.

BRANDING, a mode of punishment formerly inflicted on criminals entitled to "benefit of clergy," thieves, and others. It was performed by pressing against the skin of the cheek or hand a red-hot iron, with a letter or mark at the end. In respect to criminals this mode of punishment was abolished in the reign of George IV., but was applied to deserters from the army till a much later date.

BRANDON, CHARLES, son of Henry VII.'s standard bearer at the battle of Bosworth, was created Duke of Suffolk, 1514. He secretly married Mary, youngest daughter of Henry VII. and widow of Louis XII. The unfortunate Lady Jane Grey was their granddaughter.

BRANDY, a spirit produced by the distillation of wine. The name is also applied to liquors prepared from the juice of cherries, peaches, etc. The finest brandies are manufactured in France, the best brand being known as Cognac, the inferior varieties as eau-de-vie. Much of the so called brandy prepared for export really consists of whisky, rum, or potato-spirit, coloured and flavoured to resemble the genuine article. Brandy is also adulterated by the addition of water and burnt sugar.

BRANK, or **BRANKS,** an instrument at one time used to punish scolds. It was a kind of bridle with a plate attached so as to press on the tongue and form a gag. The woman was marched through the streets by the bellman or constable, and sometimes chained to the market cross, forming an object of insult and ridicule.

BRASS is an alloy of copper and zinc, in the proportions of two parts of the former to one of the latter. Its hardness, toughness, fusibility, and great ductility render it most useful in various ways. It is used in the construction of electrical apparatus, of scientific instruments, and, in machinery, for the bearings of moving parts, and to give a finished appearance to the whole machine.

BRASSES, MONUMENTAL, in England date from the beginning of the 13th century, though the earliest now extant is the one in the church of Stoke d'Abernon, Surrey, which is dated 1277. They consist of plates of brass inlaid in slabs of polished stone, and usually contain a representation of the person they were intended to commemorate, either in the form of the plate itself, or incised in the plate, together with the coat of arms and an inscription. Others bear merely a representation of an ornamental cross. They vary in size from a few inches in length to several feet. They are valuable from the light they throw on the history of the period and on the dress of the people. The finest specimens of the art are found amongst those engraved before the 15th century, and were imported into this country from Holland and Germany. The art has recently been successfully revived.

BRASSEY, THOMAS, *b.* 1805, *d.* 1870, was a Cheshire farmer's son. At the time when the earliest railways were being made in England, he practised as a railway engineer and contractor. In 1847 he began the construction of the Great Northern Railway, and afterwards his contracts extended to France and other European countries. He constructed the Grand Trunk Railway in Canada, and undertook contracts in Australia and India. He left an enormous fortune.

BRASSEY, THOMAS, BARON, *b.* 1836, at Stafford; was the eldest son of the above

T. Brassey. He became M.P. for Devonport in 1865, and represented Hastings from 1868 to 1886. He chiefly interested himself in labour questions, and the improvement of the navy and naval reserves. He travelled much, and "The Voyage of the Sunbeam," written by Lady Brassey, records an interesting voyage round the world. He was raised to the peerage in 1886. He is author of "Work and Wages," "British Seamen," and many kindred works.

BRAWLING. Refer to *Index*.

BRAY, VICAR OF. The famous vicar was Simon Aleyn, who held the living of Bray, near Windsor, during the reigns of Henry VIII., Edward VI., Mary and Elizabeth, not in those of Charles II. to George I., as the famous song states.

BRAZIL, a federal republic in the north-east of South America, is composed of 21 self-governed states, federated for purposes of defence, the maintenance of order, and other matters of common interest. The country, which has an area of nearly 3½ million square miles, embraces nearly the whole of the basin of the Amazon, the basin of the San Francisco, and a large portion of the basins of the Paraguay, Parana, and Uruguay. The forests produce valuable timber; considerable crops of coffee, cotton, indiarubber, and tobacco are raised; and diamonds and other precious stones, gold, quicksilver, and copper are found in large quantities. The population exceeds 18½ millions, and consists of negroes, Indians, and whites, chiefly of Portuguese descent. The chief towns are Rio Janeiro, Bahia, and Pernambuco. The present constitution dates from 1891, the revolution of 1889 having replaced the government of the emperor Pedro II., a member of the House of Braganza, by that of a President, a Senate, and a Chamber of Deputies.

BRAZIL NUTS are the seeds of a large tree of the myrtle order growing in Tropical America, particularly in Brazil, and on the banks of the Orinoco. The seed-vessel is round, as large as a man's head, and woody, and contains from fifteen to fifty of the irregularly triangular, oily nuts. Large quantities are exported from Para.

BREAD is most commonly prepared from wheaten flour, the sponginess and lightness being produced either by the fermentation of yeast or by impregnating the dough with carbonic-acid gas (see *Aerated Bread*). In fermented bread the yeast partly converts the starch of the flour into more soluble sugars, and alcohol and carbonic acid gas are produced. If kept at a proper temperature, the pressure of the latter causes the dough to swell or rise. In the process of baking, the carbonic-acid gas and a part of the alcohol are expelled, but a small percentage of alcohol is always present in newly fermented bread. The most usual adulterants are rice flour, barley flour, potatoes, and alum. Brown, or whole meal bread, is prepared from undressed flour and contains the bran as well as the flour. In the northern countries of Europe rye bread is a common article of diet.

BREAD-FRUIT TREE, a tree of the mulberry family, is a native of the South Sea Islands, and is now cultivated in many parts of Tropical America. The fruit is globular in shape, and about the size of a large melon. The natives of the South Sea Islands prepare it for use by baking it in hot embers. The inside then resembles the crumb of wheaten bread in appearance, but is insipid to the taste.

BREAKSPEAR, NICHOLAS. See *Adrian, Pope*.

BREAKWATER, a barrier erected in front of harbours and anchorages, and intended to break the force of the waves without, and produce a calm within. Some of the most famous are those of Cherbourg, Plymouth, Portland, and Holyhead.

BREDA, the capital of the Dutch province of North Brabant, was the home of Charles II. during a part of his exile, and it was from here that he dated his declaration in 1660. The treaty of Breda put an end to the second Dutch War in 1667.

BREECH-LOADING FIREARMS. The breech of a gun is the portion immediately behind the bore, and is movable to facilitate the action of loading. The principle of breech-loading is not a new one. Many of the earliest forms of cannon were of this type. The success of the needle gun, adopted by the Prussians in 1861, showed the superiority of this style of rifle over the muzzle-loading variety, in rapidity and accuracy of fire, and other European Powers began arming their troops with breech-loading guns. The French adopted the Chassepôt, and the British Government followed with the Snider, which was replaced by the Martini-Henry in 1871. The modern military rifle differs from these in being supplied with a magazine, so that more than one cartridge is inserted each time the breech is opened. Armstrong and Krupp were pioneers in the application of the breech-loading principle to artillery. The breech mechanism of the new quick-firing field gun, with which our troops are now being armed, is of such a nature that a single movement of a lever rotates and unlocks the breech-plug, swings it out of the breech, and at the same time ejects the empty case. The breech-action of the new French gun, which is capable of firing 20 rounds per minute, is also marvellously simple in its action. Heavy position guns are also constructed on the breech-loading principle.

BREMEN, a free city and state of the German empire, is situated on the river Weser, about 50 miles from its mouth. The state has an area of 90 square miles and a population of a quarter of a million. The city is the second port of the empire, and one of the chief ports on the continent for emigrants.

BREMERHAVEN, at the mouth of the Weser, is the sister port of Bremen, vessels of deep draught loading and unloading at its docks.

BRENNER PASS, THE, crosses the central portion of the Tyrolese Alps. The road from Germany to Italy crosses the pass at an elevation of 4,658 feet, and a railway over it was opened in 1867.

BRENTFORD, the county town of Middlesex, stands at the junction of the Brent with the Thames. Here Edmund Ironside gained a victory over the Danes in 1061, and Prince Rupert defeated a part of the Parliamentary forces, 1642; population over 15,000.

BRESLAU, chief town of Silesia, Germany; population 445,000. Situated on the Oder, in a district rich in coal, iron, and zinc, it has extensive hardware manufactures, and is the great market of East Germany for timber and cereals.

BREST, a great naval and military port of France; population 85,000. Finely situated on a good harbour, with strong natural defences, its extensive fortifications render it almost impregnable. Its roadstead is deep and commodious. The repairing and refitting of ships, and trade in naval supplies are the leading industries. The arsenal employs over 8,000 men.

BRETIGNY, a village in France, where, in 1360, a peace was signed between Edward III. and the French, by which Edward gave up his claims to the French crown in return for the full sovereignty of Calais and Guienne.

BREVET, a commission granting honorary promotion to a military officer. A brevet-major receives the pay of a captain and attains full rank when a vacancy occurs.

BREVIARY, a Roman Catholic service book which all in Holy Orders are enjoined to use daily.

BREVIER. See *Type*.

BREWSTER, SIR DAVID, *b.* 1781, *d.* 1868; a famous scientist, whose research work attracted much notice. He was editor of the Edinburgh Encyclopædia in 1808, one of the founders of the British Association in 1831, and was knighted in 1832 for his services to science. He made important observations on the polarization of light, invented the kaleidoscope, and contributed valuable articles to most of the scientific journals of his time. From 1859 to his death he was principal of Edinburgh University.

BRIAR, the root used in making pipes for smoking, is not the root of a briar but of a tree heath found near the Mediterranean, the name being a corruption of *bruyère* (F. for heath).

BRIA'REUS. In Greek mythology, a son of Uranus (heaven), and Ge (earth). He is described as a monster with 100 hands and 50 heads, who with his brothers overcame the Titans when they made war against Zeus (Jupiter).

BRIDEWELL, originally the workhouse and house of correction into which Edward VI. converted the palace of St. Bride, in Blackfriars, London; now applied to any house of correction for vagrants. The original "Bridewell" was pulled down in 1864.

BRIDGES are structures of wood, stone, iron, &c., crossing a gorge or deep hollow, or joining two banks separated by a body of water. (1) *Arched Bridges*, as a rule, are built of stone, and consist of a series of semi-elliptical arches supporting the roadway. Waterloo Bridge, over the Thames, is a stone bridge, with nine such arches. Arched bridges of cast or wrought iron frequently occur. (2) In *Suspension Bridges* the roadway is suspended upon chains, steel cables, or bars which pass over high piers built on each side of the river or hollow to be crossed. This type of bridge leaves a wide, clear waterway between the piers. Brooklyn Suspension Bridge has a central span 1,600 feet long. (3) *Cantilever Bridges* of the simplest type consist of two beams projecting obliquely upwards from opposite banks or piers, and meeting at an angle above the roadway—the latter lying horizontally between the ends fixed in the banks or piers. The Forth Bridge consists of a series of such arrangements. Railway bridges on this principle are frequent in the mountainous districts of the United States. (4) *Girder Bridges*, the most common form of iron bridge, consist usually of girders placed horizontally upon perpendicular supports. The Crumlin Viaduct in South Wales belongs to this class. The Britannia Tubular Bridge over the Menai Strait consists of two long rectangular tubes—box girders—placed side by side, through which the railway runs. There are four spans supported by perpendicular stone towers, with a total length of 460 yards. The tubular bridge over the St. Lawrence at Montreal is nearly two miles long. (5) *Movable Bridges* are exceedingly varied and are so constructed that the roadway can be removed to allow vessels to pass. The Tower Bridge, in which the roadway can be raised in two sections, belongs to the "bascule" type, an arrangement in which the projecting

portion is balanced by an inner portion, the latter descending into a kind of well when the former is raised. The Barton Aqueduct over the Manchester Ship Canal can be turned on a pivot so that the bridge lies in midstream parallel to the banks. (6) *Pontoon Bridges* consist of a line of boats, barrels, etc., over which planks are laid. In the British Army the bodies of waggons, specially constructed for this purpose, are employed in making temporary bridges.

BRIDGE OF SIGHS, a bridge in Venice connecting the Doge's Palace with the State prisons. In the Middle Ages, prisoners sentenced to death in the Judgment Hall of the palace were conducted over this bridge to execution.

BRIDGET, ST., *b.* 1302, *d.* 1373, was a Swede by birth, who built the first monastery of the Augustines in Sweden. She visited Rome in 1350 and spent the rest of her life there. There is also a much revered Irish saint named St. Bridget, or St. Bride, who lived in the 5th century.

BRIDGEWATER, FRANCIS EGERTON, Duke of, *b.* 1736, *d.* 1803; the patron of James Brindley, and an enthusiast in canal navigation. He built the Bridgewater Canal, connecting his coal mines at Worsley with Manchester, and by the success of this undertaking laid the foundations of the canal system of England.

BRIDGEWATER TREATISES, THE, a series of eight theological works, written by eight authors chosen by the Royal Society. They were the result of a bequest of the Earl of Bridgewater, a clergyman of the Church of England, who at his death, in 1829, left £8,000 to be devoted to a work on the Attributes of the Deity.

BRIDGMAN, LAURA, *b.* 1829, *d.* 1889, a celebrated American deaf mute, who was also blind. Carefully taught in the blind asylum of Boston, her mind developed in spite of her affliction. Her own impressions and the observations made by her instructors, have proved of great service to the teachers of deaf-mutes and the blind.

BRIEF. (1) A brief (in law) is an epitome or abridged statement of a client's case for the instruction of counsel, with a reference to the points of law supposed to be applicable to the case. (2) Papal Briefs were letters sent by the Pope to individuals or religious communities on matters of discipline, appointments to benefices, indulgences, &c. (3) Church Briefs were letters in the king's name sent in England, after the Reformation, to archbishops, bishops, clergy, magistrates, churchwardens and overseers, licensing them to collect money for the building of churches or other charitable objects. Being much abused they were regulated by a statute of Queen Anne and again by a statute of George IV. Since 1853 such briefs have been in abeyance.

BRIGADE, a division of troops composed of a varying number of regiments or squadrons, commanded by a brigadier-general, and so supplied and equipped as to be able to operate independently. An infantry brigade numbers usually over 4,000, a cavalry brigade, over 2,000.

BRIGHT, JOHN, *b.* near Rochdale, 1811, *d.* 1889; a cotton manufacturer of Rochdale, and an eminent politician. Entering Parliament in 1843, he contributed largely to the Repeal of the Corn Laws. After representing Manchester for ten years he was, in 1857, rejected for his vigorous denunciation of the Crimean and China Wars. From 1857 to his death he represented Birmingham. He supported the Reform Bill of 1867, was president of the Board of Trade in 1868, and disagreed with the Liberal policy on the Egyptian question in 1882, when he resigned his seat in the Cabinet. In 1886 he attacked Gladstone's Home Rule Bill, and from that time identified himself with the Unionist party. An ardent reformer, a lover of justice, a brilliant orator, and ever an advocate of peace, he was one of the most striking figures in the political life of the 19th century.

BRIGHTON, a popular watering-place in Sussex. Until the middle of the 18th century it was merely a fishing village. From Shoreham, near Brighton, Charles II., in 1651, escaped in a fishing boat. The Royal Pavilion, with its gardens, now in the hands of the municipal authorities, was built as a residence for George IV., with whom Brighton was a favourite resort. A fine promenade extends for three miles along the sea front. (For population, etc., see p. 902.)

BRIN'DISI, a busy port of south-east Italy, formerly the terminus of the European portion of the overland route to India. In ancient times the Romans used it as a naval station. Figs, wine, and olive oil are exported in large quantities. Since 1898, when the P. & O. Company began to make Marseilles a mail station and port of call, the annual tonnage of the port has fallen considerably.

BRINDLEY, JAMES, *b.* at Thornsett, Derbyshire, 1716, *d.* 1772, was a great engineer. Inventions he had made for pumping water from mines attracted the notice of the Duke of Bridgewater, who employed him to superintend the construction of the Bridgewater Canal. Before his death he had accomplished the cutting of 360 miles of canal in England.

BRIQUETTE, a mixture of coal dust and pitch compressed into the form of a brick and used as fuel.

BRISBANE, capital of Queensland, on the Brisbane River, 25 miles inland; population 125,000. It is in railway communication with Sydney, and exports large quantities of wool from the Darling Downs. The harbour accommodates large steamers, but requires constant dredging. The town receives its name from Sir Thomas Brisbane, Governor of New South Wales, 1821–5.

BRISTOL, a city and port, on the Avon, on the borders of Somerset and Gloucestershire. Its trade with Ireland, Canada, West Indies, and South America is considerable and increasing. The new dock at Avonmouth, now (1906) building, at a cost of nearly 1½ millions, will offer great facilities to shipping. The city has an ancient cathedral, which is, however, surpassed in beauty by the church of St. Mary Redcliffe. (For population, etc., see p. 902.)

BRITANNIA METAL, a white alloy of zinc, antimony, copper, and bismuth, used largely for teapots, forks, and spoons.

BRITANNIA TUBULAR BRIDGE. See *Bridges*.

BRITISH BORNEO. See *Borneo*.

BRITISH COLUMBIA, with the adjacent island of Vancouver, is a province of Western Canada, on the Pacific sea-board; area, 403,000 square miles; population 180,000. The Rocky Mountains and the Coast Range traverse it from north to south. Along the coast strip the rainfall is abundant, and extensive forests of pine and fir are found. Coal of a good quality exists in great quantities in Vancouver and the adjacent islands. Gold is worked in the Yukon Valley, silver in the Kootenay District. The mineral wealth still unworked is believed to be very great. The soil and climate are adapted to fruit and dairy farming. The salmon fisheries of the Fraser river are very valuable, tin being imported in vast quantities from Singapore for canning purposes. The Canadian Pacific Railway passes through the south of the province, and has its terminus at Vancouver, a rising port, in steamship communication with China and Japan. Victoria, the capital, situated on Vancouver Island, has a splendid harbour.

BRITISH EMPIRE, THE, comprises eleven million square miles of territory under British rule. It occupies one-fifth of the earth's surface, and contains a population nearly equal to one-fourth of the human race. Nearly one-half of the empire lies within the temperate zones, a fact which gives Britain an advantage possessed by no other European nation. Besides the British Isles, the Empire comprises:—(1) Territories suited to the permanent settlement of a white population:—Canada, Australia, New Zealand, Cape Colony, Natal, the Transvaal, and the Orange River Colony. (2) Territories unsuited to such settlement:—India, Ceylon, and many islands in the Indian Ocean, British East Africa, West African possessions, British Honduras, British Guiana, Jamaica, and numerous West India Islands. These, generally speaking, have a tropical climate, and possess a dense native population. They are mostly under the control of officials appointed by the English Government, and serve as a field for the exploitation of British capital and for the exercise of civilising influences. (3) Strategical positions and points on the great trade routes:—Gibraltar, Malta, Aden, Singapore, Labuan, Hong-Kong, St. Helena, Ascension. There are, besides, vast territories in Africa under British influence and protection. Refer to "British Empire" in *Index*.

BRITISH GUIANA, See *Guiana*.

BRITISH HONDU'RAS, a Crown Colony in Central America, acquired from Spain by treaty in 1670. Area, 7,500 square miles; population 38,000. The climate is moist and hot, and unsuited to Europeans, except in the uplands of the interior. Extensive forests yield mahogany, logwood, cedar, and india-rubber. Sugar is grown and coffee planting is increasing. Belize, the capital, on a good harbour, does a large export trade.

BRITISH MUSEUM, THE, the great national storehouse of antiquities, books, manuscripts, and art treasures is situated in Great Russell Street, London. In 1754 Montague House was purchased by the authority of Parliament as a home for the Cotton MSS., the Harley MSS., and the library and museum of Sir Hans Sloane, all of which had been acquired by the nation; thus originated the British Museum. In 1845 Montague House was pulled down, and the present building erected in its place, the great domed Reading Room, capable of seating 300 readers, each at a separate desk, being added in 1857. By 1883 the collection had so grown that the Natural History exhibits were removed to a separate building at South Kensington. The library consists of about two million books, besides manuscripts, prints and pamphlets. Innumerable relics of bygone civilisations—Assyrian, Babylonian, Egyptian, Greek and Roman—interesting prehistoric remains, specimens of ancient and mediæval pottery, fine old manuscripts, all arranged with great skill and care, render this a collection of priceless value.

BRITTANY, the peninsular province of France, between the English Channel and the Bay of Biscay; area, 13,000 square miles; population 3,200,000. The principal occupation in the interior is agriculture, though this is in a backward condition. Fishing employs large numbers of the coast population. The people are allied to the Welsh both in descent and disposition. Around the coast are numerous pretty watering places, many of them

delightfully situated. Druidical and Roman remains are common. Brittany is steadily increasing in favour with English tourists. Chief towns:—Brest, St. Malo, Nantes, and L'Orient.

BROAD ARROW, THE, is a mark in the form of an arrow-head used to mark government property. It was originally the badge of Sydney of Penshurst, but how it acquired its present use is unknown. It is a felony to obliterate the mark.

BROADBENT, SIR WILLIAM, *b.* 1835, is one of the leaders of the Medical profession. He is Consulting Physician to St. Mary's Hospital and to the London Fever Hospital, and is Physician to the King. Of his many contributions to Medical Science, his works on the pulse and on the nervous system are the most famous.

BROAD CHURCH, a school of thought in the Church of England that attaches more importance to the performance of every-day duties than to religious observances. It values right action more than strict orthodoxy of creed, and exercises the right of making a free use of the intellect in dealing with religious questions, instead of passively accepting what has been put forth by authority. Arnold of Rugby, Frederick Denison Maurice, and Charles Kingsley are typical examples of this school.

BROADS, THE, are shallow lakes in Norfolk and Suffolk. They are expansions of the Yare, Bure, and Waveney—three rivers which enter the North Sea at Yarmouth. They are admirably adapted for yachting, vessels of light draught being specially constructed to navigate these waters. They are much frequented in summer as a holiday resort. Wroxham and Oulton are the principal yachting centres.

BROBDINGNAG, in Dean Swift's "Gulliver's Travels," an imaginary country of giants. Everything in it was on a gigantic scale.

BROCADE, a fabric into which are worked patterns that stand out in relief from the rest of the material. The name was once applied to cloth, woven from gold and silver threads, sometimes mixed with silk.

BROCKEN, THE, a peak of the Harz Mountains, Germany, much visited by tourists; height, 3,745 feet. The "Spectre of the Brocken," seen from the top of the mountain under certain atmospheric conditions, is merely the observer's own shadow cast by the sun upon the clouds.

BROCK, THOMAS, *b.* at Worcester, 1847, after a distinguished course in the Royal Academy Schools became pupil and assistant to Foley, sculptor, R.A. In 1891 he was elected an academician, and his reputation rapidly increased. Specimens of his powerful work may be seen in many British cities, and in India. One of the greatest, "A Moment of Peril," is a noble equestrian group, purchased under the Chantery bequest. He is now (1905–6) engaged on the sculpture of the Memorial to Queen Victoria in front of Buckingham Palace, London.

BROMHEAD. See *Rorke's Drift.*

BRONTE, CHARLOTTE, (afterwards Mrs. Nicholls), *b.* 1816, *d.* 1855; a celebrated English novelist. Her childhood was spent in the village of Haworth, near Keighley, Yorkshire, where her father was rector. The death of her mother in 1820, the severe restrictions in the matter of amusements and companions placed upon his children by an eccentric father, and the care of her two younger sisters, Emily and Anne, made her early life a hard one, and to this must be attributed the morbid tone in her works. All three sisters had considerable literary talent. Emily, in 1846, produced "Wuthering Heights," and Anne, "Agnes Grey," but these novels are much inferior to the work of the eldest sister. Under the name of Currer Bell, Charlotte, in 1847, achieved fame with "Jane Eyre," a novel still largely read. Her other works are:—"Shirley," "Villette," and "The Professor." Within a year after her marriage she died of consumption, a disease which had already carried off her sisters.

BRONZE, an alloy of copper and zinc in which copper preponderates, the proportion varying according to the kind of bronze required. It is largely used in coinage and in the making of ornaments and statues. Gun-metal and bell-metal are varieties of bronze.

BRONZE AGE, a period in the history of many races when bronze was used in the making of weapons, ornaments, and various utensils. The Bronze Age varied in point of time with different parts of the globe. Refer to *Index.*

BROOKE, SIR JAMES, *b.* 1803, *d.* 1868; an adventurous Englishman, who became Rajah of Sarawak, north-west Borneo. He served for some years in the army of the East India Company, but gave up his commission and fitted out a vessel at his own expense with the view of suppressing piracy in the East Indies. Having assisted the uncle of the Sultan of Borneo to put down a rebellion, he was made Rajah of Sarawak, 1841. This position he held for over 20 years, and by the firmness of his rule he suppressed head-hunting and piracy, established law and order, and exercised a strong civilising influence in his district. His nephew succeeded him as Rajah.

BROOKLYN, an important town and seaport on Long Island, U.S.A.; population 1,160,000. The suspension bridge connecting it with New York is nearly a mile long, and has five distinct passage ways, two for ordinary vehicles, two for electric and steam trams, and one for foot passengers. Its shipping trade rivals that of New York, and its manufactures are considerable.

BROUGHAM, HENRY, LORD, *b.* at Edinburgh, 1779, *d.* 1868; a famous lawyer and politician. He was called to the bar in 1808. Entering parliament in 1810, he boldly attacked the slave trade. His brilliant and clever defence of Queen Caroline, in 1820, brought him much public favour and the King's displeasure. Raised to the peerage in 1830, he warmly supported the Reform Bill of 1832. He was successful in introducing many much-needed reforms in the law, and to this end he devoted the greater part of his life.

BROWN BESS, the old flint-lock musket in use in the British army up to 1842, when it was superseded by a musket fired by a percussion cap. Bess is a corruption of the Dutch "bus," a gun barrel. The barrels were browned to prevent rust.

BROWNE, CHARLES FARRER (Artemus Ward), *b.* 1834, *d.* 1867; a most original American humourist. He visited England in 1866, his lectures attracting large audiences. He died at Southampton, the strain of his English tour having proved too much for a constitution already wasted by consumption. "Artemus Ward His Book" and "Artemus Ward among the Mormons," contain some rich specimens of his humour.

BROWNE, ROBERT, *b.* 1550, *d.* 1630; the founder of a sect of extreme Puritans—the Brownists—in the reign of Elizabeth. He began preaching in 1581, and by his aggressive methods often came into conflict with the authorities. His followers suffered much persecution, and afterwards identified themselves with the Independents. Browne died in prison.

BROWNE, SIR THOMAS, *b.* London, 1605, *d.* 1682; physician, antiquary, philosopher, and one of the most learned men of his day. His "Religio Medici" (the religion of a doctor) is a work of great penetration, dealing with morals and religion.

BROWNIE, the name given by superstitious Scots to a spirit who, at night, performs various little friendly offices for the household to which he is partial. He is supposed to sweep floors, churn milk, &c., and seems to be the Scotch variation of our "Robin Goodfellow."

BROWNING, MRS. (née Elizabeth Barrett), *b.* 1809, *d.* 1861; a celebrated English poetess. She had but feeble health, and was a woman of very high-strung temperament. In 1846 she married Robert Browning, the poet, and from that time lived principally in Florence. Her best known poems are "Aurora Leigh" and "Lady Geraldine's Courtship." Her sonnets are full of feeling and beauty.

BROWNING, ROBERT, *b.* in London, 1812, *d.* 1889; one of the greatest of English poets. His first poem, Pauline, was published in 1833, and from that date he wrote almost without a break till his death. His poetry is marked by depth of thought, a fearless search after truth, a healthy optimism, and a rich diction, marred by ruggedness of expression. "The Ring and the Book" is the best known of his longer poems. His most popular poems are "The Pied Piper of Hamelin" and "How they brought the good news from Ghent to Aix." He died at Florence, but was buried in the Poets' Corner of Westminster Abbey.

BRUCE, JAMES, *b.* 1730, *d.* 1794; a famous Scotch traveller, who added greatly to geographical knowledge. He explored the Barbary States, visited Baalbec and Palmyra, and from 1768–72 led a most adventurous life in Abyssinia, where he traced the Blue Nile to its source. On the publication of the record of his travels many of his statements, since proved to have been in the main correct, were openly derided.

BRUCE, ROBERT, king of Scotland, 1306–1329, was crowned at Scone while Scotland was still nominally under English rule. Twice defeated by the English troops of Edward I. he fled to the Hebrides, whence he emerged in 1307, and called the Scots to arms. The death of Edward I. prevented any immediate measures being taken for the reconquest of Scotland. In 1314 he defeated Edward II. at Bannockburn, thereby making his position as king secure. In 1328 Edward III. acknowledged the independence of Scotland.

BRUGES, a town in Belgium; population 55,000. It is an important canal centre and has considerable lace manufactures. In the 13th century it was a most flourishing town, and it still retains its mediæval appearance. A ship canal in course of construction, connecting it with the North Sea, will enable vessels of 3,000 tons burthen to reach it.

BRUMMEL, BEAU, *b.* 1778, *d.* 1840; the most distinguished of a set of fashionable fops, who gained notoriety in the reign of George IV. by their dress and actions. For many years his opinion was held sacred on questions of dress and etiquette. He spent a large fortune, and losing the king's friendship fled to France to avoid his creditors. He died insane in an asylum at Caen.

BRUNEL', SIR MARC ISAMBARD, *b.* in Normandy, 1769, *d.* 1849; a famous engineer. Driven from France in 1792 by the French Revolution, he took refuge in the United States, where he became an engineer, supervised the fortifying of

New York, and established an arsenal and cannon foundry. He came to England in 1799, and while in the employ of the British Government invented a machine for making pulley blocks, which is still used. His chief work was the construction of the Thames Tunnel, which is now a railway tunnel. He is the originator of many labour-saving inventions.

BRUNEL, ISAMBARD KINGDOM, son of the above, *b.* 1806, *d.* 1859. He was the designer of the *Clifton Suspension Bridge* and of the *S.S. Great Western*, the first steamship to cross the Atlantic. He was appointed engineer to the Great Western Railway and built their main line. He directed the construction of the *Great Eastern*, and superintended the making of docks at Cardiff and Milford Haven.

BRÜNIG, a pass in the centre of Switzerland, 3,340 feet above sea-level. It is often used by tourists passing from Lake Brienz to Lake Lucerne.

BRÜNN, a manufacturing town of Moravia, Austria; population 98,000. Coal is found in the vicinity, and it is the leading woollen manufacturing centre of Austria. The strong ramparts and moats, which once defended it, have now been replaced by avenues. Napoleon I. used Brunn as his headquarters after his victory at Austerlitz.

BRUNSWICK, a duchy of Germany, area 1,424 square miles; population 435,000. The industries are chiefly agricultural, though coal, iron, and asphalt are worked in considerable quantities. Beet is grown on a large scale, nearly 100,000 tons of sugar being annually made from it. Hops, wheat, flax, and fruits are largely cultivated. Ninety-seven per cent. of the people are Lutherans in religion. Brunswick, the capital, is the leading manufacturing centre of the duchy; population 128,000.

BRUSH, CHARLES FRANCIS, *b.* 1849; a distinguished American inventor, who has devoted much attention to electric lighting. Since 1875 he has taken out over fifty patents, most of which are in common use. The Brush Electrical Engineering Co., London, was formed mainly with the idea of applying his inventions.

BRUSSELS, capital and centre of the canal and railway system of Belgium; population 587,000. Its buildings, boulevards, shops, and general air of gaiety make of it a miniature Paris. Its lace manufactures are considerable, but few carpets are now made there. The work of widening and deepening the canal, connecting it with the Scheldt, will, when completed, enable sea-going vessels of 2,000 tons to reach the city.

BRUTUS, MARCUS JUNIUS, *b.* 85 B.C., a Roman who followed the stoical tenets of Cato, whose daughter, Portia, he married. At the instigation of Cassius he headed the conspiracy against Cæsar and was present at his assassination. He was defeated in battle at Philippi (42 B.C.) by Octavius and Mark Antony, and died by his own sword.

BRYANT, WILLIAM CULLEN, *b.* 1794, *d.* 1878, an American poet and journalist. He resembles Wordsworth to some extent in his choice of subjects. His first volume of poems, "The Ages," published in 1821, established his reputation as a poet. The "Flood of Years," "Thanatopsis," and his poems of nature are very fine. From 1826 to his death he was editor of the New York Evening Post.

BRYCE, JAMES, *b.* at Belfast, 1838, historian and politician, entered Parliament in 1867, was a staunch supporter of Mr. Gladstone in his Home-Rule policy, and in 1892 joined his cabinet. In 1905 he was appointed Chief Secretary for Ireland, and since then British Ambassador at Washington. He has travelled far and wide, and written much, his most notable works being "The American Commonwealth," "The Holy Roman Empire," and "Two Centuries of Irish History."

BUBONIC PLAGUE is the Black Death of the Middle Ages and is still rampant in Asia. Amongst other symptoms the lymphatic glands of the armpits and groins swell forming masses termed *buboes*. [See "Plague" in *Med. Dict.*]

BUCCANEERS, THE, a formidable body of pirates of all nationalities, who ravaged the West Indies in the 17th century. They were characterized by extreme ferocity and brutality. Their efforts were principally directed against Spanish shipping, although they had no hesitation in attacking ships of other nations. Henry Morgan, the best known Englishman among them, rose to be admiral of the buccaneer fleet, and acquired such power that he was knighted and made governor of Jamaica. Peace between England and Spain, disunion among the leaders, and determined efforts on the part of European nations to crush them, broke up the organisation. The best thing that can be said of them is that, by weakening Spanish rule in America, they assisted in opening up the West Indies to European trade.

BUCENTAUR, the state barge used by the Doge of Venice in the annual ceremony of wedding Venice to the Adriatic. In this ceremony, which took place on Ascension Day, the Doge dropped a ring into the sea. The custom symbolized the supremacy of Venice in the Adriatic. The last bucentaur was destroyed in 1797, when Venice ceased to exist as a republic.

BUCEPH'ALUS, the famous Thessalian charger of Alexander the Great. After carrying his master through many campaigns in Asia, he was killed in battle in North-west India, where Alexander built a town to his memory.

BUCER, MARTIN, *b.* 1491, *d.* 1551; a learned German monk, and follower of Martin Luther. He gained great fame in Germany by his preaching and his learning. Invited to England by Edward VI., he was appointed Professor of Theology at Cambridge, where he died. The extent of his knowledge roused the admiration even of his religious opponents.

BUCHANAN, GEORGE, *b.* near Loch Lomond, 1506, *d.* 1582, a famous scholar and historian, was sent by his uncle, George Heriot, to Paris University. Returning to Scotland for the second time, in 1566, he became classical tutor to the young Queen Mary, and soon afterwards Moderator of the General Assembly of the Church of Scotland. He was also appointed tutor, in 1570, to Prince James, afterwards James I. of England. Buchanan was a man of talent and profound classical learning. His most famous works (in Latin) were his "History of Scotland," and a "Paraphrase of the Psalms."

BUCHANAN, ROBERT WILLIAM, *b.* of Scottish parents, in England, 1841, *d.* 1901, poet and novelist. He came into note as a poet in 1866, when he published "London Poems." Other poems followed, but he is best known as a novelist, his best works being "The Shadow of the Sword," "Rachel Dene," and "God and the Man."

BUCHAREST, capital of Roumania; population exceeds 270,000. Situated in the middle of the fertile Wallachian plain, and connected by railway with Austro-Hungary, Russia, and the Black Sea, it has become a great collecting station for wheat, maize, and other cereals, and is a centre of trade between Austria and the Balkan States. Petroleum wells are found north-west of the town.

BUCKINGHAM (George Villiers), **DUKE OF,** *b.* 1592, *d.* 1628. He stood high in the favour of James I., and became chief minister of Charles I. on his accession. He incurred popular hatred by lending a fleet to France, in 1626, to be used against the Huguenots in Rochelle. Over Charles he had complete ascendancy, and most of the troubles between that king and his early parliaments were due to him. In 1627 he led an expedition to aid the Huguenots, which ended in disaster. While fitting out a fresh expedition at Portsmouth, he was stabbed to death by an officer named Felton, who was actuated chiefly by a desire to revenge a personal grievance.

BUCKINGHAM PALACE, one of the royal palaces in London, was built for George IV. in 1825, and stands on the site of Buckingham House, the residence of Sheffield, Duke of Buckingham, in the reign of Queen Anne. The principal façade, overlooking St. James's Park, was added later, and being made of soft, easily worked stone, is painted to prevent weathering. Edward VII. occupies it when in London, and the royal drawing-rooms are held there. Visitors will find it difficult to obtain admission to view the palace; even Royalty like a place they may call home.

BUCKLE, HENRY THOMAS, *b.* 1822, *d.* 1862; historian and philosopher. His life was given over almost entirely to study. He projected writing "The History of Civilisation in Europe," the introductory volumes of which, published in 1858, created intense interest by the bold theories put forth and the extensive learning displayed. His early death prevented the completion of the work.

BUDA-PEST, the leading city of Hungary, on the Danube; population about 810,000. It really consists of two cities, Buda, a city dating from Roman times, on the right bank; Pest, a more recent city, on the left bank; but the two are under one corporation. A fine suspension bridge connects the two towns. Buda contains many mineral springs, notably that of Hunyadi-Janos. Pest is busier and more important, industrially, than Buda, and contains the newly-built Houses of Parliament for the Hungarian deputies. Buda-Pest stands on the main line from Vienna to Constantinople, is a great collecting centre for the products of the great Hungarian plain—grain, wine, wool, cattle—and does a large river trade. The flour mills of the town are highly important, Hungarian flour being much superior to that ground in other countries from Hungarian wheat.

BUDDHA. Refer to *Index*.

BUDDHISM. Refer to *Index*.

BUDGET, THE, the statement of the government's financial affairs laid annually before Parliament by the Chancellor of the Exchequer. It gives details of the expenditure during the past year, and estimates the expenses of the ensuing year, with a list of the sources from which the money is to be raised.

BUENOS AY'RES, capital of the Argentine Republic; population 960,000. Situated on the shallow estuary of the La Plata, constant dredging is necessary to allow ocean-going vessels to use the extensive docks and wharves of the town. It is a railway centre, and exports wool, hides, tallow, meat, and wheat, the latter in rapidly increasing quantities. It is a go-ahead city, lit by electricity, and with a good service of electric trams. The climate is dry and healthy.

BUFFALO, a town in the United States; population 352,000. Situated on the

Niagara River, near its junction with Lake Erie, it is admirably adapted for trade. It is a great railway centre, many miles of rails lying within the limits of the city alone. Its commerce by lake and rail has increased enormously during the past twenty years. It is a great collecting station for grain, timber, and metals, much of which is sent by way of the Welland Canal to the Atlantic. Here, in 1901, President Mc Kinley was shot. The Niagara Falls provide the power for its electric lighting, traction, etc.

BUFFALO, an animal resembling the ox in general appearance, but larger, heavier, more muscular, and more active. There are two distinct species, the straight-necked Asiatic, and the hump-necked American buffalo. Great numbers of the former are still found wild in the valley of the Zambesi, in South Africa. In India and the adjacent countries it has been domesticated, and performs all the duties of the ox. Pemmican, the dried flesh of the bison or American buffalo, and once the principal food of the early pioneers of the central and western parts of the United States, is now a thing of the past. See *Bison.*

BUFFON, *b.* in Burgundy, 1707, *d.* 1788; a great French naturalist. In 1738 he was put in charge of the Jardin du Roi, the Zoological Gardens of Louis XIV. In this capacity he produced his Natural History, a work in 36 volumes, which occupied him nearly forty years.

BUGLE. a musical wind instrument, with a cup mouth-piece, made of copper, brass or silver. Its piercing, far-reaching sound makes it peculiarly suitable for giving signals to soldiers, for which purpose it is chiefly used. The bugle-calls or signals are all formed from the notes of the common chord in the key of C. The Kent bugle was formerly used in brass bands, but its place is now taken by the cornet.

BUHL WORK is the ornamentation of furniture and other articles by inlaying with brass, mother o' pearl, tortoiseshell, ivory, fancy woods, &c.

BULAWAYO, a town in Matabeleland, Southern Rhodesia, 1,360 miles by rail from Cape Town. It lies in a fertile district rich in minerals, gold especially; and it seems destined to become the centre of a large white population. Near it are the Matoppo Hills, where Cecil Rhodes was buried.

BULGARIA, an important principality in the Balkan Peninsula; area 37,200 square miles; population 3,744,000 Eastern Roumelia now forms part of Bulgaria, and has been recognised as such by the chief European powers since 1886. Both countries were cut out from the Turkish Empire, and granted autonomy by the Berlin Treaty of 1878. The territory consists roughly of two slopes of the Balkans, one to the north the other to the south, and is well fitted to perform the part of a "Buffer State" between Russia and Turkey. About one-half of the country is under pasture; and sheep, goats, cattle, and pigs are reared in large numbers. Wine, tobacco, silk, and attar of roses from the neighbourhood of Philippopolis are the leading products. Varna, a port on the Black Sea, exports wheat. Sofia, the capital, is in a strong position, commanding the railway from Vienna to Constantinople, and has growing manufactures of woollen goods and leather. Minerals, theoretically the property of the state, are plentiful, and the output of coal and iron is increasing.

BULKHEADS in a vessel are partitions, generally of wood or iron, separating compartments on the same deck. Watertight compartments of a vessel are also separated by bulkheads. In mines, bulkheads are constructed to prevent flooding in the working portions.

BULL. (1) Papal Bull: an edict of the Pope with the bulla, a small leaden seal, attached. (2) A humorous blunder consisting of a statement containing contradictory terms. The gentleman who proposed that all local societies, with a membership of from one to a hundred, should send three delegates to conference, committed a bull.

BULL-BAITING, a favourite English sport up to the reign of George IV. Dogs, specially bred for this sport, were set upon the bull, which was usually tied to a stake in an enclosure. Occasionally the bull was allowed to run free. The dogs, which have developed into the modern bull-dog, possessed powerful protruding lower jaws, and were very tenacious in their hold. They were trained to aim at the muzzle of the bull. This sport succumbed to the verdict of popular opinion.

BULLER, SIR REDVERS, *b.* 1839; a well-known English general, with wide military experience. He took part in the China War, 1860; Red River Expedition, 1870; Ashanti War, 1874; Kaffir War, 1878; Zulu War of 1878–9 (when he won the V.C.), first Boer War, 1882; and the Soudan War, 1884. During the South African War, 1899–1900, he conducted the operations in Natal for the relief of Ladysmith. Before attaining this end, he suffered three reverses in succession on the Tugela. On returning to England his conduct of the war was subjected to severe criticism, and in attempting to justify his actions in a speech made at a luncheon in London, 1902, he was deemed by the War Office authorities to have committed a grave indiscretion, removed from his command at Aldershot, and placed upon half-pay.

BULLET, a small projectile used for revolvers, rifles, and machine-guns. In warfare, since the introduction of breech-loaders, the round bullet has been almost entirely superseded by an elongated conical bullet, which forms a part of the cartridge. The bullet used largely in the British army consists of a compressed lead centre, coated with cupro-nickel. The removal of the latter from the point exposes the lead, and converts the bullet into a "Dum-dum," which inflicts a nasty wound, as the lead expands on striking a bone. The use of Dum-dum or expanding bullets of this type is prohibited in civilized warfare.

BULL-FIGHTING, the national sport of Spain and the Spanish-speaking peoples of South America. Many of the larger towns in Spain have splendid enclosures in which the exhibition takes place. These enclosures are capable of seating thousands of spectators, who sit in tiers overlooking the ring. The sport begins by driving the bull into the arena, where he is roused to a state of fury by two horsemen, the *picadores*, who probe him with blunted lances, and by several men on foot, the *banderilleros*, who hurl small barbs at him. When the bull has been rendered almost mad with rage, the turn of the principal performer, the *matador*, comes. Armed with a short pointed sword, and with the "muleta," a small red cloak, on his left arm, he stands awaiting the bull's charge. This work requires great nerve, a steady hand, and a keen eye. He may avoid several charges before the opportunity comes for the one straight thrust which ends the contest. The matador aims at a point between the shoulders, and it is considered a disgrace not to kill with one stroke. The bulls are usually small, but strong and agile. The Portuguese are also fond of this cruel sport.

BULLION. See *Commercial Dictionary.*

BULLS AND BEARS. See *Commercial Dictionary.*

BULWER-CLAYTON TREATY, a treaty between Great Britain and the United States concluded, 1850, by which both parties undertook to respect the neutrality of a proposed ship-canal across the Isthmus of Panama. It was abrogated, 1901, by a new treaty, which acknowledges the right of the United States to construct and protect such canal.

BULWER-LYTTON, EDWARD, first Baron Lytton, *b.* 1803, *d.* 1873; novelist, dramatist, diplomatist, and politician. He was a most prolific writer, gifted with unusual powers of imagination. His works display great dramatic power, profound learning, keen analysis of character, and are generally interesting, but they lack the touch of genius necessary to put him in the first rank of writers. His historical novels, "Harold," "The Last Days of Pompeii," the "Last of the Barons," and "Rienzi" are widely read. Among his other novels, "Ernest Maltravers," "The Caxtons," and "Eugene Aram" are well-known. His best plays were "The Lady of Lyons" and "Richelieu." His political life was uneventful, most of his time being devoted to writing. He was Colonial Secretary in Lord Derby's government in 1858–9.

BUMBOAT, a rowing boat of heavy build used in seaports to carry provisions to vessels moored at some distance from the shore. These boats are generally the property of the watermen of the port.

BUNDESRATH, THE, is the Federal Council of the German Empire, and is composed of fifty-eight members appointed by the different States. Its chief business is to revise and confirm or reject measures passed by the Reichstag.

BUNKER HILL, a hill in Boston, Massachusetts, near which a battle was fought in 1775, between the American Colonists and the British, during the War of American Independence. Boston was held by the British army under General Gage, and the Colonists determined to fortify Bunker Hill to prevent the British advancing into the interior. Eventually the Colonists chose Breed's Hill, as being nearer to the town, and occupying a more commanding position, and fortified it during the night. The British attacked the position next morning, and twice were repulsed with great slaughter. At the third attack, however, they were successful.

BUNSEN BURNER, a gas burner used largely in laboratory work, the invention of the German chemist Bunsen. It consists of an upright metal tube fixed to a stand, the whole attached by a rubber tube to the tap of a gas pipe. Holes at the base of the vertical tube admit air. The mixture of air and gas, when ignited, burns with intense heat. The burners used with incandescent mantles are made on the same principle.

BUNSEN, ROBERT WILHELM, *b.* at Göttingen, 1811, *d.* 1899, one of the most eminent German chemists and physicists. His investigations in waste gases produced valuable results. Among his many inventions were the magnesium light and the burner which bears his name. He is best known by his researches in spectrum analysis. In 1898 the English Society of Arts awarded him their Albert Medal "in recognition of his numerous and most valuable applications of chemistry and physics to arts and manufactures." His German scientific works are numerous.

BUNYAN, JOHN, *b.* 1628, *d.* 1688; the great Puritan writer of Charles II.'s reign.

He was a tinker by trade, and in the Civil War fought on the Parliamentary side. During the war he became deeply convinced of the importance of religion, and began a life differing greatly from that of his youth. His ardour and persistence as a preacher led to his imprisonment under the Conventicle Act of 1664. He was confined for twelve years in Bedford Jail, during which time he produced the "Pilgrim's Progress," a religious allegory beautifully written, which has enlisted the serious interest of millions of people.

BUOY, a floating mark to point out the position of shallow water or objects under water, so as to indicate to ships their proper course. *Bell buoys* have bells attached, which may be heard when the buoys themselves are invisible through fog, &c.

BURDETT COUTTS, BARONESS, *b.* 1814, d. of Sir Francis Burdett, *d.* 1906, buried in Westminster Abbey. She inherited the immense wealth of Thomas Coutts the banker, her maternal grandfather, and gained a great name for philanthropy. During the Russo-Turkish War of 1877 she raised a fund for the relief of the peasantry in the Balkan Peninsula. Many churches in London, and the colonial bishoprics of Adelaide, Cape Town, and British Columbia have been materially aided by her wealth. She has been of great assistance to the poor in times of distress. In 1881 she married W. L. Ashmead-Bartlett.

BUREAUCRACY, the name given to a system of government in which the various departments are controlled by trained officials, independent of popular election. In Russia, the ministers controlling the various departments are appointed by the Czar, and nominally retain their position during his pleasure.

BURGH, HUBERT DE, a great warrior-statesman of mediæval England, and one of the 24 barons chosen to see that John adhered to the terms of Magna Charta. As Regent during Henry III.'s minority, Hubert ruled vigorously and wisely, and forced the more turbulent barons to respect his authority. In 1227, Henry himself took up the reins of government, and made Hubert his justiciar, or chief minister, in which office he strove hard to check the growing power of the Pope in England. He was, in 1232, ousted from his position by the intrigues of his rival, Peter des Roches, Bishop of Winchester.

BURGOYNE, JOHN, *b.* 1722. *d.* 1792; an English general best known for his share in the war of American Independence. In 1777 he marched with an army from Canada to join a British force advancing along the banks of the Hudson, from New York, with the object of isolating the northern states. Failing to effect this junction, he was compelled by famine to surrender at Saratoga, with his army of 6,000 men.

BURGUNDY was one of the old provinces of France. It adjoined Switzerland and Savoy in the east, and included parts of the basins of the Loire, Rhone and Seine. It is one of the most fertile districts in France, and is rich in agricultural produce. Its chief production is wine, known by the general name of Burgundy. Its chief towns are Dijon, Châlons-sur-Saône, Auxerre and Mâcon. From the 9th to the 15th century, Burgundy was an independent kingdom, but on the death of Charles the Bold, 1477, it became a duchy under the kings of France.

BURIAL CUSTOMS. They fall into three classes according as they have originated in a desire (1) to keep the ghost of the departed from returning, (2) to facilitate his passage to another world, (3) to provide for his necessities when there. As typical examples of these three classes of customs we give the following: (1) The Australian aboriginals take off the nails of the corpse and tie its hands to prevent it from digging its way out again. (2) The Norse warrior had his horse and armour laid in the grave with him that he might ride to Valhalla in full panoply. The Laplander placed beside the corpse flint, steel, and tinder to provide light for the dark journey. (3) In America the Indian hunter was buried with all the implements of the chase and other articles in daily use. In Egypt we often find the tombs filled with the relics of the deceased. This notion that the dead may require things they were wont to use when alive, led in some cases to an attempt to provide them with the services of their former dependants by causing favourite horses and slaves to be slain at their death. In India, the widow was, for the same reason, burned with the corpse of her husband. The ancient Greeks and Romans believed that the spirit of the dead flitted about disconsolate, unable to cross the Styx, whilst his body was unburied. It was, therefore, among them an act of piety for a person coming across an unburied corpse to cover it with earth. Of their many customs relating to the dead we may mention that of placing a coin in the mouth of the deceased to pay Charon, the ferryman, and by his side a honey-cake for Cerberus.

BURIAL, MODES OF. The mode of disposing of the dead has differed greatly in different ages and countries. Among certain uncivilised tribes the dead are exposed to the ravages of birds and beasts, and even the cultured Parsee leaves the corpse of his friend on the top of a tower to be devoured by vultures. But the most common practice has been to deposit the corpse, with or without a coffin, in the ground or in some cave or tomb. Among the ancient Greeks and Romans cremation was also commonly practised, especially in the case of the richer citizens, the ashes and burnt bones being collected and placed in an urn. It is still one of the usual methods of disposing of the dead in India. The Egyptians never burned the dead, but among them embalming always preceded burial, the mode of embalming varying considerably. As Christianity spread the custom of cremation gradually fell into disuse, and that of interment became universal among Christians, until towards the end of the 19th century, when cremation began to be tolerated on sanitary grounds (See *Cremation*).

BURKE, EDMUND, *b.* at Dublin, 1730, *d.* 1797. He came to London in 1750, and entered Parliament, where he soon made a great name for brilliant oratory, nobility of sentiment, and the whole-hearted enthusiasm he put into his political work. He strongly opposed the taxation of the American Colonies, boldly attacked the system by which George III. granted sinecures to obtain votes, and took a leading part in the impeachment of Warren Hastings. His hatred of the French Revolution caused a rupture between him and his friend Charles James Fox. His works include "An Essay on the Sublime and Beautiful" and "Reflections on the French Revolution." His speeches are models of rhetorical style.

BURKE, ROBERT O'HARA, *b.* 1820, *d.* 1861, of Irish birth, led a party of explorers across Australia. Starting from Melbourne (1860), Burke and Wills reached Flinders River, the rest having turned back. They were the first Europeans to cross the island from south to north, but they both died of starvation on the way back. Their bodies were discovered and brought to Melbourne, where statues have been erected in their honour.

BURLEIGH, LORD. See *Cecil.*

BURLESQUE, a humorous rendering of a play, poem, opera, or even of a person's characteristics, which tends to provoke laughter. Burlesque may be produced in various ways: serious passages may be given with mock gravity, gestures may be exaggerated, or actors may be chosen utterly unfitted, in manner and appearance, to suit the characters.

BURMA, a province of India, which has been acquired by three successive wars, in 1826, 1852, and 1885; area 236,000 square miles; population over 10 millions. The lower portion of the Irawadi basin is very flat, and produces immense quantities of rice, most of which is exported from Rangoon. Teak is obtainable from the extensive forests of Upper Burma. Rubies, jade, tin, iron, petroleum and coal are fairly plentiful. The bulk of the people are Buddhists. From Rangoon two railway lines run into the interior, one direct north, to Mandalay, the capital of Upper Burma, and the other to Prome, a rice collecting centre on the Irawadi.

BURNE-JONES, SIR EDWARD, *b.* at Birmingham, 1833, *d.* 1898; a celebrated artist. He did not become famous until comparatively late in life. He was elected an Associate of the Royal Academy in 1886, and received a baronetcy eight years later. One of his greatest works, "King Cophetua and the Beggar Maid," is included in the collection at the National Gallery.

BURNET, GILBERT, *b.* at Edinburgh, 1643, *d.* 1715; a distinguished churchman and historian. In the reign of James II. he twice refused a bishopric, but after the Revolution, in which he took a prominent part, he was appointed to the see of Salisbury. He was largely responsible for the establishment of the fund known as Queen Anne's Bounty. He wrote a History of the Reformation and a History of his own Times.

BURNETT, FRANCES HODGSON (*née* Hodgson), *b.* 1849, was brought up in Manchester, but went with her parents to the United States in 1865. She soon began to contribute stories to the magazines, and her reputation as a novelist was at once established, when "That Lass o' Lowrie's" appeared. "Little Lord Fauntleroy" (1886) became exceedingly popular and was dramatized. Later novels are "A Lady of Quality" (also dramatized), "His Grace of Ormonde," "The Making of a Marchioness," and "The Little Princess."

BURNEY, FRANCES. See *D'Arblay.*

BURNHAM BEECHES. The picturesque remains of an old beech forest, near Slough, purchased in 1900 by the Corporation of London, in order to preserve them as a public recreation ground.

BURNLEY, a thriving Lancashire town, 21 miles east of Preston. It has an important manufacture of machinery as well as cotton. Numerous Roman remains have been found here. (For population, etc., see p. 902.)

BURNS, JOHN, *b.* at Vauxhall, 1858, the first labour leader to become a Cabinet Minister. As a boy he worked in a candle factory and early became imbued with extreme socialistic ideas. In the eighties he gained notoriety by the prominent part he took in all labour disputes, and in 1887 underwent a short term of imprisonment for the part he took in the Trafalgar Square meeting in defiance of the public authorities. In 1889 he became a member of the London County Council, and in 1892 was elected M.P. for Battersea, and in 1905 joined the Cabinet

of Campbell-Bannerman as President of the Local Government Board.

BURNS, ROBERT, *b.* at Alloway (Ayr), 1759. *d.* 1796; by far the greatest of the Scottish poets. He was originally a farmer, and is in consequence sometimes called "The Ayrshire Ploughman." He led a riotous life, squandered what little money he possessed, and was compelled to give up his farm and become an exciseman. His poems are remarkable for their wit, pathos, and melody; but owing to the fact that many are written in dialect, they are not rightly appreciated by Englishmen. "Tam o' Shanter," and "The Cotter's Saturday Night" are the best of his longer poems, and of the shorter, "Auld Lang Syne," "For a' that," "John Anderson," and "The Banks and Braes of Bonny Doon," are well known.

BURRITT, ELIHU, *b.* in Connecticut, 1810, *d.* 1879; was originally a blacksmith. Becoming known as a linguist, he received a post in the consular service of the United States. He was the pioneer of the movement to secure the abolition of war, and formed a society known as "The League of Universal Brotherhood." He lived for many years at Birmingham as U.S. Consul, and is frequently spoken of as "The Learned Blacksmith."

BURSLEM, one of the oldest pottery manufacturing towns in England, in the north of Staffordshire. Here Josiah Wedgwood was born in 1730. Porcelain and earthenware are now made here chiefly from imported clays; population 40,000.

BURTON, SIR RICHARD FRANCIS, *b.* in Hertfordshire, 1821, *d.* 1890; a famous explorer and brilliant oriental scholar. He went disguised as a pilgrim to Mecca, explored Somaliland, and in 1856 discovered Lake Tanganyika. His writings are numerous, and include, besides accounts of his travels, translations of the "Arabian Nights" and of the "Lusiad" of Camoens, the Portuguese epic poet.

BURTON-ON-TRENT, a town situated in Staffordshire, and, as its name implies, on the river Trent. It is famous for its breweries, of which it contains no less than twenty, the largest being those of Bass and of Allsopp; population 62,000.

BURYING BEETLE, an insect which, when about to deposit its eggs, seeks out by its sense of smell the body of a rat or mole, recently dead. When one is found, several of the insects proceed to bury it, by burrowing under it with their heads, until a hole about six inches deep is formed. Upon the body, which is to form the food of the young insects, they deposit their eggs, and then carefully cover it up.

BURY ST. EDMUNDS, literally, "Borough of St. Edmund," a market town situated in Suffolk. It obtains its name from Edmund king of East Anglia, who was martyred for his faith by the Danes, 870, and is buried here. The town contains the ruins of a once famous Benedictine monastery and abbey, founded by Canute; population 16,000.

BUSHMEN, a race of people found in South-western Africa. They rank among the lowest types of mankind; they are usually of small stature, with yellow skins and woolly hair. They live in caves, and are usually found in isolated families. The dog is their only domestic animal, and their food consists largely of locusts.

BUSHRANGERS, the name given to bands of robbers who formerly infested parts of Australia and Tasmania. They first appeared in the latter colony about 1815, but were most troublesome in New South Wales and Victoria some twenty years later. The earliest bushrangers were convicts, who had escaped from the various penal settlements established in these colonies by the British Government. They frequently terrorised whole districts, robbing and murdering gold diggers, and stealing cattle; and in several cases martial law had to be proclaimed to rid the infested districts of them. The last to give any trouble was the Kelly gang in 1879.

BUTE, KYLES OF, a narrow strait, separating the island of Bute from the neighbouring county of Argyll. It is noted for its beautiful scenery, and is much visited by tourists.

BUTLER, LADY, *b.* at Lausanne, 1843, one of the most popular artists of the present day, the painter of some famous war pictures. Among the best known are "The Roll Call," "Balaklava," "Inkermann," and "The Eve of Waterloo." Lady Butler is the wife of General Sir William Butler.

BUTLER, JOSEPH, *b.* at Wantage, 1692, *d.* 1752; a distinguished theologian and philosopher. He occupied successively the sees of Bristol and Durham, and is the author of the still famous book, "The Analogy of Religion, natural and revealed, to the constitution and course of nature."

BUTLER, SAMUEL, *b.* in Worcestershire, 1612, *d.* 1680; a poet of whose life little definite is known. He is the author of a humorous poem entitled "Hudibras," in which the Puritans are caricatured. He died in extreme poverty.

BUTTER-TREE, a name given to several different trees found in tropical countries, from whose flowers or fruit a substance resembling butter is obtained. Two such trees are found in India, in Nepaul and the Central Provinces respectively, and a third in West Africa.

BUXTON, a picturesquely situated town of Derbyshire, near the source of the Wye, a tributary of the Derwent. It is visited by thousands annually for the sake of its calcareous and chalybeate springs. The caves and cliffs of the neighbourhood are interesting; population 11,000.

BUXTON, SIR THOMAS FOWELL, *b.* 1786, *d.* 1845, was a great philanthropist. He took part with Wilberforce in the movement for the abolition of the slave trade, and he worked to the end of his life in many other philanthropic movements, especially slave emancipation and the reform of the criminal law and prison discipline. He was a partner in the brewing firm of Truman, Hanbury and Buxton. He married a sister of Mrs. Fry.

BYE PLOT. The object of this plot (1603) was to seize James I. and compel him to grant toleration to the Roman Catholics and the Puritans.

BYNG, ADMIRAL JOHN, *b.* 1704, *d.* 1757. In 1757 he was sent in command of a poorly equipped expedition to relieve Port St. Philip, Minorca, which was blockaded by the French. He made a half-hearted attempt and failed. The failure caused an outbreak of popular indignation, and on his return to England Byng was tried by court martial, on a charge of cowardice, and sentenced to be shot on the deck of his own ship.

BY-PRODUCTS. In the process of the manufacture of certain substances other secondary substances are produced. These secondary substances are known as by-products, and in modern times have given rise to new and extensive industries. Thus from coal-tar, a by-product of the gas-works, the various aniline dyes, saccharin, essences for perfumes, and useful drugs, such as phenacetin, and antipyrin, are produced. The extremely hard layer of gas-carbon which is found lining the roof and sides of the gas-retorts is utilised for the manufacture of carbon rods for arc lights; and all the ammonia salts are now manufactured on the large scale from the "ammoniacal liquor" of the gas-works. Alkali works supply large quantities of hydrochloric acid as a by-product; glycerin is a by-product of the soap-boiler; while the "grains" from the brewery and the crushed seeds from which oil has been extracted are utilised in the preparation of cattle foods.

BYRON, LORD, *b.* in London, 1788, *d.* 1824; a celebrated English poet. He was of a morbid and passionate disposition, and after leaving Cambridge plunged into a life of dissipation. Owing to some unexplained disagreement with his wife he left England in 1816, and never returned. After spending some years in Italy, he proceeded to Greece, where he assisted the insurgents in their efforts to set themselves free from Turkish rule. He died of fever, in the course of the war, at Missolonghi. Among his best works are "Childe Harold," "The Prisoner of Chillon," and "Don Juan."

BYZANTINE EMPIRE, founded in 395 A.D., when the Emperor Theodosius divided the Roman Empire into two parts, which he bestowed upon his two sons. The Byzantine, or Eastern Empire, at first included Syria, Asia Minor, the Balkan Peninsula, and Egypt; but its extent varied greatly in the course of its history. It was finally destroyed by the Turks in 1453, about a thousand years after the fall of the Western Roman Empire. The capital was Byzantium, or Constantinople, as it began to be called in 330.

BYZANTIUM, situated on the Bosphorus, was founded in 667 B.C. by the Greeks, and was occupied at different times by the Persians, Athenians, and Spartans. It fell into Roman hands, 169 B.C., and in 395 A.D. became the capital of the Eastern Roman Empire. It had already changed its name to Constantinople, in honour of Constantine the Great, who founded a new city there, 330 A.D. It was a famous centre of learning before its capture by the Turks in 1453.

CAABA or **KAABA,** a small oblong building, situated in the centre of the Great Mosque at Mecca, containing the sacred stone towards which all Moslems turn in worship. According to Mohammedan tradition, the stone was originally pure white, its present black colour being due, as they believe, to the tears shed for sin by the vast crowds of pilgrims that visit it annually. The Kaaba is regarded with extreme reverence by Mohammedans, being usually covered by a black curtain, and opened for worship on three occasions only during the year.

CABAL', a secret cabinet or committee, whose aims and measures are unpopular with the nation. The word is of French origin, but its popular use in England is probably due to the existence of such a cabinet during the reign of Charles II. It was composed of five members, Clifford, Ashley, Buckingham, Arlington, and Lauderdale, and by a coincidence, the initial letters of their names form the word Cabal.

CABINET. Refer to *Index*.

CABLE, a term applied to a large rope or chain used for holding a vessel to her anchor or other fixed body. Chain cables are stronger and less liable to damage from friction against rocks, and have almost entirely supplanted those made from hemp. To enable a vessel to slip her anchor readily, in case of emergency, chain cables are made in fifteen fathom sections, jointed together by shackles and bolts. These may be easily detached by striking out the bolt. Usually the cable

consists of eight such sections, so that a cable's length indicates 120 fathoms. See *Atlantic Cable.*

CABOT, JOHN, a navigator, who discovered Newfoundland, 1497, and was probably the first to sight the mainland of America.

CABOT, SEBASTIAN, *b.* 1467, *d.* 1557; son of John Cabot; he accompanied his father to Newfoundland. Subsequently he made unsuccessful attempts to discover the north-west and north-east passages to the Pacific. He also visited South America, and published a map of the world. He is credited with the discovery of the variation of the compass.

CABUL, the capital of Afghanistan, situated on the Cabul river. It commands the western entrance to the Khyber Pass, and is of great strategic importance. In 1839 the Amir of Afghanistan was suspected of plotting against the British, and Cabul was occupied by a force sent from India. In the following year some British officers were murdered, and it was decided to evacuate the town. The retreating column, 26,000 strong, was treacherously attacked by the Afghans, and one man only succeeded in reaching India. It was again occupied, in the course of the second Afghan War, by a force led by General Roberts, 1879–80. [See *Afghanistan.*]

CACHALOT. See *Sperm-Whale.*

CACHE, an American term, introduced by French settlers, and applied to a hole formed in the ground or under the snow, in which food or heavy baggage is temporarily stored by travellers.

CACTUS is the popular name of a large group of desert plants, especially common in tropical America. In order to reduce the loss of water by evaporation to a minimum, they all have thick stems and spines or bristles instead of leaves. The stems being green, are able to perform those functions which are carried out by the green leaves of other plants. The flowers are usually red. The Cochineal insect lives on one species of cactus.

CADDIS-FLIES, or caddis-worms, are a family of insects allied to the dragon-flies. The grub or larva is aquatic, feeding on water plants and living enclosed in a sheath of sticks and gravel held together by silk. This protection is necessary, as the body is long and soft, and much sought after by fish. The adult is a four winged air-breathing insect, not unlike a dull coloured dragon-fly on the small scale, with a sucking proboscis instead of jaws. It feeds on the juices of plants.

CADE, JACK, the leader of an insurrection of the men of Kent, 1450. He marched on London with a following of 20,000 men, and, after defeating a force sent against him by Henry VI., entered London. His triumph was short-lived. Driven out of London by the citizens, his followers dispersed and left him to his fate. He was soon captured and killed, 1450.

CADIZ, a seaport of Spain, situated on a small peninsula near the mouth of the river Guadalquivir. It exports wine (sherry), fruits, and cork. Cadiz was founded by the Phœnicians about 1100 B.C. During the reign of Elizabeth, a number of the ships intended for the Armada were burnt in the harbour by Drake, 1587; and during the war with Spain the town was taken by Essex, 1596; population is now about 68,000.

CADMUS, a Phœnician, who according to tradition founded the city of Thebes, in Bœotia, about 1550 B.C. He is also credited with the introduction into Greece of an alphabet of sixteen letters, from Phœnicia or Egypt. In classical mythology Cadmus was sent to seek his sister Europa, who had been carried off by Zeus (Jupiter). In the course of his wanderings he destroyed a dragon, whose teeth, by command of Athena (Minerva), he sowed in the ground. Armed men immediately sprang up, and with their aid he founded the city of Thebes.

CADRE, a French term meaning a framework, and in naval and military language applied to the list of the officers of a ship or a regiment. In this sense the word is used in the British army.

CÆDMON, *d.* 680; a Saxon monk of the monastery of Whitby who, at the bidding of a vision in a dream, sang the "Origin of Creatures." He wrote in verse a paraphrase of the Biblical narrative, including both the Old and New Testaments.

CAERLE'ON, a small town situated in Monmouthshire, on the Usk. It contains many Roman remains, notably a large amphitheatre known as "King Arthur's Round Table." The town has been connected wth the exploits of King Arthur by Lord Tennyson.

CÆSAR, the surname of a noble Roman family who claimed descent from Æneas. As members of the family by descent or adoption, the emperors from Augustus to Nero bore the name. It was adopted by the later emperors, and on the division of the empire, the title was also applied to the heirs-apparent of the Eastern and Western portions. See *Augustus Cæsar* and *Julius Cæsar.*

CAFFEINE is the alkaloid to which the stimulating effects of both tea and coffee are mainly due. See *Med. Dict.*

CAINE, HALL, *b.* at Runcorn, 1853; a celebrated novelist and dramatist. He adopted architecture as a profession, and became a contributor to the "Builder" and the "Building News." He afterwards joined the staff of the "Liverpool Mercury," and later wrote for the "Academy" and the "Athenæum." Among his best known novels are "A Son of Hagar," "The Bondman," "The Deemster," "The Manxman," "The Christian," "The Eternal City," and "The Prodigal Son," the last five of which have been dramatized, the Deemster under the title of *Ben-my-chree.*

CAIRN, a mound of stones, conical in form, originally designed as sepulchres, or monuments to "the mighty dead." They are common in Scotland and Wales; the largest reach the height of 70 feet. In modern times cairns are erected chiefly as landmarks on hill-tops and mountain-peaks.

CAIRNGORM, a brown or yellowish crystal, much used as an ornament. In shape it is hexagonal, with the upper part in the form of a pyramid. It derives its name from a peak in the Grampian Mountains, near which it is found. It is also obtained from Cornwall, India, and Brazil. [See *Beryl.*]

CAIRO, the capital of Egypt, founded in 969 A.D., is situated on the right bank of the Nile, at the head of the Delta. It is the great Mohammedan centre of learning, and possesses considerable trade. There are over 200 Mosques in the city, and also a considerable number of quite modern buildings. Near Cairo are situated the famous pyramids. The city was occupied by the British in 1882, after the defeat of the Egyptian troops under Arabi Pasha, and British troops are still stationed there; population over 600,000.

CAISSON. (1) In engineering, the name given to a large wooden or iron structure used in the construction of piers of bridges. It is a sort of box, open at the bottom, and is connected with the surface of the water by a cylindrical shaft. In it the work of excavation is carried on, and to prevent the water leaking in, compressed air is used. As the work proceeds, the caisson is caused to descend, and the pier is built on its upper platform. In some cases the caisson actually contains the pier, the work of construction being carried on inside, and the caisson removed when the pier is finished. (2) A military term applied to an ammunition chest, or a mine formed by burying powder in a case or an ammunition waggon. (3) A boat-shaped gate, used to close the entrance to a dry dock. The caisson is placed in position and then filled with water, which causes it to fit tightly in its place. (4) In architecture, a sunken panel in a ceiling.

CALABAR, OLD, a British possession, situated on the Guinea Coast of West Africa, which obtains its name from a river flowing through it. It is now the head-quarters of the administration of the British Protectorate of Southern Nigeria; population 15,000. The district, which is practically a part of the Niger delta, is exceedingly unhealthy. It produces ivory, palm-oil, and rubber.

CALABASH, the thin, hard, close-grained shell of the fruit of the calabash tree, which grows in West Africa, the West Indies, and Tropical America. The shell is employed for various kinds of domestic utensils.

CALAIS, a seaport and packet station, situated on the coast of France, about twenty miles from Dover. Steamers run daily between the two towns. Calais exports an enormous number of eggs to England. It was a British possession from 1347 until 1558, and was the last of our possessions on the mainland of France.

CALCAREOUS ROCKS are those in which calcium carbonate is the chief ingredient. Chalk, limestone, and marble are the chief varieties. Chalk has been deposited in the ocean depths, and is composed of the shells of foraminifera; limestone has been formed from coral, in shallow seas, usually near land; marble has been produced from chalk or limestone by the heat due to volcanic action, which has given the rock a crystalline structure. Calcareous rocks are easily recognised by the application of hydrochloric acid, when carbon dioxide is at once given off in the form of bubbles.

CALCAREOUS SOILS are produced by the disintegration of calcareous rocks. Unless mixed with clay, they support but little plant life. Hence our chalk downs are bare open spaces which the agriculturist has not invaded.

CALCULATING MACHINES are contrivances for obtaining the results of arithmetical operations by mechanical means. The earliest machines were capable of working only the four simple rules of arithmetic, but others have been invented by which much more complicated operations, e.g., the extraction of the roots of numbers, may be performed. Such machines are of great value in constructing mathematical, astronomical, and actuarial tables, and in other cases where absolute accuracy is of supreme importance, and their aid has been sought by many business houses. The engineer's slide rule is an example of a simple calculating machine, while the more complicated include those of Babbage, Scheutz, and Burroughs.

CALCUTTA, the capital and largest seaport of India, is situated on the Hooghly, a branch of the Ganges. The harbour is one of the most expensive in the world to maintain, owing to the swift current, the amount of mud brought down, and a tidal bore, which occurs at spring tides. The exports include opium, rice, jute, tea, and indigo. Calcutta was founded by the East India Company, 1690, under the

name of Fort William; population, including suburbs, exceeds 1,000,000.

CALEDONIA, the name given by the Romans to that part of Scotland which is situated to the north of the Firths of Forth and Clyde.

CALEDONIAN CANAL, extends from Moray Firth, on the east coast of Scotland, to Loch Eil on the west. It connects Lochs Ness, Oich, and Lochy; the total length of the canal proper is 23 miles. It was opened in 1822, and can be used by boats up to 600 tons burden, but its commercial importance is not great.

CALENDAR. (1) An almanac or tabulated list of the days of the year. (2) The name given to the division of time into years, months, etc. Practically all civilised nations use the year, that is the time taken by the earth to make one complete revolution around the sun, as the standard of measurement. This cannot be expressed by an exact number of days, and in order to maintain the relative positions of the months and seasons, additional days are inserted or "intercalated." In the Julian Calendar, introduced by Julius Cæsar, the length of the year was taken to be 365¼ days. To avoid fractions, an ordinary year was reckoned as consisting of 365 days, with an additional day every fourth year ("Leap year"). The length of the year is slightly less than this estimate, and in consequence, by 1582, a mistake of ten days had arisen. To correct this error, Pope Gregory ordered ten days to be dropped from the month of October in that year, and to prevent the mistake arising again, directed that the last year of each century should be regarded as a leap year, only when the number of the century was exactly divisible by four. This calendar has been adopted, at various times, by all European nations excepting Russia, which still uses the Julian, and is in consequence thirteen days in arrear. Our own country did not adopt the new calendar until 1752, when 11 days were left out in September. The Julian Calendar is known as the *Old Style* and the Gregorian as the *New Style*. The Jewish year consists of 12 lunar months, an additional month being intercalated at intervals. The Mohammedan year also consists of 12 lunar months, but as they do not intercalate, there is no correspondence between their months and seasons. [See *Era*.]

CALIF or **CALIPH,** the title given to the successors of Mohammed. It is equivalent to the term "Pope." The original caliphs were the princes who ruled over the Mohammedan dominions in Asia, their capital being situated at first at Medina, and later at Damascus and Bagdad. The title is now claimed by the Sultan of Turkey, though the Persians choose to regard the Shah of Persia as the real caliph.

CALIFORNIA, one of the United States of America, situated on the Pacific coast. It has an area of 158,000 square miles, and a population of about 1½ millions. The productions include wheat, wine, fruit, wool, and metals, especially gold, silver, and quicksilver. California was discovered by the Spaniards, and for a long time formed part of Mexico. It was ceded to the States in 1848, and in the following year occurred the famous gold rush of California. The chief towns are San Francisco and Sacramento.

CALIG'ULA, Emperor of Rome, 37–41 A.D. He is suspected of having caused the death of his predecessor Tiberius, and was remarkable for his brutality, licentiousness, and cowardice. He was probably insane; for he built a temple in his own honour, had himself worshipped as a god, and caused his horse to be appointed Consul. He was assassinated at the age of 29.

CALLIPERS, an instrument used to determine the diameter of circular and cylindrical objects, in shape something like a pair of compasses with curved legs.

CALMUCKS, the name given by the Russians and Turks to a branch of the Mongolian race inhabiting certain parts of Western and Central Asia. In the 17th century a number settled on the steppes of southern Russia, and there are still about 160,000 to be found there. The Calmucks are a nomadic race, Buddhists in religion, and they number, it is thought, about a million.

CALOMEL. See *Med. Dict.*

CALORIM'ETER, a piece of apparatus, usually a copper vessel, used to determine the specific heat of a substance; that is to determine the number of units of heat required to raise a unit mass of that substance through one degree of temperature.

CALPURNIA, daughter of a Roman Consul, who became the wife of Julius Cæsar. Her pleading with her husband not to attend the meeting of the Senate on the day appointed by the conspirators for his assassination forms a powerful scene in the second act of Shakespeare's Julius Cæsar.

CALTROP, a small iron ball fitted with sharp spikes. Caltrops were formerly used to check cavalry charges, numbers of them being strewn upon the ground in front of an army. They obtain their name from a thistle which grows in southern Europe.

CALUMET, the pipe of peace, used by the North American Indians. It possessed a marble bowl and a long reed stem, and was passed round amongst the warriors who were assembled to arrange terms of peace. It was also used in discussions before war; to refuse it on such an occasion was equivalent to voting for war.

CALVARY, a small eminence situated outside the walls of Jerusalem, the scene of the crucifixion of Christ. The word literally means, "place of a skull"; whether from the shape of the hill or not is uncertain.

CALVERT, FREDERICK GRACE, *b.* in London, 1819, *d.* 1873; was the first to manufacture pure carbolic acid, for which purpose he opened large works in Manchester. He also introduced many scientific improvements into the calico printing, iron puddling, and tanning industries.

CALVERT, GEORGE *b.* at Kipling, Yorkshire, 1582, *d.* 1632; a secretary of state in the reign of James I. He was created Baron Baltimore, and subsequently founded a settlement in what is now the State of Maryland. The principal town, Baltimore, derives its name from his title.

CALVIN, JOHN, *b.* in Picardy, 1509, *d.* 1564; a celebrated theologian and reformer, who continued the work of Martin Luther. He spent the greater part of his life at Basle and Geneva. His followers are called Calvinists, and at the present time include the Presbyterians, Independents, some sections of the Baptists, and nearly all the French Protestants.

CALYPSO, in classical mythology, a nymph living in an island called Ogygia. Ulysses was ship-wrecked on this island, and there remained seven years in her company. Calypso promised him perpetual youth if he would remain with her, but the hero preferred to return to his beloved Ithaca, where his wife Penelope awaited him.

CAM, a mechanical contrivance employed in machinery for converting circular motion into motion in a straight line or in some other direction. In a gas engine, e.g., the exhaust valve is opened by means of a rod, which is made to rise by means of a cam consisting of a metal disc working on an eccentric.

CAMARILLA, the name applied to a body of unofficial advisers or favourites of a sovereign. The word is of Spanish origin, and was originally applied to a clique which influenced Ferdinand of Spain during the years 1814–1820.

CAMBODIA, a part of the Indo-Chinese peninsula, occupying the southern portion of the basin of the Mekong. It has an area of 37,000 square miles, and an estimated population of 1½ millions. It has been a French protectorate since 1863.

CAMBRIA, the name applied by the Romans to Wales. It survives in the name, Cambrian mountains.

CAMBRIDGE. (1) The county town of Cambridgeshire, situated on the Cam, and famous for its university. The principal objects of interest are the various colleges and their chapels; population about 48,000. (2) A town in Massachusetts, the seat of Harvard University. It was called at first Newtown, but after the founding of the university its name was changed to Cambridge; population 90,000.

CAMBRIDGE UNIVERSITY. Refer to *Index*.

CAMDEN, WILLIAM, *b.* in London, 1551, *d.* 1623; was a famous antiquary and historian. His most famous work, *Britannia*, contains a descriptive and historical account of the British Isles. He also wrote *Annals of Elizabeth's Reign*. In 1623 he presented Oxford University with the Manor of Bexley, in Kent, for the endowment of a chair of history.

CAMEL, a beast of burden, found in North Africa, Arabia, and Central Asia. There are two varieties, the two-humped camel, found in the northern parts of Central Asia, and the so-called dromedary, with one hump, found in the warmer parts of Asia and in Africa. It is capable of going long periods without water—sometimes for weeks—and is consequently of great use in desert districts. Its load varies from 300 to 700 pounds, and those bred for speed can travel from 70 to 90 miles a day, though the ordinary camel travels at a very leisurely pace. The flesh and milk of the camel are important articles of food.

CAMELOT, the town at which King Arthur held his court. Its position is a matter of dispute; it was probably situated in Cornwall, and was either Tintagel or Camelford.

CAMEO, a precious stone, usually onyx, upon which figures are engraved in relief. The Italians are skilful in the making of cameos, in which shells take the place of onyx.

CAMERA OBSCURA, an instrument by means of which an image of external objects is cast on a screen in a darkened chamber. In the ordinary form the rays of light proceeding from the objects are reflected by means of a plane mirror set at an angle on to a convex lens, which brings them to a focus on the screen, usually a table with its surface hollowed out to give greater definition. A photographic camera is a form of camera obscura.

CAMERONIANS, a fanatical section of Scottish Presbyterians who, in the 17th century, headed by Richard Cameron, contended for the principles adopted by the Reformers between 1638 and 1650. The persecutions to which they were subjected served only to increase their

numbers, and to add to their fiery zeal. They afterwards broke up into a number of small societies. (2) A name given to the regiment of Scottish Rifles which was originally recruited (1689) from among the Cameronians. The Cameron Highlanders (79th Foot) are a distinct regiment.

CAMERON, VERNEY LOVETT, *b.* at Weymouth, 1844, *d.* 1894; a famous African explorer. He was sent, in 1872, to discover Livingstone, and in the following year met the natives conveying the dead body to the coast. Proceeding on his journey, he explored Lake Tanganyika, and proved that the Nile did not rise in it, as had been supposed. He then continued his journey westward, and succeeded in reaching the Atlantic. He was the first explorer to cross Africa from east to west.

CAMEROONS, a district on the Guinea Coast, West Africa, which derives its name from a river flowing through it. It has an area of 191,000 square miles, and a population of about 4½ millions, of which about 600 are Europeans. With the exception of a small British station, Victoria, the whole of the district is under German protection. It produces palm-oil and ivory.

CAMISARDS, the name given to the French Protestants of the Cevennes, who, in 1702, took up arms in defence of their religious liberties.

CAMOENS, LUIS DE, *b.* at Lisbon, 1524, *d.* 1579; the national poet of Portugal. He wrote his great work, "The Lusiads," whilst living in exile at Macao, a Portuguese settlement on an island in the Bay of Canton. His work, an epic treating of the doings of Da Gama and the Portuguese merchant adventurers, was not appreciated during his lifetime, and he died in extreme poverty.

CAMORRA, a secret society which had branches in all parts of the old kingdom of Naples. Its members were recruited chiefly from the criminal classes, but also included members of the aristocracy and of the army. They practised smuggling and brigandage, and acquired considerable political power. Many attempts have been made to suppress the organisation, and even as late as 1901 the Italian Government took active measures against it.

CAMPAGNA, a desolate, malaria-stricken tract of country, extending north and south of Rome for a distance of 100 miles, and with a width of from 30 to 40 miles. Ruins of temples, amphitheatres, monuments, and aqueducts are found there. The soil is generally fertile, but the land is sparsely populated.

CAMPANILE, a lofty bell tower, standing apart from other buildings. Campaniles are common in Italy, and are frequently of great architectural beauty. Among the most famous, are the "Leaning Tower" of Pisa, and the Campanile of St. Mark, Venice. The latter, which collapsed in 1902, and will probably be rebuilt exactly as it stood before, was a square tower, standing 325 feet in height.

CAMPBELL, COLIN, *b.* at Glasgow, 1792, *d.* 1863; a famous British General, one of the most brilliant soldiers of the 19th century. He served in the Peninsular War, and commanded the Highland Brigade during the Crimean War. The defeat of the Russians, both at the Alma and at Balaklava, was largely due to him; in the latter battle he was in command of "the thin red line" that defended the little port of Balaklava. On the outbreak of the Indian Mutiny, in 1857, he was appointed commander of the British forces. He relieved Lucknow, and successfully fought in turn against every city in revolt. Before the end of the year 1858, the embers of the rebellion were finally stamped out. For his services he was granted a pension of £2,000 a year, and created Baron Clyde. He is buried in Westminster Abbey.

CAMPBELL, THOMAS, *b.* at Glasgow, 1777, *d.* 1844; wrote both prose and verse, but is remembered chiefly for his lyric poetry. Among his best known poems are: the "Pleasures of Hope," "Hohenlinden," "Ye Mariners of England," and "Gertrude of Wyoming."

CAMPERDOWN, a tract of sandy hills, or downs, about thirty miles north of Amsterdam. Off the coast here, a British fleet under Admiral Duncan gained a great victory over the Dutch, 1797.

CAMPHOR is distilled from the wood of a tree, *Ginnamomum camphora*, a native of Eastern Asia. It is used chiefly to preserve clothing from the attacks of moths, though naphthalene is now being used largely for this purpose. It has also certain medicinal uses [Refer to *Med. Dict.*].

CAMPION, EDMUND, *b.* in London, 1540, *d.* 1581, an English Jesuit and martyr. Ordained deacon in the Church of England, he afterwards joined the Church of Rome, and was sent, 1580, by the Society of Jesus on a mission to England. His preaching had a great effect. His career was violently cut short. He was tried as a conspirator, thrice tortured, and hanged at Tyburn.

CANADA was originally settled by the French, who founded Quebec, 1609, and acquired the country bordering on the St. Lawrence as far west as Montreal. New Brunswick and Quebec were ceded to Great Britain in 1713, and the remainder of Canada fell into British hands during the course of the Seven Years' War, 1756–1763, after the capture of Quebec by General Wolfe, 1759. The North-West Territory was administered by the Hudson Bay Fur Company until 1870, when it was taken over by the Canadian government. In 1837 the various provinces became self-governing, and in 1867 all, with the exception of Newfoundland, formed a confederation with the name of "The Dominion of Canada." For its geography refer to "Canada" in *Index*.

CANADA BALSAM, a resinous substance obtained from the balsam fir. When fresh it is a liquid, but after being kept for some time becomes a solid. It is used in the manufacture of varnish and in the preparation of slides for the microscope.

CANARY, a songbird originally found in the Canary Islands. In its wild state its usual colour is olive green, but the captive bird, as the result of careful attention to breeding, is more generally yellow. The canary belongs to the finch tribe, and its powers of song are greatly improved by careful training.

CANARY ISLANDS, a group of volcanic islands, belonging to Spain, situated about sixty miles from the north-west coast of Africa. The group has an area of 2,800 miles, and a population of 335,000. The principal productions are wine, silk, and fruits, especially bananas and tomatoes. The largest islands are Teneriffe and Grand Canary. Santa Cruz and Las Palmas are the principal towns. The people are of Spanish origin, the original inhabitants having been exterminated after the conquest of the islands.

CANARY WINE, a white wine produced in the Canary Islands, which enjoyed great popularity from the 16th to the middle of the 19th century.

CANDAHAR, a town of Afghanistan, commanding the western entrance of the Bolan Pass. It was occupied by the British in 1839 and again in 1879.

CANDLE FISH, a small fish resembling the smelt, found on the Pacific coast of North America, remarkable for the oily nature of its flesh. It is used as a food, and obtains its name from the fact that the Indians use the dried bodies as candles.

CANDLEMAS, a festival held 2nd February, in commemoration of the Presentation of Christ in the Temple and the Purification of the Blessed Virgin. It is so called because of the important part which lighted candles play in the Roman Catholic Church in the celebration of the festival, and because the candles to be used for ecclesiastical purposes during the year are then consecrated.

CANNES, a small town situated on the Mediterranean coast of France. It possesses a delightful climate, and is much resorted to by invalids. Cannes was several times visited by Queen Victoria, and contains a memorial to the Duke of Albany, who died there in 1884; population about 34,000.

CANNIBALISM, the eating of human flesh. The practice was at one time exceedingly common, but is now confined to certain parts of Africa, New Guinea, and Polynesia. The rules which seem to have governed the practice varied considerably in different districts; some tribes ate only the bodies of their captives or enemies, whilst others consumed only their relatives or tribesmen.

CANNING, a method of preserving meat, fish, fruit, and vegetables. The food to be preserved is placed in the tin, heated for a sufficient time to expel the air and to destroy bacteria, and the tins are then hermetically sealed. Where oil is used as a preservative the heating is dispensed with.

CANNING, CHARLES JOHN, (EARL), *b.* 1812, *d.* 1862; son of George Canning, a politician who held various offices in the ministries of Sir Robert Peel and Lord Aberdeen. In 1856 he was appointed Governor of India, and in the following year the Indian Mutiny broke out. England owes much to his steady nerve, firm will, and calm courage during that great crisis in her history.

CANNING, GEORGE, *b.* in London, 1770, *d.* 1827; a famous statesman, orator, and scholar. He was a supporter of Pitt, and, as secretary of state for foreign affairs, was largely responsible for the campaign in Spain (Peninsular War), which did so much towards weakening the power of Napoleon. He became premier in 1827, about five months before his death.

CANNING, STRATFORD, (VISCOUNT), *b.* in London, 1786, *d.* 1880; cousin of George Canning, a brilliant diplomatist, who was for many years British ambassador at Constantinople. He occupied this post at a particularly trying time, when Russia was intriguing to obtain control of the Balkan peninsula, and was suspected of aiming at the conquest of Turkey. Canning conducted the negotiations which led to the Crimean War, 1854.

CANNOCK CHASE, a heath-covered district of South Staffordshire, rich in coal and iron.

CANNON. See *Artillery*.

CANON. (1) A church dignitary holding office in a cathedral. (2) In the Roman Catholic church, the register which contains the names of the saints. (3) The name applied to those portions of the Holy Scriptures which are regarded by the Church as inspired. (4) In music, a composition in which the several parts take up the same melody in succession.

CAÑON, pronounced *canyon*, a deep gorge with more or less perpendicular sides, which has been cut out in the course

of ages by a river. Cañons occur in districts where the rocks are soft, and the strata arranged horizontally. The most famous is the cañon of the Colorado river in the United States. It has a depth of 6,000 feet, a width of over eight miles in places, and extends for about 200 miles.

CANONICAL HOURS, those times appointed by the Church for daily public worship. In the Western Church these were seven in number, Nocturns or Matins and Lauds, before daybreak; Prime, an early morning service; Tierce, at 9 o'clock; Sext, at noon; Nones, at 3 p.m.; Vespers or Evensong, about 4 p.m.; and Compline, at bedtime.

CANONISATION, the act in the Roman Catholic Church of decreeing that a certain deceased person shall be numbered among the saints. It is so called because the name of the new saint is added to the canon or register of saints. At the same time a festival day is appointed, in most cases the anniversary of the saint's death. Previous to canonisation, adequate proof of the candidate's purity and holiness must be submitted, and, generally, it is necessary to produce evidence that miracles have been performed by the aid of his relics. The ceremony cannot take place within fifty years of the saint's death, and usually the interval is much greater.

CANOPY, originally, was the name given to a mosquito net. It is now applied to the stone covering placed over a statue to protect it from the weather, and to the overhead hangings of a bed.

CANOSSA, a ruined castle, situated in Italy, near the town of Reggio. In 1077 the Emperor Henry IV. of Germany stood outside the castle for three days, bareheaded and barefooted, humbly waiting to be received and pardoned by Pope Gregory VII, who had excommunicated him.

CANOVA. *b.* near Venice, 1757, *d.* 1822; one of the greatest of modern sculptors. Many beautiful examples of his work are to be seen in Rome, Venice, and Florence. Canova was created Marquis of Ischia by Pope Clement VII.

CANSO, GUT OF, a strait 17 miles long, and 2½ broad, which separates Nova Scotia from Cape Breton Island.

CANTERBURY. (1) A city situated in Kent, famous for its cathedral. The Archbishop of Canterbury is the "Primate of all England." In 1170 Thomas à Becket, the archbishop, was murdered on the steps of the altar by four knights in the service of Henry II, and for a long time afterwards Canterbury was visited by pilgrims from all parts of Europe. (2) A province of South Island, New Zealand, which exports wool and an enormous quantity of frozen mutton and lamb.

CANTERBURY TALES, a series of tales, chiefly in verse, written by the poet Chaucer in the 14th century. The tales are told by the members of an imaginary band of pilgrims journeying from London to Canterbury, to visit the shrine of Thomas à Becket.

CANTHARIDES. See *Med. Dict.*

CANTILEVER. (1) In architecture, a bracket which supports a cornice or balcony, or a girder fixed into a wall, with one end free. Upon a series of girders so placed galleries are built and the use of pillars is rendered unnecessary. In modern public buildings, theatres especially, galleries are usually built in this way. (2) In bridge-building, a cantilever is a girder which has one end fixed in a pier and the other end free; in the next pier another girder is similarly fixed, so that the free ends face each other. The intervening space is bridged over by a third girder, and by this means a span of the bridge is eventually completed. The Forth bridge is built on this principle.

CANTON, the chief port of Southern China. It is situated on the Pearl or Canton river, about 60 miles from the sea, and exports tea and silk. It was opened as a treaty port in 1842, and was occupied by a combined French and British force from 1857 until 1861. About a quarter of its inhabitants live on boats moored in the river; population about 1,500,000.

CANTONMENTS, the name given to districts occupied by a military force, when that force, instead of being concentrated in one central camp, is scattered over the district in the various towns and villages. It is also the name given to the military camps in India. These camps are situated at some distance from the cities, and are practically barracks with a small village attached.

CANUTE or **KNUT,** *b.* 994, *d.* 1035; was a King of Norway and Denmark, who fought with Edmund Ironside for the throne of England, and on Edmund's death became sole king. His reign (1017–1035), was on the whole peaceful and prosperous; for he was a wise and just ruler, placing Dane and Englishman on an equal footing.

CAOUTCHOUC. Same as *India-rubber.*

CAPE BRETON ISLAND, an island in the Gulf of St. Lawrence, separated from Nova Scotia by the narrow strait of Canso, with an area of about 3,000 square miles. The inhabitants are engaged in fishing, lumbering, and coal mining. It was discovered by Cabot, and now forms part of the province of Nova Scotia.

CAPE COLONY was originally settled by the Dutch, in the 17th century, and became a British possession in 1806. There were but few British settlers in the colony previous to the discovery of diamonds, 1870. During the Transvaal War, 1899–1902, many of the Dutch settlers in Cape Colony joined their kinsmen and fought against us. The future prosperity of the Colony depends largely upon the harmonious working together of the British and Dutch elements. For its geography refer to "Cape Colony" in *Index.*

CAPERCAILZIE is a bird of the grouse family. The cock is black, the hen mottled brown. It occurs in central Scotland and Sweden. The flesh has a taint of turpentine, due to the fir shoots on which the capercailzie mainly lives.

CAPILLARIES. See *Med. Dict.*

CAPILLARITY, the name given to a property which liquids are seen to possess, when open tubes of small bore are placed vertically in them. If the liquid be one which adheres to the glass, water for example, it is noticed that the level inside the tube is higher than that outside, and the surface instead of being horizontal is slightly concave. If, on the other hand, a liquid be used which does not adhere, such as mercury, the level in the tube is lower than the outside level, and the surface is convex.

CAPITAL PUNISHMENT. Many governments still deem it expedient to inflict the punishment of death for certain offences; while others, including Holland, Portugal, certain Swiss Cantons, and some of the States of the U.S.A. have abolished the death penalty altogether. In the 18th century no less than 160 offences were punishable by death in England, but practically the only crimes that now demand the extreme penalty of the law are murder and treason. Hanging is the method resorted to in the British Islands, decapitation by means of the guillotine in France, and electrocution in certain of the United States. The king may order decapitation in cases of treason, and, by the Articles of War, persons condemned to death by courts martial may be shot.

CAPITOL, the citadel of ancient Rome, situated at the summit of one of the seven hills upon which the city was built. It contained the temples of Jupiter, Juno, and Minerva, and in the first named the state papers were stored. It was destroyed and rebuilt several times. The present capitol was designed by Michelangelo. The name is also applied to the building, situated at Washington, in which the United States Congress holds its sittings.

CAPITULATION, the name given in warfare to a formal surrender upon terms previously accepted by both parties, as distinguished from an absolute surrender, which is not preceded by any such arrangement.

CAP OF MAINTENANCE, an ornament of State consisting of a cap with the brim turned up, deeply in front, but coming to two points behind, borne before the sovereigns of England in their coronation procession. The term is also applied to an ornament carried in front of the mayors of certain cities on state occasions.

CAPON, a young, castrated cock chicken which is fattened for the table.

CAPRERA, a small, rocky, and barren island, lying off the north-east coast of Sardinia. This was the home of Garabaldi from 1854 till his death in 1882.

CAPRI, a small rocky island, situated in the Bay of Naples, and famous for its blue grotto.

CAPSICUM, the name given to several different plants found in the tropical parts of South America and in the East and West Indies. These plants produce a small red or yellow pod, which contains a number of small seeds. The pods are commonly called chillies, and are much used in tropical districts as a condiment. The seeds, when dried and ground, yield cayenne pepper.

CAPSTAN, a cylindrical drum, capable of rotating about a vertical spindle. It is used on ships to lift cables, anchors, and other heavy weights, and is worked by means of long levers inserted horizontally into holes situated at the top of the drum. The capstan is prevented from recoiling by pieces of iron, called "pauls," which fit into notches cut in the base. Capstans worked by steam are very common.

CAP'UCHINS, a branch of the Franciscan order of Friars, established 1525. The title was originally a nickname, and is derived from "Capuce," the name of a kind of cowl which the members of this branch wore as a head dress.

CAPUT MORTUUM, "dead head," the name given by the early chemists to the residuum of a substance after the escape of all gaseous bodies; and hence, later, the term applied to anything from which the spirit had departed, although the form remained.

CARACTACUS or **CARADOC,** a British chieftain who ruled the Silures of South Wales, and bravely resisted the Romans from 43 to 50 A.D. Being defeated by Ostorius Scapula, near Church Stretton, he fled to the Brigantes of Cheshire, whose queen surrendered him to the Romans. In 51 he graced the triumph of the Emperor Claudius, whom he much impressed by his noble bearing.

CARAMEL, burnt sugar used for colouring wines and spirits. Sugar, when heated to 160°, melts. If the temperature be raised to about 212°, the water is driven off and the dark brown substance called caramel remains. Caramel is formed whenever substances containing sugar are so heated, as in the roasting of meat or of coffee.

CARAPACE, the name given to the horny shield on the back of such shell-fish

as the crab and lobster, and to the bony covering of such creatures as the turtle and the tortoise. The lower shield is called the *plastron*.

CARAT. (1) A weight of four grains Troy, used in weighing precious stones. (2) The $\frac{1}{24}$th part of any weight of gold alloy. The number of carats of pure gold in any alloy, therefore, indicates the proportion of gold in it; thus "18 carat gold" is an alloy that contains 18 parts out of 24 pure gold, and 6 parts some baser metal.

CARAVANSARY, a kind of inn, situated on the caravan routes of the East, usually at remote distances from towns or villages. Some supply the traveller with shelter only, while others provide him with necessaries for the journey, including guides.

CARBERRY HILL, a ridge 500 feet high, situated about 7 miles south-east of Edinburgh. The English left wing occupied it before the defeat of the Scots at Pinkie, in 1547; and, in 1567, it was the scene of the surrender of Mary Queen of Scots to her nobles previously to her imprisonment in Lochleven Castle.

CARBON occurs in a free state either in the amorphous form of graphite, or black lead, or in the rare crystalline form of the diamond. In chemical combination, however, it occurs in every organic substance, and it is usually to be obtained from them by combustion. Common charcoal is an artificial form of carbon obtained by burning wood. The cindery remains of burnt meat, coals, leaves, or indeed of any charred form of plant or animal life, represent the carbon contained in their composition. We may look upon this element as the material base of organic life. The diamond is the great mystery of carbon. It is a pure crystal of that substance, and yet we have been unable to effect the crystallization artificially. Balzac's great romance, "La Recherché de l'Absolu," deals with the fascinating quest of this gem.

CARBONARI (charcoal burners). a political secret society that sprang into existence in Italy early in the 19th century. Its influence spread to all parts of that country and extended into France. More than half a million persons, including large numbers of the clergy and military, are said to have joined its ranks in a single month of 1820. The society consisted of a number of lodges known as *huts*. There were several degrees, each with its distinct ritual. While the Carbonari somewhat resembled Freemasons in their organisation and ritual, they differed from them in their objects, which were purely political, having for their end and aim the overthrow of despotic governments.

CARBONIC ACID, Carbon di-oxide, or choke-damp, is a gas poisonous to animals, and it will neither burn nor support combustion. It is constantly being poured into the air by the respiration of human beings and animals, and by the consumption of fuel in fires, yet the proportion of the gas in the air remains constant. The cause of this is that carbonic acid is absorbed by vegetation, in much the same way as oxygen is by animals; and, just as the animal world supplies the plant world with the carbonic acid necessary for the formation of wood, so, too, the plants exhale oxygen for the support of animal life. A secondary property of this gas has received much attention of late years, viz., its solubility in water. The solubility is increased by pressure, and so is utilised as a means of aerating waters. Carbonic acid is readily liquefied under extreme pressure, and *sparklets* are now made, containing sufficient liquefied gas to aerate an ordinary syphon of water. The name carbonic acid is not a correct one, unless it be applied to the solution of the gas in water.

CARBURETTOR, that part of an oil-engine in which the vapour from the oil mingles with a current of air, and so forms an explosive mixture. See *Automobile*.

CARDIFF, the largest city and chief port of Wales, situated on the estuary of the Taff, in Glamorganshire. The population increased from about 1,000 in 1801 to above 166,000 in 1901. It has excellent dock accommodation. Its chief exports are coal and iron, and its principal industries iron smelting and ship-building.

CARDINAL, a prince of the Roman Catholic Church, next in rank to the Pope. The Cardinals, seventy in number, constitute the Sacred College, which elects one of its number as Pope, and manages the general policy of the R. C. Church.

CARDINAL VIRTUES. According to the ancient classification of the moral virtues, they are justice, temperance, prudence, and fortitude.

CARDS (playing). The English pack contains 52 cards, divided into four equal suits: hearts, clubs, spades, and diamonds. A duty of 3d. has to be paid upon every pack. Cards are of ancient origin. They were, perhaps, first used in the East, but were common throughout Europe in the Middle Ages. The early cards were painted; and, in the Italian form, cups take the place of hearts, swords of spades, and coins of diamonds.

CAREW, BAMFYLDE MOORE, *b.* 1693, *d.* about 1770; commonly called "the king of the gipsies." The son of a Devonshire clergyman, he adopted the life of a vagrant. He was fond of begging in character, and was the idol of gipsies.

CAREY, WILLIAM, *b.* at Paulersbury, Northamptonshire, 1761. *d.* 1834; a distinguished oriental scholar, and the founder and first missionary of the Baptist Missionary Society. He was professor of Oriental languages at Calcutta for 29 years, and under his direction the whole Bible was translated into six, and the New Testament into twenty-one, Hindustani dialects. He also published grammars and dictionaries of native languages.

CARIBS, an aboriginal American Indian race, which formerly occupied many of the West Indies. These brave, intelligent savages are still found in the north of South America, and a part of Dominica is reserved for them. The Lesser Antilles are known as the Caribbean Isles, and the Caribbean Sea lies between the Antilles and Central and South America.

CARILLON, a series of bells tuned to a musical scale, and made to produce chants and short popular airs. The hammers are lifted by means of a number of pins fixed in a barrel, which is set in motion by clock-work at regular intervals.

CARISBROOKE CASTLE, a Norman castle in the village of Carisbrooke, Isle of Wight, about one mile south-west of Newport. It has a well 200 feet deep from which a donkey in a wheel draws water. It was the prison of Charles I. for thirteen months, in 1647-8. A tesselated pavement and other remains of a Roman villa were found near the castle in 1859.

CARLILE, WILSON, founder of the *Church Army*, which see.

CARLISLE, an ancient city, and the county town of Cumberland, situated upon the Eden. It is an important railway centre, 299 miles from London. The fine cathedral, in which Sir Walter Scott was married in 1797, was founded by William II., who also built the castle. David I. of Scotland died there, after the battle of the Standard, in 1153; and Mary, Queen of Scots, was imprisoned in the Castle in 1568. The Parliamentarians took it twice in the Civil War, and the Jacobites held it in 1745.

CARLISTS, THE, supporters of Don Carlos of Spain, *b.* 1788, *d.* 1855; brother of Ferdinand VII. of Spain. On the death of Ferdinand in 1833, in spite of the Salic Law, the daughter of his fourth marriage, Isabella, aged three years, was proclaimed queen. A fierce civil war arose, which ended, after varied fortune, in the loss of the Carlist cause in 1840. Carlos VII., a grandson of Don Carlos, revived the quarrel which finally closed in 1876.

CARLOVINGIANS, descendants of Charles the Great, commonly called Charlemagne, who ruled the "Holy Roman Empire" of the West of Europe from 800 to 814. His heirs ruled in Germany until 911, and in France until 987.

CARLSBAD or **KARLSBAD,** one of the most fashionable spas in Europe, situated in the wooded highlands of Bohemia, about 75 miles north-west of Prague. The twelve hot mineral springs daily discharge about 2,000,000 gallons of water, containing soda sulphate, at a temperature of 115° to 165° Fahrenheit. The Emperor Charles IV. founded it in 1347; population exceeds 15,000.

CARLSCRONA, the principal and strongly fortified naval station of Sweden. It is built upon rocky islands in the Baltic Sea, in the south of Sweden; population about 24,000.

CARLTON CLUB, the Conservative Club, founded by the Duke of Wellington in 1832. The club premises are at 94 Pall Mall, London, and the membership is limited to 1800.

CARLYLE, THOMAS, *b.* at Ecclefechan, Dumfriesshire, 1795, *d.* at Chelsea, 1881; one of the greatest English authors of the 19th century. At the age of fifteen he entered Edinburgh University to prepare for a proposed clerical life. From 1814, for some years, he was a schoolmaster and tutor. In 1826 he married Jane Welsh, and, though settled upon a Scotch farm, continued the literary labours which he had commenced while teaching. He went to Chelsea in 1834, and lived in Cheyne Row until his death. His principal works are "Sartor Resartus," "The French Revolution," "Heroes and Hero Worship," "Oliver Cromwell's Letters and Speeches," and "Frederick the Great."

CARMAGNOLE. (1) A form of vest worn by the revolutionaries who, in 1792, came to Paris from the south of France to assist in the Revolution. (2) A song and dance indulged in by the Republicans at popular gatherings at the beginning of the French Revolution.

CARMEL, limestone hills of Palestine, which terminate in a cape, ten miles south of Acre. They are thickly wooded with pine, olive, and walnut trees, and contain numerous caves. One of these hills was the scene of the event described in 1 Kings xviii.

CARMELITES, the Order of our Lady of Mount Carmel, founded as a society of hermits in 1156 by Berthold, a Calabrian monk, but claiming to have existed from the days of Elijah. They were driven by the Saracens into Europe, and adopted the monastic mode of life. Previous to 1536 the order possessed 52 houses in England; to-day there are seven.

CARMEN SYLVA, *b.* 1843, the nom-de-plume of the poet Queen of Roumania. She lost her only child in 1874 and turned to literature for consolation. She is much beloved by her subjects.

CARMINATIVES. See *Med. Dict.*

CARMINE. See *Cochineal.*

CARNARVON, situated about eight miles from Bangor, upon the Menai Straits. It was a Roman station, and in 1282 was captured by Edward I., who built the still existing castle, in which his son Edward was born.

CARNATIC, THE, an old division of Hindustan on the eastern or Coromandel coast, 580 miles long, and 60 to 110 miles broad. The principal rivers are the Penaar and Cauvery, and the chief towns Madras, Pondicherry, and Trichinopoli. The climate is the hottest in India. The products include rice, cotton, and sugar. Numerous large temples bear testimony to its former wealth and civilization. It was conquered by the British after a fierce contest with the French, in 1783.

CARNEGIE, ANDREW, *b.* at Dunfermline, 1835; an American millionaire, steel manufacturer, and philanthropist. His father, an emigrant weaver, took him to America while a boy. After filling various humble offices, he made some successful speculations in oil-wells, which laid the foundation of his vast wealth. Later he founded ironworks at Pittsburg, which, giving employment to 20,000 men, are the largest in the world. In 1901 he formed a trust, with 10,000,000 dollars, to provide scholarships tenable by Scotsmen at Scotch Universities. He has founded numerous free libraries, especially in the British Isles; and in 1902 he presented Lord Acton's famous library of 60,000 to 80,000 volumes to Mr. John Morley, by whom it was presented to the University of Cambridge.

CARNIVAL, literally "farewell to flesh," is the name of the period of three days immediately preceding Lent. This time is observed in Roman Catholic countries as one of revelry and merry-making, and a relic of the custom is still found in the English observance o. Shrove Tuesday. In the south of France, and in Italy, the season is given up to processions, and masquerading, "battles of flowers," and the throwing of confetti. The carnival at Rome is probably the most notable one now held; but the change, on Ash Wednesday, to the religious solemnity of Lent is as striking as the buffoonery of the previous days. Shorthouse's "John Inglesant" contains an excellent account of an Italian Shrovetide and Ash Wednesday in the days of Charles I.

CARNIVORA is an order of mammals. Although the name signifies "flesh-eaters," certain members of the order feed on a vegetable diet; for instance, some species of bears, though even in their case the teeth are better adapted for a flesh diet. The order does not, of course, include every animal which feeds on flesh. The dog forms the central type, around which are grouped the cat, bear, and weasel tribes amongst land carnivores, whilst the seals and walruses form the marine examples of the order. The latter connect the order with the whales. The carnivora are distributed over the whole world, except Australasia, but are scantily represented in South America.

CAROB, an evergreen plant of the bean order, growing wild along the shores of the Mediterranean. There the pods are used as a food for horses, and are exported to England as a food for cattle: they contain a nutritious pulp, having a slightly sweet taste.

CAROLINE, AMELIA ELIZABETH, *b.* in Brunswick, 1768, *d.* 1821, the unfortunate wife of "the first gentleman in Europe," as the Prince Regent was called. They lived apart after the first year of married life, and the country looked on her as the victim of the prince's selfish life. She travelled, and is known to have behaved with grave impropriety during a lengthened stay at Como, in the company of an Italian named Bergami. On the accession of her husband, George IV., she entered London in state, to claim recognition as queen. A bill was introduced into the House of Lords to effect her divorce, but the able defence made on her behalf, by Brougham, aroused public feeling in her favour, and the bill was dropped. At the king's coronation, however, she was denied admission at the doors of the abbey. She died within a few weeks of this disgrace.

CAROLINE WILHELMINA, of Anspach, *b.* 1683, *d.* 1737: the wife of George II. and a woman of great ability and strength of character. She had great influence with the king, and generally exercised it in the interests of the country. She highly appreciated the services of Walpole, the Prime Minister, in his successful efforts to keep England at peace, and supported his wise measures in her private converse with the king. She also aided the king in selecting suitable men for the public service.

CARP, an edible fresh-water fish found chiefly in deep still waters in Europe and Asia. It is abundant in the British Isles, multiplies very rapidly, and is reputed to live to a great age. It often attains a length of 4 to 5 feet. The beautiful gold-fish in our ornamental ponds and glass globes is a member of the carp family, introduced here probably from China.

CARPENTER, WILLIAM BENJAMIN, *b.* at Exeter, 1813, *d.* 1885; famous for his work in biology and in medicine. His "Principles of General and Comparative Physiology," published in 1838, determined the methods of modern biological teaching. He was a keen advocate of deep-sea dredging, and took part in three expeditions of this nature.

CARRARA, an Italian town, situated close to the Mediterranean coast, about 40 miles north of Leghorn, and celebrated for its inexhaustible supply of excellent marble, derived from the neighbouring hills. The population, exceeding 26,000, depend for a livelihood upon the quarries, which have been worked from the earliest ages.

CARROLL, LEWIS. See *Dodgson.*

CARRON, a Scotch village situated upon the Carron, in Stirlingshire, about two miles from Falkirk, and famous for its ironworks. "Carronades" (a kind of short cannon) were first manufactured here.

CARSE OF GOWRIE, one of the most fertile districts of Scotland, consists of the alluvial land lying along the northern banks of the Tay, and occupying portions of Perthshire and Forfarshire.

CARTEL, (1) a challenge to a duel; (2) a written agreement between hostile nations concerning the exchange of prisoners of war. Cartel ships engaged in this duty must carry no cargo or arms; (3) in Germany a trade "combine."

CARTHAGE, one of the most celebrated of ancient cities and a keen rival of Rome. It was founded by Phœnicians, about 850 B.C., upon a strongly fortified peninsula, 30 miles in circumference, near Tunis, in North Africa. The inhabitants, who were chiefly engaged in commerce, at one time occupied Sicily, Malta, Corsica, Sardinia, and parts of Spain. The Carthaginians waged three wars with Rome, known as the Punic Wars: the first commenced, 265 B.C., and the third concluded with the complete destruction of their city, 146 B.C.

CARTHUSIANS, a monastic order living under a severe order of discipline, founded by St. Bruno at Chartreuse in 1086. The order extended and possessed houses in France, Italy, Switzerland, and Spain. The French monasteries, except la Grande Chartreuse, were destroyed during the revolution, and the inmates of the latter were expelled in 1903.

CARTIER, JACQUES, *b.*, St. Malo, 1494; a celebrated French navigator. He made three voyages to Canada, between 1534 and 1541, and explored much of the gulf and river, which he named St. Lawrence.

CARTOON, a pictorial design drawn upon strong paper for fresco painting, or for tapestry. Raphael's cartoons, based upon New Testament subjects, were designs for the noted Vatican tapestries. The seven that still exist are in the Victoria and Albert Museum, South Kensington. This term is also applied to political sketches in the newspapers.

CARTRIDGE, a case of stout paper, metal, or other material containing the charge for a fire-arm. It is always of a size to exactly fit the bore of the firing-piece. When intended for a breech-loading rifle, the bullet is usually attached, and a fulminating cap inserted to fire the charge.

CARTWRIGHT, EDMUND, *b.* at Marnham, Nottingham, 1743, *d.* 1823; a clergyman, and the inventor of the power loom. In 1785 he first used his loom at Doncaster; but in consequence of its unpopularity he removed to Manchester, where, amid riots, his premises were burnt down. He received a Government grant of £10,000, in 1809, as some return for his invention.

CARYAT'IDES (i-des) figures of women draped in Grecian garments, used as supporting columns. They were so named from the Greek town of Caryæ, whose inhabitants were reduced to slavery by the Greeks for joining the Persian invaders. Male figures, used in a similar way, are called *Atlantes.*

CASABIANCA, LOUIS, *b.* in Corsica, 1754, *d.* 1798; the captain of the flagship *L'Orient,* at the battle of the Nile. When mortally wounded, he perished with his ten-year old son in the flames of his burning ship. The incident has become familiar through Mrs. Hemans's well-known poem.

CASEMATE, a shell-proof vault constructed in the wall of a fortress, and provided with port-holes for cannon. The name is also given to the heavy-armoured bulk-head of a war-ship, containing guns, which are run out through port-holes, and so trained and fired.

CASE-SHOT, or canister, a metal tube filled with bullets, or, in an emergency, with nails and other articles, and closed with a circular or wooden plate. The charge, when fired, immediately scatters, and is therefore only effective at short range.

CASH, originally a case for money, now the money itself. It includes any readily available medium of exchange, whether coin, bank-notes, bills of exchange, or other similar instruments. Cash is also the name of the thin threaded Chinese copper coins, of which 22 are worth one penny.

CASHMERE. (1) A familiar spelling of Kashmir, a native state among the Himalayas, on the upper waters of the Indus, in north-west India. It is controlled by a British Resident, and is important as a frontier state. The military station of Gilgit watches its northern passes, and Chitral guards the west, and is occupied by British troops. It is a land of valleys, and its chief town, Srinagar, lies in the famous Vale of Cashmere. (2) A fabric woven from the long, light, silky hair of the Cashmere goat. The hair is brought from Tibet and the highlands of Bokhara, to be spun

and dyed by the Cashmere women. The men are the weavers, and they take two or three years to finish a pair of the finest shawls, each colour being worked with a separate needle. Shawls of the best quality fetch upwards of £100 in London. France makes the best imitations, but has to use Asiatic materials. The introduction of the Cashmere goat into Europe and America has not been attended with success.

CASKET LETTERS, a number of letters and other documents said to have been written by Mary, Queen of Scots, to Bothwell. The letters implicated Mary in the murder of Darnley, but doubts have been thrown on their genuineness by many historians.

CASPIAN SEA, the largest inland sea in the world, with an area exceeding 170,000 square miles, situated to the south-east of Russia. It lies in a deep depression, and, in a past age, probably formed with the Black and Aral Seas a vast inland sea. Salmon and sturgeon are abundant and the seal fishery is important. The rivers Ural and Volga flow into it. Astrabad, Baku, and Astrakhan are the chief ports. Waterways, consisting of rivers and canals, connect it with the Black and Baltic Seas.

CASQUETS, a group of very dangerous granite rocks, about 8 miles north-west of Alderney, upon which lighthouses with revolving lights, visible for 15 miles, have been erected. In 1119, William, son of Henry I., was wrecked upon them in the *White Ship*.

CASSANDRA, a beautiful daughter of Priam, king of Troy. Apollo gave her power to prophesy, but, in anger, determined that none should believe her. Her warnings were in consequence disregarded by the Trojans, who considered her mad. On the capture of Troy, she fell to the lot of Agamemnon, whose wife slew her.

CASSATION, a legal term in use on the continent of Europe, signifying the annulling of any act or decision which is contrary to law. The term is applied particularly to the supreme court of appeal in France, which is empowered to revise the finding of any inferior court on a point of law, and to order the case to be retried.

CASSAVA, or manioc, a tropical plant of the West Indies and South America, which has very fleshy roots. By washing the peeled and pulped roots, a starch is obtained, which when roasted is called tapioca, and when dried in the sun Brazilian arrowroot. The roots of one kind of manioc contain poison, which is removed by boiling.

CASTE. Refer to *Index*.

CASTILE, a former kingdom and division of Spain. It is a tableland, above 2,000 feet high, crossed by high mountains, and drained by the rivers Douro, Tagus, and Guadiana. The chief towns are Madrid, Toledo, and Valladolid. In 1479 Ferdinand of Aragon and Isabella of Castile combined their kingdoms, through marriage, and laid the foundation of modern Spain.

CASTLEREAGH, LORD, *b.* 1769, *d.* 1822; a famous politician and diplomatist, was a Member of the last Irish Parliament, and assisted in passing the Act of Union. He became Minister of War in the British Parliament in 1805, and Foreign Secretary in 1812. He was the leading spirit in the coalition against Napoleon, but the home policy of the government made him very unpopular with the people. He committed suicide within a year after succeeding his father as Marquis of Londonderry.

CASTOR AND POLLUX, twin brothers, who in Greek mythology are regarded as the sons of Zeus and Leda. According to Grecian story, they were devoted to each other, and became the two bright stars, known as *Gemini*, "Twins." Castor was a celebrated horseman and Pollux an expert pugilist.

CASTOR OIL, a thick oil forming an excellent and gentle purge, obtained from the seeds of a plant, chiefly cultivated in India. The best, pale yellow in colour, is obtained by the application of pressure to the seeds, without heat. See *Med. Dict.*

CASTRATION, the removal by excision of portions of the reproductive organs of male animals. Men so treated are called eunuchs; horses, geldings; bulls, bullocks or steers; rams, wethers; boars, pigs; and cocks, capons. Such emasculated animals are more tame, work more readily, and grow and fatten more quickly.

CASUISTRY, the branch of morality, which, by means of general principles, found in the Holy Scriptures, in human laws, and in conscience, determines the lawfulness or unlawfulness of a particular act, the moral quality of which it is difficult to determine by the ordinary rules of conduct.

CASUS BELLI, "cause of war," the last act of one State towards another before the outbreak of war, which renders a peaceful solution of the dispute between them impracticable.

CATACOMBS OF ROME, underground caves or passages, miles in length, situated two or three miles from Rome. They were used in ancient times as burying places, and by the early Christians as places of worship. On both sides of these passages or corridors, series of recesses, one above another, were made. After a body had been interred, the recess was closed with a stone, upon which an inscription was carved.

CATAMARAN, a kind of raft of three bamboos, lashed together, the central one being longer than the other two. It is used upon the surf-beaten Coromandel coast of India, where boats are useless, and in Brazil. It is propelled by paddles, and in Brazil is often provided with sails.

CATAPULTS, military engines employed in ancient times and until cannon came into use for the purpose of propelling stones, spears, and arrows against an enemy. The lighter engines served the purpose of the modern rifle, the heavier ones of our great guns being used in the siege of forts and walled towns.

CATECHUMENS. Among the early Christians, this term was applied to all who were being instructed with a view to baptism. It is also used in the same sense by missionaries among the heathen at the present day.

CATEGORIES, the classification of all things that can be named. Such categories are the cause of considerable division of opinion among philosophers. John S. Mill divided all nameable things into, (1) Feelings, or states of Consciousness, (2) Minds, which experience the feelings, (3) External objects, which excite the feelings, and (4) Relations between the feelings.

CATGUT, the material used for strings of violins, guitars, and other musical instruments, and principally made from the intestines of sheep. The intestines, after being thoroughly cleansed, scraped, and fumigated, are twisted into cords. The best are made in Naples and Rome.

CATHARINE, SAINT, a Christian martyr, who, after torture upon the wheel which bears her name, was put to death at Alexandria in 307.

CATHARINE OF ARAGON, *b.* 1483, *d.* at Kimbolton, 1536; daughter of Ferdinand and Isabella of Spain, and first wife of Henry VIII. She was first married to Arthur, Henry's elder brother, who died within a few months. In 1526, Henry, through failure of male issue, determined upon divorce, which was finally effected against the determined opposition of the pious and faithful Catharine, in 1533. The quarrel between Henry and the Pope, on this question, hastened the Reformation in England.

CATHARINE II. OF RUSSIA, *b.* at Stettin, 1729, *d.* 1796; wife of Peter III., and Empress of Russia. Her husband, after much real scandal on the part of both, determined to divorce her; but she frustrated his design by having him seized and strangled in 1762. She was almost immediately crowned Empress. She ruled with great energy and ability, encouraging learning and improving the laws.

CATHAY, the mediæval name of China, and that by which it is still called in Russia.

CATHOLIC APOSTOLIC CHURCH. Refer to *Index*.

CATHOLIC EMANCIPATION, an act of Parliament, passed in 1829, to remove the disabilities of Roman Catholics, who by it became admissible to Parliament, and to all public positions, except those of Regent, Lord Chancellor of England, and Lord Lieutenant of Ireland.

CATHOLIC EPISTLES, the epistles of St. James, St. Peter, St. John, and St. Jude, and so called because addressed to Christians in general.

CATHOLIC MAJESTY, HIS MOST, a title conferred in 1491 upon Ferdinand of Aragon and his successors, by Pope Alexander VI., in honour of the expulsion of the Moors from Spain in the course of his reign.

CATILINA or **CATILINE,** an impoverished Roman aristocrat, a profligate, ambitious man endowed with wonderful powers both of mind and body. Having held all the lower public offices, he was an unsuccessful candidate for the consulship, 65 B.C. He formed an abortive conspiracy to slay the consuls, his successful rivals, and to seize the government. In 63 B.C., while Cicero was consul, he formed a second plot to create a revolution, but all his designs were frustrated by the vigilance and ability of the consul, in a fight with whose troops he was killed.

CAT ISLAND, one of the Bahama Islands, wrongly supposed to be San Salvador, the first landing place of Columbus, in America, when he made his famous voyage of discovery in 1492. Watling Island, about 50 miles south-east of Cat Island, is undoubtedly San Salvador.

CATO, "THE CENSOR," *b.* 234, *d.* 149 B.C., a typical Roman, severe, just, honest, and frugal, who desired a return to primitive ways of pastoral life. He was chiefly engaged, with considerable distinction, in military matters. In 184 B.C., he was elected Censor, and endeavoured to introduce reforms and to check luxury and corruption. Of his many books, "De Re Rustica" is alone extant.

CATSKILL, a group of the Appalachian system of mountains situated in New York State, U.S.A., and famous for much picturesque scenery, and as the scene of Rip Van Winkle's long sleep.

CATTERMOLE, GEORGE, *b.* in Norfolk 1800, *d.* 1868; a celebrated water-colour painter and book illustrator. In early life he, as a pupil of Britton the architect, became a skilled draughtsman. He first became known by his pictorial illustrations of Shakespeare's plays and Scott's novels. Among his paintings are "Sir Walter Raleigh at the Execution of the Earl of Essex," "The Assassination of the Regent Murray," and "Old English Hospitality."

CAUCASIA, a division of the Russian Empire, lying on both sides of the lofty Caucasus mountains. The valleys are

very fertile, producing tobacco, cotton, and rice. It has immense mineral wealth, including coal, iron, copper, and petroleum. The women are celebrated for their beauty. The chief towns are Tiflis, the capital: Baku, the centre of the petroleum district; and Batoum, a port on the Black Sea. The area exceeds 180,000 square miles, and the population approaches 10,000,000.

CAUCUS, a word of American origin applied there to a private meeting of citizens to decide what candidates for office in state or city they shall support and what measures they shall endeavour to carry.

CAUDINE FORKS, two narrow passes, leading to and from a considerable plain surrounded by mountains, and situated on the Appian Way, 20 miles from Capua. In 321 B.C., while at war with the Samnites, a Roman army, with both consuls, marched through one of the defiles into the valley, only to find themselves prisoners there; for on attempting to issue from the valley, they found both exits barred against them. Thus entrapped, they surrendered to the Samnites, but were eventually allowed to return disarmed to Rome.

CAUL, a thin skin sometimes covering the head of a child at birth. It was formerly supposed to foretell good fortune to the child, and its possession was considered a certain safeguard against death by drowning.

CAULKING, (1) The work of filling up the seams of a wooden ship with oakum, to make it water-tight. When this has been effected with a kind of chisel, called a caulking iron, boiling pitch is poured over the whole. (2) The act of closely fitting one plate of an iron vessel tightly against another, so as to make it water-tight.

CAUSTICS. See *Med. Dict.*

CAUTERY. See *Med. Dict.*

CAVENDISH, LORD FREDERICK, *b.* 1836, murdered in Phœnix Park, Dublin, 1882. He was a son of the seventh Duke of Devonshire, and M.P. for the West Riding of Yorkshire from 1865 to 1882. He, with Mr. Burke, was murdered by Irish "Invincibles," while taking a walk in the Park, soon after succeeding Mr. W. E. Forster, as Chief Secretary for Ireland.

CAVENDISH, HENRY, *b.* at Nice, 1731, *d.* 1810; a famous chemist, grandson of the second Duke of Devonshire. Living the life of a recluse, he devoted his energies to science. He devised an experiment to measure the density of the globe, carefully examined the properties of hydrogen, which he showed to be one of the lightest bodies in existence. He was also the first to form water by combining oxygen and hydrogen.

CAVENDISH, SIR THOMAS, *b.* in Suffolk about 1557, *d.* 1592; a celebrated English navigator. In early life he wasted his patrimony in extravagant living, and to repair his fortunes fitted out, in 1586, an expedition against the Spaniards. He sailed from Plymouth round the world, *via* the Straits of Magellan, returning, after an absence of over two years, with much booty plundered from the Spaniards. In a second voyage, which he undertook in 1591, his ships were shattered by a storm, and he died on attempting to return.

CAVIARE, a salted preparation of the roes of sturgeon, and similar fish, made chiefly in the vicinity of the Caspian Sea. The roes, after being skinned, cleansed, and sun dried, are salted and stored in barrels. It is no longer reputed a great luxury.

CAVOUR, COUNT DI, *b.* at Turin, 1810, *d.* 1861; a great Italian statesman. When about 21 years of age he came to England to investigate our system of government. On his return to Italy, he urged the adoption of constitutional rule in his native land. As Premier to Victor Emmanuel, King of Sardinia, he did as much in the Cabinet as Garibaldi in the field, to achieve the union of Italy.

CAWNPORE, an important town of about 200,000 inhabitants, situated in the North-West Provinces of India, 1,000 miles from the mouth of the river Ganges. It is a great railway centre, carrying on considerable trade in agricultural products, and manufacturing cotton and other textile fabrics. It was at Cawnpore that Nana Sahib, in the course of the Indian Mutiny, 1857, caused the European women and children to be massacred, and their bodies to be thrown into a well.

CAXTON, WILLIAM, *b.* in Kent, 1421, *d.* at Westminster, 1491; introduced the printing-press into England. He lived abroad, chiefly at Bruges, for many years from 1441, and there learnt the newly-invented art of printing. He returned to England, about 1471, and set up a printing-press near Westminster Abbey. "The Game and Playe of the Chesse," published in 1474, was the second, if not the first, book printed in England. "The Tale of Troye" was perhaps the first.

CAYENNE PEPPER, a strong red pepper made from the pods of many kinds of Capsicum, which grow freely in the Tropics. The fruit is dried, pounded, baked, and again pounded to produce the pepper. If taken in excess, it is a poison.

CAYMAN, a name applied to the alligator found in Central and South America.

CECIL, ROBERT. See *Salisbury, Marquis of.*

CECIL, WILLIAM (Lord Burleigh), *b.* at Bourne, Lincolnshire, 1520, *d.* 1598; the trusty chief minister of Queen Elizabeth, from 1558 until his death. After six years at Cambridge, he studied law at Gray's Inn. He was private secretary to Lord Protector Somerset, but held no public office during Mary's reign. Elizabeth appointed him Secretary of State at her first council at Hatfield. She exactly described the man when she then addressed to him these memorable words: "This judgment I have of you—that you will not be corrupted with any manner of gifts, and that you will be faithful to the State, and that without respect to my private will you will give me such counsel as you think best." The story of his public life is the history of Elizabeth's reign. She created him Baron of Burleigh, and appointed him Lord High Treasurer.

CECILIA, SAINT, an early Christian martyr, whose *Acts* describe her as being frequently engaged in playing on an instrument of music, and singing the divine praises. She suffered martyrdom by the sword in 230, after a miraculous escape from death by boiling in a cauldron. It is as the patroness of music that she is honoured, and Dryden's "Ode to St. Cecilia's Day," one of the noblest odes in the language, perpetuates her fame. The Church keeps her festival on November 22nd.

CEDAR, a cone-bearing evergreen tree, found principally on the mountains of Western Asia, and in the West Indies. The cedar of Lebanon, which was introduced into England in the 17th century, is the best known. The branches are often nearly horizontal, forming a series of floors, from which the cones spring up. It grows very slowly to the height of 80 to 100 feet, and may attain a girth of 30 to 40 feet. Its red, fragrant wood is very durable, but cannot be highly polished.

CELIBACY, an abstention from married life from religious motives. The priests of Isis, and of Buddha, and the Vestal Virgins, furnish examples of celibacy in the heathen world. In the Christian Church it has been the rule for monks and nuns since the first great Christian monastery was founded by St. Benedict, at Monte Cassino, near Naples, in the 6th century. But it was not until the time of Pope Gregory VII. (Hildebrand), in the 11th century, that celibacy was made compulsory on all in Holy Orders. It is still an inflexible rule with the clergy in the Roman Catholic Church, but since the Reformation it has been repudiated in the Anglican Church.

CELLINI, BENVENUTO, *b.* at Florence, 1500, *d.* about 1571; a famous sculptor. Among his medallions and bronzes are "Leda and the Swans," "Atlas supporting the World," and "Perseus with the head of Medusa." He wrote a most interesting autobiography.

CELLULOID, a substance first made about 1856, composed of paper, camphor, nitric and sulphuric acids. It can be produced in any colour, and in any degree of hardness. When plastic at 175° F., it can be shaped into any form, or when hard, like ivory or coral, can be carved or turned. It is highly inflammable, unless chemically treated. The articles which are manufactured from it are innumerable, such as collars, cuffs, combs, buttons, thimbles, knife handles, billiard balls, and chess-pieces.

CELT, a cutting instrument like an axe head, found in ancient tumuli and barrows, made of stone or bronze. They are still found well preserved, and in most cases more or less decorated.

CELTS, or **KELTS,** a race which in early historic times inhabited most of the centre and west of Europe. Gradually their great and wide-spread power, the centre of which was in Gaul, and at its highest point about two centuries before Christ, was broken down by the Romans. There seem to have been two chief branches, differing in language and in habits; one represented now by the Gaels in the Scotch Highlands; the other by the Ancient Britons, now represented by the Welsh and the Bretons (people of Brittany in France). They practised many useful arts, and possessed a considerable literature, chiefly of a legendary character.

CEMENT, any substance capable of uniting bodies firmly together. Such substances may be classified as (1) adhesive agents, and (2) binders for brick and stone. The former class include *sealing-wax,* a mixture of shellac and resin; *glue,* a jelly obtained by boiling the clippings of hides and the like in water; *paste,* boiled flour and water; and *putty,* a compound of linseed oil and ground chalk. The latter class comprises mortar, Portland cement, Roman cement, and plaster of Paris; *Mortar* is a mixture, with water, of sand and lime; *Portland cement* consists of limestone, chalk, or marble, combined with clay. This mixture, when burnt, forms a quicklime, and this when wetted, swells, becomes hot, and breaks into powder. It sets slowly, with the appearance and firmness of stone. Roman or *Hydraulic cement* is the ground and sifted product of a burnt mixture of lime and clay. It hardens rapidly under water, but is less strong than Portland cement. *Plaster of Paris,* or sulphate of lime, is much used in moulding statues.

CEMETERY, literally "a sleeping place," is the name applied to a burial ground not closely connected with a church as a churchyard. In England, every person is entitled to be interred in the churchyard of the parish in which he dies, unless it is closed to all interments. In 1850 the Board of Health, acting as a Burial Board for the

Metropolis, was empowered to close the city churchyards. The same powers were soon granted, throughout England and Scotland, on appeal to the Home Secretary. Municipal authorities may be constituted burial boards for the provision and management of cemeteries, and parishes may combine for this purpose. Expenses beyond receipts from fees are chargeable to the poor rate. The first English cemetery was opened at Kensal Green, London, in 1832.

CENIS. See *Mont Cenis.*

CENOBITES, the members of religious communities who share a common life, as contrasted with hermits, who live apart from all other human beings.

CENOTAPH, literally "an empty tomb," a monumental tomb raised in memory of one buried elsewhere.

CENSUS. (1) In ancient Rome, a declaration before the censors, by heads of families, every five years, of the value of their property, and the names and ages of their families. This determined the amount of a man's taxation, the degree of his political power, and his liability to military service. (2) In modern times, the official enumeration of the population, together with a statistical account respecting age, sex, occupation, and the like. A census has been taken in Great Britain every ten years since 1801, and in Ireland since 1811. In Germany, France, and the United States a census is taken every five years.

CENTAUR, one of an ancient race of savage men living in the hills of Thessaly, who, according to Greek fable, were the offspring of Ixion and a cloud. In ancient works of art the centaurs are represented as men from head to loins, with the remaining part of the body like that of a horse. This seems to have arisen from the fact that the Thessalians were celebrated horsemen.

CENTENARY, consisting of a hundred; the commemoration of the hundredth anniversary of an important event, or of the birth of a famous person. This has become a common practice in recent times. A *bicentenary*, in like manner, is the commemoration of an event that occurred two hundred years ago.

CENTIGRADE, the name applied to the thermometer introduced by Celsius, about 1742, and now universally used by scientists. The space between the freezing and boiling points of water is divided into 100 equal parts or degrees. The freezing point is 0° and the boiling point 100°; whereas in the Fahrenheit thermometer, commonly used in England, the freezing point of water is taken as 32° and the boiling point as 212°.

CENTRAL AMERICA consists of the republics of Guatemala, San Salvador, Honduras, Nicaragua, Panama, and Costa Rica.

CENTRE OF GRAVITY, a point with respect to any body at which its whole weight may be supposed to act. If the body be supported at this point the body will balance about it in any position whatever. In the case of bodies of regular geometric form and homogeneous structure, the Centre of Gravity corresponds with the geometric centre.

CENTRIFUGAL FORCE, the tendency to fly away from the centre which any body exhibits when constrained to move in a circle. This tendency is clearly felt when a person swings a weight round by means of a piece of string, and may become so great as to break the string if the velocity be sufficiently increased. The principle is well exemplified in Maxim's "Flying-machine." The so-called force is due to the property of inertia (which see).

CEORL, a freeman among the Anglo-Saxons, with no nobility of birth. He could never become an "eorl," but if he acquired 600 acres of land, with a church and a house, he became a "thegn," and his descendant, in the third generation, might claim nobility by birth. A ceorl, without land, although nominally free, was obliged to attach himself to a landed proprietor, and so became practically a serf.

CERBERUS, in Grecian story, the dog which guarded the entrance to Hades. He is usually represented with three heads, and with serpents round his neck.

CERDIC, the founder of the Saxon kingdom of Wessex, from whom the reigning house of Great Britain is descended. In 495 he sailed up Southampton Water, with his son Cynric, and defeated the Britons. Gradually he conquered the southern districts from Surrey to Somerset.

CERES, the Roman name of the Greek *Demeter*, "mother earth," the goddess of agriculture, and of the fruits of the earth. The Romans, who sacrificed pigs to her, honoured her with a festival called *Cerealia*, and placed the decrees of the Senate in her temple. She is frequently represented with ears of corn round her head, poppies in her left hand, and a sceptre in her right. Her daughter, Proserpine, married to Pluto, spent part of the year in Hades with her husband, and part of the year on earth with her mother.

CERVANTES, MIGUEL DE, *b.* near Madrid, 1547, *d.* 1616; the author of the world-famous "Don Quixote." He spent some fourteen years in the army, taking part in operations against the pirates of Algiers, by whom he was enslaved for five years. He devoted the remainder of his life to literature, writing over twenty plays, some poems and romances. His chief title to fame, however, rests upon his "Don Quixote," a romance in which he narrates the diverting adventures of his hero, and humorously satirises at the same knight-errants and their fabulous doings.

CETACEA is an order of mammals, which contains the whale, dolphin, and porpoise. All cetaceans are wholly aquatic, and are so adapted to life in the water that Buffon classed the whale as a fish. In reality, however, they suckle their young, breathe air, and are warm blooded like other mammals. They are shaped like fish in order to traverse the water easily. The fore-limbs are represented by broad flattened paddles, the hind limbs are absent, and the tail is furnished with a horizontal fin, not vertical as in fish. There are no external ears; the nostrils are situated on the top of the head; the skin is hairless, but the body is protected from chill by a dense layer of sub-cutaneous fat, which is known as *blubber*. A special form of fat is present also in the head of the sperm whale, which is known as *spermaceti*. Teeth are present in both jaws in some cases, in the lower jaw only in others, and are absent altogether in the adult in the whalebone whales. *Whalebone* is composed of horny plates that hang from the roof of the mouth in certain species; these plates form a strainer which retains jelly fish and other small fry that enter the mouth of the whale, whilst permitting the water to escape. One of the largest denizens of the ocean is thus enabled to prey on the smallest. In the narwhal only one or two teeth exist in the adult, but these take the form of long tusks in the male, and are of value to man, being sold as *ivory*. One more article of commerce is obtained from the whale, viz. *ambergris*, which is a fatty material found in the alimentary canal, and apparently derived from the half digested bodies of the cuttle-fish, on which the cachalot whale feeds.

CETEWAYO. See *Ketchwayo.*

CEYLON. Refer to *Index.*

CHABLIS, a small town about 90 miles south-east of Paris, surrounded by vineyards which produce the white wine of that name, or at any rate some of it.

CHAD, SAINT, (Ceadda) was Bishop of York and afterwards of Mercia. He died in 672, having gained a great reputation for piety and humility.

CHAIN-ARMOUR. Armour formed of iron links, much used in the Middle Ages. It was much more flexible than plate-armour, but more liable to be pierced by a spear-point. It was often worn under plate-armour. It is still used in the interior of Asia.

CHALCE'DON, an ancient city of Asia Minor, over against Byzantium (Constantinople), near the site of the present Scutari. The Council of Chalcedon, held in 451 A.D. declared its belief in the duality of the natures united in the one person of Christ, the doctrine now held by the vast bulk of Christians.

CHALCED'ONY, a beautiful kind of quartz, found in abundance near Chalcedon, and also in other places. It is much used for making brooches, necklaces, etc. It is found in various colours, and some of the varieties have separate names, as onyx, agate, carnelian, and sard.

CHALGROVE, a village 13 miles south-east of Oxford. Here Hampden, the great Parliamentarian, received his death wound in a skirmish with Prince Rupert's cavalry.

CHALK, of which the Downs and the Dorset Heights, and so many of the rolling hills in England, consist, is a compound of calcium, carbon, and oxygen. Formed ages ago at the bottom of the deep sea, of the shells of minute sea-creatures, it contains the fossilised remains of many animals now extinct, and the process by which it was formed is now going on at the bottom of the ocean. By heating, carbonic acid gas is driven off from chalk, and we get lime.

CHALMERS, THOMAS, *b.* 1780, *d.* 1874; the leader of the great secession which led to the establishment of the Free Church in Scotland, was an ardent Christian, a man of great cultivation and penetration, and one of the most eloquent preachers ever known. Believing that the system of patronage, as exercised, was a hindrance to Christian progress, he and 470 other ministers left the established Church of Scotland, and sacrificed their incomes rather than sanction the continuance of such a system.

CHALONS-SUR-MARNE, an ancient town in the east of France, has considerable trade in champagne wine, and is also largely engaged in making beer. Its history goes back to the Roman times. In 451, A.D., Attila was defeated near Chalons by a combined army of Romans and Franks, and Western Europe was saved from falling into the hands of the Huns.

CHAMÆLEON, a kind of tree-haunting lizard common in Asia and Africa and the south of Spain. Its great peculiarities are its varying colour, the lightning speed with which it darts out its long tongue to catch the insect marked out as its prey, and the fact that its eyes may move independently of one another. Its colour varies from dark brown to bright green, according to the colour of the objects amongst which it is resting at the time.

CHAMBERLAIN (Office). Refer to *Index.*

CHAMBERLAIN, JOSEPH, *b.* in London, 1836, but entered on a business career in Birmingham. He took a very active part in the municipal life of that city, was three times its mayor, and, in

1876, was elected one of its representatives in parliament. In 1880 he became President of the Board of Trade with a seat in the Cabinet, but six years later he broke from Mr. Gladstone on the Home Rule question, joined the Liberal Unionists and co-operated with the Conservatives. His greatest ministerial work was done as Colonial Secretary, 1895-1903. In the latter year he resigned his office in order to obtain greater freedom of action in the promulgation of his views on the closer linking of the colonies to the Mother Country by a system of preferential tariffs.

CHAMBERS OF COMMERCE. See *Commerce, Chambers of.*

CHAMBERS, W. & R. Among the causes which helped the great progress made by Britain in the 19th century, the spread of education takes a conspicuous place. At the beginning of the 19th century hardly a working man could read. Now it would be hard to find one who cannot. The precise part played in this revolution by popular literature, it would be hard to apportion; but, undoubtedly, the healthful literature which the above firm took the lead in producing, was an important factor in it. Commencing in a small way at Edinburgh, in about 1820, the two brothers, William and Robert, went on in steady success until their business attained the large dimensions of to-day.

CHAMBERTIN, a famed brand of red Burgundy produced from the vineyards on the hillsides of the Côte d' Or, in the north-east of France.

CHAMBORD (Henri Charles), **COMTE DE,** *b.* 1820, *d.* 1883; son of the Duc de Berri, and last of the older branch of the Bourbon family, might have been king of France, had his principles been as capable of concealment as those of many who have occupied a throne. Entreated in 1873 to state his views, he refused to abate any of his claims to rule by divine right. In 1875 France was again proclaimed a Republic, and in 1883 the Comte died, leaving his claims, such as they were, to the Comte de Paris.

CHAMOIS, a species of antelope found in the mountains of Southern Europe and Western Asia. About the size of a large goat, its swiftness and sureness of foot are such that pursuit is vain, while its scent and hearing are so keen that approach is difficult. The flesh is much esteemed, and the skin makes a soft wash leather called "Shammy."

CHAMONIX, or **CHAMOUNI,** a valley in the extreme east of France, 50 miles south of Lake Geneva. From Chamonix the ascent of Mont Blanc is usually made, and the inhabitants all depend, more or less, on tourists for their living.

CHAMPAGNE, a district in the north-east of France, comprising the departments of Marne, Aube, and Ardennes, and parts of the surrounding departments. The wine so called is the produce of the vineyards of Champagne, and requires great care in its preparation. It is stored in cellars hewn out of the limestone, in which the district abounds.

CHAMPERTY. Refer to *Index.*

CHAMPLAIN, SAMUEL DE, one of the early French settlers in America, made several voyages of discovery round Canada between 1603 and 1608. He founded Quebec in 1608, and in 1609 discovered Lake Champlain.

CHAMPS ÉLYSÉES, an open space with avenues of trees on the north side of the Seine, between the Pont de la Concorde and the Pont des Invalides. Here, in the season, the fashionables of Paris drive, walk, and lounge, as London people do in Hyde Park. Marie de Medicis planted the first avenue in 1616, and other plantations have been made at various times since.

CHANCELLOR, THE LORD. Refer to *Index.*

CHANCELLOR, RICHARD, an English seaman who, in 1553, made his way by the White Sea to Moscow, where he obtained permission for English ships to trade freely with Russia. Soon afterwards the Muscovy Company was formed.

CHANDOS, SIR JOHN, one of the great captains who served under the Black Prince in France and Spain. He defeated du Guesclin at Auray, and made him prisoner, and won the esteem of the French for his generosity and moderation, as well as bravery.

CHANGELING, It was at one time a common belief that fairies would take away a healthy child, and leave a puny weakling, one of their own, in its place. The child supposed to have been thus left was called a changeling. (See Shakespeare's Henry IV., Part I., Act I., Scene I.

CHANNEL, THE ENGLISH, called La Manche (the sleeve) by the French, is 21 miles wide between Dover and Cape Grisnez, and 140 from Sidmouth to St. Malo. Its general depth is about 200 feet, with a few hollows here and there as deep again. The Channel Tunnel, begun in 1878, near Dover, seems never likely to be finished, but if the coal found in the course of the borings proves workable, the work will not have been wasted.

CHANNEL ISLANDS. These islands, including Jersey, Guernsey, Alderney and Sark, are the oldest oversea possessions of the English crown, having been attached to England since the Norman Conquest. The people, about 90,000 in number, adhere to their old language and customs, and within well-defined limits make their own laws. Living is very cheap, and the inhabitants are very industrious and law-abiding. Large quantities of fruit, vegetables, and flowers are exported to the English markets.

CHANTILLY, a town in France, 26 miles north of Paris, celebrated for the beauty of its environments, and for the magnificent castle erected by the Duc D'Aumale, and presented to the French Institute in 1886. With the library, paintings, and other objects of art included, the total value is about £2,000,000. Chantilly is celebrated for its horse races; population 5,000.

CHANTREY, SIR FRANCIS, *b.* 1781, *d.* 1841; was the son of a small farmer in Derbyshire. He began life as a carver and gilder in Sheffield, but soon came to London to study portrait-painting and sculpture at the Academy. His first success, in 1808, was soon followed by numerous commissions for busts and statues. His "Sleeping Children" in Lichfield Cathedral is world renowned. He left a large sum, the interest of which he directed should be spent in the purchase of the best works of contemporary or recent British artists.

CHANTRY. A chapel endowed for the maintenance of one or more priests daily to say mass for the repose of the souls of the donors or other persons named by them.

CHAPEL ROYAL, the ecclesiastical establishment connected with the king's court. It consists of a dean, sub-dean, two domestic chaplains, eleven chaplains in ordinary, and twenty-five honorary chaplains, whose duty it is to take part, as required, in conducting divine service in the Chapel of St. James's Palace.

CHAPMAN, GEORGE, *b.* 1559, *d.* 1634; was a poet, dramatist, and translator of no mean ability. His poetical rendering of the Iliad and the Odyssey have gained enthusiastic admiration from able critics. He wrote many plays, from which numerous passages can be selected worthy of Shakespeare himself.

CHAPTER-HOUSE, the building where the clergy connected with a cathedral meet to transact ecclesiastical business. Some of the chapter-houses, notably those of York, Southwell, and Wells, are of great architectural beauty.

CHARADE, a kind of riddle in which a word has to be guessed. The various syllables of the given word are hinted at by means of pantomime or oral remarks or written lines, and then the whole word in the same way, after which the answer has to be given.

CHARCOAL, the carbonaceous substance left from wood, after its other elements have been driven off by heating, without allowing it to undergo combustion. This is done by burning the wood with only a limited supply of air, so that the other elements are consumed while the carbon remains almost undiminished.

CHARD. See *Rorke's Drift.*

CHARING CROSS, a district in London, on the east side of Trafalgar Square, so named because here stood one of the numerous crosses erected by Edward I. in memory of his "loved queen" Eleanor. The cross in the yard of Charing Cross Station is a good modern representation of the original.

CHARITY COMMISSIONERS, the four members of the commission created by the Charitable Trusts Act of 1853, and empowered to enquire into the nature, objects, and management of charities in England and Wales, with certain exceptions named in the Act. Their powers were extended by subsequent Acts, but some of these powers, as far as they apply to endowments held solely for educational purposes, were transferred to the Board of Education by Orders in Council, issued in 1901 and 1902.

CHARIVARI, originally a mock serenade of pots and pans indulged in to mark the popular displeasure at some act of the persons thus ridiculed. The term is now applied to such periodicals as Punch, in which public characters are satirised and caricatured.

CHARLATAN, a member of a particular branch of the mediæval minstrels of Provence, in France, who amused the populace by their coarse jests and buffoonery. In England the name was applied particularly to the itinerant vendor of quack remedies guaranteed to cure "all the ills that flesh is heir to," and hence to any person who makes a profession of skill or knowledge not really possessed.

CHARLEMAGNE, *b.* 742, *d.* 814; King of the Franks, and Emperor of the Romans, was one of the great warriors and statesmen of the early Middle Ages. He succeeded in extending the dominion of the Franks over Gaul and Italy, as well as over a good part of Spain and Germany, but his successors had not the ability to perpetuate his sway. Like our own Alfred, he had a high idea of the value of education, and did much to promote it.

CHARLES I., king of England from 1625 to 1649, was born in 1600 at Dunfermline, before his father came to England as king. In private life a virtuous and honourable gentleman, as a king he thought he could "do no wrong," even when breaking his plighted word. The theory of the "Divine right of kings" seemed to possess his whole nature, and this, together with his fondness for taking advice from those whom he liked, rather than from those whom he knew to be wise, proved his ruin. Henrietta, Buckingham, Laud, Strafford, each must bear the blame of leading him astray, and he paid with his life for being thus led. The body of the nation was de-

termined to stop his unlawful acts, and, fortunately, it had leaders whose wisdom equalled the importance of the occasion. Hardly a year had passed since his accession when the first conflict arose between Charles and the Parliament over the impeachment of Buckingham. The Petition of Right, agreed to in 1628, had been disregarded by the time Parliament met in 1629, and their remonstrances were met by dissolution. Till 1640 England was without a Parliament, and during this period occurred the death of Sir John Eliot and the prosecution of Hampden for refusing to pay ship-money. Troubles in Scotland, caused by Charles's attempt to introduce Episcopacy, necessitated the calling of a Parliament in 1640. November of that year saw the meeting of the Long Parliament, determined to put an end to Charles's illegal acts. Nothing but war could now decide the dispute, and from 1642 to 1645 the struggle went on with varying fortunes. The defeat at Naseby put an end to Charles's hopes. The Scots, to whom he fled, surrendered him to the Parliament, and after long negotiation he was brought to trial for levying war on the nation. His manly death at Whitehall made his errors forgotten for a time, and paved the way for his son's accession when the strong hand of Cromwell was removed.

CHARLES II., son of Charles I., *b.* 1630, *d.* 1685, determined early in life to let no excess of principle ruin his worldly prospects, as it had done his father's. On the latter's execution, he signed the Covenant for the sake of becoming king in Scotland. Cromwell's successes put an end to his kingship for a time, but his turn came in 1660. From that time till his death he devoted himself to the enjoyments his position could command. The cruel persecution of the Covenanters of Scotland, our naval defeats by the Dutch, his shameful truckling to France; these are but a few of the disgraces Charles brought on England. The Great Plague of 1665, and the Great Fire of 1666, seem fitting preludes to the disasters of the reign. In 1667 the Dutch sailed triumphantly up the Thames and burnt the dockyard of Chatham. Soon afterwards Charles made a secret treaty with Louis XIV., in which he bound himself to try and restore Roman Catholicism in England with Louis' aid, while the latter was to be left free to make the conquest of the Low Countries. But the storm which his "Declaration of Indulgence" (1673) raised made Charles halt in his religious schemes, and the reception of Titus Oates' story of the Popish plot showed him how strong the feeling was against popery. The Rye House Plot, however, in 1683, gave him an opportunity for vengeance on the Whigs who had so long braved him; and it was easy, with the help of servile judges, to get men, like Lord William Russell and Algernon Sidney, beheaded for the crime of attempting the king's assassination, a crime from which their natures would have recoiled. From that time Charles did as he liked, but his reviving plans for restoring Roman Catholicism were cut short by death.

CHARLES V., *b.* 1500, *d.* 1558; Emperor of Germany and King of Spain, was the central figure in Europe during the active part of his life. As King of Spain his anxieties were few, for the Inquisition kept religious matters quiet there, and the New World provided an outlet for the energies of his Spanish subjects. But as Emperor of Germany he had to keep the peace as far as possible between Protestants and Catholics, and to guard his empire from aggression on the side of France. The balancing measures of Henry VIII. of England kept Charles from ever fighting it out with France, and he was well content to be able to hand on his dominions practically intact to his son Philip, afterwards the husband of our Queen Mary.

CHARLES XII. OF SWEDEN, *b.* 1682, *d.* 1718; one of the meteoric characters that dart across the page of history to teach mankind what to avoid, became king in 1697. His accession was the signal for a concerted attack on Sweden, which he most skilfully repelled. In 1709 he advanced into Russia, but his supplies were cut off, and he met with a crushing defeat at Pultowa, at the hands of Peter the Great. Other wars followed, and, exposing himself recklessly, he received his death wound at the siege of Fredericshall, Norway.

CHARLES EDWARD, "THE YOUNG PRETENDER," *b.* 1720, *d.* 1788; grandson of James II., was in early life a gallant and accomplished man, but the destiny that made him a wanderer with a claim to a crown was largely responsible for causing him to end his days as a drunken profligate. His bold attempt to gain the throne in 1745, his wanderings after the Battle of Culloden, and the brave devotion of Flora Macdonald, create an interest in him that his subsequent degradation fails to sustain. He died at Rome.

CHARLESTON, a seaport in the south-east of the United States, is an outlet for much of the rice and cotton produced in that country. It saw the outbreak of the great Civil War; the bombardment of Port Sumter, at Charleston, on April 12th, 1861, being the first hostile act committed by the Confederates; population 56,000.

CHARLOTTE, PRINCESS AUGUSTA, *b.* 1796, *d.* 1817; the only daughter of George IV. and his wife, Queen Caroline; was an amiable and talented girl, who gave promise of a happy destiny. She married, 1816, Prince Leopold of Saxe-Coburg and died, to the great grief of the nation, in the following year, without issue.

CHARON (ch=k), in classical mythology, the boatman whose office it was to convey souls across the Styx, which flowed round the lower world. A coin was generally placed in the mouth of the dead before burial, to pay the fare.

CHARTER. In historical writings the word refers to documents by which the sovereign promises to confer or preserve certain rights and privileges to his subjects, or some part of them, as "The Great Charter," and the charters of cities.

CHARTERHOUSE (Chartreuse), a school and an asylum or almshouse for the aged, near Aldersgate Street, London. Founded in 1370 as a Carthusian monastery, it underwent various vicissitudes until, in 1611, Thomas Sutton bought it and endowed it for the above purposes. The school is now removed to a site near Godalming, in Surrey. Many famous men, including Addison, Westley, Grote, and Thackeray were educated here.

CHARTER-PARTY. See *Commercial Dictionary.*

CHARTISTS. From 1832 to 1839 a cry for an extension of the Reform Act was pretty general among the working classes, and in the latter year a petition to Parliament was prepared in favour of what was called the "People's Charter," purporting to bear over a million signatures. On its rejection, the agitation culminated in riots in many parts of the country. In 1848 Feargus O'Connor, the Chartist leader, organised a great procession to march to the Houses of Parliament, and demand the passage of the Charter; but the rain, and the sight of the special constables, damped the ardour of his supporters, and from that time the Chartist agitation ceased to be formidable.

CHARTRES, a city situated about 50 miles south-west of Paris, famous for its cathedral: a magnificent Gothic structure, with beautifully designed spires. It is lavishly adorned with statues, and contains about 100 windows filled with stained glass of the 13th century.

CHARTREUSE, LA GRANDE, a famous Carthusian monastery near Grenoble, in France. The monks have kept most successfully the secret of their famous "liqueur," and will most probably continue its manufacture either in Switzerland or England now that they are exiled.

CHARYB'DIS, now Galofaro, a whirlpool in the Strait of Messina, between Italy and Sicily. Opposite, near the Italian coast, was the rock of Scylla, in avoiding which ships were often drawn into Charybdis. Hence the proverb: "to avoid Scylla and fall into Charybdis."

CHASSEPOT, ANTOINE, the inventor of a form of breech-loading rifle adopted in the French Army, and used during the Franco-German War. Its various disadvantages led to its supersession soon after peace was made.

CHATEAUBRIAND, FRANCOIS, *b.* at St. Malo, 1768, *d.* 1848; a great French prose writer. His writings are marked by beauty of language and imagery, and descriptive power. The most famous are "Le Génie du Christianisme," "Les Martyrs," "Atala," and memorials of his life, published after his death under the title of "Mémoires d' outre Tombe."

CHATHAM, a town in Kent, near the mouth of the Medway, owes its importance to its royal dockyard. Here, from 5,000 to 8,000 workmen find employment, according to the number of ships building. The forts round Chatham form an important part in the chain of defences intended for the protection of London against a possible invader.

CHATHAM (William Pitt), **EARL OF,** *b.* 1708, *d.* 1778; spoken of as "Pitt the Elder," to distinguish him from his equally eminent son, and sometimes as "The Great Commoner." He was the great statesman who pioneered England through the wars that led to our acquisition of India and Canada. Entering Parliament early, his oratorical talent soon attracted attention, which was not lessened by the determined stand he made against corruption in every form. From 1757 to 1760 he initiated most of the measures which were crowned with triumph in India and Canada. He tried in vain to avert the measures which led to the revolt of the American Colonies, and he was just as energetic in his endeavours to prevent their independence being recognised. A grateful nation gave him a public funeral and a handsome monument in Westminster Abbey.

CHAT MOSS, a morass in Lancashire, seven miles west of Manchester, the largest piece of bog land in England. It is widely known as the scene of one of George Stephenson's triumphs; for after all engineers had declared it impossible, he carried the Liverpool and Manchester railway over it.

CHATSWORTH, the stately home of the Dukes of Devonshire, is situated on the River Derwent, in Derbyshire. Here Mary Queen of Scots passed a good deal of her imprisonment, although not in the present building, which dates from 1688. The library, paintings, park, and fountains are celebrated throughout Europe.

CHATTERTON, THOMAS, *b.* 1752, *d.* 1770; a melancholy example of genius without balance; was a native of Bristol. He seemed to have a mania for forging ancient manuscripts, while the literary ability he displayed in them would have gained him fame. Coming to London, he found himself in a few months at the end of his resources and poisoned himself in an attic.

CHAUCER, GEOFFREY, *b.* 1340, *d.* 1400; the father of English poetry; would be more widely read if people could be brought to believe how few the difficulties really are in understanding his language, and how interesting are the pictures he gives us of the time he lived in. Living much at Court, where he held various offices, his pictures of the various social grades are very vivid, while his originality gives to his greatest work, the "Canterbury Tales," a variety that is very charming. His other chief works are: "The Book of the Duchess," "The Parliament of Fowls," "Troilus and Cressida," "The Legend of Good Women," and "The House of Fame."

CHAUVINISM, the French prototype of the English "jingoism," received its name from Nicholas Chauvin, who continued to make a great display of his devotion to Napoleon after that monarch's fall. His name was given by several playwrights to characters in their plays distinguished for their exaggerated patriotism.

CHEDDAR, a village in Somersetshire, among the Mendip Hills, is famous for its cliffs, its caves, and its cheese. It stands at the entrance of a long narrow ravine, which extends about a mile among the hills, and forms the well-known Cheddar Cliffs. The caves in these cliffs contain beautiful stalactites and stalagmites, and one of the caves extends to a depth of 300 feet. The system of cheese making, followed in the village, is perhaps now the most widely adopted in the world.

CHEESE, a food formed by separating the solid parts of milk from the liquid and sugary parts, and then salting it and reducing its bulk by pressure. In few industries has the introduction of machinery worked such a revolution as in this, one factory being able to make up the milk of forty or fifty dairies, with better results on the whole as regards quality, while the saving of labour to the individual farmer is enormous. The various kinds of cheese are produced both by difference in the milk and by variation in the processes of manufacture; thus, Stilton owes its richness to the addition of cream to the pure milk from which it is made, while the rich cheeses of the Continent, Roquefort, Camembert, &c., owe their excellence to judicious blending of materials in the course of manufacture. The cheeses most favoured in England are Stilton, Cheddar, Wensleydale, Cheshire, Gloucester, and Gorgonzola. St. Ivel, made near Yeovil, is now bidding fair to become a popular cheese.

CHELTENHAM, a favourite health resort in Gloucestershire, among the Cotswold Hills. Its handsome buildings and promenades, its healthy climate, and general air of cleanliness and order attract many besides those who come for the sake of its springs. The well-known Cheltenham College accommodates about 700 boys, and other educational institutions abound, including a Ladies' College of high repute.

CHEMISTRY is the science which investigates the elements of which substances are made up, and determines the laws which govern the combinations of such elements.

CHEROKEES, a tribe of North American Indians of the Iroquois family, now occupying portions of the Indian Reservations in the United States of America. They have increased in numbers in recent years, have adopted Christianity, and have made such progress in education and civilisation as to be able to support a native newspaper.

CHERBOURG, a seaport and naval station in the north-west of France, almost opposite Southampton. It is supposed to be one of the best fortified places in the world, and millions have been spent on its fortifications and breakwater. Cherbourg is growing in favour as a place of call for Transatlantic Liners; population, 43,000.

CHERUBINI, *b.* at Florence, 1760, *d.* 1842; an eminent musical composer. His earliest work was performed in Italy, but, after visiting London, he finally settled in Paris as director of the Conservatoire. His operas were popular during his life time, but his fame now rests principally on his sacred compositions, especially his Requiem in C minor and his "Coronation Mass."

CHESIL BANK, or **BEACH,** is a curious ridge of shingle extending from the Isle of Portland to the mainland, at Abbotsbury, a distance of about 11 miles. It consists mainly of pebbles, which, however, get smaller as we recede from the island. It is 200 yards wide, or rather less, and is separated from the shore by a narrow channel called the "Fleet."

CHESS, one of the most intricate, and at the same time most fascinating of indoor games, has its origin far beyond the bounds of history. As an intellectual pursuit it ranks very high, but chess is not for the mere ordinary mortal seeking relaxation and amusement. Nevertheless, the popularity of chess is greatly increasing, and few towns of any size are without at least one chess club.

CHESTER, an ancient city on the river Dee, 20 miles from the sea, is one of the few towns whose character has not been entirely altered by modern improvements. The ancient walls are still entire, and form a promenade round the town, while the "Rows," or foot-ways raised above the road, and sheltered by the upper storeys of the houses, are most interesting; population 46,000.

CHESTERFIELD, LORD, *b.* in London, 1694, *d.* 1773; was a diplomatist, statesman, orator, and author, who was distinguished for his polished manners. His published works include: "Letters to His Son," "Letters to His Godson," critical, moral, and humorous essays, and his parliamentary speeches.

CHESTNUT. The Sweet Chestnut is commonly found throughout the South of Europe. The timber is as durable as oak for inside use, as furniture, stairs, etc., but will not stand exposure to the weather. The nuts do not always ripen in England, but in Italy and Spain form an important article of food among the poorer classes.

CHEVAL DE FRISE, Fr. "horse of Friesland," the predecessor of barbed-wire entanglements as a defence of the approaches to camps, fortifications, etc., received its name from the circumstance that it was first used at the siege of Groningen, in Friesland, by William of Orange, in 1594. It consisted of a heavy beam of wood furnished with spikes placed at right angles to each other, so arranged as to present an array of spears to an advancing enemy.

CHEVALIER, a cavalier, a knight. The term is still used as the courtesy title of the younger sons of the French nobility, and is also applied to members of certain foreign orders.

CHEVY CHASE. See *Otterburn.*

CHICAGO, population 1,930,000; the second city in the United States in population, and fifth in the world, is situate in the State of Illinois, at the mouth of Chicago River, where it flows into the south-west corner of Lake Michigan. A hundred years ago the site of Chicago was uninhabited. A fort was built in 1804, and by 1837 a population of 4,000 had grown up around it. In 1870 this had increased to 300,000, and since that time it has multiplied nearly sixfold. Abundance of grain, preserved beef and bacon, capital railway and sea communication, are the factors in Chicago's progress. Situated nearly a thousand miles from the Atlantic, it is reached by means of the Great Lakes and the St. Lawrence, by almost the largest ocean-going ships. The Great Fire in 1871 destroyed the old wooden buildings, and cleared the way for buildings of a modern type. Americans consider Chicago one of the handsomest business cities in the world; its buildings of twenty storeys or more are known all over the world.

CHICORY, or **SUCCORY,** a plant of the order *Compositæ*, growing wild in the temperate parts of Europe and Asia, and also largely cultivated. Its chief use is to mix with coffee, to which, in small quantities, it is for various reasons often considered an improvement. The roots are washed and cut up, then dried till they are about one-fourth the original weight. Then the chicory is ready to be ground into powder and mixed with ground coffee.

CHILE, or **CHILI,** the former being the spelling of the natives, is a long, narrow strip of country, forming a Republic, along the west coast of South America, stretching from Tierra del Fuego in the south to near Lake Titicaca in the north, a distance of 2,500 miles. Its breadth varies from 40 to 200 miles. The inhabitants are a mixture of Spanish with the native Indians, the upper classes being more purely Spanish than those of South America generally. Since the revolt from Spain in 1810, the government of Chile has undergone fewer changes than most of the once Spanish colonies, and it has kept faith with foreign creditors. Santiago, the capital, has a population of about 350,000, and Valparaiso, the chief port, about half that number.

CHILLIANWALLA, a village in the Punjab, near the river Jhelum, the site of a bloody battle between the English, under Lord Gough, and the Sikhs. The English lost most men, but took their revenge a few days later, by nearly annihilating the Sikh army.

CHILLON, a castle standing at the eastern end of Lake Geneva, in Switzerland. Here Bonnivard, the subject of Byron's lovely poem, the "Prisoner of Chillon," was imprisoned from 1530 to 1536.

CHILTERN HUNDREDS. The forests which once covered the Chiltern Hills used to be infested with robbers, and, in order to check them, the Crown used to appoint an officer called the "Steward of the Chiltern Hundreds," the Hundreds being certain divisions of the county. A member of Parliament not being allowed to vacate his seat, the only way to resign is to apply for the Stewardship of the Chiltern Hundreds, which, being a Crown office, necessarily causes his seat to be vacated. Of course, at the present day, this is a convenient fiction only, for such stewardship is now merely nominal.

CHIMÆRA, in classical fable, a fire-breathing monster, having the head of a lion, the hinder parts of a dragon, and the body of a goat. It is said to have wrought great havoc in Lycia, until slain by Bellerophon, with the aid of his winged horse Pegasus.

CHIMPANZEE, a kind of ape, found round the Gulf of Guinea, about four feet high, coming very near to man in its general construction. It has no tail, but it has one more pair of ribs than man. Its brain is about half as big as the average man's. It does not live long in confinement.

CHINA. China Proper has an area of about 1,500,000 square miles. It has Manchuria and Mongolia on the north, Tibet and Turkestan on the west, and Anam on the south. Of these, all but the last are included in the Chinese Empire, and make it as large again

as China Proper. Of this vast territory, by far the most important part is China Proper, which may be described as sloping gradually from the central plateau of Asia to the sea, and formed mainly of the valleys of the Yang-tse-kiang and Hoang-Ho rivers. These each have a length of about 3,000 miles, and the valley of the Yang-tse-kiang presents one of the most fertile and best cultivated districts in the world. The Hoang-Ho is most famed for the havoc it has wrought by bursting the banks which keep it above the low-lying country in the latter part of its course, and sweeping away everything for miles around. The population of China is one of the most homogeneous in the world. Their records begin about the year 2,400 B.C., and so for about 4,000 years or more they have been working out their own destiny with little interference from foreigners, till early in the last century. Their numbers have been variously estimated, but it is probable that China contains about one-fourth of the population of the world, or 450 million people.

Of the productions of China, the tea-plant comes first, but rice, cotton, and sugar are largely cultivated, and silk is plentifully produced. Coal abounds, and gold, silver, iron, copper, lead, tin, and mercury are extensively distributed, but little has been done in working the mines. The industry of the Chinese is remarkable; they are devoted agriculturists, and raise extraordinarily large crops. The silk and cotton manufactures are highly important; earthenware comes next; then various ornamental arts, such as ivory carving, lacquered ware, and metal working. The total foreign trade is about £69,000,000, chiefly with the United Kingdom and its dependencies. The chief *exports* are tea, raw silk, and silk goods, raw cotton, and ornamental articles; the chief *imports* are cotton and woollen goods, opium, iron goods, and coal.

Pekin, the capital, on the Peiho river, which flows into the Gulf of Pechili, is one of the oldest cities in the world; population 1,000,000; it is surrounded by walls, which gave the allied army considerable trouble in the "Boxer rising." Port Arthur, Wei-hai-wei, and Kiao-Chau, are places near the entrance of the Pechili Gulf, leased by Japan, England, and Germany respectively. The Treaty Ports are places to which foreigners are allowed free access. Of these ports, the chief are Canton (population 1,800,000), and Shanghai. There are besides, a score of places in China now open to the trade of the world. Hong Kong, an island off the mouth of the Canton river, fell into our hands in 1841, and is now our chief naval station and centre of trade in the "Far East."

CHINCHILLA, a gregarious rodent, somewhat resembling the rabbit in structure and appearance, which inhabits the mountainous districts of South America, and is hunted for its long, soft, grey fur.

CHINESE. The Chinese language is the best example of that curious group of languages, called mono-syllabic, in which there are no letters, each written character representing a word, and no inflections by which to form words as we do, when we form "looker-on," "overlook," and "looking-glass," from the word "look." Thus there are about 30,000 written characters in the language, each one a word, and any one of these may represent, according to its position, a noun, verb, adjective, or adverb.

CHINOOK, a warm wind prevalent in the valleys between the foot-hills on the eastern side of the Rocky Mountains, and also felt for a considerable distance over the western portion of the great plains. Its influence extends almost as far north as the Arctic Circle. It prevents the snow from lying long, and thus enables the ranchmen to keep their cattle in the open throughout the winter.

CHIPPENDALE, THOMAS, a furniture maker who flourished in the middle of the eighteenth century, was a native of Worcestershire. He came early in life to London, and soon gained renown as a designer. His mahogany cabinets are much esteemed, although too heavy and too highly ornamented for present day taste.

CHITRAL, a mountainous State, with an area of about 7500 square miles, extending along the north-west frontier of Kashmir. The district is of great strategical importance, as it commands the principal passes over the Hindu-Kush. The territory has been occupied by the British since 1895.

CHIVALRY, the whole system of life and conduct expected from a true and loyal knight (chevalier) is comprised in the word *Chivalry*. The French proverb, "Noblesse oblige," perhaps best expresses the spirit on which Chivalry was founded. It owed its origin partly to the Feudal System, which made the lord a superior being to his vassals, and partly to the esteem in which women were held by Teutonic tribes.

CHOCOLATE, a preparation of the seeds of a species of tree growing freely in the West Indies and South America. The seeds are ground to a very fine powder, which, either alone, or mixed with flour or other farinaceous matter, is sold as cocoa. Chocolate is made by the addition of water and sugar, together with some flavouring matter, as vanilla, etc.

CHOKE-DAMP, the name given by miners to carbonic acid gas. Besides being produced in the ordinary way by persons breathing, and by combustion, it is also slowly given off by coal, so that great care is required in entering a pit, or part of a pit, that has been for some time disused.

CHOPIN, FREDERIC FRANCOIS, *b.* 1809, *d.* 1849; was born near Warsaw, in Poland. Of a highly nervous nature, his temperament is expressed in his works. Of these, his pianoforte pieces are by far the most important; opera and oratorio he never attempted. He visited London twice, in 1837 and 1848, but the last half of his life was spent in Paris.

CHORUS, a band of people who sing together, or a piece of music that is sung by a number of people together. In Greek plays the chorus is a number of people who remain on, or in front of, the stage during the play, and utter speeches either explaining the action of the play, or commenting on the events portrayed. Sometimes the chorus addressed, and was addressed by, the actors.

CHOUANS, Royalists who, after the French Revolution, strove to maintain the royal cause in Brittany, and for some time caused the Republican Government great anxiety. They were defeated in 1796 by La Hoche; and Cadoudal, the chief leader, after several attempts to revive the movement, was executed by Napoleon in 1804.

CHRISM, the holy oil used in the Roman Catholic and Greek Churches in baptism, confirmation, ordination, and extreme unction.

CHRISTIAN BROTHERS, a society founded in Ireland in 1802, for the education of the poor. The society maintains a number of primary schools both in Ireland and the Colonies, and much of the secondary education is also under its control.

CHRISTIAN IX., King of Denmark, the father of Queen Alexandra, was born in 1818, and came to the throne in 1851. Since the loss of Schleswig-Holstein in 1864, Denmark has been free from outside trouble, while internal dissensions have been minimised by the love of the people for their ruler, despite their occasional disapproval of his policy; *d.* 1906.

CHRISTIANIA, the capital of Norway, stands at the head of Christiania Fiord, an inlet of the Skager Rack. The king has two palaces here, and it is the seat of Parliament, (the Storthing and the Lagthing). It is named after Christian IV., who founded it in 1624, after the destruction of Oslo, the old town, by fire. The population has increased from 128,000 in 1885 to 225,000 in 1902. The reason for this extraordinary increase is the rapid growth in its manufactures and trade, for Christiania is fast becoming the chief manufacturing town and port of the kingdom. Timber and wood-pulp for making paper are largely exported.

CHRISTIAN, PRINCE, *b.* 1831, is a prince of the house of Schleswig-Holstein. In 1866 he married Princess Helena Victoria, the third daughter of Queen Victoria. Their eldest son, Prince Christian Victor, died 1900 in South Africa during the Boer War.

CHRISTIE'S, a famous auction room for all objects of art, situated in King Street, London. The sum total of a day's auction has exceeded 100,000 guineas.

CHRISTMAS DAY, the day on which Christians celebrate the birth of Christ. In the Early Church there was no fixed day for its celebration, but by the end of the fifth century the 25th December had become the general day. The rejoicings so common in most countries were encouraged originally as an antidote to the pagan revels usually celebrated at the winter solstice. In the Greek and Roman Catholic Churches it is common to have a representation of the Holy Family, the stable, manger, etc., set up in the churches.

CHRISTOPHER, SAINT, a saint of the Roman Catholic and Greek Churches, of whom many beautiful legends are related. A man of enormous strength, he showed his love for God by bearing pilgrims across a broad river. One day Christ came to him in the form of a child, to be borne across, and he marvelled at the weight of the burden till the child said, "Marvel not, for thou hast borne Him who bore the sins of the world." Hence his name Christophoros, "Christ-bearer."

CHRIST'S HOSPITAL, the "Blue Coat School," as it is usually called, was founded by Edward VI., in Newgate Street, on the site of an ancient Greyfriars' Monastery. For three centuries and a half it did its beneficent work there, and now is removed to Horsham, in Sussex. Among the eminent men who have passed through the school may be mentioned Camden, Stillingfleet, Lamb, S. T. Coleridge, Sir Louis Cavagnari, and Sir Henry Maine.

CHRONOLOGY, the science of time, requires a starting point and an agreed method of estimating the interval between one event and another. The Sun has provided the latter requisite, but different peoples having adopted different starting-points, the chronology varies accordingly. [See *Era.*]

CHRYSALIS. The chrysalis stage is the second in the life history of butterflies and moths. The caterpillar, having finally ceased eating, weaves a cocoon or webby shelter, or suspends itself by a silken thread in some quiet nook, or burrows in the earth. It is now in the chrysalis stage, and to all outward appearance quite lifeless. But really it is inwardly undergoing a complete change, and, in a few weeks, emerges as a moth or butterfly.

CHRYSOSTOM, SAINT, the "golden-mouthed," as his name means, was a native of Antioch, born about 347 A.D. He became a priest in his native city, and his

eloquence soon attracted universal attention. In 398 he became Archbishop of Constantinople, but his zeal in reforming abuses brought about his banishment. The sympathy shown to Chrysostom irritated the Emperor Arcadius so much that he commanded him to retire to Pityus, on the very extreme of the Black Sea. The journey on foot, with bare head, proved too much for the feeble old man, and he expired on the way. His writings are among the most valuable the Christian Church possesses, characterised as they are by religious fervour, eloquence, and critical acumen.

CHUNCHUSES, turbulent bands of brigands inhabiting Manchuria and Mongolia. During the Russo-Japanese War they several times cut the railway, and the accusation was brought by Russia that they were secretly in the pay of the Japanese.

CHURCH ARMY, a Christian Mission in connection with the Church of England, founded by the Rev. W. Carlile in 1882. It has been described by the Prison Commissioners as "one of the great reclaiming influences of the age." The organisation includes an Evangelistic Society which trains working men and women for work among the masses; missions to prisons and workhouses; mission vans and tent missions for harvest workers; a social department with labour, rescue, and lodging homes; Boys', Girls', First Offenders' and Inebriates' Homes; mission nurses engaged in parochial and rescue work; and an Emigration Test Farm and Market Garden in Surrey where able-bodied men and youths are instructed in practical farming, and sent when fit to the Colonies.

CHURCHILL, JOHN, DUKE OF MARLBOROUGH, *b.* 1650, *d.* 1722; one of England's greatest generals, covered his nation with glory by his successful campaigns, and his own private character with infamy by his treacheries and acts of dishonesty. He first distinguished himself against the Dutch, and, on the accession of James II., his rise was rapid. He took an active part in suppressing Monmouth's rebellion, but on the landing of William of Orange he deserted the king for the prince. William, however, never really trusted Churchill, although he made him Earl of Marlborough in recognition of his services in Ireland. When Anne came to the throne, Marlborough's time came. He had married Sarah Jennings, the favourite attendant of Queen Anne, who could do nothing that her minion did not approve of. In the war against France that followed, Marlborough added success to success. Donauworth, Blenheim, Ramillies, Oudenarde, Malplaquet, any one of them would have made the victor famous. The Treaty of Utrecht, 1713, which ended the war, was more favourable to the French than they might have expected. Marlborough's enemies had by this time gained the queen's ear, and his wife's day was over. Charged with peculation, he retired to his palace of Blenheim, at Woodstock, the gift of a grateful queen and nation in years gone by, and from that time he took little part in public life.

CHURCHILL, LORD RANDOLPH, *b.* at Blenheim Palace, 1849, *d.* 1895; was the third son of the seventh Duke of Marlborough. He entered Parliament in 1871 as Conservative member for Woodstock, and soon made a reputation as an able debater. As one of the most active of the members of the so-called Fourth Party, he made frequent attacks on Mr. Gladstone, John Bright, and other Liberal leaders. In 1885 he became Secretary for India, and the following year was Chancellor of the Exchequer and Leader of the House of Commons, but resigned within six months. His biography has been written by his son, Winston Churchill.

CHURCHILL, WINSTON, *b.* 1874: a soldier, journalist, and politician, is the eldest son of Lord Randolph Churchill. As a soldier he saw service in Cuba, on the Indian Frontier, in the Sudan, and in South Africa, where he was taken prisoner but cleverly managed to escape. He became M.P. for Oldham in 1900, as a Conservative, broke with his party in 1904, over the Tariff question, and became Under-Secretary for the Colonies in the Liberal Government, 1905. His "Life of Lord Randolph Churchill" is a work of high merit. (2) A well-known American, *b.* 1871; journalist and novelist, the author of "The Celebrity," "Richard Carvel," and "The Crisis."

CIBBER, COLLEY, a dramatic writer and actor, *b.* in London, 1671, *d.* 1757. His plays include "Love's Last Shift," "The Careless Husband," and "The Non-juror." In 1730 he was appointed poet laureate. His "Apology for the Life of Colley Cibber" has been described as one of the most amusing autobiographies in the English language.

CICERO, MARCUS TULLIUS, 106 B.C.—43 B.C., the greatest orator, and one of the greatest statesmen Rome ever produced, lived in times too troublous for a genius like his. Cæsar, Pompey, Crassus, and Catiline were too much for him, while the bold stand he made against Antony after Cæsar's death only brought about his own ruin. The speeches and philosophical writings of Cicero are still read with pleasure, for the gracefulness of the language and for the insight they give us into the life and thought of the time.

CID, THE, Don Rodrigo Diaz, Count of Bivar, *b.* 1026, *d.* 1099, was one of the heroes of the Middle Ages whose exploits have handed down their names to undying fame. Born in Castile at the time when the Moors seemed destined to be masters of Spain through their own prowess and the disunion of the Spaniards, he drove them back from his native land before he was twenty. From that time till his death he was foremost among Spanish knights. Banished through his sovereign's jealousy, he went wherever fighting was, and always with success. The Moors, with whom he was sometimes allied against his Spanish enemies, called him the Cid, or "Lord."

CIDER, a drink made from the juice of apples. Devonshire, Herefordshire, and Worcester are famous for its production. It is usually made by the growers of the fruit, so the results are apt to vary, but when cider is sound, it is a most wholesome beverage.

CIMABU'E, GIOVANNI, *b.* 1240, *d.* 1302, is generally credited with having revived the art of painting in Italy after the neglect of the dark ages. He was undoubtedly the founder of the Florentine School of Painting, which produced the famous masters Raphael, Michael Angelo, and Da Vinci. His mosaics at Pisa and frescoes at Florence are far-famed.

CIMMERII. The Cimmerii were a nomadic people, inhabiting the district north and north-west of the Black Sea. They more than once attempted the conquest of Asia Minor, but were unsuccessful. In early times the fame of their gloomy winter caused people to talk of it as a land without sun, and perpetually dark. Hence the phrase, "Cimmerian darkness."

CIMMERIAN BOSPORUS, a name given to the Strait of Yenikale, by which the Sea of Azov is entered.

CINCHONA, or **CHINCHONA,** a tree from whose bark is prepared the valuable medicine, quinine. It is a native of South America, growing best on the moist eastern slope of the Andes, but it has now been successfully introduced into India, Burma, Ceylon, and the West Indies. The bark is called Peruvian bark, Jesuit's bark, and by other names, as well as Cinchona bark. Sulphate of quinine can now be made in the laboratory, and is displacing that obtained from the cinchona.

CINCINNA'TI, the largest city in the State of Ohio, United States of America, stands on the north bank of the Ohio river, in the midst of a fertile and well-peopled district. Next to Chicago, it is the most important centre of the pork and bacon trade, but its other industries are numerous and important; population 325,000.

CINCINNA'TUS, LUCIUS QUINCTIUS, one of the favourite heroes of the early republic of Rome; was chosen consul in the year 460 B.C. Two years afterwards he was chosen to lead, as Dictator, the army of Rome against the Æquians. The messengers sent to tell him of the honour found him ploughing his little farm. He put on his toga to hear their commands, went to Rome, and after defeating the enemy, was at home again at work in sixteen days.

CINEMATOGRAPH. See *Biograph.*

CINNABAR, a compound of mercury and sulphur, constituting the ore which is the chief source of mercury. The mines of Almaden, in Spain, which have been worked for over 2,000 years, are still very productive. The mercury is obtained by heating the ore under suitable conditions.

CINNAMON, the dried bark obtained from the branches of a tree of the laurel kind. The branches are cut down, and the outer bark scraped off. A slit is then made lengthwise, and the bark gradually loosened from the stem. As it dries, it rolls up, and the smaller rolls are placed inside the larger. Cinnamon grows freely in Ceylon and the East Indies.

CINQUE PORTS, "five ports"—Dover, Sandwich, Hythe, Romney, and Hastings—which, in Saxon and succeeding times, were bound to furnish ships for the purpose of repelling invasion, and in return were granted special privileges. Rye and Winchelsea were afterwards added to them.

CINTRA, a small town of Portugal, 14 miles north-west of Lisbon. Standing high, it is a favourite residence for the wealthier inhabitants of Lisbon. The "Convention of Cintra," by which were thrown away all the advantages Wellesley had gained over the French, was signed here in 1808.

CIRCASSIA, a district extending between the north-west slope of the Caucasus mountains and the Black Sea. The inhabitants of this mountainous region have long been famed for their beauty, bravery, and love of freedom. Unjustly handed over to Russia by the treaty of Adrianople, in 1829, they did not submit without a long and sanguinary struggle.

CIR'CE, in classical mythology, a fabled sorceress who lived on the island of Æaea. Ulysses, in his wanderings, landed on her island, and she changed some of his companions into pigs. Ulysses, however, persuaded her to remove the spell, after which he stayed with her for a year.

CIRCULAR NOTES, bank notes especially devised for the use of travellers in foreign countries. The bank which issues them also gives the holder a letter addressed to its foreign agents, authorising them to cash the notes in favour of the person named. See *Commercial Dict.*

CIRCUMCISION. The practice of this rite was not confined in ancient times to

the Jews, nor is it now. The Egyptians and other neighbouring nations, practised it of old, and so do Arabs, Egyptians, and Persians to-day, besides many less civilized peoples. Sanitary reasons may account for its origin, although among the Jews it is a sign of religious faith as well.

CISTERCIANS, a religious order of monks and nuns, following the rule of St. Benedict, founded in 1098, and so called from its original convent in the forest of Citeaux (*L.* Cistercium) in France. Within a century from its foundation the orders possessed 800 rich abbeys on the Continent, and before the Reformation the convents of this order were very numerous in England. The habit of the order is a white cassock with a black scapulary and woollen girdle.

CITIZEN KING, THE, Louis Philippe, (*b.* 1773, *d.* 1850), who was *elected* king of the French in 1830, had a chequered existence. Though a member of the Bourbon family (the royal family of France), he sided with those who set up the Republic, but becoming suspected of disloyalty to the republic, he fled to England, and there remained until the restoration of the monarchy, 1814. Elected king after the revolution of July, 1830, he became more and more autocratic with years, and was at length compelled, in 1849, by a popular rising, to abdicate. He fled to England as Mr. Smith, and there died in 1850.

CITRON, the fruit of a tree belonging to the same order as the lemon tree and orange tree. The common citron is much like a lemon both in size and shape, but by cultivation it can be grown up to four or five pounds in weight. The rind is very thick and fleshy, and it is this which gives us the best candied peel. The tree grows freely in warm countries.

CIVET, a carnivorous animal of the cat kind, secreting by means of a gland in its hinder parts an oily substance yielding the perfume once so esteemed. It is found wild in the hot parts of Asia and Africa, and is often kept in confinement, for the sake of obtaining the civet perfume.

CIVIL LIST. Refer to *Index*.

CIVIL SERVICE, a term denoting all officials engaged in carrying on the administration of government in any of its forms, whether it be the collection of revenue, administration of justice, post-office work, or any similar work.

CLAIRVOYANCE, "clear seeing," is the power, alleged by some to exist, of seeing, when mesmerised, what is at the moment occurring in some distant place. Despite the assertions of its believers, no clear case has yet been proved of a clairvoyant being able to do what he claims to do.

CLAN-NA-GAEL, the name of a society of Irish-American Fenians, founded in Philadelphia about 1870. Chicago afterwards became its head-quarters. The policy of its members was to terrorise the British parliament and people in the hope of securing the complete separation of Ireland from Great Britain, or, at least, its virtual independence. To this end dynamite outrages and assassinations were organised.

CLAQUE, a term introduced from France to denote a number of people hired to applaud a piece or a performer at the theatre. The custom of doing so is quite common in France, and it appears to be making some progress in England.

CLARE, RICHARD DE, Earl of Pembroke, better known as "Strongbow," began the English conquest of Ireland. When Dermot, king of Leinster, came to seek help against his rivals, Strongbow agreed to aid the king and obtained his daughter Eva in marriage. On Dermot's death, Strongbow became king of Leinster, and he hastened to do homage to Henry II. as such.

CLARENCE, DUKE OF. (1) The first prince to bear this title was *Lionel*, third son of Edward III. (2) It was also borne by *George*, brother of Edward IV. The duke married a daughter of Warwick, "the King-maker," and joined him in making war on the king. But on the eve of the battle of Barnet he went over to his brother's side, and helped him to gain the victory. Later on he fell under the king's suspicion, and was imprisoned in the Tower, where, it was commonly reported, he was drowned in a butt of Malmsey wine. (3) *William IV.*, before his accession, was known as Duke of Clarence. (4) The same title has since been borne by *Albert Victor*, eldest son of Edward VII. This prince died in 1892, at the age of 28, just before the time appointed for his marriage with Victoria Mary (May) of Teck.

CLARENDON, CONSTITUTIONS OF, a series of laws drawn up by a council of nobles and prelates held at Clarendon, near Salisbury, in 1164. Their aim was to restrict the power of the clergy and bring them more under the secular laws. Archbishop Becket refused to consent to them, and hence arose the quarrel between him and Henry II.

CLARENDON (Edward Hyde), **EARL OF,** *b.* 1608, *d.* 1674; the author of the "History of the Rebellion in England," was well qualified for his work, for he was an actor in most of the events between 1640 and 1660. In the Short Parliament, and in the early months of the Long Parliament, he was with the popular party, but the "Grand Remonstrance" threw him on the side of the king. Faithful to Charles and to his son, he had his reward when the Restoration came. As Lord Chancellor and Earl of Clarendon he occupied posts of the highest dignity. But he soon lost favour with both king and people, the former because he abhorred Charles's vices, and the latter, because of his repressive measures. In 1667 he was impeached of high treason, and had to go into exile, from which he never returned. He died at Rouen. His daughter, Anne, married the Duke of York, afterwards James II, by whom she had a daughter, who reigned as Queen Anne.

CLARET, the name given to the light, red wine, containing from 9 to 10 per cent. of alcohol, obtained from the vineyards in the neighbourhood of Bordeaux. Clarets improve by removal, a voyage rendering them lighter and more delicate. Very good claret is also produced in California.

CLARKSON, THOMAS, *b.* 1760, *d.* 1846; one of the devoted band of workers to whom we owe the abolition of the slave-trade (1807), and the freeing of slaves through the British Empire (1833). He was born at Wisbech, and educated at St. Paul's School and at Cambridge. Here he gained a prize for a Latin essay on slavery, and thenceforward devoted himself to its abolition. His later life was spent in furthering other benevolent schemes, particularly for seamen.

CLASSICS. The early inhabitants of Rome were divided, according to their wealth, into six *classes*. Those who belonged to the highest class were called "classici," i.e., members of *the* "class." Hence the best writers were called "classics," and a period in which eminent writers abounded is called a classical period. Similarly, the Greek and Roman authors, on account of their general excellence, are especially regarded as "classics."

CLAUDE LORRAINE, *b.* 1600, *d.* 1682, was a native of Lorraine, but was taken quite young to Rome, where he spent most of his life. Beginning as a menial in the studio of Tassi, he worked his way up until he became the great landscape painter of his day. Four hundred of his pictures exist in the chief galleries of Europe, about 50 being in England.

CLAUDIUS, Emperor of Rome, 41–54 A.D., was fifty years of age when the assassination of his nephew Caligula made him Emperor. He ruled wisely and well, but his private life was far from happy. He visited Britain in 43 A.D. After putting his wife Messalina to death for her crimes, he married his niece Agrippina, who poisoned him.

CLAUS, SANTA. See *Nicholas, Saint.*

CLAY, a kind of earth, which when wet has a tenacious and plastic character. All the clays consist mainly of aluminium compounds, and they all have the sticky nature when wet, but do not all retain their cohesive power when dried, some rather falling to powder.

CLEARING HOUSE. See *Commercial Dictionary.*

CLEMENS, SAMUEL, an American writer whom the world knows as *Mark Twain*. He was born in 1830, and early in life learned piloting on the Mississippi river, whence his "nom de plume;" for "mark twain" means two fathoms by the mark, in sounding. His descriptions of life in the Nevada silver mines are very fine; but it was the "Innocents Abroad" which established his fame. It records in a humorous manner the doings of a pleasure party visiting the Continent and Palestine.

CLEOPATRA, *b.* 69 B.C., *d.* 30 B.C.; daughter of Ptolemy, king of Egypt, was contending with her brother for her share of the government when Julius Cæsar arrived at Alexandria. Cæsar at once became her helper, and soon her lover. She followed Cæsar to Rome, and after his death made Antony her slave. After the battle of Actium, 31 B.C., Antony took refuge with her in Egypt, but finding that she was about to surrender him to Octavius, he killed himself, and Cleopatra put an end to her life by the poison of an asp.

CLEOPATRA'S NEEDLE, a monolith of red granite, on the Victoria Embankment, London, was presented to England, in 1819, by Mehemet Ali, Pasha of Egypt. It was brought to this country by Mr. John Dixon, the engineer, at the expense of Mr. Erasmus Wilson, in 1878. It weighs 180 tons.

CLEP'SYDRA, an instrument for measuring time by regulating the escape of water from or into a vessel. The common form was that of a float in a tall vessel, which rose by the influx of water from an orifice above, thus pointing in succession to lines at regular intervals on the sides of the vessel.

CLEVELAND. (1) The north-eastern portion of Yorkshire, a hilly district containing a rich deposit of iron-ore, which is smelted at Middlesborough, a town which owes its prosperity, and almost its existence, to its iron-works. (2) A city in Ohio, U.S.A., on the south shore of Lake Erie, where the Ohio Canal connects the lake with the Ohio river. Cleveland is both an important manufacturing town and a busy port. Its chief industries are the iron manufacture and petroleum refining, while its ample railway facilities make it second only to Chicago as a lake port; population, 380,000.

CLEVES, a small town of Prussia, a few miles west of Nimeguen in Holland, and near the river Rhine. Anne of Cleves, Henry VIII.'s fourth wife, was born in

the fine old castle which commands the town.

CLIFFORD, ROSAMOND, "the fair Rosamond," was the daughter of Walter, Lord Clifford. That King Henry II. loved her and visited her at Woodstock, seems clear, also that she died about 1176, and was buried at Godstowe, near Oxford. The details about the labyrinth and the cup of poison are probably romantic additions.

CLIMACTERIC YEARS are critical or important years in a person's life. These are supposed to be the seventh, and years with odd multiples of seven, i.e., the 21st, 35th, etc. As the 63rd is regarded as the most critical year, especially for men, it is called the "grand climacteric." There is no real ground for these notions. The only climacteric is the change of life in a woman when menstruation ceases.

CLIMATE, the general state of the atmosphere in respect to temperature and humidity. The climate of a place depends mainly on its latitude; but there are certain modifying causes, the chief of which are—(1) altitude of the place, (2) its proximity to the sea, (3) the winds that usually prevail, and (4) the nature of the soil, and whether wooded or bare.

CLIMAX, "a ladder," is a rhetorical device in which the conclusion is led up to by a series of particulars, each one more striking than the preceding. The last statement, or proposition, is often called the "climax." (See 1 Sam. iv. 17.) When details of slight importance succeed the climax, an *anticlimax* is reached.

CLIVE, ROBERT, one of the founders of our Indian empire, was born near Market Drayton, in Shropshire, 1725. At school he loved fighting better than he did learning, and he was for ever in trouble. At eighteen he was packed off to Madras in the service of the East India Company, and the monotony of his work made him attempt suicide. In 1746 he enlisted as an ensign in the Company's army, and by 1751 had gained renown for daring, dash, and success as a commander. The victory of Plassy, in 1757, made him the real master of Bengal, though a native prince was the nominal ruler. In 1760 he came home to the honours he had earned. He went out again in 1765, and with a strong hand corrected the abuses of the Company's officials. On his return to England, in 1767, he found that the enemies he had made by his reforms had blackened his name. From then till his death, in 1774, he was the victim of accusations that caused him at last to take his life.

CLOSE TIME. Refer to *Index*

CLOSURE. Refer to *Index.*

CLOTILDA, SAINT, *b.* 475. *d.* 545, A.D., daughter of Chilperic, king of Burgundy, and wife of Clovis, king of the Franks. Her saintly life converted her husband, who did much to forward Christianity in France. She was canonised soon after her death.

CLOUDS consist of minute particles of water suspended in the air, each particle having for its centre a speck of dust, from which the purest air is never free. The production of the watery particles is due to the condensation of the vapour in the atmosphere caused by a fall of temperature. When, for instance, a warm wind strikes the side of a cold mountain, it is cooled, and, in cooling, the vapour it contains condenses, just as dew is formed by the rapid cooling of the air in contact with the ground at night. [See *Fog.*]

CLOVES, the flower buds of a kind of myrtle. Before being gathered they are of a red colour. They are dried either in the sun or artificially. The clove-tree is a native of the East Indies, but grows freely in moist and warm climates.

CLOVIS, *b.* 465, *d.* 511, A.D.; king of the Franks, succeeded his father Childeric in 481, and in 30 years he greatly extended his sway in Gaul, defeating the Alemanni, or Germans, in the north-east, and the Visigoths in the south-west. His conversion, due to the religious example of his wife, Clotilda, did much towards spreading Christianity in Gaul.

CLYDE, THE RIVER, rising in the Lead Hills, in the south-west of Scotland, flows in a general north-westerly direction into the Firth of Clyde, past Lanark, Hamilton, and Glasgow, after a course of 100 miles. Near Lanark are the celebrated Falls of Clyde, where the river descends about 250 feet in a few miles. The Firth of Clyde may be said to begin at Glasgow. It is one of the busy waterways of the world, having Glasgow at its head, and a fringe of busy ports and watering-places right down its course. Dumbarton, on the north, and Greenock on the south bank, come next to Glasgow in importance.

CLYTÆMNESTRA, in Greek legends, wife of Agamemnon, king of Mycenæ. On his return from Troy, Clytemnestra murdered her husband for the sake of Ægisthus, her paramour, during Agamemnon's absence. Orestes, her son, shortly afterwards slew her to avenge his father.

COAL, a mineral formed of vegetation by pressure, heat, and chemical action. The forests of bygone ages have been submerged, and then covered with a deposit of sand, clay, or limestone. The same process having been repeated several times, many layers of compressed vegetation are found one above another, with rock of varying thickness and substance between. Such a series of layers, containing coal at varying depths, constitute what we call the "Coal Measures." Coal varies in kind according to the extent to which certain gases and water have, or have not, escaped from the squeezed vegetation. The extent of ground beneath which we expect to find coal is called a coal field. The two chief kinds of coal are (1) anthracite, which gives little smoke or flame in combustion, and (2) bituminous coal, which, containing a large quantity of gas, gives a good deal of flame.

COAL GAS. See *Gas, Coal.*

COALING STATIONS, places conveniently situated along the main trade-routes, and at certain strategic points, where supplies of coal are kept to re-stock our liners and men-of-war. Along the great trade route to India and Australia, we find Gibraltar, Malta, Aden, Bombay, Karachi, Colombo, Singapore, and Hong Kong. On the route to South Africa are Gibraltar, Sierra Leone, and St. Helena. In the West Indies, Jamaica is our great coaling station. All these are strongly fortified.

COAL TAR. When coal is heated in a closed vessel, gas is produced and also a thick, black liquid, insoluble in water, which is called coal tar. The uses of coal tar are various and important, but its chief value lies in the substances obtained from it, among which are aniline dyes, benzine, naphtha, creosote, saccharine, etc.

COASTGUARD. This force, originally intended only to guard against smuggling, is now more a body of men for coast defence, although its original duties remain. The coasts of Great Britain are divided into eleven districts, each under a captain, who has a cruiser and smaller boats, at his disposal. The men have, as a rule, served in the navy, and receive high pay, besides quarters and other privileges.

COATBRIDGE, a rapidly growing town of Lanarkshire, in Scotland, 9 miles east of Glasgow. Situate in the great mineral district of Scotland, it makes iron goods of all kinds, as well as heavy earthenware; population over 40,000.

COAT OF ARMS. Refer to *Index.*

COBBE, FRANCES POWER, *b.* near Dublin, 1822, *d.* 1904, a talented essayist, lecturer and author. She had strong views on religion, women's rights and duties, and the question of vivisection, and was an able exponent of her ideas, contributing largely to some of our leading newspapers.

COBBETT, WILLIAM, *b.* at Farnham, 1762, *d.* 1835; was a fine example of untaught and unregulated genius. Till the age of 21 he was a ploughman, with literary tastes; then he went to London, and, after working nine months as a lawyer's clerk, enlisted. Having gone through various adventures he settled down as a political writer, and his out-spokenness brought him the usual reward of those days, imprisonment. After many futile attempts, he succeeded in entering Parliament, but made no mark there. His writings, where not marred by prejudice and personal feeling, are extremely interesting, and rise sometimes to a pitch of excellence quite striking. His "Rural Rides" are well worth perusal.

COBDEN, RICHARD, *b.* near Midhurst, 1804, *d.* 1861; the great leader of the "Free Trade Movement" of last century, was the son of a Sussex farmer, and came to London as a boy to learn the drapery trade. In 1830 he and some friends set up a calico printing establishment in Manchester, which was a great success. In 1838 he began to advocate the repeal of the Corn Laws, and the work of the Anti-Corn Law League fell mostly on his shoulders. When the heat of battle was over, it was found that Cobden, in his zeal for others' welfare, had neglected his own, but a national subscription of £80,000 made amends for that. He was the founder of what is often called the "Manchester School" of politicians, and till the end of his life he insisted on the importance of peace, free trade, economy, and non-intervention in the affairs of other nations.

COBLE, a low flat-floored boat much used by the fishers of the north-east coast. The rudder projects two or three feet below the bottom, thus securing great stability and manageability. It is about 20 feet long and 4 or 5 broad.

COBLENZ, a city of Western Prussia, is situated in a commanding position at the junction of the Moselle and Rhine. Opposite is the strong fortress of Ehrenbreitstein, and the two are connected by a bridge of boats. Its strong situation has made Coblenz an object of attack in nearly all warlike movements in Germany. It is a great centre of the wine trade; population 45,000.

COBRA DA CAPELLO, or Hooded Snake, one of the most deadly of poisonous snakes, is about 5 or 6 feet long when full grown. It derives its name from puffing out its neck when excited, so as to form a kind of hood about its head. Its bite is almost certain death, and in India, where it is common, about 10,000 deaths are due to it annually.

COCA, a shrub growing freely in South America, whose leaves are chewed by the natives. They have a soothing and at the same time stimulating effect, so that one can for a time both do with less food, and sustain more prolonged exertion.

COCAINE. See *Med. Dict.*

COCHIN-CHINA, a name formerly used for Anam, but now generally restricted to the French colony in the south of that

country. The latter has an area of 23,000 square miles, and a population of about 2,000,000, of whom about 4,000 are Europeans, chiefly French officials and their families. Comprising the fertile delta of the Mekong river, Cochin-China is one of the best rice-producing districts in the world. The monsoons are very regular, the south-west one bringing abundance of rain. Besides rice are grown sugar, tobacco, indigo, tea, and hemp. Saigon, the capital, about 60 miles up the river Mekong, is a handsome modern city. It is the chief port of the country, and trades principally with Singapore; population 60,000.

COCHINEAL, a small insect frequenting a kind of cactus found originally in Mexico and Central America, but now cultivated in many warm countries. The dye consists of the dried bodies of the insects, 70,000 of them being required to make a pound of it. Of late years, the cochineal industry has suffered from the competition of aniline and other chemically prepared dyes.

COCHRANE, THOMAS, EARL OF DUNDONALD, *b.* 1749, *d.* 1831; was one of those impatient geniuses who seem out of place in modern civilization. He entered the navy in time to serve all through the Napoleonic wars, in which he distinguished himself again and again. Ruined by powerful enemies, he left England in 1818, and spent the next ten years fighting gallantly for the independence of the South American States and Greece. At length, in 1831, his unjust condemnation was reversed, and the latter part of his life was spent in the enjoyment of his merited honours.

COCKADE, a bow or knot of ribbons, or rosette of cloth or leather, worn on the hat. By soldiers and sailors it is worn simply as a decoration, but in times past, cockades were worn as signs of adherence to one or other political party. Thus the white cockade was long the distinctive mark of a Jacobite.

COCKAIGNE, LAND OF, an imaginary country, often alluded to in literature, where all good things are to be had for the taking.

COCKATOO, the name given to several kinds of parrot found in Australia and the East Indies.

COCKATRICE, a fabulous monster, the existence of which was thoroughly credited in ancient times, and indeed till quite lately among the more credulous. Supposed to be hatched by a serpent, from a cock's egg, it was credited with deadly and malignant powers, so as to kill with a touch or look. The weasel alone could resist its venom and encounter it successfully.

COCKER, EDWARD, *b.* 1631, *d.* 1674, was the first author of a connected treatise on Arithmetic. He had great success as a teacher of Arithmetic and writing, but his great work was not published till after his death. It was such a success that "according to Cocker" became a proverb.

COCK-FIGHTING, a sport which was common among the Greeks and Romans, is still common in many half-civilized countries, as China, Persia, and South America, and has hardly even yet died out in England, although its cruelty has raised public opinion decidedly against it. For centuries it had the approval and support of all classes of society, from the throne downwards, and the rules of the contest were very strict. The area where the fighting took place was called the cock-pit; much art was shown in the choosing and rearing of the birds, generally of the kind called game-fowl; the spurs, usually of steel or silver, were very carefully fastened on; and the weighing of the birds was a most important process. A certain number of birds on each side having been found to match in weight, within certain limits, were set to fight two by two, and the side which won the greater number of contests was adjudged to have won the "main." In the reign of Edward III. cock-fighting had become so rife that it was forbidden in 1366 by proclamation. So far, however, was it from dying out, that Henry VIII. had a cockpit built in Whitehall, and James I. was extremely fond of witnessing the sport there. It is a curious fact that cock-fighting was once a recognised amusement in public schools; the boys brought game-cocks to school on Shrove Tuesday, and spent the morning in seeing them fight. The birds which ran away became the perquisites of the master.

COCK LANE GHOST. In 1762 London was agog with reports of spirit rappings heard in the house of one Parsons, of Cock Lane, Smithfield. Even Dr. Johnson seemed to believe in their supernatural origin. Eventually it was found that Parsons, in collusion with his daughter, had produced the sounds, and he was pilloried.

COCKPIT. (1) The floor of a building with rising seats all round where people sat to watch cock-fighting (which see). (2) The part of a ship set apart for the reception and treatment of the wounded during a battle. (3) The Privy Council office at Whitehall, because built over the old palace cockpit.

COCOA or **CACAO.** See *Chocolate.*

COCOANUT, the fruit of a species of palm growing freely in tropical regions, especially near the sea. It grows to a height of 80 or 90 feet, with a gigantic tuft of feathery leaves at the top. It produces about 100 nuts annually, which are enclosed in a fibrous covering called coir when detached. Every part of the cocoanut tree is useful, the leaves for thatching and the coir for weaving mats, etc., the shell of the nut for drinking-vessels, the wood for building, etc.

COCOON, the silky covering spun by many caterpillars as a protection during the chrysalis stage. The finest example is, of course, the cocoon of the silkworm. The thread is formed as a glutinous liquid in certain glands, and issuing from the mouth of the creature, hardens as it comes in contact with the air. Spiders also, spin a cocoon, which serves as a bag to hold their eggs, and in which to carry them off, if in danger.

CODE NAPOLÉON, now called the "Code Civil," is the standing body of law in France. Drawn up under the direction of Napoleon, between 1804 and 1810, it unified and simplified the laws prevailing locally in different parts of France, and at the same time greatly simplified legal procedure. Napoleon set a high value on his Code, and not without reason, for it has stood the test of time.

COD FISHERY. The cod, a fish from 2 to 4 feet long, weighing from 30 to 100 pounds, is an inhabitant of the temperate waters of the North Atlantic. The cod-fishery is mostly centred at Newfoundland and on the coast of Norway. From Newfoundland large quantities of dried cod are exported to Roman Catholic countries, while Norway supplies the bulk of the cod-liver oil now so extensively used.

CODEX, a written volume or manuscript, usually an ancient one. The name is generally reserved for ancient classical or Scripture manuscripts.

CODICIL, a short addition to a will. A codicil must be signed by the testator, and witnessed in the same way as a will, and is then of equal validity.

COD-LIVER OIL, as its name implies, is oil obtained from the liver of the cod, and also of allied fishes. It is obtained from the liver by heating or pressure, that which comes off first being the purest and most delicate. It is a valued remedy in all cases of consumption, rickets and scrofula, and where used perseveringly for some weeks, rarely fails to produce beneficial results.

CODRINGTON, ADMIRAL SIR EDWARD, *b.* 1770, *d.* 1851, entered the navy at thirteen. He commanded the Orion at the Battle of Trafalgar. He took part in the American War of 1812 to 1814, and was present when the English were repelled from New Orleans. He commanded the combined English, French and Russian fleets at the Battle of Navarino, 1827, when the Turkish fleet was destroyed, and the independence of Greece assured.

COFFEE, the ground and roasted seeds of the coffee tree, a native of East Africa and Arabia. When the fruit is ripe, it is shaken off the tree, and caught in cloths. The husks, when dried, are cracked between heavy rollers, and the seeds, two to each pod, collected and dried still more. They are then ready for use. The use of coffee originated in Abyssinia and Ethiopia, whence it spread to Arabia. It was introduced into England about 1650, and in the succeeding century the coffee houses were a part of everyday town life. Arabia now exports but little coffee, our chief supplies coming from Central America, India, Brazil, and Ceylon.

COFFER DAM, an enclosure round the spot where the foundation of a pier or wall has to be placed under water, for the purpose of shutting out the water, so that the work may be done in the dry. It consists of parallel rows of closely arranged piles, having the space between the rows filled with clay.

COGNAC, a small town in France, about 70 miles north of Bordeaux. The chief industry is the distillation and export of brandy, sold under the name of Cognac; population about 20,000.

COHESION, a name applied to the force with which the molecules of a body resist separation. Thus the particles of which a piece of wood is made up are more easily forced asunder than those of a piece of iron, those of chalk more easily than wood, and so on. Liquids have very little cohesion, and gases none at all, the particles repelling one another. Cohesion is weakened by heat.

COHORT, a division of the ancient Roman army. The army consisted of a certain number of legions, a legion containing about 6,000 men, divided generally into ten cohorts.

COINAGE. See *Numismatics.*

COIR, or cocoa-nut fibre, is the fibre obtained from the outer covering of the cocoa-nut. The husks are steeped for some months, then taken out and beaten to separate the fibres. It is extensively used for making matting, and also for ropes and cables. Its lightness gives it some advantage over hemp in this respect.

COKE, SIR EDWARD, *b.* at Mileham, Norfolk, 1552, *d.* 1634; one of England's greatest lawyers, and an upholder of freedom in troublous times. His fame as a lawyer has obscured the part he took in resisting the encroachments of the Stuarts, but he lost office, and even suffered imprisonment rather than compromise the liberties of the realm. He had a great share in drawing up the famous "Petition of Right" of 1628. His legal works are a masterpiece of erudition and acumen.

COLBERT, JEAN BAPTISTE, *b.* 1619, *d.* 1683, a great finance minister of France in the reign of Louis XIV. It was, in-

deed, owing to Colbert's financial skill that Louis was able to carry on his ruinous wars. He re-organised every department of the State, and put down abuses, and used his position to promote commerce, agriculture and science.

COLCHESTER, a town of eastern Essex, on the river Colne, about 12 miles from the sea. It is the centre of a large corn-growing district, an important military depôt, and the market for the valuable oyster fisheries of the Colne and the neighbouring coast. It was probably the seat of the British King, Cunobelinus (Shakespeare's Cymbeline), and the site of the first Roman town in Britain. The old Roman walls are still entire for a considerable extent, and many Roman remains have been found here; population 40,000.

COLDSTREAM GUARDS, a regiment of the Household Brigade of Guards, so called from the village of that name in Berwickshire, on the left bank of the Tweed. When General Monk was preparing for his march on London, in 1659, he raised here a regiment of troops, which has retained its corporate existence ever since, under the above name.

COLENSO, a village on the Tugela in Natal, where the British, under General Buller, suffered a severe reverse in the Boer war, 1899; ten of our guns having to be abandoned.

COLENSO, JOHN WILLIAM, *b.* at St. Austell, in Cornwall, 1814, *d.* in Natal, 1883; took high place as a mathematician at the University of Cambridge, and for some years after taking his degree was engaged at Harrow and Cambridge in tutorial work. Appointed Bishop of Natal in 1853, he set himself zealously to learn the Zulu language, and make himself acquainted with the character of the natives, and from that time to the end of his life he was devoted to the interests of his flock. His outspoken criticisms of the Pentateuch—especially its numbers and measurements—brought him much obloquy; but his studious moderation of language in the heat of contention compelled respect. His manuals on Algebra and Arithmetic long remained the stock text books on the subjects.

COLERIDGE, SAMUEL TAYLOR, *b.* at Ottery St. Mary, 1772, *d.* at Highgate, 1834; was one of the "Lake Poets," the others being Southey and Wordsworth. Educated at Christ's Hospital ("Bluecoat School"), he went to Cambridge, but left without a degree. He enlisted in the Dragoons, but soon returned to civilian life. Married at 23, he had hard work to maintain a home by the sale of his poems until an annuity of £150, from the brothers Wedgwood, set him at any rate above the reach of want. After a tour on the Continent he settled for some time in the Lake district, first at Keswick with Southey, and afterwards at Grasmere with the Wordsworths. While there he contracted the opium habit, which proved his curse for many years, though he shook it off somewhat towards the end of his life. As poet, prose writer, and critic he occupies an almost unique position, and as a conversationalist he seems to have been worthy to rank with Johnson. His chief works are "Wallenstein," "Remorse," "Christabel," "Kubla Khan," "Youth and Age," and the "Ancient Mariner." Hartley Coleridge, his eldest son, with much poetic talent, had a weakness of character that ruined his prospects for life, though some of his poetry has been much admired. Derwent, another son, was a distinguished educationist, making his mark as first Principal of St. Mark's Training College. Sara, the poet's daughter, inherited the greatest share of her father's talent, and did the greater part of the work involved in editing his works.

COLET, JOHN, *b.* in London, 1467, *d.* 1519; Dean of St. Paul's, was the eldest son of Sir Henry Colet, twice Lord Mayor of London. Educated for the church, he made a tour on the Continent before being ordained. There he met Savonarola, whose teaching seems to have sunk into his mind, if we may judge from the boldness which he showed in censuring what he thought abuses in the church. The wealth which came to him on his father's death he devoted to the establishment of St. Paul's School, still one of the most flourishing in London. It has educated many able men, among whom we may mention Halley, Leland, Marlborough, Milton, and Pepys.

COLIGNY, GASPARD DE, admiral and general of France in her wars against Spain, is best remembered as the leader of the Huguenots, in their struggle for religious freedom. Fearing his influence, Catharine de Medicis, Queen Dowager of France, arranged the bloody "Massacre of Saint Bartholomew," in which the great admiral fell a victim, 1572.

COLLIE, a kind of dog common in Scotland and the north of England, valued on account of its usefulness as a sheepdog. Of late years, the collie has become very fashionable, but its rather uncertain temper with strangers renders it a dangerous pet.

COLLINGWOOD, CUTHBERT, LORD, *b.* at Newcastle, 1750, *d.* 1810, was one of the brave sea captains who helped to gain the victories that Nelson planned. He had a share in most of the naval battles of the Napoleonic wars, and at Trafalgar he was second in command. His gallantry during the battle, and skilful conduct afterwards, gained him a peerage. His body lies near Nelson's in St. Paul's Cathedral.

COLLINS, WILKIE, *b.* in London, 1824, *d.* 1889, novelist, was educated for the law, but was attracted to literature. His early ventures were fairly successful, and with time he still further improved. He had a strong turn for the marvellous and intricate, some of his plots being extremely ingenious. "Armadale," "The Woman in White," and the "Moonstone" are his best works.

COLLOTYPE, a photographic process depending on the fact that gelatine mixed with bichromate of potash becomes insoluble when exposed to light. The negative it is desired to reproduce is exposed over a paper coated with such gelatine, and thus a print is obtained, which by suitable treatment is rendered strong enough to reproduce from.

COLLUSION, literally a playing together, an acting in concert, generally with a view to deceit or fraud. Collusion in legal cases between parties apparently opposed is very difficult to detect. It occurs mostly in bankruptcy and divorce cases.

COLOGNE, or **KÖLN,** whose very name (Latin, *colonia*, a colony), bespeaks its antiquity, is a city of Prussia on the left bank of the Rhine. The cathedral, begun about 1270 and finished in 1880, is one of the finest Gothic buildings in the world. Cologne is the centre of the Rhine traffic, its ships trading with Holland, Belgium, and even more distant countries. The famous Eau de Cologne is made here: population about 400,000.

COLOMBIA, a republic occupying the north-western portion of South America, has had a chequered history since the great revolt from Spain in 1810. It has an area of about 500,000 square miles and a population of perhaps four million, of various races, having little sympathy with one another. The loss of Panama, which in 1903 declared its independence under the protection of the United States, was a great blow. The gold and silver mines of Colombia are still capable of great production, with improved working. Bogota, the capital, population 110,000, is nearly in the middle of the country. Carthagena, the chief port, population 20,000, is on the Gulf of Mexico.

COLOMBO, the capital and chief port of Ceylon, is on the west coast, right in the track of steamers bound for Australia and the far East. The population is very varied in race. The Portuguese took possession of Colombo in 1517, the Dutch in 1656, and the British in 1796; population about 100,000.

COLONNA, VITTORIA, *b.* near Rome, 1490, *d.* 1547, a member of the celebrated Colonna family of Italy, was married at seventeen, and left a widow at thirty-five. After that event she devoted herself to poetry, producing much admirable work, which is still widely read. She is said to be the only woman that won the admiration of the great Michelangelo.

COLORADO BEETLE, an orange-coloured beetle, rather less than half-an-inch long, unfortunately rather common in North America. It commits great ravages among the potato crops both in the States and in Canada, and in 1877 got as far as Liverpool, but has never yet succeeded in evading the stringent regulations made to keep it out of this country.

COLORADO RIVER, THE, drains the south-western portion of the plateau which covers a good deal of the western United States. For hundreds of miles the river and its tributaries flow through deep channels, called cañons, whose walls rise for hundreds, and even thousands of feet on each side. The last few miles, before it flows into the Gulf of California, are in Mexican territory; total length, 2,000 miles.

COLOSSEUM or **COLISEUM,** a gigantic building erected at Rome by Vespasian and Titus, and finished about the year 80 A.D. Of about the same shape as the Albert Hall, London, its length and breadth were each about 2½ times as great. It covered about 5 acres of ground, and accommodated about 100,000 spectators. For nearly five centuries it stood entire, then the Emperor Theodoric began using its material for various buildings, in which he was followed by later rulers. Enough, however, is left, especially of the lower courses, to give us an idea of its grandeur. Here assembled the people of Rome to view the amusements of the time, conducted in the central space called the arena; the chariot race, the encounters of men with wild beasts, the meetings of gladiators in single and in general combat, and worst of all, the tortures of helpless Christians done to death by wild beasts, or by some still more cruel fate devised by a Nero. As an example of the extent to which the building was used, may be cited the fact that at its dedication the games lasted 100 days, and 5,000 wild animals were slain. Britain furnished many of the gladiators who exhibited their skill and courage there.

COLOSSUS OF RHODES, a gigantic statue set up at the entrance of the harbour. It is said to have stood astride the entrance, but this is doubtful. Erected about 280 B.C., it was thrown down about 60 years afterwards, and eventually broken up and sold as old metal.

COLOUR. All objects owe their colour to the light which they reflect to our eyes. See *Light.*

COLOUR BLINDNESS, i.e., inability to distinguish colours. Cases where a person

is totally unable to appreciate colour are very rare, but a large number of people are apt to fail to distinguish colours under varying circumstances. Unfortunately, red and green are the colours on which people are weakest, hence the necessity for testing the sight of railway employés and seamen.

COLOURS, MILITARY. The flags which most regiments possess, and carry on parade and on other official occasions, are called the "colours." One is the royal colour, and is the same for all regiments; the other, the regimental colour, has embroidered on it the names of the battles and campaigns the regiment has shared in. The colours are not now carried into battle.

COLOUR-SERGEANT. In former times each company in a regiment had a flag, which the senior sergeant carried, and hence he was called the colour-sergeant, a name still used to denote the senior sergeant, although he carries no colours.

COLT, SAMUEL, *b.* 1814, *d.* 1862; was a native of Hartford, Connecticut. He invented the revolver when quite a youth, and in 1835 he secured a patent for it in France, England, and the United States. At first it did not find much favour, but the Mexican war proved its value, and from that time its use extended.

COLUMBA, SAINT, *b.* 521, *d.* 597 A.D., a native of Ireland, founded a monastery in Iona, a tiny island on the west of Scotland, in 563. From Iona he made repeated missionary journeys through the Highlands, converting the Picts and establishing monasteries among them. His life of labour ended before the altar of his chapel at Iona.

COLUMBIA, BRITISH. See *British Columbia.*

COLUMBIA, DISTRICT OF. See *Washington.*

COLUMBINE. See *Pantomime.*

COLUMBUS, CHRISTOPHER. Refer to *Index.*

COLZA OIL, an oil obtained by crushing the seeds of rape, a plant of the turnip family. It is much valued for lubricating delicate machinery, and for burning in lamps.

COMÉDIE FRANCAISE, or **THÉATRE FRANCAIS,** the great state-aided theatre of Paris. Here, as a rule, the plays are of the highest class, and the performers at the head of their profession. In March, 1900, it was burnt down, but the beautiful exterior was little harmed.

COMET, a small body, or collection of bodies, revolving around the sun. Their orbit, instead of being nearly circular, like those of the planets, takes the shape of an ellipse, or even of a parabola or hyperbola. The tail, sometimes millions of miles long, probably consists of gases in a high state of combustion.

COMMEMORATION, the great event of the year at Oxford University, is the time when Masters of Arts and Doctors receive their degrees. Advantage is usually taken of the occasion to present honorary degrees to distinguished men in other walks of life.

COMMENSALISM is the living together of two animals or plants for mutual benefit. Many examples could be given; thus an anemone is commonly found on the whelk shell which contains a hermit crab. Many animals prey on the hermit crab, but the anemone is nauseous to them all, and thus affords protection to its companion by its presence. The hermit crab, in turn, when tearing up its food, necessarily allows many fragments to escape, some of which come within reach of the anemone. By living together both animals thus derive mutual benefit. In the plant world the most striking example is seen in the lichens. A lichen is not a single plant, but is composed of a fungus, containing within its meshes microscopic green plants, or algæ, allied to seaweed. The fungus dissolves the bark of the tree, and feeds both itself and the algæ; the algæ, being green, are able to make starch from the atmosphere, and so to feed both themselves and the fungus. Each plant thus obtains a double food supply, which it could not obtain when acting alone.

COMMERCE, CHAMBERS OF, associations of traders now to be found in most important towns. Their function is to safeguard and extend the local trading interests; they collect information and statistics, and make representations to the government on matters affecting their district. The London Chamber of Commerce does a great work in promoting commercial education and in publishing commercial information.

COMMINATION, literally "a threatening." The Commination Service of the Church of England was introduced at the Reformation as a substitute for the formal expulsion of notorious sinners from the Church on Ash-Wednesday, with their equally formal re-admission, after professed repentance, on Maundy Thursday. It consists of a series of statements chiefly from Deut. vii., that certain sinners are accursed, and the congregation express their agreement by saying *Amen* to each.

COMMISSARY, a person who has certain functions committed to him. In ecclesiastical matters a colonial bishop often appoints a commissary to act for him during his absence from England. In the army the name is generally applied to the officer whose special duty it is to provide food.

COMMISSIONAIRES, on the Continent, hotel attendants who await trains and steam-boats to secure customers for their hotels, bring their luggage up, and so on. In England the name is usually reserved for a body of men picked from pensioned soldiers and sailors, who perform various duties, as hotel attendants, watchmen, etc. Sir Edward Walter founded the Corps in 1859.

COMMISSIONS, ARMY. Refer to *Index.*

COMMODORE, the commander of a number of ships detached from the rest of the fleet for a special purpose. The title only lasts for the duration of the special duty; but while his authority holds good, the commodore is above a captain.

COMMONS, HOUSE OF. Refer to *Index.*

COMMONWEALTH, a name given to the form of government between 1649 and 1660, during which England was without a king. Some, however, restrict the name to the period 1649–53, Cromwell's Protectorate beginning in the latter year. The name is now given to the federated colonies or states of Australia.

COMO, LAKE OF, a beautiful lake in North Italy, 30 miles long, but nowhere above $2\frac{1}{2}$ miles wide. It lies among enchanting scenery, and the district is exceedingly healthy.

COMPARATIVE ANATOMY, the branch of science which has for its object the comparison of the structure of different animals, with a view to accounting for the presence or absence of some part or organ, and thus learning the history of the creature in question. It may be called the portal to Biology.

COMPASS. See *Mariner's Compass.*

COMPOSTS, a term for manures formed by mixing horse-dung or cow-dung, leaves or decaying vegetation of any sort, with earth in the form of sand or lime, and allowing the mixture to stand for some time to thoroughly amalgamate. They are very valuable on pasture land that is getting exhausted.

COMPOUND HOUSEHOLDER, a tenant of a portion of a house or building on which the landlord does not reside. The latter *compounds* for the rates for the whole of the building, and this is regarded as a payment by the tenant, who thereby becomes a "compound householder" enjoying the full franchise.

COMPURGATOR, the origin of our modern juryman. Under the old Anglo-Saxon law an accused person could produce twelve persons to declare on oath their belief in his innocence. They were thus witnesses to character rather than judges of fact, but from them arose our modern jury.

COMTE, ISIDORE AUGUSTE, *b.* 1798, *d.* 1857; the most practical of the group of philosophers whose teaching may be said to owe its origin to the French Revolution, will go down to history as the founder of "Positivism." Surveying the progress of mankind in all branches of knowledge, he concluded that the time was at hand for some *positive* results to be gained from philosophy and science, for man's good. It is true that the system by which he proposed to obtain the good is fantastic and impossible, but undoubtedly his teaching contained the elements of many practical reforms.

COMUS. (1) In later classical times, the name of a divinity supposed to preside over festive proceedings, and represented as a youth with wings. (2) A pastoral drama, or masque, written by Milton, in 1634, for the Earl of Bridgewater, whose children had met with the accident on which the drama was founded.

CONCERTO, a musical composition for one instrument chiefly, the others acting in subordination. As a rule, a concerto is divided into three movements, the *allegro*, the *adagio*, or *andante*, and the *rondo*.

CONCHOLOGY, the branch of knowledge which treats of the structure and composition of shells. As a serious study it may be called dead, the shell being now always considered together with the animal it belonged to; but the collection and arrangement of shells will probably go on as long as the world lasts.

CONCLAVE, a suite of apartments in the Vatican in which the cardinals meet to elect a Pope. Hence a meeting on any serious subject is called a "conclave."

CONCORDANCE, a book in which the key-words of the various passages of an author are arranged alphabetically, with reference numbers, indicating the place where such passages may be found in the author in question.

CONCORDAT, a convention or agreement between two high contracting parties, generally the Pope of Rome and some temporal power. The concordat of 1801, between Napoleon and Pope Pius VII., by which the Roman Catholic religion was re-established in France, has outlasted the century. The Austrian concordat of 1855, which gave the clergy control of public instruction, lasted only till 1870.

CONCRETE. (1) In philosophy, a term denoting something which can actually be felt, handled, or weighed, as opposed to the abstract, which exists only in our minds. Thus "blind man" is a concrete term, while "blindness" is abstract. (2) A mixed mass of mortar and stones used to form the foundation of a wall or building, especially in damp places, where it lasts longer than stone or brick.

CONCUBINAGE, a form of cohabitation quite usual among the Greeks and Romans, is not now practised among Christian

nations. The only trace of it now sanctioned by law, is the "morganatic marriage" (which see), of the Germans, and that is not much used.

CONDENSER, an apparatus for concentrating anything, and making it occupy less space. Thus the condenser of a steam-engine turns the used steam into water, and so makes room for more to come from the cylinder; an electric condenser binds electricity on a sheet of metal, or other conductor, and renders the metal free to receive more.

CONDIMENT, something which we eat with our food to heighten its taste or flavour. As a rule the condiment is not a food itself, as salt, pepper, vinegar, etc.; but butter and the various sauces whose basis is milk, have a high food value, besides being condiments. The use of condiments in moderation is a sensible tribute to nature's demands, but in excess they ruin the digestion.

CONDOR, a large kind of vulture found in the Andes, in South America. It is a little over three feet from tip of beak to tip of tail, and its wings, when extended, measure 14 feet from tip to tip. These birds live far up the mountains, at a height of 14,000 or 15,000 feet, and from thence soar far up again till lost to sight. But even at that immense height, they can recognise a dying or dead sheep, or other animal, and soon appear to feast on its flesh.

CONDOTTIERI, a class of Italian mercenary soldiers and adventurers, who played an important part in the wars of the Italian States, in the 14th and 15th centuries.

CONDUCTION. See *Heat*.

CONFEDERATE STATES, the name adopted by the "Southern" States, when they attempted to secede from the "Union" in 1860–61, which attempt led to the great American Civil War.

CONFEDERATION OF THE RHINE, a confederation of many of the lesser German States formed at the instigation of Napoleon in 1806 as a counterpoise to the power of Prussia and Austria. The Kings of Bavaria and Würtemberg and the Elector of Baden were at the head, supported by about a dozen lesser rulers. As long as all went well, the confederation was a powerful aid to Napoleon, but after his Russian disasters, 1812–13, it melted away.

CONFIRMATION, a rite which follows baptism in Christian Churches. There is no settled limit of time between the two ceremonies. In the Roman Catholic Church, seven years at least must intervene; in the English and Lutheran Churches, Confirmation is not administered until the person confirmed is of an age to understand the obligations thereby assumed.

CONFUCIANISM. Refer to *Index*.

CONFUCIUS. Refer to *Index*.

CONGÉ D'ÉLIRE, "permission to elect," a document under the Great Seal, giving permission to the dean and chapter of a vacant bishopric to elect some one to fill the office. A letter accompanies the congé d'élire, nominating the person for election, and in reality leaving the electing body no choice in the matter.

CONGLOMERATE, a geological term for a mass of rock composed of a number of small stones or pieces of rock bound together by a kind of cement of chalk, clay, or sand; it is also called "pudding-stone."

CONGO, the great river of Central Africa, rises under the name of Luapula, in Lake Bangweolo, and flows northwards into Lake Moero. Leaving Lake Moero, under the name of Lualaba, it still flows north past Nyangwe, to the Stanley Falls, (near the Equator), after which it turns west, and eventually south-west to flow into the Atlantic Ocean. From Stanley Falls it is called the Congo. The two largest tributaries are the Mobangi on the north and the Kassai on the south. Its length is about 3,000 miles, and despite occasional cataracts and falls, the Congo and its tributaries furnish an admirable system of internal communication.

CONGO FREE STATE, THE, arose out of the discoveries of the late Sir H. M. Stanley, and of subsequent explorations carried on by an International Association, whose headquarters were at Brussels. The President of the State is the King of the Belgians. It includes nearly the whole basin of the Congo, and the line of its eastern boundary passes along the west shore of Lake Tanganyika. From Matadi, the port at its mouth, the river is navigable for about 100 miles. A railway then carries the traffic past the rapids for 240 miles. A telegraph is being made to Stanley Falls, and thence to Tanganyika. The wealth of the State depends chiefly on the exportation of caoutchouc or india-rubber, which forms three-fifths of the exports. Palm-oil, nuts, and ivory are also exported. The European population is under 2,000, and includes 1,000 Belgian officials. The native population is over 14 millions, some of whom are cannibals, and others of a comparatively high degree of civilization. Sleeping sickness, a deadly disease, for which there has not yet been found a remedy, carries off increasing numbers of the natives each year, particularly in the Lower Congo.

CONGREGATIONALISTS. The earliest Congregational churches were established in the latter half of the 16th century. The members were at first called Brownists, but in the time of Cromwell were known as Independents. They are appropriately designated *Congregationalists*, since they maintain that each congregation constitutes a Christian church competent to manage its own affairs independently of any other Christian body. There are now in the United Kingdom more than 3000 Congregational ministers and nearly half a million church members. They have 12 colleges in which nearly 400 students are being trained for the ministry, and they raise about £1,000,000 per annum for religious and philanthropic purposes (Refer to "Congregationalists" in *Index*).

CONGRESS, "a meeting together," an assembly of people for some high purpose, such as settling international disputes, as in the case of the "Berlin Congress" of 1878. The word is also specially used to denote the legislative body of the United States, which, under the name of "Congress," consists of (1) the Senate, whose members are elected by the legislatures of the various States, and (2) the House of Representatives, directly elected by the people.

CONGREVE, SIR WILLIAM, *b.* 1772, *d.* 1828; the inventor of the rocket called by his name, was educated for the army, in which he gained the rank of lieutenant-colonel, and retired in 1816. He devoted much time to chemistry, and his invention brought him great fame both in England and abroad.

CONGREVE, WILLIAM, *b.* 1670, *d.* 1729; a clever and original dramatic author, was born in Leeds, and educated in Ireland, graduating at Dublin University. His first play, entitled the "Old Bachelor," gained him the patronage of Lord Halifax and a post under government. Soon followed "The Double Dealer," "Love for Love," and the tragedy of "The Mourning Bride." "The Way of the World" was his last, and probably his best play. The language and allusions of his plays render them quite unfit for the modern stage.

CONIFER is the name of a group of cone-bearing trees which includes the pine, fir, larch, juniper, cedar, yew, and cypress. The conifers differ from other flowering plants in producing seeds which lie exposed in the flower instead of being enclosed in a seed case or ovary. The majority are evergreen, the larch being an exception. Conifers range from the Arctic Zone to the Equator, and were the earliest flowering plants to appear on the earth.

CONNAUGHT, the most westerly province of Ireland, is the poorest, the most purely Irish, and the most devotedly Roman Catholic of the four provinces. In 1840 it had a population of about 1,400,000, which has now sunk to less than half. Famine and emigration have caused the decrease. Agriculture is the chief industry. The tourist will find the scenery grand and picturesque.

CONNEMARA, the western portion of the county of Galway, in the west of Ireland. Abounding in picturesque mountains, lakes, and streams, it is a favourite resort for tourists. It is also called Ballynahinch.

CONNOISSEUR, (lit. "one who knows,") a person particularly well acquainted with some art subject, as music, painting or sculpture, without being himself an artist.

CONSANGUINITY, relationship by blood as distinguished from affinity, or relationship by marriage. In all civilised countries both consanguinity and affinity have been always more or less regarded as a bar to marriage. The law on the subject is less strict than before the Reformation, and now all persons are allowed to marry who do not fall within the prohibitions of the Levitical law. Marriage of a deceased wife's sister is still illegal in England, but in the United States, Australia, and many other British colonies it is permitted by law.

CONSCIENCE, the power or faculty within us which decides whether our actions are morally right or wrong; or that exercise of consciousness which points out to us the moral bearing of our acts, words, and motives.

CONSCIENCE CLAUSE, a clause introduced first into the Endowed Schools Act of 1860, and afterwards into the famous Elementary Education Act of 1870. Under it a person sending children to any school assisted by ancient endowment or public money may claim exemption from the religious teaching given at the school.

CONSCIENCE MONEY, money sent to the Chancellor of the Exchequer by persons who have somehow not paid their due share of some tax, generally of the income tax. It is usually sent anonymously, and amounts to several thousands a year.

CONSCRIPTION, the system under which every man is liable to serve in his country's army, his name being enrolled as soon as he reaches the required age, generally twenty, unless he is exempt by reason of physical infirmity, of being the eldest of a family of orphans, the only son of a widow, etc. He generally serves three years in the regular army, followed by twelve or more in the various forms of army reserve. This system is adopted in the chief European countries except our own.

CONSECRATION, the act or ceremony by which a person or thing is solemnly dedicated to the service of God. Among Christians the word is used to denote (1) the ordination of bishops, (2) the dedication of churches and sometimes of

cemeteries, and (3) the act of hallowing the elements in the Holy Eucharist.

CONSERVATION OF ENERGY. Energy or force is the term used to denote capacity to perform work, or to overcome resistance. When a railway train is moving, it possesses a certain moving force. When the train is brought to a standstill, that moving force or energy is not annihilated, but transformed into the energy of heat by the action of the brakes on the rails. The train is re-started by the energy of steam; the steam derived its energy from coal; coal is a product of plant life, whose energy came from the sun. Each of these transformations forms a link in the chain of causes that enabled the train to regain its energy of motion. There is always an apparent loss of energy in whatever way it is applied, but, though dissipated, it still exists in one or more forms, and the aggregate of these forms of energy remains unchanged. In fact, conservation of energy means that the sum total of the energy of the universe is constant, and that all the processes of nature are due to transformations of energy from form to form; as from motion to heat, from heat to chemical change, from chemical change to heat again, and so on.

CONSERVATIVE PARTY, THE, a convenient name for that political party which is less ready to adopt political changes, and, as its name implies, is disposed to preserve the existing state of things until some need for change is proved.

CONSISTORY, the court held by a bishop or archbishop to determine matters exclusively ecclesiastical. In the Roman Catholic Church, the assembly of Cardinals, which meets every week to advise the Pope on various matters, is called the Consistory.

CONSOLS. See *Com. Dict.*

CONSTABLE, JOHN, *b.* 1776, *d.* 1837; one of England's best landscape painters, was born at East Bergholt, in Suffolk. He joined the Royal Academy in 1799, and exhibited in 1802. But turning from conventional landscape painting to represent what he saw, he was long in gaining support, and not till he was between forty and fifty years of age did he gain the recognition he deserved. "The Valley Farm," "The Haywain," "The Cornfield," and "Salisbury Cathedral" are among his best pictures.

CONSTANCE, COUNCIL OF, a great ecclesiastical council held at Constance in 1414–18 with a view to ending the dissensions in the Church, and combating the preaching of John Huss. The latter, a staunch supporter of Wicliff's doctrines, was summoned before the Council under a safe-conduct, but on refusing to recant was burnt at the stake in 1415. The existing Pope, John XXIII., was deposed, and his rivals, Gregory and Benedict, forced to resign their claims. Martin V., a member of the Colonna family, was made Pope, and did much to raise the character and power of the Popedom.

CONSTANCE, LAKE, the only large lake in the course of the river Rhine, is situated in the north-east of Switzerland. Its length is 44 miles; greatest breadth nine. The shores are generally flat or undulating, and the soil extremely fertile. It contains a great variety of fish, and aquatic birds are numerous.

CONSTANT, BENJAMIN, *b.* 1845, *d.* 1902, a great French painter, who made the portrayal of Eastern subjects his chief aim. He was also an admired portrait-painter, and took a great share in the decoration of many public buildings. "Prisoners in Morocco." "Mahomet II.," "The Harem," and "The Emir's Favourite," are some of his chief works.

CONSTANTINE "THE GREAT," *b.* 274, *d.* 337 A.D.; succeeded his father Constantius as "Emperor of the West" in 306. For some years he had to struggle with his rival Emperors for the title and power. At length, in 312, he gained a great victory near Rome, over his last rival, Maxentius. It was before this victory that he saw, or imagined he saw, the portent of the fiery cross in the sky, promising him victory, which led him to become a Christian, and prompted the Edict of Milan (313), giving complete toleration to Christians. A war between Constantine and Licinius, the Emperor of the East, ended (325) in the defeat and death of the latter, and Constantine became sole Emperor. He made Byzantium his capital, which he almost entirely rebuilt and called *Constantinople*—"Constantine's city."

CONSTANTINOPLE, founded 330 A.D. by Constantine the Great, on the site of the ancient and famous Byzantium, stands at the southern end of the Bosporus. The Golden Horn, an inlet running up about five miles inland from the strait, separates the city into two parts, in the more northerly of which Christians mostly reside. Stamboul, the Turkish name for the southern part, or Constantinople proper, contains most of the wonderful buildings that delight the traveller, pre-eminent among which is the Mosque of Saint Sophia. The manufactures of Constantinople are not important, but it is a great entrepôt of commerce, the trade amounting, exports and imports together, to £10,000,000 per annum; population 1,125,000.

CONSTANTINOPLE, COUNCIL OF. Of the many councils of the Church held at Constantinople, that held in 381 A.D. claims the pre-eminence for its importance and its far reaching results; for it is on the version of the Nicene Creed, as promulgated by this council, that the Greek Church bases its claim to be *the* orthodox church.

CONSTELLATION, a group of stars. All the fixed stars are divided into groups by imaginary lines, joining each member of a group to its neighbour and then some more or less suitable name is given to the group, generally from a fancied resemblance, as in the case of "Charles's Wain."

CONSTITUTION, the established and recognised form of government of a country. The constitution may be a written one, as that of the United States, or an unwritten one that has grown up, through a series of precedents, round an existing framework, as the English constitution has grown up round "King," "Lords," and "Commons."

CONSUBSTANTIATION, the doctrine that the body and blood of our Lord Jesus Christ are actually present in the bread and wine after consecration, although these elements are not themselves changed.

CONSUL, (1) an officer maintained by a State in a foreign country to conserve the rights and support the just claims of its citizens in that country. The status, privileges, and duties of consuls are very varied, the consul, or consul-general, at places like New York or Constantinople holding a very high position, and receiving a corresponding salary. (2) One of the two chief magistrates of Rome.

CONTANGO. See *Commercial Dictionary.*

CONTRABAND OF WAR, articles which must not be supplied to either belligerent in time of war. Whoever engages in such traffic does so at his own risk; his government will not protect him from having his goods captured and confiscated. Obviously, guns, and military stores generally are contraband of war, but with regard to food, coal, railway material and the like, all depends on their ultimate purpose. These are called conditional contraband, and are not seizable without compensation unless clearly destined for the seat of war.

CONTRALTO, the lowest or deepest musical voice among boys and women. The emotional effect of good contralto singing has long been recognised, and the best contralto singers are much sought after.

CONVECTION. See *Heat.*

CONVENTICLE, (lit. a little meeting) a name given by way of reproach or contempt to religious meetings held by the Nonconformists of England and Scotland in defiance of the law in the 17th century.

CONVERSION. Starting from the literal meaning of this word, namely a changing round, we get the (1) religious, (2) scientific, and (3) commercial uses of the word. Thus, in theology, the word implies a change of heart, prompting to a new life; in science we speak of the conversion of ice to water, iron to steel, etc.; while in commercial parlance, the conversion of a thing is its application to a purpose it was not intended for.

CONVOCATION. Refer to *Index.*

CONVOY, a ship or ships of war detailed to escort a fleet of merchant vessels, and keep them safe against the enemy. Sometimes the merchant ships themselves are spoken of as the "convoy;" also a train of waggons conveying supplies under an escort of troops is called a "convoy."

CONWAY, a charming and picturesque little seaport on the shore of North Wales, at the mouth of the river Conway. Conway Castle, built in 1284 by Edward I., rising abruptly above the river, with walls over 12 feet thick, is a famous ruin, and a favourite subject for illustration; population 4,600.

CONWAY, HUGH, *b.* 1847, *d.* 1885, a sensational and dramatic novelist, was born in Bristol and there made the *coup* which brought him almost instant fame. His "Called Back," published in 1884, had an enormous sale, and "Dark Days" proved quite as great a success. He wrote many short stories and some poetry.

COOK, ELIZA, *b.* 1818, *d.* 1889, the poet of the domestic affections, was born in Southwark. She early achieved success in the comparatively humble path she laid down for herself, and till health began to fail, her articles and poems maintained her in comfort. It is probable that no one poem had so many readers as, at one time, her "Old Armchair." In 1864 she was awarded a Civil List pension of £100.

COOK, JAMES, *b.* at Marton, 1728, the great navigator and discoverer, was the son of a labourer in Yorkshire. After serving in the merchant service, he entered the Navy, and soon rose. His voyages, on account of his accuracy in the observations he made, added much of great value to our geographical knowledge. He did more than any one by his discoveries, as an explorer, to get Australia and New Zealand added to our Empire. In the course of his third voyage he landed at Hawaii in the Sandwich Islands, when he was suddenly attacked by the natives, and clubbed or stabbed to death at the water's edge, 1779. Refer to "Cook" in *Index.*

COOK, THOMAS, *b.* 1808, *d.* 1892; the pioneer of co-operative and organised travel, was a native of Derbyshire. A large temperance meeting at Loughborough prompted him to arrange for a train to take Leicester sympathisers there and back, at a shilling a head. He at once deserted his wood-turning, and

took to organizing similar excursions, with the result the world knows.

COOK, MOUNT, the highest mountain in Australasia, situated nearly in the middle of South Island, New Zealand, rises to a height of over 12,000 feet. It is surrounded by other snow-clad peaks, and by glaciers, surpassing in magnitude those of the Alps.

COOLIES, labourers, generally Indians or Chinese, hired at a fixed rate of pay, for a fixed time, to work in some country not their own, as Mauritius, Guiana, South Africa, etc. The contract usually includes free conveyance to the place of labour and home again. Sometimes, ordinary hired labourers in India and China are called "coolies."

COOMASSIE. See *Kumasi.*

COOPER, ANTHONY ASHLEY, first Earl of Shaftesbury, *b.* 1621, *d.* 1683; one of the most versatile and wittiest of men, seems to have lived only to illustrate the fact that genius without principle brings good neither to its possessor nor to his fellows. He took a share in the Civil War, and sat in the Parliaments that Cromwell held. The Restoration made him a leading man in the country, and as a member of the "Cabal" he must be held responsible for its infamous doings. The "Test Act" (1673), caused him to break with the Court, and from that time he became a violent Whig. The "Habeas Corpus Act," (1679), was largely his production. In 1682 he thought it prudent to retire to Holland, where he died.

COOPER, ANTHONY ASHLEY, seventh Earl of Shaftesbury, *b.* 1801, *d.* 1885; determined in early life to devote himself to the relief of the downtrodden and the humanising of the debased. Being as a child wholly neglected by his parents, he owed all his high principles, as he never ceased to declare, to the sympathy and moral teaching of his nurse, Maria Millis, whose watch he wore all his life. Lunatics, child chimney-sweeps, women working in mines, all had their lot ameliorated largely by his efforts. The Ragged School movement, and that for improving the dwellings of the poor, owed much to him. Every form of suffering called out his sympathies, and he took a leading part in all the beneficent schemes of his day.

COOPER, JAMES FENIMORE, *b.* 1789, *d.* 1851; was a prolific American novelist, whose works had an immense vogue in the last century, and will continue to be read as long as the love of adventure remains in the human breast. His "Deerslayer," "Pathfinder," "Prairie," and "Last of the Mohicans," perhaps excel, but another half-dozen could be found nearly as good.

COOPER, SIR ASTLEY, *b.* 1768, *d.* 1841; a famous surgeon. He published important works on hernia and on dislocations, and by his lectures at Guy's Hospital, did much to advance surgery. He operated successfully on George IV. He became President of the Royal College of Surgeons, and Vice-President of the Royal Society.

COOPER, THOMAS SIDNEY, *b.* at Canterbury, 1803, *d.* 1902, early evinced a talent for art. From 1827 to 1830 he travelled in the Low Countries where he developed his talent for animal and landscape painting. He became A.R.A. in 1845, and R.A. in 1867. He exhibited at the Royal Academy from 1833 to 1898.

COOTE, SIR EYRE, *b.* 1726, *d.* 1783; was a soldier who did England immense service in India. He went out in 1754, and spent there practically the rest of his life. He had a hand in all the great engagements of the time, including Plassy (1757), and Wandewash (1759). It was he who routed Hyder Ali, at Porto Novo, in 1781, and saved Southern India.

COPAL, the hardened resinous juice of various trees found in warm climates. It makes an almost colourless varnish when melted and mixed with turpentine or boiled linseed oil.

COPENHAGEN, the capital of Denmark, is on the east side of the island of Zealand. It is not remarkable for objects of interest. Manufactures are unimportant, but almost all the commerce of Denmark passes through it to the value of about £26,000,000, imports and exports together; population 420,000.

COPERNICUS, NICHOLAS, *b.* 1473, *d.* 1543; was a native of Germany, but was early attracted to Italy, then the centre of all learning. Returning to Germany in 1505, he spent his life in working out the theory of the Solar System, as we have it now.

COPHETUA, a legendary king of Africa who loved and married a beggar maid.

COPPER, a red metal, specific gravity 8·8, probably the first worked and employed by man. It is found native, and is also easily extracted from its ores. Next to silver, it is the best conductor of heat and electricity. Its compounds furnish many blue and green colours, widely used.

COPPERAS, sulphate of iron, or green vitriol, is largely used in making ink and in producing black dyes. It also plays a great part in the production of sulphuric acid.

COPRA, the dried and crushed kernel of the cocoa-nut, from which cocoa-nut oil is obtained.

COPROLITES, the fossilised excrement of animals. Containing a large quantity of phosphate of lime, they form a valuable manure, of which large quantities are obtained from the deposits of Suffolk, Cambridge, Essex, and Norfolk.

COPTS, the Christian descendants of the ancient Egyptians; they formerly spoke the Coptic language. After the fourth General Council at Chalcedon, 451, they separated from the orthodox Church and have since remained separate, under their own Patriarchs. Their present head is the Patriarch of Cairo. The Abyssinian Christians belong to the Coptic communion, and, like the Copts in general, regard all other Christians with hatred and contempt.

COPYHOLD. Refer to *Index.*

COPYRIGHT. Refer to *Index.*

CORACLE, a canoe or boat made of wicker-work, and covered with skins. Some of the Welsh and Irish fishermen use to-day a coracle practically identical with that used by the ancient Britons.

CORAL, a rock formed of a chalky substance secreted by myriads of polyps, little soft-bodied creatures with tentacles similar to those of the sea-anemone, to which they are allied. There are many varieties, but these may be roughly divided into the two classes, deep water and shallow water corals. As a rule, the former embrace the solitary types, and the latter, the congregating and reef-building. Again, the solitary types exist in almost all seas, the reef makers in shallow, warm seas only. The Mediterranean yields the rose-tinted coral of commerce, which is dredged off the coast of Italy, to be manufactured or prepared for sale in Naples and the coast towns. Coral reefs abound in the South Pacific Ocean, in the form of atolls, barrier reefs, and fringing reefs. The two latter forms occur off the coasts, the *barrier reefs* having a continuous channel or roadstead between them and the mainland, whilst the *fringing reefs* are connected at intervals with the land. The *atolls* consist of a ring enclosing a lagoon, which is usually connected with the open sea by a single opening. They vary in circumference from 100 yards to several miles. No explanation of the structure of these atolls has yet received general acceptance. It is difficult to explain how so many circular islets could be constructed in a deep ocean by creatures that cannot work at a depth of more than 120 feet. The forms and colours of coral formations are as beautiful as they are varied, and they look particularly brilliant when seen through the clear waters of the shallows that surround the atolls of the Pacific.

CORAL SEA, that part of the Pacific Ocean lying between Australia, New Guinea, Solomon Islands, and the New Hebrides.

CORBAN, a gift or offering, especially to God. The term is also applied to a vow which a person might make to do, or abstain from doing, a given act. Our Lord rebuked the Jews for making the means of relieving their parents "corban," and thus evading their natural obligations.

CORBEL, a piece of stone, wood, or iron projecting from the face of a wall to form a support for a pillar, girder, etc.

CORDAY, CHARLOTTE, the slayer of Marat, the chief author of the dreadful September massacres of 1792. It is said that her lover's death was due to Marat. Certainly either this, or Marat's excesses, caused her to go to his house and stab him in his bath. She died glorying in her deed.

CORDILLERAS, from a Spanish word meaning a cord or chain; a chain of mountains in America. We speak of the Cordilleras of the Andes, of the Rocky Mountains, and of Central America.

CORDITE is the form of smokeless powder used in the British Army and Navy. It was first made by Sir Frederick Abel, the perfecter of gun-cotton, and was adopted by the Government in 1891. It consists of nitro-glycerine, gun-cotton, and a jelly, the ingredients being mixed until they form a paste, which is then pressed through apertures according to the dimensions of the cartridge for which it is required. Its cord-like appearance after it has been dried has led to its name.

CORDOVA, a city of Southern Spain, on the right bank of the Guadalquivir river. It has a handsome market-place, and a magnificent cathedral, once a Moorish mosque. Under the Moorish rule, Cordova was the capital, and is said to have had a million inhabitants, and walls fifteen miles in circuit. Cordovan leather comes now chiefly from the Levant; population about 60,000.

CORDUROY ROAD, a road constructed over bogs or swamps by laying logs of wood side by side, across the track. It is so called from its similarity to the corded cloth, "corduroy."

COREA, a kingdom or empire in the east of Asia, consisting chiefly of a peninsula separating the Japan Sea from the Yellow Sea. It has an area of 90,000 square miles, and a population estimated at 8 or 10 millions. Every industry is in a backward state; there are no roads worth mentioning, and hardly any bridges. The king or emperor is absolute, and when exerted his authority is obeyed; but the oppression ordinarily exercised by the officials and nobles is very great. Seoul, the capital, near the west coast, is surrounded by a wall 11 miles round and 20 or 30 feet high. It has a population of about 220,000. Chemulpo, its port, 25 miles distant, is now reached by railway. Songdo, the ancient capital, 25 miles north of Seoul, has a population of 60,000.

CORELLI, MARIE, a writer of Italian extraction, was brought up and educated chiefly in England, in the house of the late Mr. Charles Mackay. Among her works are "A Romance of Two Worlds," "Barabbas," "The Sorrows of Satan,"

and "The Mighty Atom," some of which have been translated into every European language, and even into Persian and Hindustani.

CORFE CASTLE, the scene of the murder of the Saxon king Edward, by his stepmother, Elfrida, is near Swanage, in Dorsetshire. It was the scene of fighting in the reign of John, and in the Civil War gallantly resisted the Parliamentarians for six weeks. Its picturesque ruins cover over three acres.

CORINTH, a celebrated ancient city of Greece, was situated on the isthmus of that name, which joins the Peloponnesus to the mainland. In ancient times its situation brought it great gain, ships from the east and west unloading on either side, and getting their goods transported across. St. Paul stayed here some time, and to the Corinthians addressed two of his epistles. The canal across the isthmus, projected ages ago, and begun by Nero, is now complete. The present town of Corinth (population 4,000) is about 3½ miles away from the ancient site.

CORIOLA'NUS, a famous Roman warrior, a patrician, Caius Marcius by name, gained the above surname by his valour at the taking of Corioli, a town of the Volscians. His haughtiness and his severity to the plebeians caused his exile, whereupon he took refuge among the Volscians, and led their armies against Rome. His mother's tears induced him to lead his army away, and soon afterwards he was stabbed.

CORK, the bark of a kind of oak tree found chiefly in Spain and Portugal. The bark is not taken until the tree is about 20 years old; after that a crop is taken every eight or ten years, and the tree attains an age of about 150 years. The use of cork for floating purposes, and as a non-conductor of heat, is very old, but it was not used to make stoppers for bottles, etc., till the 15th century.

CORK, the third city in Ireland, and the chief outlet for the products of the south and south-west, is on the river Lee, about fifteen miles from the sea. Cork harbour, the estuary of the Lee, is one of the safest in the world, and large enough to contain the British navy. Grain, butter, bacon, hams, and live stock are largely exported, chiefly to Bristol. Almost all the liners between Liverpool and New York visit Queenstown, to take up or put off passengers and mails; population about 100,000.

CORMAC, the name of two of the early kings of Ireland, contemporary with Fingal, the Scottish hero, who flourished in the latter half of the 3rd century, and who aided them both against their enemies.

CORMORANT, a kind of bird, a good deal like the pelican, found in most parts of the world in the vicinity of water, in which they find the fish they delight to feed on. The Chinese train them to give up the fish to their master, and one cannot go far on a Chinese river without seeing some of these birds at work.

CORNEILLE, PIERRE, *b.* 1606, *d.* 1684; the first great French dramatic author, wrote a good many plays before he produced his immortal "Cid" (see *Cid.*) The historical dramas "Horace," "Cinna," and "Polyeucte" followed not long after, as well as his great comedy "Le Menteur." His other plays were not up to the level of these.

CORNELIA, a Roman matron who lived in the 2nd century B.C. She was a daughter of Scipio, the conqueror of Hannibal, and wife of Tiberius Sempronius Gracchus; after whose early death she devoted herself to the education of her children. Her two sons, Tiberius and Caius, distinguished themselves by their zeal in the popular cause, and were murdered at the instigation of the nobility.

CORNELIUS, a Roman centurion belonging to the garrison stationed at Cæsarea in early Apostolic times. He was directed in a vision to send to Joppa for Peter, who would tell him more plainly the truths he was so anxious to learn. The Apostle came and baptised Cornelius and his family, who were thus the first Gentiles admitted into the Christian Church.

CORNELL UNIVERSITY, named after its founder, Ezra Cornell, is in the town of Ithaca, New York State. Supported by State gifts and private benefactions, in addition to its original endowment, it provides education for some 3,000 students, women as well as men, in many cases free of all fees.

CORNER. See *Commercial Dictionary.*

CORNET, formerly the lowest rank of commissioned officer in the cavalry, as the ensign was in the infantry, both of them having to carry the standard into battle. With the abolition of the purchase of commissions in the army, in 1871, the names went out of use.

CORN LAWS, REPEAL OF THE. The Corn Laws were statutes dating from the 14th century for the regulation of the trade in grain and for protecting the agricultural and landed interests. An Anti-Corn Law League was formed in 1839, Cobden and Bright being the most notable members. In 1846 Sir Robt. Peel, who had become a convert to Free Trade, was able to pass a measure, repealing the Corn Laws, and the duty entirely ceased in 1849.

CORNUCOPIA, "horn of plenty," a horn filled to overflowing with flowers, fruit, corn, etc., symbolical of the blessings of peace and plenty.

CORNWALL, the most westerly county of England, containing the two capes—Land's End and the Lizard, which form the most westerly and the most southerly points, respectively, in the country. The greater part of the county is hilly, the Devonian range stretching right through and terminating at the Land's End. The soil generally is not fertile, and the sea winds which sweep the land add to its unproductiveness. The climate is mild, and continued frost rare, so that tender plants, as the fuchsia, hydrangea, and others flourish outdoors all the year round. The Cornish mines, producing tin and copper, besides other metals, have been known since the dawn of history. Bodmin is the county town, and Truro has a Cathedral and is the seat of a (restored) bishopric. Penzance and Falmouth are the only other towns of much importance.

CORNWALLIS, CHARLES, MARQUIS, *b.* 1738, *d.* 1805; English general and statesman, had to surrender in the American War of Independence with all his men at Yorktown, Virginia, 1781. This loss was probably due to the blunders of others; at all events, Cornwallis escaped all censure, and continued to hold high offices till his death. In India he did good service by crushing Tippoo Saib, 1792, and as Lord Lieutenant of Ireland he did much to crush the rising of '98, and to restore tranquillity afterwards.

COROLLARY, a proposition the truth of which is so evident on some other proposition being shown to be true, that it only needs to be stated.

CORONA. (1) In architecture a broad slab forming the lower member of the projecting part of a cornice. (2) A luminous radiating appearance round the sun observed in total eclipses, due chiefly to the combustion of hydrogen and helium.

CORONATION. Refer to *Index.*

CORONET. Refer to "Degrees of Nobility" in *Index.*

CORPORAL. (1) The lowest grade of non-commissioned officers in the army, ranking just above the private. He is distinguished by two "chevrons," or angular stripes, on the sleeve, the serjeant having three. A "lance-corporal," or corporal on probation, has only one stripe. A ship's corporal is an officer who undertakes similar petty responsibilities on board ship. (2) A name given to the fine linen cloth with which the officiating minister covers the remaining elements in the Holy Communion after all have partaken, while he concludes the service.

CORPORATION. There are two kinds, aggregate and sole. A corporation sole consists of one person, the holder of a public office and his successors, e.g., a bishop or vicar. A corporation aggregate is a society of persons authorised by law to act as one person, e.g., the dean and chapter of a cathedral. A corporate body must always bear a corporate name by which it sues and is sued, and it must possess a common seal to be applied to certain legal documents. It can inherit property and hold it in perpetuity, being unaffected by the death of its individual members, if only care be taken to fill vacancies according to its constitution.

CORPUS CHRISTI, FESTIVAL OF, the grandest festival of the Roman Catholic Church, was instituted in 1264 by Pope Urban IV. In purely Roman Catholic countries, as Spain and Italy, gorgeous processions go through the streets with music and incense, and the day is observed as a general holiday. The Thursday after Trinity is the day appointed for its observance.

CORREGGIO, ANTONIO ALLEGRI DA, *b.* 1494, *d.* 1534; a famous painter, was the son of a tradesman of Correggio, near Parma, in Italy. His works were mostly executed at Padua, Parma, or his native town. Padua has still some beautiful frescoes, executed by him there in 1518. His frescoes at Parma are also celebrated. His best pictures are the "Night," "St. Jerome," "Christ in the Garden of Olives," and "The Penitent Magdalen."

CORRELATION OF FORCES. Under "Conservation of Energy" we pointed out that energy cannot be destroyed or lost. The term "Correlation of Forces" is a convenient expression implying that one form of energy can be converted into another. Thus the kinetic energy of a bullet produces heat when its motion is arrested by the target; chemical action gives rise both to heat and kinetic energy when a bullet is fired from a gun, and so on.

CORRIE, a name given in Scotland and Ireland to a circular or semi-circular recess among mountains, generally surrounded by steep cliffs. At the bottom of many corries is a mountain lake or tarn.

CORROBOREE, a gathering of aborigines in Australia, generally held by moonlight, when dancing of a very vigorous order, accompanied by pantomimic action, is the chief amusement.

CORRUGATED IRON, or fluted iron, is formed by passing thin sheets of iron between revolving fluted rollers, the projections of one fitting into the hollows of the other. The fluting enormously increases its strength and rigidity. Coated with zinc it is largely used for roofs and walls of temporary buildings, also for the flues of steam boilers.

CORSAIRS, the pirates who infested the coasts of South Europe and the East Atlantic, came chiefly from Algiers, Tunis, Tripoli, and Sallee, their ships being licensed as privateers by the princes of Barbary. Up to 1801 they were subsidised by European naval powers, but in 1804

and 1815 the Barbary States were attacked by the U.S. Admiral Decatur, and Christian prisoners were released. In 1816 Lord Exmouth bombarded Algiers and destroyed the Algerine fleet. This put an end to the Corsairs.

CORSICA, an island belonging to France, in the Mediterranean lying south of Genoa, from which it is distant about 100 miles. Its area is about 3,400 square miles, and population 300,000. The great Napoleon was a native of Ajaccio, its capital. The vendetta, or blood-feud of the Corsicans, has caused many frightful tragedies.

CORSO, an Italian name for a procession of carriages through the principal streets of a town, such as is usually made in Italy on festival days. The name is hence given to the principal street itself, and the Corso of Rome, nearly two miles long, with its handsome buildings on each side, presents a striking picture at the Carnival.

CORTES, the name given in Spain and Portugal to the national parliament.

CORTES, HERNANDO, *b.* 1485, *d.* 1547; the Spanish conqueror of Mexico, and the hero of one of the most daring and successful expeditions the world has seen. He had served under Velasquez in the reduction of Cuba, when the latter conceived the idea of conquering the flourishing empire of Mexico, and offered the command of an expedition for the purpose to Cortes. He set out, in 1518, with about 550 Spaniards, 300 Indians, a dozen horses, and 10 brass guns to conquer an empire. Montezuma, the emperor, received him in the city of Mexico as a friend and master, but was slain by a stone in trying to pacify his enraged subjects, who had risen against the strangers. For a time Cortes had to leave the city, but returning with augmented forces he took the town after an obstinate siege of 75 days, and this was the last organised resistance he had to meet. In 1540 he returned finally to Spain, and met with coldness and neglect, dying a poor man after working wonders for his sovereign.

CORT, HENRY, *b.* at Lancaster, 1740. *d.* 1800. was for some years a navy agent in London. In 1775 he had a forge and a mill near Fareham, Hants. where in 1784 he invented a process called "puddling" for converting pig iron into malleable iron. This had an enormous effect on the manufacture of iron, and for this and other inventions he has been called the "Father of the Iron Trade." A dishonest partner involved him in financial difficulties and he was ruined. Government awarded him a pension of £200 a year.

CORUNNA, a small but flourishing seaport in the north-west of Spain, with a good harbour. Here Sir John Moore turned to bay and defeated the French army that was trying to cut off his retreat, but lost his life in the moment of victory, 1809.

CORVÉE, a system under which the inhabitants of a country are forced to give their labour to their lord or sovereign, in performing certain public works, such as road-making, etc. The abolition of corvée in Egypt is one of the many beneficial results of the British administration of that country.

CORVETTE, a name formerly given to a ship of war, below a frigate in size, flush-decked, and carrying from 18 to 20 guns in one tier.

CORYBANTES, priests of Cybele in Phrygia, who celebrated her worship with wild enthusiastic dances to the sound of the cymbal and drum.

CORYPHÆUS, the name given to the leader of the chorus in ancient Greek drama. The word is now applied to a recognised leader in some art or science; also, in its French form *coryphée*, it is used to designate the principal *danseuse* in a ballet.

COSMETICS. The use of cosmetics is as old as history, probably older. The best that can be said for such adjuncts to beauty is that *some* of them are comparatively harmless; many are most dangerous. Even the most innocuous, as oatmeal powder, must choke up the pores of the skin and prevent its healthy action.

COSSACKS, a people with strongly marked characteristics, inhabiting the south and east of Russia, divided into two main branches, the Cossacks of Little Russia and the Cossacks of the Don. They pay no taxes, performing instead the duty of guarding the frontier. They are, as a rule, slighter and more intelligent-looking than the true Russians. Their system of society is based upon military needs, and thus they can be called to arms without any delay. Though little adapted for regular military operations, as scouts and skirmishers they are invaluable, being able to cover 60 or 70 miles a day for several days in succession. The development of Russia in Asia is largely due to the services of the Cossacks.

COSTA RICA, a small republic of Central America, having on the north Nicaragua, and on the south Panama. With an area of 21,400 square miles, its population only amounts to about 200,000, chiefly of Spanish descent. Minerals are abundant, the climate excellent, except along the coast, and the soil is fertile. San José, the capital (population 15,000), is nearly in the centre of the country.

COSTA, SIR MICHAEL, *b.* at Naples, 1810, *d.* 1884, musical conductor and composer. He composed cantatas, operas, and masses when in his teens. He came to England in 1829 and there remained throughout his life. His best known works are two oratorios, Eli and Naaman. But it is as a distinguished conductor that he is chiefly remembered. He was knighted in 1869.

CÔTE D'OR, "golden hill," a ridge of hills in the east of France, extending for about 100 miles to the south from the Plateau of Langres. It gets its name from the excellent wine produced from the vineyards of the district, which forms part of the ancient province of Burgundy.

COTILLON, originally a French dance for eight dancers, somewhat similar to the quadrille. It is still popular on the Continent and in the United States, but has changed to a much more lively dance offering much scope for manœuvring for partners.

COTOPAXI, a lofty volcanic peak of the Andes, 19,500 feet high, situated in Ecuador, about 35 miles from the city of Quito. It is remarkable as the loftiest active volcano in the world. It is rarely altogether quiescent, smoke generally issuing from its summit, and a red glow being frequently seen at night. Many violent eruptions have been recorded, the worst being in 1768.

COTTON, the downy seed-covering of a kind of shrub flourishing in warm climates. At present our main supply comes from the United States, the cotton so largely grown in India and China being hardly more than enough for their own needs, but there are many parts of the Empire quite suitable for its production. The picking and cleaning of the cotton is an operation requiring much care, and the attention bestowed upon this in the United States is evident to any one comparing a sample of United States cotton with one from elsewhere. It is packed in bales weighing 400 pounds each, and at present three out of every four bales imported here come from the United States.

COTTON, SIR ROBERT BRUCE, *b.* 1571, *d.* 1631, famous in the reign of James I. for his antiquarian learning, was a great favourite with that king until the king's encroachments threw him on the constitutional side. Under Charles I. the pamphlets he published, in the cause of liberty, brought him to prison. He is chiefly remembered as the founder of the Cottonian library, now in the British Museum.

COUNCILS, ECCLESIASTICAL, originally meetings or synods of the clergy of a city or district, convened to discuss and settle questions of Church discipline and doctrine. When Constantine adopted Christianity as the religion of the Roman Empire, he summoned an œcumenical council, that is, a council of the whole Church, at Nicæa, in Bithynia, to settle the Arian controversy respecting our Lord's divinity. Such councils continued to be summoned by the Emperors in the East, and afterwards by the Popes in the West. The four general councils recognised by all the Churches are those of Nicæa (325), Constantinople (381), Ephesus (431), and Chalcedon (451).

COUNTERSCARP, in military language, a term for the side of the ditch of a fort nearest to the besiegers, the other side being called the *scarpe* or *escarpe*.

COUNTERSIGN, in military language, a word or words used to detect strangers trying to gain admission to a camp or fortified place. The sentry has orders to stop and arrest all who cannot give the "countersign," which is changed every day.

COUNTRY PARTY, a name given to the Opposition in the latter part of Charles II.'s reign, as they resisted the king's arbitrary measures and insisted on their "country's" rights, while those who supported Charles formed the "Court Party."

COUNTY BOROUGHS, boroughs which are exempt from the government of the county in which they are situate, and with certain specified exceptions, manage their local affairs entirely. All boroughs which on June 1st, 1888, had a population of 50,000 or more, were made county boroughs, and a few have been added since.

COUNTY COUNCILS, bodies elected every three years to manage the local matters of every part of an "administrative" county, except what falls within a "County Borough." These bodies were established in 1888. Refer to "County Councils" in *Index*.

COUNTY COURTS, as we now know them, were established in 1846, with the two-fold purpose of lessening the press of business in the Higher Courts, and making justice more accessible to the poorer classes. Refer to "County Courts" in *Index*.

COUNTY PALATINE. See *Palatine*.

COUP D'ÉTAT, "a stroke of State" is a sudden violent course of action intended to effect some revolutionary change in the government of a State, such as, the sudden and successful attack made upon the leaders of the French National Assembly, by Louis Napoleon in 1851, in consequence of which he became the Emperor Napoleon III.

COUPLET. Two lines which rhyme constitute a "couplet," but the name is more especially reserved for those in which the sense is complete with the end of the second line. Take one of Pope's for an example:—

" Honour and shame from no condition rise ;
Act well your part, there all the honour lies."

COUPON. See *Commercial Dictionary*.

COURIERS, a term applied to those who travel about, either taking messages, generally on government business, or guiding others who hire their services for the purpose. A good courier is an invaluable adjunct to a travelling party who want to make the most of a limited time.

COURTESY TITLES are titles given by custom to persons having no legal claim to them ; thus the eldest son of a duke is styled a marquis. Refer to "Degrees of Nobility" in *Index*.

COURT MARTIAL, a court of naval or military officers, to try offences against naval or military law, such as mutiny, abandonment of a fortress, disobedience, and desertion. The assembly and constitution of courts-martial vary according to the rank of the offender and other circumstances : the trial is public, the members of the court sit as both jury and judge. Procedure is similar to that in civil courts. In naval courts the sentence is final, but in military it must be confirmed by the king or the convening officer.

COURT OF ARCHES, the Archbishop of Canterbury's Court of appeal, presided over by the Dean of Arches, was originally held in the Church of St. Mary-le-Bow (*de Arcubus*), whence its name. The Dean is now the chief law-officer of the Archbishop of Canterbury and also of the Chancery Court of the Archbishop of York. Though called a dean, he is a layman.

COURT OF CASSATION. See *Cassation*.

COURT OF SESSION, the supreme civil court in Scotland, instituted by James V., 1532, consisted originally of fifteen members, reduced to thirteen in 1830. The court now consists of two houses—the outer and the inner. The inner is separated into two divisions, in each of which sit four lords. Each of the five lords in the outer house has his own separate court. Appeals go from them to a division of the inner house. There is no appeal against the Court of Session except to the House of Lords.

COURT PARTY. See *Country Party*.

COURT, PRESENTATION AT, an introduction to the Sovereign by one who has previously been presented. The names of those who wish to be presented must be submitted to the Sovereign for approval through the Lord Chamberlain, and the one who introduces is responsible for the character and suitability of the person presented.

COUVADE, the name of a singular custom in savage lands whereby the father plays the part of an invalid on the birth of a child. About the time the birth is expected, he takes to his bed, where he continues for some weeks, religiously abstaining from ordinary food, from washing, from smoking, and indeed from all the proceedings of every-day life. This curious custom is widespread, for it has been met with in parts of China and Borneo, as well as of Africa and America.

COVENANTERS. There are two celebrated covenants mentioned in Scottish history : (1) The National Covenant, and (2) The Solemn League and Covenant. Both were intended for the defence and maintenance of the Presbyterian form of the Reformed Religion. The latter was also intended for the defence and maintenance of civil liberty and played an important part in the struggle with Charles I. by uniting the Scottish nation with the Parliamentary party in England. The name " Covenanters " refers especially to those who upheld the Covenants in the period between the Restoration and the Revolution, when they were declared to be unlawful. The *Cameronians* were a fanatical section of the Covenanters founded by Richard Cameron, 1680.

COVENT GARDEN, an extensive market place in London, near Charing Cross, for the sale of fruit, vegetables, and flowers. Here the bulk of the above commodities used in London come to be disposed of wholesale, and the regularity with which the needed quantities appear, and are distributed to the retail dealers, is an object lesson in the art of division of labour. About 6 a.m. is the best time to see the market in full activity.

COVENTRY, an interesting old city and modern manufacturing town of Warwickshire, 18 miles from Birmingham, and associated for ever with the legend respecting the ride of Lady Godiva. Two of its old gates and a portion of the wall still exist, and houses with projecting upper storeys are common. Its three chief churches, St. Michael's, Holy Trinity, and St. John's are well worth a long visit. The manufactures of silk ribbons, watches, cycles, motors, and art metal objects flourish. (For population, etc., see p. 902.)

COVERDALE, MILES, *b.* 1488, *d.* 1568 ; translator of the Bible into English, was trained to be a priest in the Roman Catholic Church, but he early embraced the Reformed doctrine. In 1535, under the authority of Henry VIII., to whom he dedicated the work, he published his English version of the Bible, a noble work to which we owe some of the finest phrases in our "Authorised Version." The Psalms as they stand in the Prayer Book are from Coverdale's Bible.

COW-CATCHER, a pointed, slanting projection in front of an engine on American railways, intended to throw aside any obstruction the engine may encounter. As many American railways are unfenced, the reason of the name is obvious.

COWES, a seaport and watering-place on the north side of the Isle of Wight, situate on either side of the river Medina, the parts being called East and West Cowes respectively. It is the head-quarters of English yachting, and to see the yachts anchored in lines just before great regattas is a sight not soon forgotten. There is good steamship communication with Portsmouth and Southampton ; population about 10,000.

COWLEY, ABRAHAM, *b.* in London, 1618, *d.* 1667, when only fifteen published his " Poetic Blossoms." He was attached to the Court party and in 1646 followed the queen to Paris. On his return, in 1656, he was arrested as a spy. Dr. Johnson thought him the last and best of the metaphysical poets, and Milton classed him with Shakespeare and Spenser.

COWPER, EDWARD, *b.* 1790, *d.* 1852 ; an inventor of various processes in printing, including the use of inked rollers.

COWPER-TEMPLE CLAUSE. Refer to *Index*.

COWPER, WILLIAM, *b.* 1731, *d.* 1800 ; was a native of Great Berkhamsted, in Hertfordshire. As a young man his want of cheerfulness was marked, and later in life he was subject to melancholia. It was after his first attack that he met with the Unwins, who were to have much influence on his destiny. Most of his poetry was written at Olney, Buckinghamshire, where Mrs. Unwin resided after the death of her husband. To her and Lady Austen we owe his best work ; for it was their insistence that caused the composition of " John Gilpin," and " The Task." His letters are models, and among his minor poems the lines, " On Seeing My Mother's Picture," are remarkably beautiful.

COWRY SHELLS, found chiefly in the Maldive and Philippine Islands, were long used as currency by the tribes of Southern Asia and Western Africa. They are still so used in Africa from the Guinea Coast to the Central Soudan.

COX, DAVID, *b.* 1783, *d.* 1859 ; landscape painter and artist in water-colour, was the son of a blacksmith in Birmingham. He began life as a scene painter and actor, but soon devoted himself to painting. He lived for many years at Hereford, and derived most of his subjects from country scenes in North Wales.

COXWELL, HENRY TRACY, *b.* 1819, *d.* 1900, a famous aeronaut, who in the course of forty years made some 700 ascents, the most remarkable of which was one he made with James Glaisher in 1862, when he attained the record height of 7 miles.

CRABBE, GEORGE, *b.* 1754, *d.* 1832 ; the East Anglian poet, came to London to " try his luck " as a poet, when all other avenues seemed, if not closed, at any rate difficult to enter. It was long before he found a hearing, but he endured bravely. His appeal to Burke turned the tide. Before long he was well off, and became ordained as curate in his native Aldeburgh, in Suffolk. In various comfortable livings he spent his remaining life, describing in poetry the every-day life of his East Anglian kinsfolk with a fidelity seldom equalled. " The Library," " The Village," " The Borough," and " Tales of the Hall " are his chief works.

CRACOW, a strongly fortified town on the Vistula, in Galicia, Austria ; population 92,000. It was the capital of Poland till 1609, and on the partition of that State, in 1795, it fell to Austria. By the Congress of Vienna, in 1815, Cracow became the capital of a small republic, and remained so till 1846, when a Polish insurrection led to its annexation by Austria. In the Castle church many Polish kings and heroes lie buried. The University dates from the 14th century. Cloth and leather are the leading manufactures, and its transit trade is considerable.

CRAIGENPUTTOCK, a lonely farm in the county of Dumfries, Scotland, bequeathed by Thomas Carlyle, at his death, to Edinburgh University. Here from 1828 to 1834 Carlyle, like the prophets of old, lived remote from the world, devoting himself to intense study and deep meditation, and laying the foundations of the great works on which rests his fame as a writer and philosopher.

CRAIK, DINAH MARIA (née Mulock), *b.* Stoke-upon-Trent, 1826, *d.* 1887 ; was the author of several novels, poems, and essays. Her best work, " John Halifax, Gentleman " (1857), has a wide circle of admirers, and has been translated into several European languages. All her works are characterised by simplicity, a broad sympathy with humanity, and a cheerful outlook on life generally. She married George Lillie Craik, publisher, in 1865.

CRANMER, THOMAS, *b.* 1489, *d.* 1556 ; Archbishop of Canterbury in the reigns of Henry VIII. and Edward VI. When Henry was vainly seeking from the Pope a divorce from Catharine of Aragon, Cranmer attracted the King's notice by suggesting that the question of the legality of the marriage should be laid before the universities of Europe. An answer favourable to Henry was given, but the Pope remained obdurate. Cranmer was made Archbishop of Canterbury in 1533, and his granting of the divorce led to England's separation from the Church of Rome. He promoted the Reformation by encouraging the transla-

tion of the Bible and recommending the dissolution of the monasteries. All his work as a reformer in Henry's reign is marred by a weak submission to the royal will. As one of the Council of Regency in Edward VI's. reign, he pushed forward the Reformation rapidly. On the restoration of Roman Catholicism in Mary's reign he was imprisoned for supporting Lady Jane Grey, and for heresy. Old and feeble he weakly agreed to recant. At a meeting convened at Oxford for his public recantation, he regained his spirit and boldly spoke in his own defence. He was hurried to the stake and died with cheerful courage.

CRAPE, is a light, gauzy material made from silk, though an inferior quality is now made from cotton. In crape-weaving, silk with the natural gum retained is used, and it is the process of afterwards removing this gum which leads to the distinctive character of the fabric. The wavy appearance of soft crape, such as is made in China, is produced by the partial untwisting of the silk threads when dipped in water to remove the gum. The process by which the hard, crisp nature is given to English crape is a trade secret.

CRAWFORD, MARION, *b.* in Italy, 1854, a well-known novelist. He is the son of American parents, and leaving Italy at the age of 12, studied successively at Concord, U.S., Cambridge, Heidelberg, and Rome. He edited the Allahabad Indian Herald for eighteen months, and his first novel, "Mr. Isaacs" (1882), is based on his Indian experiences. He is a most prolific writer, producing on an average two works a year from 1885 to 1898. Since 1884 much of his life has been spent in Italy, and his delineation of Italian life is highly interesting. "Marzio's Crucifix," "Saracinesca," and "A Cigarette Maker's Romance," are typical works.

CREASY, SIR EDWARD SHEPHERD, *b.* in Kent, 1812, *d.* 1878; a historian, and the author of the widely-read work, "The Fifteen Decisive Battles of the World." He was elected a Fellow of King's Coll., Camb., in 1834, called to the Bar in 1837, and practised on the Home Circuit for twenty years; was made Professor of History at London University in 1840, and was appointed Chief Justice of Ceylon in 1860. He served for twelve years in the last capacity, and on his return to England, in 1873, was knighted.

CRÈCHE, a nursery, generally supported by charitable funds, where parents working from home during the day may leave their infant children to be cared for, at a small charge, until their return in the evening. There are many such institutions in the industrial portions of the large cities of England and America.

CRECY, a village 10 miles north of Abbeville, memorable for the great victory gained by Edward III. over the French in 1346.

CREDENCE TABLE, the small table in churches placed beside the altar or communion table, on which the bread and wine are placed before being consecrated. In the Middle Ages the credence table was a side-board on which the food was placed and tasted before being set before the guests, to assure them there was no fear of poisoning.

CRÉDIT FONCIER, a kind of mortgage bank established in 1852 under the patronage of the French Government. It lends money at a low rate of interest on real or *immovable* property, to the extent of one half its value. The loan is repayable in a certain number of annual instalments. Since 1860 it has been empowered to advance money to local authorities for public improvements.

CRÉDIT MOBILIER, a banking company, founded in 1852 with the sanction of the French Government for the purpose of advancing money on *movable* property as the Credit Foncier was doing on immovable property. Its main object was to advance the necessary capital for making railways, working mines, and carrying on other industrial undertakings. It is still running, but its operations and profits are small compared with those of its early years.

CREEDS, professions of belief summarising the fundamental doctrines of a religious faith. The 8th of the 39 Articles of Religion in the English Prayer Book states that the Apostles' Creed, the Nicene Creed, and Athanasius's Creed ought thoroughly to be received and believed. The simplest of these, the *Apostles' Creed*, was not the work of the Apostles, and was probably embodied in its present form in the 8th century, though it has been traced, with some variations, back to the 4th century. The *Nicene Creed* was the outcome of a long dispute as to the precise nature of Christ. Arius and his followers claimed that Christ was the highest of created beings, differing both in nature and power from God the Father. At the Council of Nicæa, held in 325, the equality of the Father and the Son was solemnly affirmed. The Nicene Creed received its present form at Constantinople, 381, when the Divinity of the Holy Ghost was plainly asserted. The *Athanasian Creed*, which was probably drawn up in the 6th century, about two centuries after the death of Athanasius, states, with much minuteness of detail and careful elaboration, the doctrine of the Trinity as taught by Athanasius.

CREFELD, a town between the Meuse and Rhine in the Rhine Province, Germany; population 107,000. It is situated on the Ruhr coalfield, and among European towns is second only to Lyons for the manufacture of silks and velvets. Its manufactures of dyes, chemicals, and sugar are important.

CREIGHTON, MANDELL, *b.* 1843, at Carlisle. *d.* 1901, a celebrated historian and bishop. In 1885 he was made professor of Ecclesiastical History at Cambridge, having previously given evidence of his historical learning and research by publishing the first two volumes of his chief work "The History of the Papacy during the Reformation Period." He was made bishop of Peterborough in 1891, and translated to the see of London in 1896. He was a man of first-rate ability, sterling character, and broad sympathies. He held the scales fairly between the two extreme parties in his diocese and exercised a marked influence among the leading men of the day.

CREMATION, the burning of human remains, was frequently practised in ancient times, and was the common method adopted in Greece and Rome till the spread of Christianity made it unpopular. Its supporters claim that if no noxious fumes are allowed to escape during the process, cremation does not endanger the health of the living as does the ordinary method of burial. The objectors base their reasons on Scripture and the impossibility of detecting poisoning cases if suspicion arises after the body has been cremated. A test case in 1884 legalised cremation in England, but the system has made very slow headway. At Woking Crematorium, however, 1877 bodies were cremated in three years (1901–4.) In order to insure cremation it is not sufficient merely to insert a direction to this effect in a will, for having no effect in law it would not bind unwilling executors. The only safe course is to appoint executors who would undertake to respect the testator's wishes in this matter.

CREMONA, a city of Lombardy, Italy, on the Po. Its strong natural position made it a town of some importance in Roman times, and it is still well guarded with walls and moats. Silk throwing is the principal industry. Cremona, in the 16th and 17th centuries, was famous for violins, the best-known makers being Andrea and Antonio Amati, Antonio Stradivarius and Guiseppe Guarnerius; population 38,000.

CREOLE, a person of European descent born in the West Indies, Mexico, Central America, or South America. There is no tinge of negro or Indian blood in a pure Creole. The name is also applied to descendants of French settlers in the Southern United States. Before the secession of the Spanish colonies from Spain, strong social distinctions existed between Creoles and Spanish residents born in Europe. Creole dialects exhibit many curious deviations in grammar from the European languages on which they are based.

CREOSOTE, an oily, colourless liquid extracted from wood-tar, but more frequently from coal-tar. It has the property of arresting animal and vegetable decay. Its uses are many. It is largely employed in the manufacture of disinfectants, relieves toothache, and renders wood and timber better able to resist the effects of the weather.

CRESSID, a type of inconstant womanhood. She figures under the name of Cressida in a mediæval romance, the scene of which is laid in Troy, during its siege by the Greeks. Troilus, one of the sons of Priam, King of Troy, becomes enamoured of Cressida, who is a Greek prisoner in the hands of the Trojans. The two swear eternal fidelity to one another. An exchange of prisoners takes place, Cressida becomes the charge of the Greek hero, Diomed, and shortly after breaks her vow of constancy. The story has served as the basis of a long poem by Chaucer, and a play by Shakespeare.

CRESSY. See *Crecy.*

CREST, originally the thick protecting ridge, then the drooping tuft of horsehair or the plumes of a helmet, and occasionally the figure of some animal or bird wrought in metal served as a crest. In the 13th century the crest began to figure in the armorial bearings of noble families. The crest, in this connection, is a device, resting on a wreath or issuing from a crown or ducal coronet, which appears above the helmet or shield. The crest serves to distinguish different families of the nobility, or different branches of the same family. Detached, the crest serves as a mark for plate, livery, or panels of carriage doors.

CRESWICK, THOMAS, R.A., *b.* 1811, *d.* 1869; a painter who was especially gifted in depicting the country and coast scenery of Great Britain. His trees and foliage are much admired. "The Pathway to the Village Church" is in the National Gallery, and "A Scene on the Tummel" and "A Summer's Afternoon" are in the South Kensington Museum. He was also a successful illustrator of books.

CRETE, an island in the Mediterranean Sea, south-east of Greece. The Turks captured it in 1669 from the Venetians, after terrible fighting lasting over twenty years. The rule of the Turks was marked by great oppression and religious persecution. From 1821 to 1897 nine distinct risings of the Christians occurred, all of

which were crushed by the Turkish authorities. In 1897 Greece interfered to stop these atrocities, and this led to combined action by the Great Powers. Crete was given autonomy under a High Commissioner—Prince George of Greece, appointed by the Powers, the Sultan retaining the purely nominal title of suzerain. The Turkish troops were expelled in 1898. The industries are chiefly agricultural. Wheat, fruit, olive oil and cheese are exported. Candia, the leading commercial town, and Canea, the capital, are the chief ports; area 3,330 square miles; population 310,000, of which over four-fifths are Christians.

CRETINISM, a disease prevailing in certain mountain valleys, particularly of the Alps. Cretins, the victims of this disease, are usually weak-minded, and may also suffer from goitre. See "Cretin" in *Med. Dict.*

CREVASSE, a fissure across a glacier, caused by the unevenness of the ground over which it travels. The existence of crevasses, often hidden by a recent fall of snow, makes the crossing of glaciers somewhat hazardous.

CREWE, an important railway junction in Cheshire. It is quite of modern growth, and dates its rise from the establishment there of the N.W. Railway works. The bulk of the male population are employed in the works, which have turned out over 4,000 locomotives in the last 60 years; population 43,000.

CRICHTON, JAMES, "The Admirable Crichton," *b.* in Scotland about 1560, *d.* about 1585; was a Scotch adventurer, who won a great reputation for his learning, his many social accomplishments, and his skill in arms. Educated at St. Andrew's University, he passed to Paris, where he is said to have offered to dispute with the most learned doctors of Paris in any one of twelve languages, a feat which he accomplished with success. At Mantua he killed a famous fencer, who had issued a public challenge. He became tutor to the son of the Duke of Mantua, and was stabbed to death by his pupil, a dissipated youth, in a street brawl. The fragments of his writings preserved bear no evidence of his reported abilities.

CRICKET. A game bearing this name is frequently mentioned by writers previous to the 18th century, but practically no details are given of the manner in which it was played. In the middle of the 18th century cricket seems to have taken a strong hold, and the Hambledon Cricket Club, which had its ground at Hambledon, a small village about eight miles north of Portsmouth, occupied for many years a position similar to that held now by the M.C.C. In 1774 the first set of written laws of the game was framed at a meeting of gentlemen in London. About 1790 round-arm bowling, later on developing into the modern over-arm style, became general, and necessitated the use of gloves and pads by the batsmen. The Marylebone Cricket Club, the ruling authority of the cricket world by the tacit consent of all cricket clubs of the Empire, was founded in 1787. It was at first composed chiefly of members of the defunct White Conduit Club, who advised Thomas Lord, a bowler in their employ, to procure a piece of land on which they could play matches. Lord hired some fields where Dorset Square now stands, and in 1814 removed to the present (*Lord's*) ground at Marylebone. County cricket, as now existing, began in 1845, with the founding of the Surrey Club. In 1859 an English team opened international cricket by a visit to America. The first Australian team visited England in 1878.

CRIMEA, THE, a large peninsula of the Black Sea, joined to the Russian mainland by the narrow isthmus of Perekop; area 10,000 square miles. Population 500,000. Russia seized it from the Turks in 1783. Sebastopol, the chief town, on a fine harbour of the south-west coast, is strongly fortified, and is an important station of the Russian Black Sea fleet. It was besieged by the English and French in the Crimean war (which see). A railway through Simferopol, the capital, connects it with the mainland.

CRIMEAN WAR, THE, was the outcome of the aggressive attitude assumed by Russia, in 1852, towards Turkey. The Czar Nicholas I., one of the most astute and ambitious of Russian rulers, claimed the right of protecting Christians of the Greek Church under Turkish rule. The Sultan was recommended by the great Powers to accede to the Czar's demand. The Sultan refused and Russia precipitated war by occupying Turkish territory near the mouth of the Danube. England and France, unwilling to see Russia dominant in the Balkan States, allied themselves with Turkey, and sent a powerful combined fleet and army to the Crimea, with the main object of destroying Sebastopol, which had been strongly fortified as a menace to Turkey. In 1854 the Russians sustained three severe defeats at the Alma, Balaclava, and Inkerman. Sebastopol, which had been invested immediately after the battle of the Alma, was evacuated by the Russians in September, 1855, after holding out for nearly a year. The British troops in the winter of 1854–5 suffered terribly from the mismanagement of the commissariat department. By a treaty of peace, signed at Paris, in 1856, Russia promised not to keep a fleet of war ships in the Black Sea, and not to re-fortify Sebastopol. The former agreement she was released from by the Great Powers in 1871, the latter she has ignored.

CRIMP, a low type of lodging house keeper who works for gain on the credulity of sailors. During the Napoleonic wars they were very common in the naval ports of England, and devoted much attention to sailors who had been paid off after a voyage. Crimps of the worst type still abound in many of the great ports of the United States.

CRINAN CANAL, a canal in Scotland, separating the peninsula of Kintyre from the mainland of Argyllshire. It is about nine miles long, and accommodates vessels up to 200 tons burthen. Small passenger boats going from Glasgow to Oban are saved nearly 70 miles by using this canal. It was opened in 1801.

CRINOLINE, originally the name of a kind of cloth made of horsehair, used for stiffening ladies' skirts, was later extended to a bell-shaped underskirt consisting of a frame work of steel hoops. Crinolines became fashionable in 1856, and after a vogue of ten years common sense prevailed, and they dropped into disuse.

CRISPIN, SAINT, the patron saint of shoemakers. According to an old legend, two brothers, Crispin and Crispian, sons of Roman parents, settled at Soissons, in Gaul, and were beheaded, in 287, for preaching the gospel. During their mission they supported themselves by shoemaking. The battle of Agincourt was fought on the anniversary of St. Crispin's day, October 25th, 1415.

CRITICISM, HIGHER. See *Higher Criticism.*

CRITIQUE OF PURE REASON, a work dealing with the nature of the mind, published by the great German philosopher, Kant, in 1781.

CROCODILE, a great lizard-like reptile found chiefly in the rivers of Africa and Southern Asia. The largest grow to a length of about 24 feet. The upper surface of its body, tail, and head are protected by thick, bony plates. On shore its movements, owing to the shortness of its legs, are slow and awkward; in the water, the long powerful tail enables it to move with great rapidity. Its ferocity and the terror it inspired led the ancient Egyptians to deify the crocodile, and a special priesthood was devoted to its worship. Few crocodiles are now found in the Nile below the first cataract. The alligator of the rivers of the New World resembles the crocodile in its general features. Many crocodiles found as fossils were marine creatures; none are so to-day.

CRŒSUS, king of Lydia, in Asia Minor, about the middle of the 6th century, B.C., acquired riches so vast that his name became proverbial for wealth. His kingdom was conquered 546 B.C., by Cyrus, the founder of the Persian monarchy.

CROFTER, the name given to a small tenant of land in certain parts of Scotland. Roughly speaking, crofters are located in the western islands and Highlands, the counties of Inverness, Sutherland, Ross, Caithness, and the Orkney and Shetland Islands. The majority of them occupy, in separate tenancy, a small plot of arable land near or surrounding the dwelling-house, and they combine with other crofters in renting pasture land on the mountains. High rents, insecurity of tenure, and general grievances against landlords, led to the passing of an Act in 1886 for their protection.

CROME, JOHN, *b.* at Norwich, 1769, *d.* 1821; landscape painter. Son of humble parents, he became a house-painter and devoted his evenings to the study of art. He attained much skill in painting trees and foliage. One of his best paintings, 'Mousehold Heath," is in the National Gallery.

CROMER, EVELYN BARING, EARL, *b.* in Norfolk, 1841, a famous diplomatist and financier. He was appointed one of the Commissioners on the Egyptian debt in 1877, Finance Minister of India in 1880, and British Minister and Consul-General in Egypt from 1883 onwards. Under his administration Egypt has undergone a marvellous transformation. He was created Baron Cromer in 1892, Viscount in 1899, and Earl in 1901.

CROMPTON, SAMUEL, *b.* 1753, *d.* 1827; the inventor of the "mule" employed in cotton-spinning. His father, a cotton-spinner and farmer, a combination common in the days of the domestic system of manufacture, died when Samuel was five years of age, and the boy was instructed in cotton-spinning by his mother and an aged uncle. At the age of twenty-one he invented the mule, so called because it combined the principles of Hargreave's spinning-jenny and Arkwright's water frame, both invented earlier. The modern complicated mules are simply developments of that of Crompton. In 1812 Parliament voted him £5,000, but the scandalous way in which manufacturers had taken advantage of his invention without permission, brought him in a return by no means commensurate with the immense profits made by its use.

CROMWELL, OLIVER, *b.* at Huntingdon, 1600, *d.* September 3rd, 1658; was the great-grandson of a nephew of Thomas Cromwell, Earl of Essex. From his marriage in 1620 to the outbreak of the Civil War he lived the life of a gentleman-farmer, chiefly near Ely, in which locality he led the opposition to Charles I.'s arbitary rule, from 1629 to 1640. He represented Cambridge in both the Short and Long Parliaments and won a name for sturdy common-sense and blunt speaking. On the rupture between King and Parliament, in 1642, he raised a troop of horse,

which afterwards grew into his famous regiment of Ironsides. The series of defeats suffered by Parliament, in 1643, convinced him that the only way to make head against the courage and dash of the Cavaliers, was to foster a deep religious spirit among the Parliamentary troops. Piety and discipline eventually gave that solidity to the Roundhead forces which led to the downfall of the Royalist cause. As leader of cavalry, Cromwell distinguished himself at Marston Moor; and later, at Naseby, in 1645, Cromwell, as second in command to Fairfax, won a great victory with an English army trained on the model of his own Ironsides. In the struggle between the military and the Presbyterian parties in Parliament, 1646–8, he came to be regarded as the leader of the former. In the second Civil War he crushed the Royalist Scots at Preston, and was largely responsible for the execution of Charles I. Under the Commonwealth he subdued the Royalists of Ireland with great severity, and on September 3rd, 1650, defeated the Scots under Leslie at Dunbar. At Worcester, September 3rd, 1651, his defeat of Prince Charles, afterwards Charles II., shattered the Royalist hopes for years to come. As Protector, from 1653 to 1658, he strove at first to rule constitutionally, but, to prevent a reign of anarchy, he was compelled to maintain an army, and rule almost as an absolute monarch. His foreign policy was marked by great sagacity and firmness. He helped to develop English trade by a successful war with the Dutch; his alliance was sought by France and Spain; he compelled the pirates of the North American coast to respect English shipping, and brought the Navy to a high state of efficiency. In religion, he was an Independent, and more in favour of toleration than most men of his day.

CROMWELL, RICHARD, *b.* 1626, *d.* 1712; succeeded Oliver Cromwell as Protector of England, in 1658. He had neither the strength of mind nor the energy of his father, and finding himself incapable of controlling the dictatorial officers of the army, he voluntarily resigned, after an inefficient rule of seven months. At the Restoration he fled to France, and, returning in 1680, peacefully passed the remainder of his life at Theobald's Park, Cheshunt.

CROMWELL, THOMAS, *b.* about 1490, *d.* 1540; was the son of a Putney blacksmith. After a varied life on the Continent, he became secretary to Wolsey, about 1525. He attracted Henry VIII.'s notice by a vigorous defence of his fallen master in the House of Commons. Entering Henry's service, Cromwell, as a reward for the ready way in which he furthered the king's ends, gained rapid advancement, and was finally made Earl of Essex, in 1539. The suggestions for the separation from Rome, and the dissolution of the monasteries, emanated from him. With the idea of increasing Henry's power as a Protestant ruler, he arranged the king's marriage with Anne of Cleves. The latter's lack of beauty caused Cromwell to fall under the king's displeasure, and, accused on a trumped-up charge of high treason, he was executed by Bill of Attainder.

CRONJE, PIET, *b.* 1835, a Transvaal general, of Huguenot birth, in 1880 fought against the British at Doornkop and Majuba Hill, and in 1895 against the Jameson raiders at Krugersdorp. On the outbreak of the Boer War in 1899 he was appointed general and besieged Kimberley. He defeated Lord Methuen at Magersfontein, but a few months later was surrounded and compelled to surrender to Lord Roberts at Paardeburg with 4,000 men. He was sent prisoner to St. Helena, and there remained till peace was declared.

CRONOS, a Greek god, the son of Uranus and the father of Jupiter, Neptune, Juno and Ceres, took the throne of heaven from his father and was himself expelled by his son, Jupiter. Cronos corresponds to the Roman god Saturn.

CRONSTADT, a naval station and port of Russia on an island in the Gulf of Finland. It was founded, in 1710, for the defence of the newly-established St. Petersburg, under the supervision of Mentchikoff, the favourite minister of Peter the Great. It has a good harbour, and its fortifications make it almost impregnable; population 60,000.

CROOKES, SIR WILLIAM, *b.* 1832, a prominent chemist and physicist. In 1861 he discovered a new metallic element, *thallium*. He is a leading expert in sanitation, and, while engaged in experiments for testing London water, he invented the Radiometer, and also produced extreme vacua in tubes and bulbs, which have proved of great service in the construction of incandescent lights, and in the manipulation of X-rays.

CROSIER, the straight, richly-ornamented staff surmounted by a cross, usually borne before an Archbishop. It must not be confounded with the Pastoral Staff with its crooked handle, borne before a bishop. When pronouncing the pastoral benediction, archbishops hold the crosier in the left hand.

CROSSBOW. See *Arbalest*.

CROSSLEY, SIR FRANCIS, *b.* 1817, at Halifax, a great manufacturer and philanthropist. Securing the patents of an improved carpet loom, he largely extended the carpet factory founded by his father, lowered the price and vastly increased the output of carpets from his mills. He presented Halifax with a park, orphan homes, and almshouses, and gave munificent donations to the London Missionary Society.

CROSS, SOUTHERN, a brilliant star group in the southern hemisphere, first reckoned a constellation in 1679. The four principal stars form a sort of cross. The upper and lower serve as a pointer to the south pole. It cannot be seen from the northern hemisphere except very near the Equator.

CROSS, THE, the leading symbol of the Christian faith, commemorates the crucifixion of Christ. In ancient times the Carthaginians crucified defeated generals, and the Romans reserved this form of death for criminals of the lowest type. The custom among Christians of making the sign of the cross has been traced back to the 3rd century, but it was not till the reign of Constantine the Great, who died 337 A.D., that the cross lost its associations of degradation, and rose to be the most revered of Christian emblems.

CROWN, THE. This term, used to signify the State, dates back to a time when the sovereign was supreme in State affairs. Such terms as crown lands, crown lawyers, officers of the crown, &c., no longer imply a close connection with the sovereign. The Crown Solicitor prepares evidence for prosecutions by the State. Crown lands is the name applied to State property, once very extensive, now controlled by the Commissioners of Woods and Forests. Unappropriated land in many British colonies is still called crown land.

CROWTHER, SAMUEL, *b.* near Dahomey, 1812, *d.* 1891, was the first negro bishop. He was captured and sold as a slave but rescued by a British ship and landed at Sierra Leone. He became a Christian and laboured among the negroes first as teacher, then as a clergyman, and lastly as bishop. He was consecrated bishop of the Niger territory in 1864, and did noble service as a preacher and translator of the Bible into the Yoruba language, his native tongue.

CROYDON, a remarkably healthy town in Surrey, and now a large residential suburb of London, with which there is excellent railway service. Population increased from 10,000 in 1851 to 140,000 in 1901. See also p. 902.

CRUCIBLES, vessels made of fireclay or other materials capable of resisting the effects of great heat, in which substances are fused. Some writers assert that the name originated in the custom of marking such vessels in the Middle Ages with the sign of the cross to prevent the evil spirit spoiling the result of the fusion.

CRUCIFIX, a cross with the image of Christ attached, placed in Roman Catholic churches over the high altar. Small crucifixes are made for personal use. Crucifixes appear to have been first used in public worship towards the end of the 6th century. Probably the degradation of crucifixion—a mode of death inflicted only on malefactors of the worst type—delayed its general adoption as a Church symbol. Before the 11th century, Christ was represented on crucifixes as alive and pierced with four nails, one through each hand and each foot.

CRUDEN, ALEXANDER, *b.* at Aberdeen, 1701, *d.* 1770, went to London in 1722, where he became a teacher, bookseller and corrector of proofs of learned works. He published in 1737 his "Concordance to the Bible," the most famous and valuable in any language.

CRUIKSHANK, GEORGE, *b.* in London, 1792, *d.* 1878; a caricaturist of great ability and remarkable originality. Up to 1821 he devoted himself chiefly to political drawings and caricatures. As a book illustrator, his etchings are probably unequalled. His illustrations to Dickens's "Oliver Twist," and Ainsworth's "Jack Sheppard," "Tower of London," and "Windsor Castle," are among the finest of his works. Though his etchings brought large profits to the publishers, the latter showed little generosity towards him, and in 1866 he was glad to receive an allowance of £50 a year from the Royal Academy's Turner Annuities.

CRUISERS, armed ships, smaller than the ordinary battle ship, built especially for speed, and used to protect commerce, capture the enemy's ships, watch the movements of the enemy's fleets, and carry despatches.

CRUSADES, THE, a series of wars waged by the Christian nations of Europe for the recovery of the Holy Sepulchre from the Turks. In 1095 the preaching of Peter the Hermit, and his exposure of the bad treatment to which Christian pilgrims in Palestine were subjected by the Mohammedans, led to the First Crusade, which ended in the capture of Jerusalem and the election of Godfrey of Bouillon as king of Jerusalem. The Second Crusade, which ended disastrously, was undertaken in 1144, under the leadership of Louis VII. of France and Conrad III. of Germany, to prevent Jerusalem falling once more into Turkish hands. The Third Crusade, in which Richard I. of England took part, failed, after much bloodshed, to attain its object—the recovery of Jerusalem from the hands of Saladin, sultan of Egypt. Baldwin of Flanders, who led the Fourth Crusade in 1203, used his army to possess himself of the Byzantine Empire, and never reached Palestine. Frederick II. of Germany led the Fifth Crusade and obtained Jerusalem by treaty, but, the town having once more

fallen into infidel hands, Louis IX. (St. Louis), led two more fruitless Crusades, one in 1249 and another in 1270, in which Edward I. of England took part. No permanent conquests resulted from these wars, but they developed the power of the commons in England by removing numerous turbulent barons, they improved the relations between European Powers, they opened up the East to trade, and by crippling the might of the Turks and Saracens on the plains of Palestine they arrested the tide of Mohammedan conquests.

CRUSTACEA are animals of the crab and water-flea type. They are all encased in a shell, and provided with numerous jointed appendages, some of which serve as jaws, others as claws, and others as legs for swimming or walking. They all breathe by gills, and most are of active free-swimming habits. The barnacles, however, in their adult state, live a sedentary life attached to rocks or hulls of ships, and were for a long time mistaken for molluscs. The common woodlouse is one of the few crustacea which never enter the water; it, however, lives in damp places and breathes by gills. Certain shore crabs are remarkable; one of them climbs palm trees and bores its way into the heart of the cocoa-nuts on which it feeds.

CRUTCHED FRIARS, or Cross Bearers, so called from the cruciform staff they carried, came to England in the 13th century and set up monasteries in London, Oxford, Reigate, and elsewhere. They were suppressed in the 17th century; the site of their monastery in London is marked by the street "Crutched Friars."

CRYPT, a chamber constructed underground beneath many ancient churches and cathedrals and used generally as a burial place. The word literally means, "a place hidden," and was first applied to the vaults and catacombs in which the Early Christians held their services.

CRYPTOGRAPHY, or "hidden writing," is the art of writing in such a way that only those in the secret can unravel the real meaning of the words. It is frequently employed in the writing of important State messages.

CRYSTAL PALACE, THE, a beautiful structure of glass and iron at Sydenham, in Surrey. A company, in 1851, bought up the materials of the wonderful glass palace, which was the most admired feature of the Great Exhibition in Hyde Park, and had it reconstructed with vast improvements, under the supervision of its architect, Sir Joseph Paxton. The nave is 1,600 feet long and 110 feet high. It is admirably adapted for exhibitions, shows of various kinds, concerts and the annual outings of large societies. The London County Cricket Club has its headquarters here, and for several years past the Palace football ground has been the venue of the final tie for the Association Cup.

CUBA, the largest of the West India Islands, belonged to Spain from 1492 to 1898, when the oppressed inhabitants, with the help of the United States, gained their independence. Since 1902 it has enjoyed self-government under what is practically the suzerainty of the United States. Material improvements in roads, railways, trade, and sanitation are being now carried out chiefly with American capital. The interior is healthy, but fever prevails on the coast. Valuable forests of mahogany, dyewoods, and cedar abound. Tobacco and sugar are the leading exports. The United States, with which there is a preferential tariff, absorbs most of its trade. Havana, the capital, and Santiago, the chief centre of the naval fighting in 1898, are the chief ports. Area about 36,000 square miles; population about 1½ millions.

CUCKOO, a migratory bird, the British variety of which is found in English woods from early April to the end of July. The cuckoo, with extremely rare exceptions, lays its eggs in the nests of other birds, generally one egg to each nest. The nest of the hedge sparrow is usually chosen for this purpose, and, when hatched, the young cuckoo proceeds to eject any eggs or young birds that it finds in occupancy, and then receives the undivided attention of its foster parents until it is fully fledged.

CUDDESDON, a village about six miles from Oxford. Near it is the palace of the bishops of Oxford and a theological college founded by Bishop Wilberforce in 1854.

CUIRASSIERS, heavy cavalry wearing the cuirass, a metal breast plate and back piece, which now serves more as a cumbrous ornament than as a protection. The name cuirassiers is not applied to any British regiment, though the Household Cavalry, when not on active service, still wears the cuirass. Russia and Germany have each twelve regiments of cuirassiers and France four.

CULLINAN DIAMOND, THE, found in the New Premier mine, twenty miles from Pretoria, in 1905, weighs 3.025 carats or 9.566 grains and is the largest diamond ever known. Cutting will probably reduce it to some 1.300 carats. It is remarkably pure and clear. The next largest diamonds are:—Excelsior (Jagersfontein), 969 carats; Koh-i-nur (after first cutting), 279 carats, now, 106 carats; Nizam of Hyderabad, 279 carats; Orlop, 194 carats; Pitt, 137 carats.

CULLOD'EN, a moor in Scotland, five miles from Inverness. Here, in 1746, the Duke of Cumberland, with 9,000 men, defeated 5,000 Highlanders under Prince Charles Edward, and crushed finally the hopes of a second Stuart restoration.

CUMBERLAND, a county in the extreme north-west of England. The Cumbrian Mountains, of which Scafell Pike, Helvellyn, and Skiddaw are the culminating peaks, contain some lovely lakes—Derwentwater, Buttermere, and Ullswater being the best known. A portion of the Pennine Chain occupies the east of the county. The Eden, on which stands Carlisle, the county town, and the Derwent are the chief rivers. Agriculture and sheep and cattle rearing are the leading industries of the interior; while on the coast Whitehaven, the centre of a small but rich coal field, Maryport, and Workington have manufactures of steel and iron, and a rising shipping trade. Lead, slate, and a little plumbago of the finest quality are worked; area 1,520 square miles; population 267,000.

CUMBERLAND, WILLIAM AUGUSTUS, DUKE OF, *b.* 1721, *d.* 1765: was the second son of George II. He fought beside his father at Dettingen, 1743, and was defeated at Fontenoy, 1745. In the Seven Years War he was defeated at Hastenbeck, and soon after, by the convention of Kloster-Zeven, was forced to disband and disarm his forces, leaving Hanover helpless against the French attack. At Culloden Moor, 1746, he crushed the Jacobite rising under Charles Edward Stuart. The treatment meted out to prisoners and wounded by his sanction after this victory earned him the name of "The Butcher."

CUNARD LINE, a line of fast steamships running between Liverpool and New York, was established in 1878 by the combination of two companies, one of which had been founded by Mr. Samuel Cunard in 1839. The company owns a large fleet of the fastest and best fitted vessels, some reaching a speed of 20 to 22 knots an hour. In 1903 the company entered into an agreement with the British Government by which it undertook to remain a purely British undertaking and to place its fleet at the service of the British Government in any emergency during the next twenty years.

CUNARD, SIR SAMUEL, *b.* at Halifax, Nova Scotia, 1787, *d.* 1865. He came to England, 1838, and with two British shipowners founded the steamship company which later grew into the great Cunard Line. The contract from the British Government, in 1840, for the mail service between Liverpool and Halifax, Boston and Quebec, helped considerably to put the new company on a sound basis, and the readiness with which Cunard adopted new inventions connected with steamships did much to advance ocean travelling.

CUNEIFORM, writing in which the letters, and sometimes the syllables, consist of combinations of wedge-shaped strokes, was used chiefly by the ancient Assyrians, Babylonians, and Persians. The deciphering of this ancient writing, begun by Grotefend in 1802, forms one of the most striking examples of scholarly detectivism, and has not only cleared history of many false traditions, but is gradually bringing back to us the records of civilisations existing, perhaps, as long as 9,000 years ago. The writing was done by some hard-pointed instrument upon bricks or cylinders of clay, which were afterwards baked. The excavations of Botta and Layard at Nineveh, from 1840 onwards, brought to light hundreds of these queer books, which students are still busy deciphering. The cuneiform inscriptions cut upon stone are generally in the three languages—Persian, Scythic or Median, and Babylonian.

CUPID, the god of love in Roman mythology, was the son of Venus. He appears as a mischievous little winged boy, armed with a bow and arrows, which he is occasionally represented shooting with his eyes blindfolded.

CURATE. In Elizabeth's reign this term was employed in much the same way as the French now use the word curé, and was applied to resident pastors of parishes. Later it was given only to deputies of non-resident incumbents, and in modern times it is applied to clergymen of the Church of England who are engaged to assist the rector or the vicar of a church in performing his duties.

CURFEW. In feudal times it is said that a bell was rung at sun-set in summer and about 8 p.m. in winter, to warn the inhabitants of towns and villages to extinguish their fires and retire to bed. Its institution in England is ascribed, probably erroneously, to William I., and is set down as an instance of his oppressive rule.

CURRAGH, THE, the Aldershot of Ireland, is an extensive down in Kildare, about 32 miles east of Dublin. It is used as a camp and training ground for British troops, and provides a splendid racecourse.

CURRAN, JOHN PHILPOT, *b.* in County Cork, 1750, *d.* 1817, a great Irish advocate and orator, famous for his defence of political offenders, especially Wolfe Tone. His pathos, drollery, and brilliant wit have never been surpassed. He was one of the greatest of Irish patriots.

CURRANTS. The dried variety sold by grocers is obtained from a vine which grows best in the countries and islands of the eastern Mediterranean. They came to us originally from Corinth, the French pronunciation of which gave us

the name. The island of Zante—one of the Ionian Islands—produces the finest currants.

CURRENCY. Refer to "Coinage, British and Foreign," in *Inder*.

CURSE OF SCOTLAND, the nine of diamonds, owing it is thought to the nine lozenges on the arms of the Earl of Stair, who was popularly held responsible for the Glencoe massacre.

CURULE CHAIR (*sella curulis*), the Roman chair of state, said to have been used in very early times as an emblem of kingly power. It was in shape like a folding-stool, with curved legs, and from the first was ornamented with ivory. Under the republic the right of sitting upon this chair belonged solely to the highest dignitaries of state, and subsequently the curule chair, overlaid with gold, became the throne of the emperor.

CURWEN, JOHN, the promoter of the Tonic-Solfa system of teaching music, and the author of many publications on that subject. For many years he worked as a Nonconformist minister, but in 1864 devoted himself entirely to spreading the Tonic-Solfa system, which he had begun to advocate in 1841. He built up a flourishing music-publishing business, and lived to see the system adopted in practically all the primary schools of England.

CURZON OF KEDLESTON, LORD, *b.* at Kedleston, in Ireland, 1859, educated at Eton and Balliol College, Oxford, where he became President of the Union. He held the post of Private Secretary to Lord Salisbury, and afterwards in 1891, was appointed Under-Secretary for India, and in 1895 Under-Secretary for Foreign Affairs. He has travelled extensively in Central Asia, Persia, Afghanistan, Siam and Corea. His term of office as Viceroy of India (1899–1905) was marked by statesmanlike and bold reforms. After returning to India in 1905 to undertake a second term of office, an *impasse* arose between the Viceroy and Lord Kitchener in the negotiations touching the dual control of the Indian army. The home government supported Kitchener in his condemnation of the dual system, and Lord Curzon resigned.

CUSTOMS. See *Commercial Dictionary*.

CUSTOMS DUTIES are duties placed upon certain articles of import and export. The name was originally applied to duties such as tonnage and poundage which the sovereign appropriated by custom. At one period, during the Napoleonic Wars, as many as 1,200 articles were liable to these duties. Smuggling was prevalent, and much trouble and difficulty were entailed in collecting these dues. The Customs Consolidation Acts of 1787 and 1825, by imposing one duty instead of several on each taxable article, simplified the collection; and the liberation of numerous articles from customs duties, especially by Peel and Gladstone, eased the burden of taxation and greatly increased trade. In 1903 customs duties were imposed on twelve articles of import, and the revenue drawn from them was £34,433,000.

CUTHBERT, SAINT, one of the pillars of the early English church, was born, it is said, near Melrose, about 635 A.D. A tradition fixes his birthplace in Ireland. He became a monk, and about 661 was made prior of Melrose, in which office he struggled hard to suppress paganism among the people. He later became prior of the monastery of Lindisfarne, but yearning for a hermit's life he retired to one of the Farne Islands, where he lived alone in a hut for eight years. He accepted the bishopric of Hexham in 684, and died in 687. After being carried from place to place for safety from the Danes, his body found its last resting-place at Durham, where the cathedral now stands.

CUTLERY, formerly a general term for cutting instruments of every description, but at present not applied to many edged tools, such as saws, chisels, &c. From very early times Sheffield has been noted for this trade, and it is still the centre of the industry for the whole world. In this trade the division of labour is so minute as to have a bad effect, morally and socially, on the operatives. Cutlery grinding is also a most unhealthy occupation, owing to the atmosphere being loaded with fine dust of steel and silica, causing injury to the lungs. Means, however, have been adopted in recent years for reducing the evil.

CUVIER, GEORGES LEOPOLD, *b.* 1769, *d.* 1832; a famous naturalist and a great authority on comparative anatomy. His original researches in marine animal life, made while acting as tutor to the family of a nobleman near Caen, attracted the notice of the great naturalists of France, and while quite a young man he was appointed Professor of Comparative Anatomy at the Jardin des Plantes. From that time he laboured with indefatigable energy, and produced most exhaustive treatises on Natural History. He was the first to elaborate scientifically the connection between prehistoric and existing animal forms. He was a councillor of State under Napoleon I., and was made Chancellor of the University of Paris by Louis XVIII.

CUXHAVEN, a fortified port at the mouth of the Elbe, about 70 miles below Hamburg. A commodious harbour capable of receiving the liners of the Hamburg-American Line was completed in 1895, and the port has rapidly grown in importance.

CUYP, ALBERT, *b.* 1605, *d.* 1691; a Dutch landscape painter of great excellence. Many pictures by him are in the National Gallery, London.

CYB'ELE (s-le), was the Phrygian goddess who personified the fruitfulness of the earth, and was worshipped as the mother of the gods. Rhea in the Greek and Ops in the Latin mythology, have practically the same position and the same powers assigned to them.

CYCLING. This mode of locomotion has passed through many changes since the days when the "dandy-horse," a two-wheeled structure propelled by pushing the ground alternately with each foot, provided material for satire to Cruikshank and his contemporaries. Pedals fixed to cranks connected with the back wheel were introduced about 1840. In the "boneshaker" of 1866 the pedals were arranged to turn the front wheel. The introduction of rubber tyres, some years later, rendered the latter instrument of torture less terrible, and with the adoption of one large fore wheel and a small back one, cycling was made moderately pleasant. H. L. Cortis, in 1882, travelled more than 20 miles in an hour on a machine of the latter type. In 1885 the Starley "Rover," a machine consisting of two wheels of equal diameter, and driven by a chain passing over a gear wheel, revolutionised cycling, and made it possible for persons of nearly all ages and of either sex to derive pleasure from the pastime. The principal improvements in the modern cycle, with the dates of their introduction, are as follows: Steel wire tension spokes, 1870; ball bearings, 1877; J. B. Dunlop's invention of pneumatic tyres, 1888; the "free wheel," 1901.

CYCLONE. There are, in general, two main currents in the atmosphere, a polar current of cold air and an equatorial of warm. The various meetings and crossings of these currents cause eddies, which are circular or spiral, and seldom less than 500 miles in diameter. Such eddies or circling currents of air are named cyclones, and within them the barometric pressure is low, whilst outside the pressure is high. The lowest barometrical reading occurs in the centre of the cyclone or cyclonic area. The direction of the wind is from places where the atmospheric pressure is high to places where it is low; but the centre of the cyclone is comparatively calm, the full force of the wind being felt where the barometric differences are most marked. A violent east wind, for instance, occurs whenever the barometer stands high in Norway and low on the east coast of England. The term *anti-cyclone* is applied to the belt of high pressure surrounding the cyclonic area. As the lowest barometrical readings indicate the centre of the cyclone, so the highest readings mark the locality of the anti-cyclone.

CYCLOPS or **CYCLOPES,** giants of Greek mythology, in which two distinct sets are mentioned. Homer's Cyclops are a wild, ferocious race of giants, who with their one-eyed chief, Polyphemus, dwelt on the coast of Sicily. The Cyclops of the older mythology are three Titans, each with one eye fixed in the centre of the forehead, who forged the thunderbolts of Zeus, and were eventually slain by Apollo. Later additions to this story make them servants to Hephæstus (Vulcan), assisting him, below Mount Etna, to forge the armour and weapons of the gods and demi-gods.

CYCLORAMA. See *Panorama*.

CYMBELINE, a British king and father of Caractacus. In Shakespeare's play he occurs as a man of weak character, under the evil influence of a second wife. *Imogen*, the child of his first wife is one of the most charming of Shakespeare's heroines.

CYMRI, the latest of the Celtic immigrants of Britain, who probably drove out the Gaels. They themselves were driven out by the Angles, Saxons, and Jutes into Wales, Cornwall, the north-west of England, and Brittany. The Cymric dialect of the Celtic tongue is still spoken in Wales.

CYNICS, a school of Greek philosophers who flourished from 380 B.C. to about 60 B.C. They affected great contempt for the ordinary comforts and pleasures of life, and their aggressive snarling at the conduct of others made them very unpopular. Antisthenes of Athens, the founder, and Diogenes of Sinope, are the best-known of the Cynics.

CYNOSURE, that on which the attention of beholders is centred. The Phœnician mariners used to steer their vessels by the "Little Bear," a constellation which the Greeks called Cynosura, "dog's tail." Hence Cynosure denotes anything that strongly attracts attention.

CYNTHIA, one of the many names of Diana, the Greek goddess who represented the moon. According to mythology, she and her twin brother Apollo were born at Mount Cynthus, in the island of Delos, a circumstance which gave her the name Cynthia.

CYPRIAN, SAINT, *b.* at Carthage about 200 A.D., one of the Fathers of the Church. He embraced Christianity in 246, and from that time devoted his wealth to the poor. He was made a bishop in 248. After several years of exile from Carthage, owing to the persecution under the Emperor Decius, he returned, and in a council held in 255 challenged the authority of the bishop of Rome over other bishops. He was beheaded, 258, for preaching Christianity in defiance of the imperial decree. Many of his writings are preserved.

CYPRUS, a large island off the coast of Syria, which has, since 1200 B.C., belonged successively to most of the dominant powers in the Eastern Mediterranean. England took it over from the Turks under an agreement made in 1878, by which she is to retain the island until Russia restores Batoum and Kars to Turkey. Agriculture is the leading industry and is slowly improving under British rule. Wine, oranges, wheat, barley, silk, and tobacco are the chief products, but the absence of good harbours hinders the development of foreign trade. In 1882 the island was granted partial autonomy; area, 3,700 square miles; population about 210,000.

CYRUS THE GREAT, founder of the Persian monarchy, was the son of Cambyses I., king of Elam. He conquered Astyages, king of Media, in 549 B.C.; crushed Crœsus, king of Lydia, about 540; and in 538 took Babylon from its king Nabonidus without striking a blow. He freed the Jews from their captivity in Babylonia, and allowed them to return to Palestine, 536. Before his death, he had conquered all that part of Asia which comes between the Mediterranean and the Indus Valley. The accounts given by ancient Greek writers differ greatly from the results of modern enquiry.

CZECHS, a Slav race which settled in Bohemia about the 6th century A.D. They became so powerful that the name was applied later to all the Slav inhabitants of Austria-Hungary. They now number over 7,000,000.

CZERNY, GEORGE, *b.* in Servia, 1766, *d.* 1817, a Servian patriot who raised a band of volunteers and drove the Turks out of Belgrade, forcing them to acknowledge him as ruler. The Turks subsequently regained Belgrade and Czerny became an exile. He was captured and beheaded during a second attempt to win the freedom of his country.

DACCA, a district in Bengal, at the mouth of the Ganges. Also the chief town of this district.

DACIA, under the Roman Empire the district north of the Danube, comprising what is now Roumania, Transylvania, &c., and extending from the Pruth to the Theiss.

DACOTA, a territory of the United States, on the northern border, adjacent to Manitoba, in the valley of the Missouri, about 200 miles west of Lake Superior.

DÆDALUS, a mythical Greek architect and sculptor, whose most famous work was the labyrinth in Crete. To escape from that island he made himself wings with which he flew to Sicily.

DÆMON, with the Greeks a spiritual being, intermediary between the gods and men, regarded often as the source alike of inspiration and of madness. In the Bible, an evil spirit or devil taking possession of human beings.

DAGON, the fish-god of the Philistines, whose principal temple was at Ashdod (1 Samuel v.).

DAGUERRE, *b.* 1789, *d.* 1851, a French scene painter, the inventor of the process called after him, Daguerreotype.

DAGUERREOTYPE, the earliest process of photography, in which was used a silvered plate sensitized to light by iodine fumes, the image being developed by mercury vapour, and fixed by hyposulphite of soda. Also, a photograph produced by this process.

DAHOMEY, a petty kingdom in Western Africa on the Gulf of Guinea, of which Abomey is the chief town and Whidah the chief port. It was notorious for its slave traffic and for its cruel religious rites and human sacrifices.

DAIMIO, the title of a class of Japanese officials. Till 1871 the daimios were feudal lords, some being entirely independent, others only nominally subject to the Mikado. Now they are governors of the districts over which they used to be sovereigns.

DAIMLER, GOTTLIEB, *b.* 1834, *d.* 1890, a German engineer and specialist in oil and gas engines. He was associated with Otto in the production of the Otto gas-engine, and in the last three years of his life he was engaged in the invention of the motor-car that bears his name.

DAIRY FACTORIES, in which machinery replaces manual labour, were first tried in the United States in 1860, cheese being made first and butter later. Their success in Canada and the United States, where they are numbered by thousands, has led to their introduction into England, especially in the counties of Cheshire, Gloucestershire, and Wiltshire. The stream of milk runs into a revolving cylinder, where the cream adheres to the axis of the cylinder, and the remainder is then drawn off by taps.

DALAI-LAMA, literally the "ocean priest," the name of the Buddhist high priest, who dwells at Lhassa, in Tibet.

DALE, DR. ROBERT WILLIAM, *b.* 1829, *d.* 1895, a Congregational minister, and famous theologian, whose work on the Atonement is regarded as a masterpiece by all schools of thought.

DALHOUSIE, MARQUIS OF, *b.* 1812, *d.* 1860. He succeeded Mr. Gladstone as President of the Board of Trade under Sir Robert Peel in 1844, and from 1848 to 1856 he was Governor-General of India. He added to our Empire the Punjab and several other native states, and greatly developed the resources of India, especially its railways and canals.

DALKEITH, a town on the Esk, near Edinburgh, where is the family seat of the Duke of Buccleuch.

DALMATIA, the most southerly province of the Austrian Empire, stretching along the north-east shore of the Adriatic Sea; a narrow strip of coast, with excellent harbours, and separated on the land side from Bosnia and Herzegovina by the Dinaric Alps.

DALMATIC, the vestment worn by the deacon at High Mass in the Roman Catholic Church.

DALRYMPLE, VISCOUNT STAIR, *b.* in Ayrshire, 1619, *d.* 1695; a famous lawyer, whose *Institutes of the Law of Scotland* is still unsurpassed as an authority. He acted as Commissioner under Cromwell, and was Lord President of the Court of Session under Charles II.

DALRYMPLE, FIRST EARL OF STAIR, son of the preceding, and Secretary of State for Scotland at the time of the Glencoe massacre in 1692.

DALTON, JOHN, *b.* in Cumberland, 1766, *d.* 1844, a chemist of world-wide fame. He formulated the laws of pressure and elasticity of gases, while his Atomic Theory has vindicated itself by leading to many brilliant discoveries which have since been made in Chemistry.

DAMA'RALAND, with Namaqualand, forms what was recognised in 1884 as a German Protectorate in South-West Africa, lying to the north of the Orange River and encircling the British territory of Walfisch Bay. It is thought to be rich in silver and copper ores, and is drained by the Fish River, a tributary of the Orange River.

DAMASCENING, the art of inlaying one metal with another; especially the decoration of sword blades with a pattern of gold inlaid, first practised at Damascus.

DAMASCUS, the largest city in Syria, about 130 miles north-east of Jerusalem, is famous for its bazaars and for its Great Khan or Mart. It is probably the most ancient city in the world.

DAMASK, a figured fabric, either of silk, as originally made at Damascus, (whence its name), or of linen as made in Scotland and Ireland.

DAMIEN, FATHER, a Belgian priest, who in 1873 devoted his life to the lepers confined in Molokai, an island of the Hawaian Archipelago in the North Pacific. He acted for them not only as priest, but also as magistrate, cook, carpenter, &c. After twelve years' heroic service he contracted the disease himself, and from it he died in 1889.

DAMIENS, ROBERT FRANCOIS, a Frenchman who attempted to assassinate Louis XV. in 1757, and was executed with the most horrible tortures.

DAMIETTA, a town on the main eastern mouth of the Nile, as Rosetta is on its main western branch. As a port it is overshadowed by Alexandria.

DAMOCLES, the flatterer of Dionysius, tyrant of Syracuse, 405–367 B.C. To teach him the unenviable lot of princes, and to rebuke his flattery, the tyrant seated him at a gorgeous banquet with a naked sword hung over his head by a single horse-hair.

DAMON, who lived in the first half of the fourth century B.C., is famous for his friendship with Pythias. The latter having plotted against the life of Dionysius of Syracuse was condemned to die, but was permitted to return home to arrange his affairs, on Damon offering to die in his stead, should he fail to return by an appointed day. At the last moment Pythias returned. Dionysius was so struck with their mutual fidelity, that he pardoned the offender, and begged to share their friendship.

DAMPIER, WILLIAM, *b.* in 1652, a famous sailor, who made many discoveries along the western and northern coasts of Australia.

DAN'AË, a maiden shut up in a tower at Argos by her father, but nevertheless visited in a shower of gold, by Zeus (Jove) by whom she became the mother of Perseus.

DANA'IDES, (i-des) the fifty daughters of Danaus, who with one exception put to death their husbands, the fifty sons of Ægyptus, on their bridal night, and consequently in the lower world were sentenced to draw water in a sieve.

DANCE OF DEATH, an allegorical drama, portraying the power of death over all men, common in France and Germany during the 14th and 15th centuries. It afterwards became a subject of pictorial representation.

DAN'DOLO, ANDREA, *b.* 1317, *d.* 1354, Doge of Venice, and historian of that republic. Through his successful wars with the Turks he opened the ports of Egypt and Asia Minor to Venetian trade.

DANEGELD, a land tax imposed to provide means for raising forces to resist the Danes, but afterwards employed by Ethelred the Unready to buy them off. It was abolished in the reign of Henry II.

DANELAGH, the country east of Watling Street which ran from London to Chester; ceded to the Danes in 878 by Alfred. The name is also given to the laws and customs which the inhabitants of that district observed.

DANES, THE. A race akin to the Anglo-Saxon; they first landed in England in 787, and continued their incursions for the next 150 years. Alfred allowed them to settle peaceably in the east of England, but their kinsmen continued to raid other parts of England. Ethelred the Unready caused the Danes, who had settled in Wessex, to be treacherously murdered on

St. Brice's Day, 1002. The result was a terrible revenge on the part of Sweyn, and the rule of the Danish kings, Canute and his two sons, Harold I. and Hardicanute (1017–1042).

DANIEL, a Hebrew prophet, carried captive from Jerusalem to Babylon in 597 B.C. By his skill in interpreting dreams he gained the favour of Nebuchadnezzar, and was made chief among the magi, and ruler of the province of Babylon. Darius put him next to the sovereign, but jealousy at this advancement caused him to be thrown into the lions' den. Soon afterwards he retired from court, but apparently continued his prophetic work till the reign of Cyrus.

DANIEL, BOOK OF, written partly in Hebrew, partly in Chaldee or Aramaic; its first six chapters purport to be historical, the remainder being an apocalypse or revelation in which prophecy takes the form of vision. Many modern critics would date the composition, or at least the compilation of the book, about the Maccabean times in the second century B.C.

DANTE ALIGHIERI, the Italian poet, born at Florence in 1265 of a noble family, died 1321. After playing an important part in Florentine politics, he spent the last twenty years of his life in banishment at Paris, Ravenna, &c. His love for Beatrice Portinari, which seems to have begun when he was a boy of nine and she a girl of eight, was the inspiration of his life, though Beatrice was afterwards married to Simone Bardi, an Italian noble, and Dante married Gemma. This passion was the theme of his first published work, a collection of poems called the *Vita Nuova;* but the undying fame of the poet is due to his *Divina Commedia* (a Comedy being a representation of life which reaches a happy ending), in which is portrayed man's life after death, the poet describing in order his visions of hell, purgatory, and the heavens, under the guidance first of Virgil and then of Beatrice.

DANTON, GEORGES JACQUES, the guiding spirit of the French Revolution for two years, but destined to perish by the monster he had himself begotten. His fall was due to the jealousy of Robespierre, who was his superior in cunning, as he was his inferior in courage; he was executed in 1794.

DANTZIC, a port of West Prussia, near the mouth of the Vistula, doing a huge transit trade, especially in wheat, the granaries for storing which are on the adjacent island of Speicher.

DANUBE, the longest river of Europe, except the Volga, rising in the Black Forest in Baden, only 30 miles from the Rhine, and flowing in a generally eastern direction for 2,000 miles into the Black Sea. Of its sixty great tributaries, the most important are the Drave, Save, and Morava, on the right bank, and the Theiss, Sereth, and Pruth on the left. The chief towns on its banks are Vienna, Pressburg, Buda Pest, and Belgrade.

DAPHNE, a river nymph, who became a laurel tree to escape the pursuit of Apollo. Also the name of the paradise or park near Antioch in Syria, where was a sanctuary of Apollo.

DAPHNIS, a Sicilian shepherd, son of Hermes (Mercury), said to be the inventor of bucolic poetry.

D'ARBLAY, MADAME. See *Arblay, Madame D'.*

DARBY AND JOAN, the hero and heroine of an old ballad which celebrates the mutual love and devotion of an old couple after more than fifty years of married life.

DARDANELLES, whose classical name was the Hellespont, is a strait connecting the Sea of Marmora and the Ægean Sea.

DARFUR, an African state in the east of the Soudan, now part of Egypt. Formerly a great centre of the slave trade. Its inhabitants are Mohammedans.

DARIEN, ISTHMUS OF. See *Panama.*

DARIUS I., king of Persia, 521–485 B.C. in whose reign the East and the West came into keen conflict. He made a fruitless expedition across the Danube in 516 B.C., but succeeded in subduing the coast of Thrace and Macedonia. But after the revolt of the Ionian Greeks in the west of Asia Minor, his punitive expeditions in 492 B.C. under Mardonius, and in 490 B.C. under Datis and Artaphernes, were failures. In the latter year was fought the memorable battle of Marathon, near Athens, when Miltiades inflicted a crushing defeat on the Persian hosts.

DARJEELING, a district in Bengal at the foot of the Himalaya Mountains, due north of Calcutta, famous for its sanatorium, 7,000 feet above the sea, and still more for its tea plantations, which occupy half the tea-growing area of India, and yield 450 lbs. to the acre.

DARLEY, THE ARABIAN, one of the three eastern stallions from which all horses in the stud book trace their descent, and the founder of the chief male line of thoroughbreds.

DARLING, GRACE, born at Bamborough, 1815; died, 1842. She was the daughter of a lighthouse keeper at the Farne Islands, near Berwick. In September, 1838, the *Forfarshire*, a steamer from Hull to Dundee, was wrecked a mile away; and the heroine and her father between them rowed their small boat through a raging sea to the wreck and saved nine lives. This noble act roused the utmost enthusiasm through the country.

DARLING, an Australian river, traverses the Colony of New South Wales, flowing in a south-westerly direction till it joins the Murray.

DARLING DOWNS, a range of hills on the coast of Western Australia, running due south from the Swan River.

DARLINGTON, a town 18 miles south of Durham, in the county of Durham, near the Tees. Here are the locomotive works of the N.E.R., besides iron and brass foundries and worsted mills; population about 45,000.

DARNLEY, LORD, great-grandson of Henry VII., and husband of Mary Queen of Scots; their son was James VI. of Scotland, afterwards James I. of England. The tragedy of Darnley's death—whether simply due to an explosion in the house where he was lying ill, or whether he was first killed by the agents of Bothwell, the Queen's favourite—has never been entirely explained; *d.* 1567.

DARTMOOR, a table-land in West Devon, 22 miles by 20, containing the remains of a Druid temple. The convict prison was originally built to receive prisoners of war during our struggles with Napoleon.

DARTMOUTH, a port in Devon, on the estuary of the Dart, about 30 miles south of Exeter. Here is situated the Royal Naval College, which occupies a beautiful site 200 feet above the river. Accommodation is provided in it for 320 cadets and staff; architect, Mr. Aston.

DARWIN, CHARLES, *b.* 1809, *d.* 1882, son of a Shrewsbury physician, and grandson of the well-known Erasmus Darwin. From 1831 to 1836 he made his voyage round the world in H.M.S. *Beagle*, on which he was naturalist. In 1859 he published the *Origin of Species* (see *Darwinism*), while subsequently he wrote many treatises to elaborate and defend the theory therein maintained. Among these works was the "Descent of Man," which gained great attention.

DARWINISM, the theory of the history of organic life, propounded by Darwin in his *Origin of Species*, and formulated independently about the same time by Dr. Alfred Russel Wallace. Instead of maintaining the ultimate independence of the chief types of vegetable and animal life (the "Special Creation" theory), Darwin adduced facts to show that a few ultimate types might be capable of many variations, particular variations being induced by the stimulus of external circumstances. In the struggle for existence throughout nature, the "fittest" to survive, i.e., those best able to respond to the stimulus from environment, would survive; this process is natural selection; and when this has been repeated throughout ages upon ages, it could account for the multitudinous and highly developed species of the present day being *evolved*, not from one another, but from a few simple original types. This scientific theory was transferred by Mr. Herbert Spencer and others from biology to questions of ethics, politics, religion, &c., and the resulting philosophy of *Evolution*, though not regarded as the final word on the subject, has helped greatly to advance thought during the last thirty years.

DATE PALM, the palm tree of Scripture, still found in many of the countries at the east end of the Mediterranean. An upright stem of 50 feet is capped by a cluster of some fifty leaves, each 8 feet long, with heavy bunches of fruit on the female plant.

DAUDET, ALPHONSE, *b.* 1840 *d.* 1897, "the French Dickens." Of his novels, the most famous is *L'Immortel*, and of his plays *Sapho;* he was also a contributor to the *Figaro* (Paris).

DAVENANT, SIR WILLIAM, *b.* 1605, *d.* 1668, a dramatic poet, manager of Drury Lane Theatre, and poet laureate after Ben Jonson.

DAVID, of the tribe of Judah, Saul's successor in the Hebrew kingdom was born at Bethlehem (the "city of David"), *d.* 1000 B.C. He was one of the greatest Old Testament heroes; his character was marked by courage, generosity, loyalty to his friends, and deep sincerity. His dynasty reigned over Judah till the Babylonian captivity, and from him was our Lord descended. The books of Samuel record the events of David's life, and most critics accept the tradition which regards him as the author of some of the Psalms.

DAVID, SAINT. Archbishop of St. David's about 600 A.D., patron saint of Wales.

DAVID I., king of Scotland 1124–1153, uncle of Queen Matilda, whose claims to the English crown he defended against Stephen, though with little success. He greatly encouraged learning and civilization in Scotland.

DAVID II., son of king Robert Bruce, and king of Scotland from 1330 to 1370. He was defeated and taken prisoner at Neville's Cross, in 1346, by Queen Philippa, wife of Edward III.

DAVID, JACQUES LOUIS, one of the greatest of modern French painters. His "Rape of the Sabine women" is in the Louvre. He was an ardent revolutionist, and a supporter of Robespierre; *d.* 1825.

DA VINCI, LEONARDO, Florentine painter, sculptor, and art-critic. The *Last Supper*, painted on the wall of a convent at Milan, was his most famous work; *d.* 1519.

DAVIS, JEFFERSON, leader of the Confederate (slave-holding) States during the American War of South versus North, on the slavery question; taken prisoner in 1865, released in 1868. A man of marked ability and the highest character; *d.* 1889.

DAVIS, JOHN. One of the heroes and navigators of Devon in Queen Elizabeth's reign; discoverer of Davis' Strait.

DAVIS' STRAIT, the channel between the Arctic and Atlantic Oceans on the west of Greenland; discovered by Davis in 1585.

DAVITT, MICHAEL, *b.* 1846. *d.* 1906. a prominent member of the Irish Nationalist party, lost his right arm as a lad while working in a Lancashire mill. He was sentenced to penal servitude in 1870 for his part in Fenian outrages. He was released in 1877, but rearrested and imprisoned on several subsequent occasions. He was a secretary of the Land League, and has written much, as an ardent patriot, in fiery language. For some years he was a member of Parliament.

DAVOS, or **DAVOS-PLATZ,** a famous health resort in the Swiss canton of Grisons, 5,000 feet above the sea level.

DAVY, SIR HUMPHRY, *b.* at Penzance, 1778; *d.* 1829. He was a great natural philosopher and chemist, and President of the Royal Society from 1820. He was the first to discover that such substances as potash, soda, &c., were not elements, but compounds of oxygen with a metallic base (potassium, sodium, &c.); his efforts founded the science of Agricultural Chemistry, and his investigation of the nature of fire-damp led to his invention of the safety-lamp.

DAVY LAMP. See *Safety Lamp.*

DAVY JONES'S LOCKER. Among sailors Davy Jones is a polite name for the Devil, and his Locker is the sea, the grave of seamen, because the sea keeps all that is committed to its care.

DAWSON, a city in Klondyke, at the confluence of the Klondyke and Yukon rivers, only two degrees south of the Arctic Circle; gold was discovered there in 1896.

DAY; the *sidereal day* is the time taken by the earth to make exactly one rotation measured by the interval between two consecutive appearances of a fixed star on a meridian; the *solar day* is about four minutes longer, but varies and is measured by the interval between two consecutive appearances of the sun on a meridian. The solar or sun-day is longer than the sidereal or star-day, because of the sun's apparent motion forward in the heaven, which distance the earth has to make up before the sun will be on a given meridian again. The solar day is of varying length, partly because the sun's apparent motion (really, the earth's motion in her orbit), varies, and partly because the equator is inclined to the ecliptic or plane of the sun's path. The average of these variations has been worked out, and is known as the *mean solar day.* The inclination of the earth's equator to the ecliptic is also the cause of the inequality of the periods of light and darkness throughout the year, for this inclination causes any circle of latitude (except the equator), to be divided unequally by the circle on the earth bounding the area of the sun's illumination—so at any point in that latitude the days and nights are correspondingly unequal in length.

DAYS OF GRACE. See *Commercial Dictionary.*

DAYS OF THE WEEK. The names of the days of the week are survivals from the times when the Anglo-Saxon race worshipped heathen divinities. Sunday and Monday are named in honour of the Sun and Moon respectively; Tuesday is the day of Tiw (Jupiter), Wednesday of Woden (the god of war), Thursday of Thor (the god of thunder) Friday of Frigu (the goddess of love), and Saturday of Saturn (the early Roman god of the seed-time and harvest).

DEACON. (1) The lowest of the three orders of the Christian ministry. (2) The assistant of the celebrant at High Mass. (3) In the Presbyterian bodies, a lay official.

DEAD, BOOK OF THE. A collection of prayers for the souls of the dead among the ancient Egyptians, copies of which were buried with the mummies. An edition has been published by Edward Naville, at Berlin.

DEADLY NIGHTSHADE. See *Belladonna.*

DEADLY SINS, as distinguished from venial. The former are considered to need special confession and forgiveness, while the latter need only to be dealt with in general terms. The deadly sins are traditionally given as seven in number:—anger, pride, gluttony, lust, avarice, envy, and sloth.

DEAD RECKONING, the calculation of a ship's probable course by using the compass, considering the rate of sailing, and allowing for currents, winds, etc.; and therefore needing correction when possible by astronomical observations.

DEAD SEA, a lake in the south-east of Palestine, into which the Jordan flows; the site of the cities of the Plain (Gen. xix.). Its level is 1,300 feet below that of the Mediterranean, and its waters are very buoyant and brackish.

DEAF AND DUMB. In most cases deafness is due to a physical defect, and dumbness is not organic, but simply the result of the deafness—the power of speech being only exercised through imitation of what has been heard. To establish communication with deaf-mutes, recourse must be had to manual signs, which are associated first with various ideas and then with words, so that an alphabet can ultimately be constructed; various methods of education connect the signs, in varying degrees of closeness, in some cases with ideas, in others with external objects, and in others merely with words. Deaf-mutes can be taught to articulate sounds, though rarely with any degree of clearness, but the latest system of visible speech gives promise of enabling the afflicted to communicate by the motion of the lips.

DEAKIN, ALFRED, *b.* 1856, an Australian lawyer and statesman. He held successive offices in the administration of Victoria, and in 1901 joined the Commonwealth Government as attorney-general. He became premier for a short time, in succession to Sir Edmund Barton, and again became premier in 1905. He has written extensively on irrigation.

DEAL, timber obtained from the Scotch fir (red deal) or from the spruce fir (white deal). Both are largely exported from the Baltic ports. The term is also used to denote all ready-sawn pine timber, whether from Europe or America.

DEAN. (1) An ecclesiastical officer, who presides over his cathedral chapter or council of canons. (2) A college tutor, who is usually in charge of the college discipline. (3) A judge in the Court of Arches.

DEAN, FOREST OF. In Gloucestershire, west of the Severn, famed for its coal and iron mines; most of the timber for the navy used to be grown here.

DEBORAH, the Hebrew prophetess who inspired Barak to give battle to Sisera, the commander of the forces of Jabin, king of Canaan (Judges iv. v.).

DECAMERON, literally the *ten days;* a collection of one hundred tales supposed to be told to while away ten days of the plague at Florence; written by Boccaccio (*d.* 1375). The idea of the "Canterbury Tales" was probably suggested to Chaucer by the "Decameron."

DECAP'OLIS, the district round the upper course of the Jordan, chiefly on the east, containing ten Greek or Gentile cities colonised by the Romans soon after Pompey's visit to Syria (63 B.C.).

DECCAN, the peninsula of India between the rivers Nerbudda and Krishna, including Nagpore and Hyderabad; sometimes the term is applied to the whole peninsula south of the Nerbudda.

DECEM'VIRATE, the office of the college or body of ten magistrates who had supreme power at Rome, 449–447 B.C., till the insult of one of their number, Appius Claudius, to Virginia, a Roman maiden, led to the downfall of all.

DECIMAL SYSTEM. See *Commercial Dictionary.*

DECIMATION, a military punishment of the Romans who dealt with large bodies of rebels or prisoners by executing one man in ten.

DECIUS, emperor of Rome, 249–251, and one of the most severe persecutors of Christianity.

DECKEN, BARON VON DER, a native of Brandenburg, Germany, an African explorer, who discovered Mount Kilimanjaro (1861) and penetrated into Somaliland; *d.* 1865.

DECLARATION OF INDEPENDENCE, made on July 4th 1776, by the Congress of the American States, which then formed themselves into the republic of the United States of America; recognised by the English Government in 1783, on the conclusion of the War of Independence.

DECLARATIONS OF INDULGENCE, (1) Issued in 1672 by Charles II., extending toleration to Nonconformist (including Romanist) worship. (2) Issued in 1687 by James II., and re-issued in 1688, when the Seven Bishops appealed against its being read in churches. They were consequently put on their trial for sedition, but acquitted.

DECLARATION OF PARIS, signed by all the European Powers at the Congress of Paris in 1856. It defined international law as regards neutral goods, and maritime traffic in general, during time of war.

DECLARATION OF RIGHTS, the charter of rights (as to taxation, a standing army, election of members of Parliament, &c.), presented to William III. and Mary, in 1689, by Parliament. It was afterwards embodied in the *Bill of Rights.*

DECLINE AND FALL OF THE ROMAN EMPIRE, the *magnum opus* of Edward Gibbon, written between the years 1775 and 1787. See *Gibbon, Edward.*

DECOY, a bird or animal trained or used to assist in the capture of its wild kindred. In England, the decoy-duck is commonly used by fowlers in the capture of water-fowl. These abound in the pools and marshes of the Eastern Counties. A secluded haunt is chosen, and tame ducks accustomed to feed in artificial channels leading out of the main pool, are used as decoys. The channels or "pipes" are cunningly made, screens of osiers and grasses enabling the fowler to pass unseen from one to another. The pipes have wide mouths and are netted over hoops, a cage-net being placed at the narrow end of the pipe. The decoys, on entering the pipes to feed, are usually accompanied by some wild birds. The fowler then closes the mouth of the pipe and drives the birds into the cage-net at the other end.

DECRE'TALS, or papal decrees, edicts, rescripts, &c., giving decisions on points of law. The most famous are the *Forged Decretals* of the Pseudo-Isidorus (in the ninth century), on which at one period the papal claims rested almost entirely.

DEE. (1) A river in England, flowing through North Wales past Chester into the Irish Sea. (2) A Scotch river, flowing eastwards through Aberdeenshire past Balmoral into the North Sea at Aberdeen.

(3) A Scotch river, flowing southwards through Kirkcudbrightshire into the Solway Firth.

DEER are distinguished from other cud-chewing or ruminant animals by their antlers, which are carried by the males of all but the musk-deer. In the reindeer alone are both sexes thus armed. Britain possesses two wild deer, the red deer and the roebuck. The *fallow deer*, so commonly preserved in our parks, is said to have been introduced by the Romans, though found here in a fossil state. The *roebuck* is comparatively rare; it is a small deer with small antlers. The *red deer*, on the other hand, is a large animal with great branched antlers; it is still hunted on Exmoor and shot on the Scotch moors. The great Irish elk, now extinct, is found fossilised in the Irish peat. [Refer to *Antler*, *Elk*, *Reindeer*, *Musk Deer*.]

DEER-FORESTS are wild tracts of moorland country in which deer are preserved, mainly for sport. Such forests now occupy a large extent of ground in the Highlands of Scotland. The largest of these forests are about 100,000 acres, and the smallest about one-tenth that size. Cattle and sheep are excluded, a "sanctuary" in which the deer are safe from intrusion is provided, and the heather is periodically burned to favour the growth of grasses for food.

DEFENDER OF THE FAITH, *Fidei Defensor*, a title bestowed on Henry VIII. by the Pope for writing against Luther; it was confirmed by Parliament in 1544; on our coins it is abbreviated as *Fid. Def.*

DEFOE, DANIEL, *b.* in London, 1661, *d.* 1731; a political pamphleteer, still more famous as a writer of fiction. He was unfortunate in his business career, and so took to literature; his political views, and men's failure to understand his irony, brought him repeatedly into trouble, and caused him to find his true *métier* in fiction. The *True-born Englishman* (1701) was a defence of William III.; the *Shortest Way with the Dissenters* was so delicately ironical that both parties felt themselves attacked in it; the *Hymn to the Pillory* testified his appreciation of the conduct of his opponents; and the *History of the Union* is a first-hand source of information as to the manner in which the Union with Scotland was effected. But Defoe's immortality is assured by *Robinson Crusoe*, which did not appear till 1719, and which was followed by several other imaginative works, of which the *Adventures of Roxana* is perhaps best known. He excelled in giving an air of reality to his creations by the accuracy and persuasiveness of their circumstantial details.

DEGREE. (1) An arc of a circle consisting of the 360th part of its circumference. (2) The angle between two radii drawn to the extremities of such an arc, ninety of which make a right angle, (written 90°). (3) In Algebra, the description of an equation according to the highest power of the unknown quantity. See *Latitude* and *Longitude*.

DEGREES, titles of distinction (Bachelor, Master, Doctor) in various subjects or faculties (Arts, Science, Divinity, Laws, Medicine, Music, &c.), granted by Universities, (1) to those who have passed the required examinations, and (at the older Universities) have completed a prescribed period of residence; (2) to persons of special distinction or merit, *honoris causa*, without fulfilling any such requirements. At the newer Universities women are eligible for degrees equally with men. The Archbishop of Canterbury also has the right of conferring degrees.

DE IMITATIONE CHRISTI, "Concerning the Imitation of Christ," ranks with St. Augustine's *Confessions* among our noblest devotional literature, next to the Psalms in the Bible. Its author was probably Thomas à Kempis, who died in 1470.

DEIRA, one of the old Anglian kingdoms, founded by Ella in 560, and united with Bernicia into Northumbria by Edwin in 626. Deira consisted of Durham, Yorkshire, and parts of Lancashire and Westmoreland.

DEISM, the system of belief of a *Deist*, in which the Deity is regarded as the First Cause of the Universe, who has given the original impetus to all phenomena, but which thereafter proceed without Him. Consequently He is thought of as apart from His creation, with which He does not meddle; therefore miracle or a supernatural revelation is not deemed credible or necessary, only "Natural Religion" can be believed, and unaided reason is man's only faculty by which to apprehend the Deity. The theory of evolution has exhibited the weaknesses of any such creed which does not recognise the presence of God in the *course* of Nature (see *Pantheism*); but deism was popular in the 17th and 18th centuries, its most famous adherents being Lord Herbert of Cherbury, Hobbes, Bolingbroke, and Tindal.

DELACROIX, FERDINAND, 1799–1863, a French painter of the *Romantic* school, in which faithfulness to nature is subordinated to the power of imagination, and oftentimes accuracy of drawing is sacrificed to brilliancy of effect.

DELAGOA BAY, on the east coast of South Africa, opposite the centre of the Transvaal, discovered by, and originally named after Lorenzo Marques, a Portuguese, in the 16th century; claimed by both Great Britain and Portugal for half a century, but awarded to the latter Power by the French President acting as arbitrator, in 1875. A railway, 400 miles long, connects Delagoa Bay with Pretoria and Johannesburg (and so with Cape Town). Before the Boer War Delagoa Bay was a serious rival to Durban for the trade of the Transvaal goldfields.

DELAROCHE, PAUL, *b.* Paris, 1797, *d.* 1856; a French historical painter, of the *Eclectic School*, which combines the brilliant colouring of the Romantic school with the correctness of the Classic school. His mural decorations of the Paris School of Fine Arts, and his picture of Cromwell contemplating the dead Charles I., are considered his best works.

DELAWARES, a tribe or rather confederacy of tribes of North American Indians, which formerly dwelt by the River Delaware, but were driven inland to the Ohio, and thence to Arkansas.

DELECTABLE MOUNTAINS, THE, whence, towards the end of his journey, Christian, in the *Pilgrim's Progress*, gains his first glimpse of the heavenly Jerusalem.

DELFT, a town in Holland, eight miles north-west of Rotterdam; from it was named the pottery, which was once famous but now is little in demand.

DELHI, in the Punjab, on the Jumna, due south of Simla, is famous for its Mogul's palace (dating from the time when Delhi was the Moslem capital of India) and other ancient buildings, as well as for its Government College for Native Education. Its embroidery and goldsmiths' work are renowned; but it is chiefly celebrated as the centre of the Indian Mutiny in 1857, when it was only retaken by the British after a three months' siege.

DELI'LAH, the Philistine courtesan, who first learned the secret of Samson's strength and then betrayed him to his enemies (Judges xvi.).

DELITZSCH, FRANZ, *b.* Leipsic, 1813, *d.* 1890, theologian and critic, marked equally by acumen and caution. His commentaries on the Psalms and his work on Biblical psychology are noted.

DELOS, a small island midway between Asia Minor and Greece, sacred to Apollo. This island was selected to be the treasury for the contribution made by the Confederacy of Greek states (476 B.C.) in order to provide against Persian invasion.

DELPHI, in Greece, on the north of the Corinthian Gulf, where oracles were delivered by the Pythoness or frenzied priestess of Apollo.

DELTA, a tract of land formed of soil which has been brought down by a river and accumulated at its mouth. The shape of the delta of the Nile (an equilateral triangle), like the Greek capital letter Δ (Delta), originated the name. The phenomena of the age-long formations of geological strata are often reproduced by deltas under our very eyes in miniature.

DEMAVEND, a volcano in the Elburz Mountains, in Persia, south of the Caspian Sea; height, 18,570 feet.

DEMERARA, a river and province of British Guiana, South America; its capital is Georgetown. The interior is covered with dense forests, but along the coast and river-banks sugar, tobacco, and cotton are produced in great abundance. There are two rainy seasons in the year, occurring about the time of our mid-winter and mid-summer respectively.

DEME'TER, literally "Earth Mother," the Greek goddess of corn and fruit, the Roman *Ceres*. She was the mother of Proserpina or Persephone, who was carried off to the under-world by Pluto.

DEMOCRACY, the form of government in which the supreme power ultimately rests with the body of the people or commons. In ancient democracies the functions of government were under the control of the popular assembly, which consisted of all male citizens of full age; but in modern times the commons elect representatives in whose hands such control lies.

DEMOCRATIC PARTY, THE. See *Republican Party*.

DEMON. See *Dæmon*.

DEMONOLOGY, knowledge about demons, the Greek equivalent for the Biblical *angels*, spirits whether good or bad; Jewish usage has caused the worse sense to predominate with us. See *Dæmon*.

DEMOS'THENES, *b.* 385, *d.* 322 B.C., the great Athenian orator, who tried to defend Greek independence against the aggressive policy of Philip of Macedon, father of Alexander the Great. The speeches in which he attacked Philip were called Philippics.

DEMURRAGE. Refer to *Commercial Dictionary*.

DENARIUS, the principal Roman silver coin. It is referred to in the New Testament as "a penny." It was named *denarius* because it was originally equivalent to ten of the copper coins, called ases (*deni* = "ten apiece").

DENDERA, in Egypt on the Nile, near which are the ruins of the temple of Isis. On the temple's ceiling was drawn what is probably a planetary table or zodiac, now preserved in the National Library at Paris. Denderah is on the trade route across the Libyan Desert.

D'ENGHIEN, DUC, *b.* Chantilly, 1772, *d.* 1804; left France at the Revolution, and took refuge near Strasburg. When Pichegru's conspiracy to restore the Bourbons was discovered, Napoleon imagined that D'Enghien was implicated,

and had him seized, brought to Paris, and shot.

DENIS, SAINT, missionary from Rome to France about 260 A.D., first bishop of Paris, six miles from which is the famous abbey founded in his memory.

DENMARK, a Scandinavian kingdom, including besides the peninsula of Jutland, the islands of Zealand, Funen, and Lauland (which lie in the Cattegat, or strait leading to the Baltic), Bornholm (in the Baltic) the Faroe Isles and Iceland (in the North Atlantic), and Greenland. The capital is Copenhagen, on Zealand, opposite the Swedish coast, and the other towns are Aarhuus, Odensee, Elsinore, and Aalborg. The chief exports are provisions, specially butter; the chief imports are textile goods. Its area is 14,100 square miles, and its population including that of the Farõe Islands is over two and a half millions.

DENTATUS, M. CURIUS, Roman consul in 290 B.C. He succeeded in driving Pyrrhus, king of Epirus out of Italy; in later days he was revered as a typical Roman, both in his patriotism and in the simplicity of his life.

DENT BLANCHE, a peak in the Alps, just north-west of the Matterhorn, in Valais, 14,300 feet high.

DENTISTRY, the work of the dentist, whether *mechanical*, to provide artificial teeth, or *surgical*, to scale, stop, or extract the natural teeth. The use of anæsthetics (such as ether, nitrous oxide, &c.), has facilitated the dentist's work in late years, and great improvement has been made in the construction of artificial teeth, which are mostly of porcelain, fitted into the mouth on a plate of gold or vulcanite.

DENT DU MIDI, a peak in the Alps in Valais, between the Rhone and the Savoy frontier, about 16 miles south of the east end of the Lake of Geneva. Height, 10,750 feet.

DENUDATION, the process by which water (rain, rivers, &c.), gradually wears away the surface of the rocks of the earth's crust, and carries the soil off to deposit it elsewhere. See *Delta*.

DENVER, a city in Colorado, U.S.A., on the Pacific side among the Rocky Mountains; the centre of a mining industry which is most flourishing, the mines being specially productive in silver, lead, iron, gold, and coal.

DEODAND. Until 1846, when the law was abolished, any personal chattel that was the cause of human death was confiscated to the crown to be applied to some pious use (*Deo dandum*="to be given to God").

DE PROFUNDIS, "out of the deep," the Latin or Vulgate commencement of the 129th Psalm (Prayer Book Version), one of the seven penitential psalms.

DE QUINCEY, *b.* Manchester, 1785, *d.* 1859; a famous essayist, and the author of "Confessions of an Opium Eater," a series of papers for the *London Magazine*, in which he analysed his own experiences. He was the friend of Charles Lamb, Coleridge, Wordsworth, and Southey.

DERBY, the county-town of Derbyshire, famous for its porcelain and silk. It is the centre of the Midland Railway system, and a good tourist centre for the scenery of the Peak district. The eastern part of the county comes within the Leeds and Nottingham coal field. (For population, etc., see p. 902.)

DERBY, EARL OF. (1) The title was conferred in 1485 after the battle of Bosworth, on Thomas, Lord Stanley, who had contributed largely to the success of Henry VII. in that battle. (2) Edward Stanley, 14th Earl of Derby, *b.* 1799, *d.* 1869, a prominent statesman of the 19th century, was Secretary of State for the Colonies in the Whig administration of 1833. He opposed Peel as a protectionist in 1845, and became Prime Minister in 1852, subsequently returning to power again in 1858 and in 1866. A vehement orator, he was known as the "Rupert of Debate." He cared however little for office, and left a mark of his scholarly attainments in his translation of Homer.

DERBYSHIRE, one of the midland counties, south of Yorkshire. In the north is the rugged Peak district, with lovely dales and caverns. Here are the health resorts of Buxton and Matlock with their warm mineral springs. The county is famous for its splendid halls and mansions such as Haddon Hall and Chatsworth, as well as for its abbey ruins and fine churches. Derbyshire is singularly rich in metals and minerals. Its chief manufactures are silk, cotton, hosiery, lace and porcelain. Its chief towns in addition to the two already named, are Derby, Chesterfield, Glossop, and Ilkeston.

DERBY, THE, a horse race of one and a half miles run at Epsom on the Wednesday after Trinity Sunday (about the end of May). It is named after Lord Derby, who instituted it in 1780. To breed and run a Derby winner is recognised as winning the blue ribbon of the turf.

DERVISHES, Mohammedan monks, vowed to poverty and celibacy, often living as beggars (Arabic, *fakirs*). Their inspiration, or rather frenzy, is intensified by dancing and howling. In the war with the Mahdi, in the Soudan, the name "Dervishes" was commonly applied to his troops.

DERWENTWATER, the most beautiful lake in the Lake District, in the south of Cumberland, with Keswick on its north side backed by Skiddaw; through it flows the Derwent.

DERWENTWATER, EARL OF. In 1715 he took the lead in England in the Jacobite rising which was to place the Pretender on the throne instead of George I.; the rising was utterly crushed at Preston, and Derwentwater was beheaded on Tower Hill, 1716.

DESCARTES, RENÉ, 1596–1650; the forerunner of modern philosophers as distinguished from the Schoolmen of the Middle Ages. His system is called the *Cartesian*, and attempted to find the criterion of truth within rather than without, in the thinking subject rather than in either the object of thought or any external authority. *Cogito, ergo sum*, "I think, therefore I exist," was the formula at the basis of his philosophy.

DES MOULINS, BENOIT CAMILLE, *b.* 1760, guillotined 1794; one of the leaders in storming the Bastille in 1789; voted for the death of Louis XVI.; supported Danton and the less extreme Revolutionists against Robespierre, and this led to his fall.

DESPOBLADO, (literally *desert*), a waste plateau more than 9,000 feet above the sea level, on the borders of Bolivia and Argentina.

DESTROYERS, or torpedo boat destroyers are vessels varying from about 300 to 350 tons displacement, with a speed of about 30 knots, designed to act against torpedo boats. They carry torpedoes and quick-firing guns, and when acting in squadrons are capable of effective harassing tactics against battle-ships and cruisers.

DETONATORS are employed to explode dynamite or gun cotton in a manner that increases the effectiveness of the discharge. They are cartridges of copper tubing containing compressed fulminate of mercury, and are fired by a fine train of gunpowder enclosed in a waterproof braiding.

DETROIT, in Michigan, U.S.A., on the river of the same name, possessing a first-class harbour and excellent communication by rail and water. By means of canals, the Mississippi effects a junction with the St. Lawrence at Detroit, which is an important centre for the timber trade and for boat-building.

DETROIT RIVER, connecting Lake St. Clair (and so Lake Huron) with Lake Erie, in the basin of the St. Lawrence. Its banks are lined with fruit orchards, and it forms part of a most valuable highway from the centre of the continent of North America to the Atlantic.

DETTINGEN, in north-west Bavaria, on the Main, 24 miles above Frankfort, the scene of the victory of England and Austria over France and Spain in 1743. This was the last occasion when an English monarch (George II.) commanded our army in person on the field of battle.

DEUCALION, a mythical hero, who built a ship, and thus with his wife, Pyrrha, was saved from the flood sent by Zeus. The oracle bade the couple repeople the earth by throwing the bones of their mother behind them; these they rightly interpreted as stones. From those flung by Deucalion men sprang up; from those by Pyrrha, women.

DEUTERONOMY, literally, the "Second Law," the fifth book of the Bible. It claims to contain the addresses delivered by Moses to the Israelites shortly before his death, in which were recapitulated God's blessings to them and their duties to Him. The tendency of some modern criticism is to assign a far later date to the book, and to identify it with the "Law of the Lord" found (and compiled, some critics add), in the Temple in the reign of Josiah (622 B.C.); some critics, however, admit the literary unity of the book, though not ascribing it to Moses.

DEVEREUX, PENELOPE, a lady who married Lord Rich, but with whom Sir Philip Sidney (1554–1586) fell in love, and whom he celebrates as Stella in his sonnets *Astrophel and Stella*.

DEVEREUX, ROBERT (second Earl of Essex), 1567–1601, who succeeded the Earl of Leicester as favourite of Queen Elizabeth, was present at the taking of Cadiz. As Lord Lieutenant of Ireland he failed to subdue Tyrone's rebellion, and soon after his premature return to Court he tried to rouse a revolt in London, but failed and was beheaded.

DEVEREUX, ROBERT (third Earl of Essex), son of the preceding, commander of the Parliamentary army at the beginning of the Civil War in Charles I's reign. He was too cautious and slow for the vigorous Cromwell, whose *Self-Denying Ordinance* caused his retirement from command in 1644.

DEVIL'S ADVOCATE. The act of canonisation in the Roman Church follows upon a form of trial in which the reasons against the proposal are stated by the *advocatus diaboli*, or devil's advocate. See *Canonisation*.

DEVIL, THE, or SATAN, the former word meaning *accuser*, the latter *adversary*. The Jewish belief, which we find in the New Testament, in the devil seems to have developed mainly after the Exile, when Persian influence was strong (from 530 B.C.), but it was ever free from the dualism which tainted Zoroastrianism, in which were postulated two *independent* powers of light and darkness, good and evil. Some theologians now deny the personality of the devil, and account for our Lord's teaching on the matter as an accommodation to the ideas prevalent in His day.

DEVIL'S BRIDGE, THE, by which the road over Mount St. Gothard spans the

Reuss, a tributary of the Rhine which flows through Lake Lucerne. The bridge crosses a deep chasm, 4,600 feet above the sea level. In other places bridges are similarly named when they occupy difficult positions.

DEVONPORT, on the mouth of the Tamar, in Devonshire, two miles west of Plymouth. Here is a naval arsenal, and dockyards line the estuary. It forms, with the adjoining town of Plymouth, an important naval station. (For population, etc., see p. 902.)

DEVONSHIRE, a county in the south-west of England, forming with Cornwall a peninsula between the English and Bristol Channels. The tableland of Exmoor occupies the north, that of Dartmoor the south. The chief rivers are the Exe, Tamar, Torridge, and Dart; the most important towns are Exeter, Plymouth, Devonport, Barnstaple, Bideford, with several seaside resorts, such as Torquay and Ilfracombe. Agriculture and dairy-farming are the chief industries.

DEVONSHIRE, DUKE OF. The house of Cavendish attained ducal rank in the reign of William III. For distinguished members of the house see under *Cavendish, Lord Frederick; Cavendish, Henry;* and *Devonshire, Duchess of.* The eighth duke (*b.* 1833), who succeeded to the title in 1891, and had been long known as the Marquis of Hartington, was a prominent member of the ministries of Lord John Russell and Mr. Gladstone. In 1885 he severed his connection with Mr. Gladstone on the Home Rule Question, and became leader of the Liberal Unionist party. In 1903 he left Mr. Balfour's ministry on the question of Tariff Reform, and became president of the Unionist Free Food League. The Duke is well known as a princely host, a sound and cautious politician, and a great and beneficent landowner. See *Chatsworth* and *Eastbourne.*

DEW. The amount of water-vapour that the atmosphere can hold at any given time depends largely on the temperature of the atmosphere at the moment. A continued fall in temperature will lead to a point when the vapour will begin to condense as dew. A cloudy night is unfavourable to the deposition of dew, for clouds radiate heat back to the earth and so prevent the fall of temperature necessary to its formation, whilst winds interfere with the stillness necessary to condensation. If the temperature of the surface of the ground be below freezing-point, the vapour is deposited as hoar frost.

DEWAR, SIR JAMES, *b.* at Kincardine, 1842, an eminent chemist. He became professor of chemistry at Cambridge (1875) and at the Royal Institution (1877). He has achieved wonderful results in the liquefaction and solidification of gases at low temperatures, and was associated with Sir F. Abel in the invention of cordite.

DE WET, CHRISTIAN RUDOLF, *b.* 1854, a celebrated guerilla warrior who, after bringing about the surrender of two British battalions at Nicholson's Nek, was appointed chief commandant of the Orange Free State forces in the great Boer War (1899). He captured a huge convoy at Waterval Drift, ambushed Broadwood at Sanna's Post, capturing a convoy and six guns, and took 470 prisoners at Reddersburg—all within two months (February–April, 1900). Driven across the Vaal, he captured the garrison at Dewetsdorp (November). In February, 1901, he evaded Kitchener's great "sweeping movement," and made a raid into Cape Colony, where he lost all his guns and transport. He was still uncaptured when peace was concluded at Vereeniging.

DEWEY, GEORGE. An American Admiral, *b.* 1837, at Montpelier, U.S.A. In the Spanish-American War he destroyed the Spanish Fleet off Cavité, in the Bay of Manila, 1898. A few months later his fleet aided the troops under General Merritt in the capture of Manila.

DE WITT, JAN, *b.* at Dort, 1625, *d.* 1672, a Dutch statesman of republican principles, the inveterate foe of the House of Orange, whose head was Prince William, who afterwards became William III. of England. De Witt perished with his brother Cornelius in a riot at the Hague.

DHAWALAGIRI, a peak in the Himalaya Mountains, 26,826 feet high, only some 2,000 feet less than Everest, the highest mountain in the world, both peaks being situated on the border of Nepal.

DIALS, SUN instruments for ascertaining the time of day by measuring the shadows thrown by the sun on to a plate (mostly a plane of metal), on which is fixed a metal style. The latter is mostly made parallel to the earth's axis, and points to the North Pole. The plate is usually either horizontal or vertical, and the divisions for the various hours have to be marked off after trigonometrical calculations based on the latitude of the place where the dial is to be used.

DIALOGUE, or conversation. In literature, a form of composition which enables the author to advance various aspects of the subject under discussion without identifying himself necessarily with any of them. Plato thus used the dialogue with great success in philosophy, its form doubtless being suggested to him by the conversations and catechisms which his master Socrates employed. In the theatre, a dialogue is the opposite of a soliloquy, and in the ancient drama it was opposed to the chorus (which was a kind of recitative).

DIAMONDS, precious stones consisting of pure carbon crystallised, and varying in colour from pure white to deep black. They are often found at the bottom of the clay or mud that underlies the finer sandy deposit of rivers, but are also found embedded in sandstone or quartz, as in Brazil; consequently so-called diamond mines are either merely washings of river mud, or simply diggings for stones that may happen to be cased in the rock. In the South African mines, shafts are sunk much as for coal, the earth is brought up in buckets, washed in "cradles," and then sorted—all these processes being now performed by machinery. The oldest diamonds were found in India, notably at Golconda (near Hyderabad, in central India), and in some of the East Indies; smaller ones have been found during the last two centuries in the Brazilian mines. During last century they were found in the Ural Mountains, in Australia, and in North Carolina and Georgia, U.S.A. In 1870 came the discovery of a rich diamond field near Kimberley. Since that time the mines of Kimberley have yielded an average return worth between two and three millions per annum.

DIANA, a Roman goddess, identified with the Greek Artemis; the twin-sister of Apollo; born at Delos; the goddess of the moon and of hunting. Her temple at Ephesus was one of the seven wonders of the world.

DIAPASON, the term used by the Greeks for an octave. In French it denotes musical pitch. In England the name is given to certain stops of an organ that extend throughout the whole compass of the keyboard.

DIAPHRAGM, literally a partition, denotes (1) in anatomy, the midriff, a muscle separating the chest from the abdomen (See *Med. Dict.*); (2) in optics, a disc which moves across a tube narrowing the aperture through which light may pass. The term is also applied to the vibrating plate of a telephone.

DIARY, a daily register of the occurrences of each day. Morley's Life of Gladstone contains copious extracts from the statesman's diary, which filled forty small volumes in double columns. Among the great diaries of our literature may be mentioned those of Samuel Pepys, John Evelyn, Madame D'Arblay, and Thomas Moore.

DIATOMS, minute plants of the class *Algæ,* abounding on rocks in the sea, on the moistened surfaces of stones, in river mud, &c. They sometimes reproduce by conjugation, but oftener increase by mere division. The fossil remains of their silicious (or flinty) envelopes, which are practically indestructible, have accumulated in myriads of myriads to form some of the later rocks of the earth's crust, and tripoli stone is composed entirely of them.

DIAZ, BARTHOLOMEW, a Portuguese navigator who prosecuted the exploration of the coast of West Africa, and was the first to pass the Cape of Good Hope; he died in 1500.

DIBDIN, CHARLES, *b.* Southampton, 1745, *d.* 1814; the writer of many famous sea songs, including *Tom Bowling,* which fostered the naval spirit of Englishmen much as the poems of Tyrtæus are said to have encouraged the Spartans in the seventh century B.C.

DICKENS, CHARLES, *b.* Landport, 1812, *d.* 1870. His novels are marked by humour, wit, pathos, and purpose, though sometimes criticised for their extravagance, exaggeration, and superficiality. He began life as a newspaper reporter; his "Sketches by Boz" (1836), and "Pickwick Papers," made his fame, and among his novels there then followed "Oliver Twist," "Old Curiosity Shop," "Barnaby Rudge," "Martin Chuzzlewit," "Dombey and Son," "David Copperfield," "Tale of two Cities," "Our Mutual Friend," &c. For a little while he was editor of the *Daily News,* and later of *Household Words* and *All the Year Round;* but his true greatness can be best judged when it is remembered that he was the creator of Mr. Pickwick, Sam Weller, Mrs. Gamp, Mark Tapley, Agnes, Dora, Uriah Heep, and hosts of other characters who are the intimate friends of most English speaking people on both sides of the Atlantic.

DICTATOR, the name of an extraordinary magistrate in the Roman republic. In a public crisis with which the ordinary officials were incapable of dealing, a dictator would be nominated to take supreme command of the State for not more than six months. As his word was law the name is often applied now to any irresponsible, supreme magistrate.

DIDDLER, JEREMY A name for an unprincipled, impecunious adventurer, originating in a character in James Kenny's *Raising the Wind* (written in 1803) who does every thing at other people's expense.

DIDO, the mythical foundress of Carthage (about 853 B.C.), and daughter of Belus, king of Tyre. Virgil, in the beginning of the Æneid, makes her fall in love with Æneas after the fall of Troy (about 1100 B.C.), and commit suicide by burning herself on her own pyre when that hero continues his voyage to Italy.

DIEPPE, on the French coast, in Normandy, between Calais and Havre, a favourite watering-place, and specially known to English travellers in connection with the Newhaven-Dieppe route to the Continent.

DIES IRÆ, "Day of Wrath," a 13th century Latin hymn, a translation of which is contained in "Hymns Ancient and Modern," among the hymns for the Burial of the Dead.

DIFFUSION, the process by which two gases or two liquids intermingle, when brought into contact with one another, although their densities may differ. It is owing to this process that the atmosphere is of a uniform character, that noxious fumes speedily are dissipated, and that the saltness of the sea is evenly distributed.

DIGBY, SIR EVERARD, *b.* 1581, hanged 1606, for complicity in the Gunpowder Plot. His son, Sir Kenelm Digby (1606–1665), gained considerable reputation for his philosophical and literary works.

DIJON, in France, in the valley of the Saone (a tributary of the Rhone), the chief town in the province of Burgundy, and the centre of its wine trade.

DILEMMA, a logical argument which offers two alternative assumptions (one of which *must* be accepted), and shows that either way the opponent is defeated—or as we say, caught between "the horns of a dilemma."

DINGO, the Australian dog. It is of wolf-like appearance, and given to ravaging the sheep, for which vice it has been now almost exterminated.

DINOCE'RATA (lit. *terrible horns*), an extinct order of mammals found in the Eocene strata of North America, having on each foot five toes, each ending in a hoof.

DINOSAURIA (lit. *terrible lizards*), so named by Professor Owen, and classified by Professor Huxley among the Ornithoscelida, an extinct order of Reptiles nearly allied in development to the Aves or Birds.

DINOTHERIUM (lit. *terrible beast*), a fossil mammal somewhat resembling the elephant, but larger, and semi-aquatic, with tusks curving downwards. There is considerable conjecture about its characteristics, as at present the skull is the only part of the skeleton that has been discovered.

DINWIDDIE, ROBERT, 1692–1770, a Scotchman, who was Governor of Virginia from 1752 to 1758, and through whose advice Ohio was formally annexed.

DIOCLETIAN, Roman emperor from 284 to 305 A D, in which year he voluntarily abdicated. On the division of the Empire, Diocletian governed the East. He initiated the final (and probably most severe and general) persecution of the Christians, in which our first martyr, St. Alban, was killed.

DIO'GENES, born 412 B.C. at Sinope on the Black Sea, died 323 at Corinth, a cynic philosopher, whose ostentatious contempt for life's comforts is said to have led him to take up his residence in a tub. When Alexander the Great, standing in front of his tub, asked what boon he could grant Diogenes, the latter merely said, "stand out of my light."

DIOME'DES, a mythical Greek hero, son of Tydeus (therefore called Tydides), who took part in the expedition against Thebes, and in the siege of Troy, and greatly distinguished himself for valour.

DIONY'SUS, the Roman Bacchus, god of wine and representative of the reproductive powers of nature, son of Zeus and Semele. His wanderings in the East, in the course of which he spread the elements of civilization through all the countries of the known world, are the subject of many myths. The dithyrambic hymns in his honour afterwards developed into the classical Greek drama.

DIORAMA. See *Panorama.*

DIORNIS (lit. *a terrible bird*), a genus of extinct, wingless birds peculiar to New Zealand. One species was probably the most gigantic bird that ever existed.

DIPLODOCUS CARNEGII is a fossil reptile discovered in the Jurassic strata of Wyoming. It belongs to the Dinosaurs an extinct order occurring in European strata. The reptile had a short body but a neck and tail of great length, the total length being 80 feet, and the height at the shoulders 11 feet. It was aquatic and herbivorous. A cast of the skeleton was presented to the Natural History Museum of London by Mr. Carnegie in 1905.

DIP'TERA (lit. *two-winged*), an order of insects, which includes the gnat, the common house fly, the mosquito, and other insects which sometimes act as scavengers, but often are pests. They disseminate many diseases, notably malaria, yellow fever, typhoid, and sleeping sickness. They are essential to many flowers for effecting fertilisation. Their distinguishing marks are the antennæ or horns, the proboscis, the three small eyes on the back of the head (in addition to the two at its side), and the delicate suckers on the feet by which (aided by a sticky fluid secreted in the feet) the insects can adhere to any surface, walk on the ceiling, &c.

DIRECTORY, THE. (1) In the Roman Church, the name of the book enumerating the sins to be enquired about at confession. (2) The book of directions for public worship drawn up at Westminster in 1644 to supersede the Prayer Book. (3) The Committee of five which formed the Executive Government of France from the end of the reign of Terror and the death of Robespierre, down to the sole Consulate of Napoleon Buonaparte, that is from 1795 to 1799.

DISCOUNT, the sum deducted from an account in consideration of prompt payment, the difference between the *credit price* and the *cash price.* In banking operations the holder of a Bill of Exchange (that is, a promise to pay a certain sum on a certain date), often prefers to receive ready money, and so sells his bill in the market at a reduction (which will vary according to the current rate of interest, and the time the bill has "to run;") the difference between the face value of the bill and the cash received for it is its *discount.* (See "Discounting a Bill," in *Commercial Dictionary*).

DISRA'ELI, BENJAMIN, *b.* in London, 1805, *d.* 1881; son of Isaac D'Israeli, a well-known author. At first he was articled to a solicitor, then he embarked in literature, his earliest novel being *Vivian Grey.* In 1837 he entered Parliament as Conservative member for Maidstone, after having twice contested Wycombe unsuccessfully as a Radical. His first speech, though a failure at the time, has become famous for its prediction to the House, "The time will come when you will hear me." In 1841 he became member for Shrewsbury, and began his attack on Sir Robert Peel's Free Trade Policy. On the death of Lord George Bentinck, in 1848, he became Protectionist leader in the Commons. He was Chancellor of the Exchequer in Lord Derby's three Administrations (1852–3, 1858–9, 1866–8), and in 1868 became premier. It was due to his insight that the Conservatives passed the Reform Bill of 1867, but his resignation at the end of the next year brought in a Liberal Ministry under Mr. Gladstone, which lasted till 1874. The Conservatives then returned to office with a strong majority in the Commons. In 1877 Mr Disraeli went to the Upper House as Earl of Beaconsfield, and the following year attended the Congress of Berlin on the Eastern Question, from which he returned with Lord Salisbury bearing "peace with honour." Nothing has more brilliantly vindicated his political sagacity than his acquisition of a preponderating influence for Great Britain in the Suez Canal by the purchase of the Khedive's shares at the cost of £4,000,000. In 1880 the Liberals returned to power, but few would be found to deny that the present popularity of the Conservative party among the masses, and the imperialist ideals so prevalent now, are the heritage of Mr. Disraeli's prescience; and these two features have been rendered permanent by the "Primrose League," formed in his memory. His many novels, (of which *Lothair* was the last), though widely popular at one time, are rarely read now—their brilliancy being disfigured by an utter inadequacy of conception both of characters and conditions.

DISSENTERS. Refer to "Nonconformists" in *Index.*

DISSOLVING VIEWS, given by two magic lanterns, each of which in turn throws its image on to the same area of the screen. When oil light is used, a shutter is arranged which alternately covers and uncovers the aperture of each lantern; when lime light is employed, a "dissolving tap" simply turns the light off in one lantern and on in the other, alternately.

DISTEMPER, a kind of catarrh which often attacks young dogs, the symptoms being a hard cough and running from the eyes and nose, which result in a gradual wasting away of the tissues.

DISTRICT OF COLUMBIA. See *Washington.*

DISTRINGAS. See *Commercial Dictionary.*

DIVAN, a Persian word applied to a state council, or room in which it is held; also the cushioned seats of a reception room. The word has the further meaning of a collection of poems.

DIVIDE, THE GREAT, the name given to the watershed formed by the Rocky Mountains in the United States, separating the long rivers flowing to the Atlantic from the short ones flowing to the Pacific.

DIVINA COMMEDIA, See *Dante.*

DIVINE RIGHT, the theory that royal power is derived direct from God, to Whom alone the monarch is responsible; accordingly he is above the law, with which he can dispense, (the "dispensing power,") when he thinks fit. As has often happened, what was intended to withstand papal aggression became itself a means of oppression. The king's insistence on his divine right in actual practice led to the execution of Charles I. and the abdication of James II. On the Continent this doctrine provoked the extreme form of the counter-theory that "the people is the sole source of sovereign power," which was elaborated into the Social Contract Theory by Rousseau and others, and paved the way for the ideals of the French Revolution at the close of the 18th century. In England, a century earlier, Milton and Algernon Sidney led the attack on divine right, while the philosopher Hobbes was its most notable defender.

DIVING BELL, an apparatus to enable persons to remain under water a considerable time. Two principles are involved in its working—(1) the pressure that a liquid can exert at any point within itself is proportional to the depth of that point; and (2) the pressure that a gas can exert is proportional to its density, which increases as the bulk or volume of the same amount of gas decreases. If an

inverted tumbler be forced straight down into water so that the air in it does not escape, the deeper the tumbler goes the greater will be the pressure of the water on the contained air, and the greater the pressure on the air, the less will be its volume, and the higher in the tumbler will the water rise. The same thing exactly takes place in the diving-bell. And so to keep a sufficient volume of air in the bell, and to supply the men with fresh air for breathing, a supply of fresh air is constantly forced into it through a tube from above. Often now a diving dress of India-rubber is used instead of a diving bell. The helmet, however, is of strong metal, and serves as the air-reservoir; or the air reservoir is placed on the diver's back, with a tube by which he may inhale the air, while he expels air into the water by a second tube, which is fitted with a powerful valve to prevent water getting in.

DIVINING ROD, a forked branch, usually of hazel, which is carried by the diviner, and is said to dip where water (or sometimes various minerals) is concealed in the earth. Some of the phenomena associated with the use of the divining-rod are too well authenticated to be wholly ascribed to charlatanism, and are often now referred to animal magnetism by way of explanation.

DIXIE, LADY FLORENCE, *b.* 1857. *d.* 1905. poet. novelist, and explorer. She explored Patagonia with her brother, Lord Francis Douglas, who afterwards was killed on the Matterhorn. She acted as war-correspondent in the Boer War (1881–2), and took a leading part in questions of women's rights.

DIXIE'S LAND, a term for the Southern States in the Civil War, and for nigger land in general; derived from the refrain of a nigger song about a slave owner named Dixie.

DIXON, WILLIAM HEPWORTH, *b.* 1821, *d.* 1879. for sixteen years editor of the Athenæum, a biographer, historian, and traveller. Chief works:—"Life of John Howard." "William Penn," "Personal History of Lord Bacon." "The Holy Land." "Spiritual Wives," and "Her Majesty's Tower."

DNIEPER, a river 1,230 miles long, draining the south-west of Russia, and flowing into the Black Sea at Kherson, about 80 miles east of Odessa. There is a magnificent suspension bridge over this river at Kiev, and engineering works have overcome the impediments caused to navigation by the cataracts below Ekaterinoslav.

DNIESTER, a river 700 miles long, rising in the Carpathians, and flowing through Austrian Galicia and the south-west of Russia into the Black Sea about 30 miles south of Odessa. Its numerous falls and its general shallowness render it of little use for navigation.

DOAB, in India, the name for any district between two rivers, but specially for the country between the Ganges and its tributary the Jumna.

DOCETÆ, (Greek *dokeo*, I appear,) an early heresy which tried to explain the Incarnation by saying that our Lord's human nature and form were only *apparent*. This theory was often due to the Gnostic notion of matter as the source of evil.

DOCKS (1) *Tidal docks* have an open entrance and are therefore subject to *tidal variations* which interfere with the discharge of cargoes. (2) *Wet docks* have dock-gates and so can keep a uniform water level. Vessels can, however, only enter at certain states of the tide. (3) *Dry* or *graving docks* are used for repairing vessels. They have sluice gates and are full when the vessel enters. The water is pumped or slowly run out and the vessel settles upon the keel blocks over which she has been trimmed. (4) *Floating docks* are also used for repairing vessels up to a certain tonnage. They require deep water and a safe berth. They are cheaper than dry docks, but as they work by lifting the vessel, they cannot be economically used for the largest ships.

DOCKYARDS, enclosed places near harbours, provided with slips for shipbuilding, docks, wharves, basins, workshops, and magazines, containing stores and all requisites for the building or repairing of ships. The royal dockyards in England are at Chatham, Devonport, Pembroke, Portsmouth, Sheerness, and Woolwich. There are dockyards at many points in our Empire abroad, e.g., at Gibraltar, Malta, the Cape, and Hong-Kong; but since steam has been introduced, and iron has replaced wood, many of the ships for the Royal Navy are built in private yards.

DOCTORS' COMMONS, demolished in 1867, was situated near St. Paul's Churchyard. It was the headquarters of the advocates and proctors who practised in the old Ecclesiastical Courts. Marriage licences used to be issued here. Here also wills were registered and kept, but in 1874 the Will office was removed to Somerset House.

DODGSON, CHARLES LUTWIDGE, 1833–1898, a Fellow of Christ Church, Oxford, who, under the name of Lewis Carroll, wrote "Alice in Wonderland" and "Through the Looking Glass."

DODO, a bird bigger than a turkey and too heavy to fly (as its wings were only rudimentary). It was very common in Mauritius when that island was discovered (1644), but its flesh was so good to eat and it was so incapable of self-protection, that within forty years it became absolutely extinct.

DOE AND ROE. John Doe and Richard Roe were the fictitious plaintiff and defendant respectively in the quaint system of ejectment procedure that was followed until 1852 when the legal farce was abolished.

DOG DAYS, the hottest period of the year, part of July and August, at which season the dog star, Sirius, used to rise just before the sun; but this conjunction, owing to the precession of the equinoxes, does not now come within the period we continue to call the dog days.

DOGE'S PALACE, in Venice. It has been five times rebuilt since its first construction in 800. It was restored twenty years ago, and contains the library of St. Mark's, as well as paintings by all the great Venetian masters.

DOGGER BANK, a sand bank in the North Sea, with an average width of 40 miles and depth of 18 fathoms, stretching from a point 36 miles off Flamborough Head in an easterly direction to within 60 miles of Jutland. It is famous for its cod-fisheries, which are in the hands of the English and the Dutch. Here occurred (October, 1904) the outrageous attack by some Russian war-ships, on their way to Japan, upon the Hull trawling fleet, sinking the *Crane* and damaging two other boats. Two fishermen were killed and others wounded. An international commission, presided over by Admiral Fournier, determined that the order to fire was "not justifiable," and found that the Russian Admiral, Rojdestvensky, was responsible. Compensation was accordingly paid by the Russian Government to the families of the victims.

DOGGETT'S COAT AND BADGE, a sculling prize of a red coat with a silver sleeve badge, founded by the actor Thomas Doggett (*d.* 1721), to be annually competed for by Thames watermen who have just completed their apprenticeship. The course is from London Bridge to Chelsea.

DOGMA (lit., what appears good), a principle which appeals for support to authority rather than to individual experience; in religion, an authoritative expression of an article of faith, as representing the Church's consciousness, and recognised through her accumulated experience.

DOG WATCH. See *Watch*.

DOLDRUMS, a belt of calms near the equator between the south-east and north-east trade winds. Long calms, and a brazen torrid sky, broken by violent and sudden squalls, make the Doldrums a dangerous area for sailing vessels.

DOLPHIN, a species of whale only six or eight feet long, met with chiefly in the Mediterranean and North Atlantic. Large shoals are sometimes seen following a ship in full sail and gambolling amid the waves. Ancient mariners regarded their appearance as the presage of a storm.

DOME, a feature of architecture specially common among the Arabs and Turks. The oldest dome known is that of the Pantheon at Rome, which dates from the beginning of our era. Strictly, the external part of the roof is the dome, and the internal part is the cupola. The basis of the dome may be a circle, an ellipse, or a polygon, and often the dome is surmounted by a lantern.

DOMESDAY BOOK, a register containing the results of the survey of England made by William I. in 1086. (Doom = valuation, judgment). It is in two volumes, one folio, the other quarto, and contains minute details as to the value, tenure, and condition of the land. It may be seen in the Museum of the Record Office, in Chancery Lane, London.

DOMINIC, SAINT, Domingo de Guzman, *b.* Old Castile, 1170, *d.* 1221; founder of the Order of Dominicans, by whose efforts he hoped to convert the Albigenses, an heretical sect in Southern France. Failing in this, he initiated a ruthless persecution, which set an example to, if it did not actually originate, the notorious Inquisition. See *Albigenses*.

DOMINIC'A, or Dominique, in the Leeward Islands, British West Indies, just north of Martinique, of volcanic origin, discovered by Columbus in 1493. Its capital is Roseau, and its chief products are sugar, cotton, coffee, and cocoa.

DOMINICANS, or Black Friars, an order founded by St. Dominic in 1216. Their special work was preaching and teaching. The most famous Dominican was St. Thomas Aquinas, the organizer of theology in the Middle Ages, whose followers the Thomists were the rivals of the Franciscan Scotists. In theology they insisted on St. Augustine's doctrines of free-will and grace.

DOMITIAN, Roman emperor, of the Flavian line, which began with his father Vespasian in 69 A.D. He reigned from 81 to 96 A.D. In cruelty and vice Domitian quite came up to the tradition of Nero's later years. Under him the Christians were extensively persecuted. He was fittingly denounced by the satirist Juvenal and the historian Tacitus.

DON, (1) a river draining the south of Yorkshire, flowing near Sheffield, a tributary of the Ouse; (2) a river in the south of Aberdeenshire, flowing eastwards into the North Sea at Old Aberdeen, a famous salmon stream; (3) a river in central southern Russia, flowing into the Sea of Azov (chief tributary the Donetz), with important fisheries.

DONATION OF CONSTANTINE, now admitted by all to be a forgery, but purporting to be a decree by the Emperor

Constantine in 324, conferring the sovereignty of the West on the Bishop of Rome. At one time it was used as a great support to the Papal claims.

DON CARLOS. See *Carlists*.

DONCASTER, on the Don, in Yorkshire, 26 miles south-east of Leeds, well known for its splendid race course, on which at the Autumn Meeting is run the St. Leger. The parish church is a fine specimen of modern architecture; population about 30,000.

DONEGAL, the north-western corner of Ireland, between Lough Foyle and Donegal Bay. It is thinly populated, the soil is poor, and the methods of agriculture primitive. The surface is mountainous, (Mount Errigal being 2,462 feet high), with much bog land, and the fisheries are the chief means of sustenance for the inhabitants. Lifford on the Foyle, and Ballyshannon on the Erne, are the chief towns.

DON'GOLA, NEW, in Nubia, on the Upper Nile, between the third and fourth cataracts. It was captured by the Mahdi, but regained by Egyptian troops under General Kitchener, 1896.

DONIZETTI, GAETANO, *b.* in Italy, 1798, *d.* 1848, a famous operatic composer, whose artistic life centred chiefly at Naples and Paris. His later years were clouded by impaired reason. His operas are tuneful and pretty, the most popular being Lucia di Lammermoor, La Fille du Regiment, and Lucrezia Borgia.

DONJON, the master tower of a Norman castle, with walls of tremendous thickness, containing the most important rooms, and also the prison. It usually stood in the centre of the Inner Bailey, round which space ran a wall, beyond which was the Outer Bailey. The donjon or keep was the last retreat of the garrison when pressed by siege.

DONKEY-ENGINE, a small auxiliary engine on board ship, driven by steam from the main boilers, and used to work derricks pumps &c.

DONNYBROOK, a village just outside Dublin. Here used to be held a fair which became proverbial for its disorderly scenes, and was put a stop to in 1855, after being held for over 500 years.

DON QUIXOTE, a romance written by Miguel de Cervantes in 1605, in which the absurdities of the days of chivalry are satirised. The hero, after whom the book is named, turns knight errant, tilts at windmills, and has many ridiculous adventures. His lady-love is a peasant girl whom he names Dulcinea del Tobosa, and his squire is a peasant, the matter-of-fact Sancho Panza.

DOOLEY, MR. See *Dunne*.

DOOMSDAY BOOK. See *Domesday Book*.

DOONES, THE, a family or small clan of marauding outlaws who lived in the Badgeworthy valley on Exmoor. Blackmore gives a romantic but exaggerated description of the valley and their life in "Lorna Doone."

DORCAS or **TABITHA,** a Christian disciple at Joppa, who was restored to life by St. Peter, and who was famed for her good works, and specially for her clothing the poor (Acts ix. 36–42).

DORCHESTER, the county town of Dorsetshire on the Frome, with most interesting remains of the Roman occupation of Britain, including a camp and wall and an amphitheatre cut in the chalk hills.

DORÉ, PAUL GUSTAVE, *b.* Strasburg, 1832, *d.* 1883; a French painter and sculptor, his most famous paintings being "Christ leaving the Praetorium," and the "Entry into Jerusalem." His colouring was brilliant, but permanence was sacrificed to immediate effect. He is rather a popular artist than a great one, at least if the verdict of art critics such as Ruskin is to be accepted.

DORIC ORDER, the earliest of the Greek styles of architecture, embodying manly simplicity and strength, while the Ionic rather shows feminine delicacy, and the Corinthian is marked by wealth of adornment. As a man's height ought to be six times the length of his foot, so a Doric column's height was six times its diameter. In imitation of the trees of the forest, some Doric columns have no base, and while the Ionic and Corinthian columns have volutes or scrolls at the top of the shaft, the Doric has none. The shafts are fluted in all three orders, but the Ionic and Corinthian columns have a much less sturdy appearance, their heights being nine and ten diameters respectively.

DORT, SYNOD OF, a Protestant assembly which met at Dort or Dordrecht (on the Maas, south-east of Rotterdam in South Holland), in 1618–19, and confirmed the doctrines of Calvin against those of Arminius, who taught that God's predestination was conditioned by His foreknowledge of the use which man would make of grace.

DOTHEBOYS HALL, the name given to Mr. Squeers' Academy by Charles Dickens in his novel, *Nicholas Nickleby*, in which he denounced the iniquities of many of the boarding schools of his day, notoriously some in Yorkshire.

DOUAI, in the department of Nord, south of Lille, about 70 miles south-east of Calais. A Romanist seminary for English Education was established here under Cardinal Allen in the reign of Elizabeth, when the break between England and Rome became final. Here was made the English translation of the Bible which is used among Roman Catholics, as it has the Pope's recognition. It was published in 1609 as the Douai Bible.

DOUGLAS, a popular seaside resort in the Isle of Man, on the south-east coast, famous for its bathing facilities. Here is the House of Keys, the meeting place of the Manx Legislature.

DOUGLAS, ARCHIBALD, fifth Earl of Angus, who died in a monastery in Galloway in 1514. His grandson married the widow of James IV. of Scotland, and their grandson was the Lord Darnley who married Mary Queen of Scots, and became the father of our James I. This Douglas was known as "Bell the Cat," because he volunteered to carry into execution the project of the other Scotch nobles for the murder of the Earl of Mar, favourite of James III.

DOUGLAS, SIR JAMES, called the Good, and also the Black (because of his dark complexion). He repeatedly harried the north of England and achieved such exploits that the mere mention of his name was enough to inspire terror. He commanded under Bruce at Bannockburn (1314), and was killed in Spain, 1330, when on his way to Palestine, where he hoped to deposit Bruce's heart in accordance with that king's dying request.

DOULTON, SIR HENRY, *b.* 1820. *d.* 1897. began work at his father's small Lambeth pottery. In 1846 he began the substitution of earthenware drain pipes for the old loose-jointed brick drain courses, and in 1848 established his great pipe works at Rowley Regis in the Potteries. At Lambeth he revived art pottery and by his beautiful Doulton ware, art stone ware, and terra cotta work won a world-wide reputation.

DOVEDALE, the name of the valley of the River Dove, a tributary on the left bank of the Trent, in Derbyshire, famous for its beautiful scenery.

DOVER, a seaport on the Kent coast, 66 miles from London, 21 from Calais. The Dover-Calais route gives the shortest sea passage to the Continent, while the Dover-Ostend route is also a favourite one. The Admiralty Pier is strongly fortified, and its construction has rendered the harbour secure. There are many other fortifications, the most striking being the Castle which surmounts the white cliffs, nearly 400 feet above the sea. At the foot of the Castle cliffs is being constructed a naval harbour, which is to accommodate fifty men of war; it is expected that about four millions will be expended on the works before their completion.

DOVER, STRAIT OF, connecting the English Channel with the North Sea, and separating England from France, is from 20 to 24 miles wide. The geological evidence of both coasts shows that the rocks were once continuous, forming an isthmus which made our island a peninsula and part of continental Europe.

DOVER, TREATY OF, a secret treaty made in 1670 under which Charles II. sold himself to the French king for £200,000, and promised to introduce Romanism, at the very time when his ministers were making the Triple Alliance with Sweden and Holland against France.

DOW, GERARD, *b.* at Leyden, 1613, *d.* 1675; a Dutch painter, pupil of Rembrandt, and justly famous for the accuracy of detail and delicacy of finish which all his work exhibits, while his mastery of light and shade (*chiaroscuro*) is unsurpassed.

DOWIE, JOHN ALEXANDER, *b.* at Edinburgh, 1848, the self-styled "first apostle of the Lord Jesus the Christ," was ordained, as a Congregational minister, in Australia, where he founded the "Divine Healing Association." After gaining notoriety by his teaching and pretensions in the United States, he founded Zion City, near Chicago (1901) to exemplify the possibility of adherence to the teaching of the Decalogue and the Sermon on the Mount. There (1905) he presided over 10,000 members of "The Christian Catholic Apostolic Church in Zion." From that time his influence began to wane, and disbelief in his integrity spread rapidly among his disciples.

DOWNS, THE. (1) Smooth hills, chiefly used for pasturage, such as the North and South Downs, which run across the south of England. (2) Ridges or sandbanks, running along by the seashore (=dunes). (3) The roadstead off Kent, between the two Forelands, a natural harbour formed by the Goodwin Sands.

DOXOLOGY, or ascription of praise, such as the one used at the end of the Psalms, (*Gloria Patri*, Glory be to the Father, &c.), or the longer one used in the Communion Office, (*Gloria in Excelsis*, Glory be to God on high, &c.).

DOYLE, SIR ARTHUR CONAN, *b.* at Edinburgh, 1859, novelist, nephew of Richard Doyle the artist, who designed the cover of Punch. He studied medicine in Edinburgh under Mr. Joseph Bell the original of his famous "Sherlock Holmes." Reminiscences of his student days appear in "Round the Red Lamp" (1894). He wrote "The White Company," an historical romance of great charm, in 1890, whilst practising as a doctor. He acted as war-correspondent to the Westminster Gazette in the Soudan War (1896), and served as a physician in a South African field-hospital in 1900. His "Story of Waterloo" was one of the most popular plays in Irving's répertoire. Amongst his other works may be mentioned his novels "Micah Clarke" and "Rodney Stone," his poems "Songs of Action," and his "Cause and Conduct of

the (Boer) War," a work of singularly clear judgment.

DRACHMA, the chief silver coin among the ancient Greeks, and the unit (equal in value to a franc) in the monetary system of modern Greece. The "dram" in our British weights is another form of this word. Formerly there were two weights so called: one in Avoirdupois Weight=$\frac{1}{16}$ oz., the other in Apothecaries Weight=$\frac{1}{8}$ oz. The latter is no longer used.

DRAGA, QUEEN. See *Servia.*

DRAGON, a mythical monster, having the form of a huge serpent or a winged crocodile, &c., often belching out flames and noxious fumes, thus symbolizing the powers of evil. Great renown as dragon-slayers was won by many ancient heroes, such as Hercules, who killed the hydra of Lerna; Jason, when he gained the golden fleece at Colchis; Perseus, and our own St. George.

DRAGONADES, or persecutions of the French Protestants in the reign of Louis XIV., when the soldiery were quartered among the Protestants with licence to commit any outrage or extortion. Prominent among the soldiers were the dragoons, and they gave their name to the persecution.

DRAGON-FLY is an insect with four transparent, richly veined wings, belonging to the order of *Neuroptera.* It is of active habit, preying on small flies, and holds the same position in the insect world that the swallow does among birds. It has no sting and is harmless to man. The eggs are laid in water; the larva is aquatic, breathing by gills and feeding on water-fleas and the like. Before changing into the perfect insect it passes through a resting stage corresponding to the chrysalis of the butterfly.

DRAGON OF WANTLEY, THE, an old ballad of a dragon who, after exacting the usual tribute of maidens, &c., was conquered and slain by More of More Hall. [See Percy's *Reliques of Ancient English Poetry,* published in 1765.]

DRAGON'S BLOOD, a reddish resin obtained from the fruit of a palm found in Sumatra and Borneo, from the dragon-tree of the Canary Islands, and from the Australian resin-gum tree. Soluble in alcohol it is used in preparing varnishes, and for staining leather, wood, &c.

DRAGOON, so called either from the carbine used by the soldiers, or from the dragon carried by them as a standard. Dragoons were first employed in France, and served as mounted infantry. Apparently in England the earliest dragoon regiment was the Scots Greys (raised in 1681). The equipment of our Dragoon Guards is now considerably heavier than that of the old Dragoons.

DRAINS. See *Med. Dict.*

DRAKE, SIR FRANCIS, *b.* at Tavistock, in Devonshire, 1539, *d.* 1595, one of the "Devon sea-dogs" who wrested the supremacy of the sea from Spain, and prepared the way for our world-wide Empire. Four voyages he made to the West Indies with great loss to the Spaniards both in wealth and prestige; but his most famous voyage was in 1577–9, when he passed through the Straits of Magellan into the Pacific, plundered the Spaniards along the coasts of Chili and Peru, and then, not being able to get back into the Atlantic, crossed the Pacific and Indian Oceans and reached home after rounding the Cape of Good Hope. In the fight with the Spanish Armada (1588), Drake was vice-admiral to Lord Howard. His last two expeditions were failures.

DRAMA, a form of literary composition in which the words spoken to the audience are aided by the action seen by the spectators. Its two main kinds, which we owe to the Greeks, are *Tragedy* and *Comedy*—the former leading to a serious termination, the latter to a happy one. As Greek tragedy developed from Bacchus worship, so the modern English drama has developed out of the mediæval Mystery, or Miracle Play. The term *drama* also includes melodrama (in which a stirring succession of incidents is sought rather than a development of character), burlesque, farce, opera, &c.

DRAPIER'S LETTERS, written by Dean Swift, when Walpole had granted to one, William Wood, the right to coin copper for Ireland in 1722. Swift's attack, though greatly exaggerated, was very popular, and caused "Wood's halfpence" to be withdrawn.

DRAYTON, MICHAEL, *b.* Hartshill (Warwick) 1563, *d.* 1631; poet-laureate in 1626. His *Polyolbion* is a description of English scenery in verse, and is his longest and best known work. He was buried in Westminster Abbey.

DREAMING. See *Med. Dict.*

DREDGING is carried on either to remove obstructions of mud, silt, &c., from a river bed or harbour, or to obtain ballast. The dredger is a vessel which lets down successively into the water buckets on an endless chain, whose depth can be adjusted according to need. The buckets commit their mud to a lighter at the stern as they come to the top of the chain and begin to descend. If the material is to be got rid of, the bottom of the lighter is movable, so that its contents can be left in mid-ocean.

DRESDEN, capital of the kingdom of Saxony, on the Elbe, 25 miles from the Erz-gebirge Mountains and the borders of Bohemia. Its picture gallery contains some of the finest pictures in the world, by painters of all schools—above all, Raphael's Sistine Madonna. The famous Dresden china is chiefly made at Meissen, 15 miles lower down the Elbe.

DREYFUS, ALFRED, an Alsatian Jew and captain in the French Army, unjustly convicted in December, 1894, of selling military secrets to a foreign power, and sentenced to imprisonment for life. Thanks to the agitation initiated by Zola and Colonel Picquart, he had a fresh trial in 1899, but was declared guilty and sentenced to ten years' imprisonment. He was, however, set free within a fortnight, and has since (1906) been pronounced innocent, reinstated in the army, and raised to the rank of *chef d'escadron.*

DROGH'EDA, on the Boyne, on the east coast of Ireland, about half way between Dublin and Dundalk. It has manufactures of linen and cotton, and exports local products, chiefly to Liverpool. It suffered cruelly under Cromwell in 1649, and near it William III. gained a decisive victory over the Irish and French forces under James II. at the Boyne in 1690.

DROWNING. See *Med. Dict.*

DRUIDS, the priests of the ancient Britons and Celts, of whose rites and privileges Cæsar has given a description. They appear to have resembled the Persian magi; they were sun worshippers, and believed in the immortality of the soul, but offered human sacrifices. It is much questioned whether cromlechs and dolmens (unhewn stones balanced on upright ones to make a sort of rough table), are their altars, and whether Stonehenge marks the remains of a Druidical temple.

DRUMMOND, HENRY, *b.* at *Stirling,* 1851, *d.* 1897, scientist, evangelist, and traveller. He became Professor of Natural Science at the Free Church College in Glasgow, where his influence on youths and young men was very great. He travelled in the Rockies, Central Africa, Japan and the New Hebrides. His "Natural Law in the Spiritual World" and "Ascent of Man" aim at reconciling the teaching of natural science and religion, the latter work bearing particularly on Evolution in the spiritual emotions.

DRUMMOND, JAMES, 1675–1720 the leader of the Jacobite rising in Scotland in 1715. He managed to escape with the Pretender, and took refuge at the French Court, dying at St. Germain.

DRUSES, Syrian Arabs who inhabit south Lebanon, and are regarded as heretics from Mohammedanism. They consider the Egyptian caliph Hakim (1029 A.D.) as an incarnation of the Deity, to which faith they were converted by Ed-Derazi; their moral precepts are partly Christian, partly Mohammedan, and include truthfulness, contentment, submission, &c., while the unity of God is strongly insisted on. Their hostility towards the Maronites (the Christians who inhabit north Lebanon) culminated in shocking massacres in 1860, and led to the appointment of a Christian governor of Lebanon by the Porte.

DRYADS, woodland nymphs of Greek mythology.

DRYBURGH ABBEY, near Melrose on the Tweed, in Berwickshire, a beautiful ruin where is the burial place of Sir Walter Scott, who died in 1832.

DRYDEN, JOHN, *b.* Aldwinkle (Northampton), 1631, *d.* 1700; poet laureate, 1670–1689; educated at Westminster School, and buried in the Abbey. His plays were highly thought of in his own times, but it is by his poems that his memory lives. His satire, *Absalom and Achitophel* (pourtraying Monmouth and Shaftesbury respectively), appeared in 1681; the *Hind and the Panther* announced his conversion to Romanism; his noble translation of Virgil and his *Ode on St. Cecilia's Day,* were published in 1697; and by all these, as well as by his prose *Essay on Dramatic Poesy,* he worthily led the way from the Shakespearian to the modern period of literature.

DRY ROT, a disease which attacks timber, especially when it is allowed to get damp, and fresh air cannot approach it. It is due to a fungus which gets implanted in the wood, and then spreads, reducing the substance of the wood to a fine powder.

DU BARRY, COMTESSE, *b.* 1741, *d.* 1793, the beautiful mistress of Louis XV. After the outbreak of the French Revolution she fled to England, but, returning to France, was guillotined during the "Terror" (1793).

DUBLIN, capital of Ireland, at the mouth of the Liffey, and at the head of Dublin Bay, which stretches between Howth Head and Kingstown. The chief buildings are Dublin Castle, the Bank of Ireland (formerly the House of Parliament), Trinity College (which constitutes the University of Dublin), and St. Patrick's Cathedral; while in the beautiful Phœnix Park (where Lord Frederick Cavendish and Mr. Burke were murdered in 1882), is the Lord Lieutenant's Viceregal Lodge.

DU CHAILLU, PAUL, *b.* 1837, an African traveller and explorer. He was chief of General Gordon's staff in 1874, explored Lake Victoria, and has contributed much to our knowledge of the zoology of African species, specially of the gorilla and other monkeys.

DUCHESS OF DEVONSHIRE, the famous "Gainsborough," painted in 1783, bought by Messrs. Agnew, in 1876, for 10,000 guineas, stolen a few days later from their rooms, but restored to them in 1901. Sir Joshua Reynolds also

painted a famous picture of the Duchess with her infant son (1786), which is now in the collection of the Duke of Devonshire.

DUCKING STOOL, a development of the *cucking stool*, a chair which served the purpose of a pillory, while the ducking-chair was fastened to the end of a beam, and by a see-saw arrangement could be dipped into the water and out again. This punishment for scolding wives was actually in use till a hundred years ago.

DUDLEY, LORD GUILDFORD, fourth son of the Duke of Northumberland, who persuaded Edward VI. to settle the English crown on Lady Jane Grey, the grand-daughter of Henry VIII.'s younger sister. Dudley was Lady Jane's husband, and after Sir Thomas Wyatt's rebellion both Dudley and his young wife were beheaded, 1554.

DUDLEY, JOHN, *b.* 1502, *d.* 1553, father of the preceding, successively Viscount Lisle, Earl of Warwick, and Duke of Northumberland. Left under Henry VIII.'s will as one of the guardians to Edward VI., he supplanted the Duke of Somerset in the young king's favour, and endeavoured to secure the succession to the throne for Lady Jane Grey. The plot failing, he was beheaded on Tower Hill.

DUDLEY, ROBERT, Earl of Leicester, *b.* 1532, *d.* 1588; son of the preceding, one of the special favourites of Queen Elizabeth, and consequently the holder of many public offices. Sir Walter Scott's novel *Kenilworth* deals with one period of his life.

DUDLEY DIAMOND, THE, a famous diamond found in Africa, 88½ carats in weight originally, but cut down to 44¼ carats, was bought for £12,000 from its finder, and sold to Earl Dudley for £30,000.

DUELLING, probably a development of the old trial by combat which was prevalent among Teutonic nations. Though illegal in both England and France for the last three centuries, it was the fashionable way of vindicating one's personal honour with us from the time of Charles II. to that of George IV., while in France the political duel, though rarely dangerous, is not yet extinct. Still more harmless are the German University students' duels, which are rather to be called fencing matches.

DUFFERIN AND AVA, (Frederick Blackwood) **MARQUIS OF,** *b.* 1826, *d.* 1902, a great British diplomatist, was Governor-general of Canada, Ambassador at St. Petersburg, Constantinople, Rome, and Paris, and Viceroy of India. During his rule in India he achieved the annexation of Upper Burma (1888), whilst his rule in Canada was marked by the development of Manitoba. His last year of life was embittered by the disastrous failure of a Financial Corporation of which he was Chairman. He was a brilliant administrator, a charming writer, and a powerful orator. His "Letters from High Latitudes" deal delightfully with a yachting cruise to Iceland.

DU GUESCLIN, *b.* Rennes, 1314, *d.* 1380; Constable of France, famous alike for personal prowess and military skill. He gradually retrieved the fortunes of France after its disasters in the wars with Edward III. and the Black Prince, and eventually cleared France of the English.

DUKERIES, THE, a district around Worksop, Nottinghamshire, so named from the four ducal seats it contains, viz., Worksop Manor and Clumber Park (Duke of Newcastle), Welbeck Abbey (Duke of Portland), and Thoresby Park (formerly Duke of Kingston, now Earl Manners).

DUKOBORS, a Russian sect of non-conformists that arose about 1740. They have been subjected to much persecution by the Russian Government. A colony emigrated to Canada (1898), assisted by Tolstoi, and certain British and American Quakers. They are communists, they reject priesthood and formal marriage, and they are peculiarly simple in their religious thoughts and habits.

DULCE DOMUM, "Home, Sweet Home," the song of the Winchester College boys, when breaking up for the vacation.

DULCIMER, one of the oldest of musical instruments, perhaps the Jewish *psaltery*, consisting of a wooden frame across which wires are stretched, and these, when the instrument is played, are struck by a hammer; a sounding board is attached, and pegs tighten the wires in order to tune them. Thus in principle the instrument is the same as the pianoforte, wherein the several keys replace the single hammer.

DUMA, national assembly of Russian representatives, occasionally summoned by the Czar. In 1906 Nicholas II. called together such an assembly, but it was dissolved before accomplishing anything. Another Duma is to meet in 1907.

DUMAS, ALEXANDRE, *père*, *b.* 1803, *d.* 1870; a French romance writer, whose chief works are the *Count of Monte Cristo* and the *Three Musketeers*. His writings are marked by barbaric splendour and voluptuous imagination, but it is a moot question how far they are the product of Dumas' own genius. After his fame was assured, he certainly retained a staff of writers to do the bulk of the work which he issued as his own.

DUMAS, ALEXANDRE, *fils*, *b.* Paris, 1824, *d.* 1895; son of the preceding, the author of the famous (or infamous) *Dame aux Camelias*, on which Verdi based his opera *La Traviata*.

DU MAURIER, GEORGE LEWIS, *b.* 1834, *d.* 1896, an artist in black and white and a novelist. He succeeded Leech on the staff of Punch in 1864, and became famous for his delightful satires of English social life. Of his novels, "Trilby," with its vivid portraiture of artist life in the *Quartier Latin* is the best.

DUMBARTON, situated where the Leven from Loch Lomond joins the Clyde. At the mouth of the Leven and in front of the town is a peninsula, consisting of a rock 200 feet high rising abruptly from the water. This is capped by an ancient castle which makes a most striking landmark along the estuary of the Clyde. The town has become a centre of the ship-building trade.

DUM-DUM, a place near Calcutta famous for its small-arms factory, which has given its name to the "dum-dum" or expanding bullets. Here the Sepoys made their first demonstration against the use of greased cartridges in 1857. (See *Indian Mutiny*.)

DUMFRIES, on the Nith, a few miles above its mouth in the Solway Firth, is famous for its cattle markets and for the tomb of the poet Burns. In Greyfriars' Church, John Comyn was stabbed by Robert the Bruce in 1306.

DUMOURIEZ, CHARLES FRANCOIS, *b.* 1739, *d.* 1823, a French general, whose greatest exploits took place between the years 1789–93, when his tactics preserved France from the hostility of Prussia and Austria.

DUNBAR, a port in Haddingtonshire, at the entrance to the Firth of Forth, 26 miles east of Edinburgh. Near it was won Cromwell's famous victory over General Leslie and Charles II.'s Scotch supporters in 1650. So complete was their defeat that the battle was known as the Race or Drove of Dunbar.

DUNCAN, ADAM, Viscount Camperdown, *b.* Dundee, 1731, *d.* 1804, a British Admiral, whose great achievement was his victory over the Dutch fleet in 1797, off Camperdown.

DUNCIAD, THE, the famous satire in which Pope, in 1728, avenged himself effectually on his critics, whose malevolence had been almost equal to their incompetence. Colley Cibber is most severely treated in this satire.

DUNDEE, in Forfarshire, on the north of the Firth of Tay. Its public buildings, docks, and harbour are very fine; the seal and whale fisheries find here their head-quarters; its marmalade and butter-scotch are known all over the world. Next to the Clyde, it is the centre of Scottish ship-building and engineering; but above all, in importance, are its manufactures of flax and hemp (imported from the Baltic) and jute (from India). From the latter substance all kinds of packing cloth, sacking, and even carpets are made. Just above Dundee was the famous Tay Bridge, which was blown down in 1879, little more than a year after its completion, when a train was passing across it. It has been replaced by a more substantial structure.

DUNDONALD, THOMAS COCHRANE, EARL OF, *b.* Perthshire, 1775, *d.* 1860. His career in the Navy was marked by the greatest gallantry and success, and his exploits off the coasts of France and Spain were specially notable; but unfortunately in 1807, in Parliament, he accused his official superior, Lord Gambier, of incompetence in action against the French fleet, and this ruined his chances of promotion; while in 1814 he was himself unjustly accused of dishonest commercial transactions. In 1818 he threw in his lot with the South American States, which were trying to throw off the Spanish yoke, and their success was greatly due to his personal daring and brilliant genius. He organised the Chilian Navy, blockaded Callao, and took Lima (1820), and so brought the war to an end. He then transferred his services to the Brazilians, while in 1828 he helped the Greeks to recover their independence. With the accession of William IV. he was restored to the honours in England of which he had been so unjustly deprived.

DUNDREARY, LORD, an amusing character in *Our American Cousin*, a play by Tom Taylor, produced in 1863. He represents a young nobleman whose gentlemanly manners, kindness of heart, and ludicrous lack of sense, combine to produce an intensely humorous effect on a sympathetic audience.

DUNE'DIN, on the south-east coast of South Island, New Zealand. The discovery of gold-fields in 1861 laid the foundation of its prosperity, which has been since maintained through the development of the wool and frozen meat trades.

DUNG BEETLE, so called because the female lays its eggs in a pellet of dung, which it then drags away and buries: thus it acts both as scavenger and fertilizer, and consequently was highly venerated by the ancient Egyptians, being frequently represented in their monuments and carvings. A common variety with us is the Shard-born beetle, whose drone can so often be heard towards evening time.

DUNKIRK, a French sea-port on the Strait of Dover, 20 miles north-east of Calais. Oliver Cromwell took it in 1658, but Charles II. restored it four years later for £400,000.

DUNMOW, a village in Essex between Braintree and Bishop Stortford, famous for the Flitch of Bacon which is offered yearly to any married couple that can satisfy a jury of bachelors and maids that for a year and a day they have neither

quarrelled nor repented of their bargain. This prize was first offered in the 14th century, but never awarded till 200 years later, and in the 400 years following only five times. Now, most years witness the successful claim of at least one couple.

DUNNAGE. See *Commercial Dictionary*.

DUNNE, FINLAY PETER, *b.* at Chicago, 1867, began as a reporter, and subsequently edited two Chicago papers. He is famous as the creator of "Mr. Dooley," a saloon keeper whose comments on the Spanish American War and other "philosophical" reflections are in the best style of American humour.

DUNOON, a pleasure resort on the west of the Firth of Clyde, with a castle formerly belonging to the Stuarts.

DUNSINANE, a hill with rude earthworks, north-east of Perth. See *Macbeth*, Act. v.

DUNS SCOTUS, *b.* about 1270 in Scotland, *d.* 1308. A philosopher and theologian, who lectured at Oxford and Paris Universities; a stern critic of the teaching of Thomas Aquinas who, accepting the philosophy of Aristotle, seemed to attribute insufficient importance to the dependence of faith upon will. Their rival schools continued to be known as Thomists and Scotists. The latter opposed the restoration of classical scholarship under the renaissance, and thus the name *dunce* or Duns-men came to be applied to illiterate folk.

DUNSTAN, SAINT *b.* 925, at Glastonbury, *d.* 988. He became abbot of Glastonbury, and instituted reforms in the church. Under Edgar the Peaceful he was made Archbishop of Canterbury, and is credited with the quietness and prosperity of the reign. He urged rigorous observance of monastic rules, and raised the tone and status of the clergy generally.

DUPLEIX. JOSEPH FRANCOIS, *b.* 1697, rose by merit to be governor of the French Indies after success in official and commercial work. He aroused the alarm of the English East India Company, quarrelled with the French Naval commander, La Bourdonnais, about the restoration of Madras to the English, and defended Pondicherry brilliantly against an attack of an English fleet under Admiral Boscawen. He intrigued successfully with native princes for French predominance, but was finally defeated by the energy and genius of Clive. The French Company refused to reimburse him for his outlay in their interests, and his country failed to recognize his patriotic services. He died in poverty, 1763.

DUQUESNE, FORT, on the Ohio, built by the French, who routed an English army under General Braddock there in 1755. It was captured by the British in 1758. Pittsburg now stands on its site.

DURBAN, the chief port of Natal, has an excellent harbour in direct railway communication with the Transvaal. The town takes its name from Sir Reginald D'Urban who took the town from the Boers who had trekked to Natal in 1836. Durban was the chief base of the Imperial troops in Natal during the Boer War, (1899–1902).

DURBAR, a reception in state held by the Viceroy of India, or by a native Prince. The proclamation of Edward VII. as Emperor of India was made the occasion of a memorable durbar held by Lord Curzon in 1903.

DÜRER, ALBRECHT, *b.* at Nuremberg, 1471, where he died, 1528, is the greatest of German painters. He twice visited Italy, and was much employed by the Emperors Maximilian I. and Charles V. His work as an engraver establishes his fame not less than his painting.

DURHAM COUNTY, one of the three counties palatine, lies between the Tyne and the Tees, and has about 30 miles of sea coast with busy ports at South Shields, Sunderland, Hartlepool, and Stockton. It is rich in minerals, especially in coal, and its breed of cattle, the Durham shorthorns, is highly esteemed.

DURHAM CITY is the ancient seat of the Prince Bishops of Durham, whose castle stands, with the venerable Norman cathedral, on a steep wooded rock whose base is almost encircled by the Wear. The cathedral is perhaps the most magnificent existing example of Norman architecture, and it contains the bodies of St. Cuthbert and of the Venerable Bede. The castle is now used as one of the "halls" of Durham University.

DURHAM, (John George Lambton), **EARL OF,** *b.* 1792, *d.* 1840, was sent to Canada in 1838 to report upon the advisability of changes in the existing form of administration against which the Canadian French had rebelled. His report, with its statements of Colonial grievances, and his proposed remedies, forms a new era in our colonial history. Most of his recommendations were carried out with excellent results, and thus was laid the foundation of Colonial self-government.

DURRA is a grain-yielding, broad-leaved grass that grows well in hot climates. The grain is used for food, the leaves as fodder, and the pith yields sugar. It is largely cultivated as an annual crop in India, Africa, and the United States. It is also called millet or sorghum.

DÜSSELDORF is a railway and manufacturing centre at the junction of the Rhine and Dussel in Prussia. It has long been noted for its school of art. It was the birthplace of the poet Heine; its population now exceeds 200,000.

DUST is of interest because of effects produced by its presence throughout the atmosphere. The reflection of light from it is held to be the cause of the blue colour of a cloudless sky, and it is said to be owing to its presence that the vapour in the atmosphere is able to condense and form clouds.

DUTCH METAL, an alloy of copper and zinc, resembling gold leaf. It is used to imitate gilding, but may be distinguished from gold by its solubility in Nitric Acid.

DUVAL, CLAUDE, *b.* 1643, in Normandy, hanged 1670, at Tyburn; a gallant highwayman who became famous in England in the reign of Charles II.

DVORAK, ANTONIN, *b.* 1841, *d.* 1904, the famous Bohemian composer of a setting of the Latin hymn, "Stabat Mater," was the son of a butcher, and won his way to recognition after dreary work in Prague. He made considerable use of the rhythmic effects of his native folk music in his orchestral compositions.

DWARF. Pygmy or dwarf races, denizens of the forests, harassed Stanley's march across Central Africa, and showed themselves expert archers. Some of these tribes average only 4 feet 1 inch in height. The Bushmen of South Africa, some of the Malayan Islanders, the Lapps, and the Fuegians are dwarf peoples. Tom Thumb (31 in.), and General Mite (21 in.), American dwarfs, were exhibited in England during the last century.

DWARFED TREES, growing in small pots are regarded as an ornament in Chinese and Japanese gardens. This curious product is the result of spare diet. The seedlings are planted in small pots of poor soil, care being taken that the roots do not pass into the ground beneath; the soil is sparingly watered; the strongest branches are nipped off and the remaining ones contorted. A tree more than 100 years old may be less than a foot in height. Some specimens may be seen at Kew Gardens.

DYAKS, the natives of Borneo, a people of savage disposition, but of much ingenuity in industrial arts, are akin to the Malays, though taller in stature and more honest in character.

DYEING. Until 1856 the dye stuffs in use were natural products, but since then great advances have been made in artificial dyes by the discovery that the distillation of coal tar yields products such as aniline, benzine, anthracene, and napthalene, each of which is the basis of a series of colours. The discovery of the brilliant aniline dyes was begun by Perkins, an English chemist, in 1856, when he found the first aniline dye stuff, known as mauve. Now, the number of coal-tar dyes is extraordinary, and though some are not fast colours, yet many are permanent.

DYKES occur in the geological formation known as igneous rocks. They represent fissures or veins, which have been filled either from below or by a flow of lava from above. Where the enclosing rock has yielded to the corrosion of weathe , the dyke remains as a prominent mass; otherwise, it may appear as a deep hollow. The name is also applied to mounds raised to protect low-lying lands from inundation.

DYNAMICS is the science which treats of the phenomena of matter and motion. It investigates causes of motion, the nature of momentum, and conditions of equilibrium.

DYNAMITE is a violent explosive formed by the mixture of nitro-glycerine with a peculiarly absorbent siliceous earth found largely in Aberdeenshire. It is used in mining and blasting, and must be handled with great care; even in water it loses little of its explosive power. It is exploded more readily by a blow than by a flame.

DYNAMO, a machine for the conversion of the energy of an engine, a fall of water, or other source of power, into an electric current. The current is induced by causing coils of wire to revolve very rapidly in a magnetic fluid as suggested by Faraday's experiment. Refer to *Electricity*.

EAGLE, the largest of the birds of prey of the falcon family, is remarkable for its keenness of sight and strength of flight. It nests in rocky places, and preys upon the smaller animals. The Golden Eagle, a magnificent bird, three feet in length, is still to be found in Sutherland. The eagle was an emblem of Jove, and, in consequence, became the symbol of the sovereignty of the Romans, and of the empires that trace their power to the Romans. The German Imperial Eagle is one-headed, and its claws are outstretched; the Austrian is two-headed, and it grasps a sword and sceptre in the right claw, an orb in the other; the Russian, likewise two-headed, carries only the sceptre and orb. The United States have adopted a one-headed eagle holding arrows and an olive branch.

EARL MARSHAL. Refer to *Index*.

EARLY ENGLISH, the term generally used to denote the pointed or lancet style of ecclesiastical architecture that followed upon the round-arch Norman style. Its period lasted from about 1175 to 1250.

EARTH, THE, one of a number of non-luminous planets in the solar system, whose centre is the sun, a self-luminous star. Each planet makes an annual circuit of the sun, and has a daily rotatory motion on its own axis. The period of the earth's annual circuit contains about

365¼ of its rotatory periods or days. Mercury, the planet nearest the sun, takes 88 of our days for its annual journey, whilst Uranus completes its circuit in 84 of our years.

EARTHENWARE. See *Pottery*.

EARTHQUAKES, or vibratory movements of the ground, are more frequent than was supposed before seismology received the attention that has recently been given to it. Violent shocks, which are usually confined to well known areas, chiefly in volcanic districts, are preceded by a series of increasing tremblings. The movement is generally lateral, but notable vertical shocks have occurred in South America. The motion of earthquakes is in the form of waves radiating from a common centre, so that places equidistant from the centre are affected at about the same time. Probably the centre of disturbance is seldom more than a few miles deep. The origin of the movement is held to be the flashing of water into steam, or the explosion of gas or vapour, and it is thus akin to volcanic action. In the case of submarine shocks, a dangerous sea-wave is generated, an occurrence that is frequent in the Pacific, whose shores mark the great volcanic belt of the globe. The area affected by a great shock is enormous ; that affected by the great earthquake of Lisbon, 1761, is thought to have been several times greater than Europe. Japan is more subject to earthquakes than any other country, hence the slightness of structure of Japanese buildings.

EARTHWORM. Darwin has established the extraordinary usefulness of this creature, which feeds on leaves and vegetable matter, transforming them into mould. It is constantly perforating and loosening the soil, thus opening it up to the action of air and water. Darwin stated that on an acre of ground, which he kept under observation, ten tons of soil passed annually through the bodies of these creatures.

EARWIGS, insects well known to gardeners, akin to cockroaches, and having pincer-like appendages behind. They avoid the light, and are easily caught in dark shelters made for them. They eat fruit, the petals of flowers, and leaves.

EASEMENT. Refer to *Index*.

EAST AFRICA. 1. British East Africa includes (1) the East Africa Protectorate, extending from the mouth of the Umba to the Juba River with a splendid harbour at Mombasa, (2) Uganda, which lies north-west of Lake Victoria, 600 miles from the coast ; and (3) Zanzibar, an island with a city of the same name offering great facilities for shipping. A railway connects Mombasa with Lake Victoria.

2. *German East Africa*, bounded on the north-east and north by British East Africa, on the west by the Congo Free State, and on the south by the river Rovuma and Portuguese territory. A railway runs from Tanga on the east to Korogwe.

3. *Portuguese East Africa*, including the two provinces of Lorenzo Marques and Mozambique. Railways run from Delagoa Bay to join the Transvaal system, and from Beira to Salisbury in Rhodesia. The climate on the coast is malarial, but the Lembobo Mountains afford a healthy retreat.

EAST ANGLIA formed one of the Anglo-Saxon kingdoms, and included what are now the counties of Norfolk and Suffolk.

EASTBOURNE, a handsome, well built, modern seaside resort, near Beachy Head, on the south coast. It owes much of its prosperity to the Duke of Devonshire, the ground landlord, and not a little to the enterprise of its inhabitants. It has a long sea-front, beautifully laid out, and is a good centre for inland excursions to places of historic interest.

EASTER is the name of the Christian Feast, commemorative of the resurrection of Jesus Christ. Of the many customs observed in different countries at Easter, the presentation of eggs as emblems of renewed life is the most universal. In early times controversies arose in the Church as to the proper day for keeping Easter, some keeping it on the anniversary of the actual day of resurrection, whatever the day of the week, others on the Sunday following. The Council of Nicæa (325) decreed in favour of the latter. The earliest day for Easter is March 22nd ; the latest April 25th.

EASTERN ARCHIPELAGO. See *Malay Archipelago*.

EASTERN EMPIRE. See *Byzantine Empire*.

EASTERN ROUMELIA, in the Balkan peninsula, was created an autonomous province by the Treaty of Berlin, 1878 ; but a revolt in 1885 led to its incorporation with Bulgaria.

EAST INDIA COMPANY. Of the various English companies chartered to trade with India, that founded by London merchants in 1600 absorbed the rest, and by 1710 stood as the representative of English influence in India. Headquarters were established in Madras, Bombay, and Calcutta. Founded only for purposes of trade, the Company began none the less to make capital out of quarrels among the native princes, and thus became the proprietor of large domains. Renewals of the charter were usually accompanied by loans to government. In 1858, after the Indian Mutiny, India passed to the Crown. The East India Company was popularly known as " John Company."

EAST INDIES, a general name for India, Further India, and the Malay Archipelago.

EAU DE COLOGNE, a well-known scent made in Cologne by over thirty firms, each bearing the name of the reputed inventor, Farina.

EBENEZER, " stone of help," was the name of a memorial raised by Samuel after his victory over the Philistines. See 1 Sam. vii.

EBIONITES, a sect of Jewish Christians of the first century, whose teaching was considered heretical. They retained many Jewish religious observances, whilst recognizing Jesus Christ as the Messiah.

EBONY, is a hard wood which takes a fine polish. It exists in three varieties, red, black, and green, and is imported from Mauritius, Madagascar, and Ceylon.

EBOR'ACUM, the Latin name of York, a contracted form (Ebor.) still being retained by the Archbishops of the Province of York.

EBRO, the principal river of north-east Spain, is navigable for about 180 miles, but is much obstructed by shoals. Canals have been constructed for 100 miles parallel to the river.

ECCE HOMO. (1) Pilate's words—" Behold the man," St. John xix. 5. In art, the name of any painting of the Saviour crowned with thorns. (2) A book written anonymously by the Cambridge historian, Sir J. R. Seeley, in 1865, which insisted on the practical and human side of Christ's work.

ECCLESIASTES is the Septuagint title of a didactic poem traditionally attributed to Solomon. The writer, who calls himself " the Preacher," was probably an aged Hebrew thinker of the third century B.C. He reviews the various activities of human life, and sees in them nothing that can yield abiding satisfaction ; " All is vanity, saith the Preacher." This book has at all times appealed to the thoughtful as a human outcry for something better than the fleeting things of time. With St. John, the writer could emphatically affirm, ' The world passeth away and the lust thereof," and he would fain have been able to say with the apostle, " but he that doeth the will of God abideth for ever." 1 John ii. 17.

ECHIDNA is an Australasian mammal allied to the duck-billed platypus. These two animals are the lowest known mammals and present many reptilian characters in their anatomy and physiology ; for instance, they hatch from an egg and have a body temperature of only 80° F. Echidna is covered with spines like a porcupine and is about the size of a large hedgehog. It possesses strong claws for digging, a small mouth and no teeth, and a long sticky tongue with which it licks up the ants on which it feeds.

ECHO. (1) As the rays of a lighted candle placed before a mirror are reflected so as to form an image of the candle, so the waves of sound caused by a sounding body in front of a wall are reflected, and give back a sound. A steep cliff in the distance may thus send back, somewhat reduced in intensity, a shout, the report of a pistol, &c. But if the resisting surface be nearer the origin of sound than 60 or 70 feet, the sound and its echo are mingled and confused ; hence the bad acoustic properties of many public buildings. Just as a luminous object may give a succession of images when placed between two reflecting surfaces, so a trumpet blown between two high cliffs will produce a succession of echoes. Killarney offers a famous example of repeated echoes thus produced.

(2) " Echo " is also the name of a nymph who, according to Greek fable, was transformed into a rock, because her talkativeness hindered Juno from overhearing Jove's converse with the nymphs. She was allowed to retain the power of repeating the last word she heard. Another Greek myth makes " Echo " pine away until only her voice is left, because of her love for Narcissus.

ECK, JOHANN VON, *b.* 1486 at Eck, in Swabia, *d.* 1543 ; a clever controversialist, and a somewhat self-opinionated opponent of the teaching of Luther and Melanchthon. He took part in public disputations with these reformers, and made three journeys to Rome to obtain a papal bull against them. He is suspected of vanity and low motives.

ECLIPSE, a famous race-horse unbeaten in any of its eighteen races. Mr. O'Kelly undertook to place the horses in his first race in 1769, and his declaration " Eclipse first, the rest nowhere," was justified by the result.

ECLIPSES (1) of the *moon* occur whenever that satellite passes wholly or partially through the cone of shadow formed by the earth ; (2) of the *sun* are caused by the interception of all or part of the sun's surface by the passage of the moon between it and the earth.

ECLIPTIC, the great circle traced among the fixed stars by the sun's annual apparent retrograde motion. This circle was anciently divided into twelve stages, known as the Signs of the Zodiac, and each was named after a prominent constellation within the area of the sign.

ECONOMICS, the science that treats of the nature of wealth, and the laws governing its production, consumption, distribution, and exchange.

E'CUADOR. A republican State on the west of South America, and lying on either side of the equator. It contains several

of the highest of the peaks of the Andes, including Chimborazo (21,525 feet), and Cotopaxi (19,613 feet.) Guayaquil is the chief port and Quito the chief inland city.

EDDA, the name given to two Icelandic works, one in verse the other in prose, dating from the 13th century. They are our source of information about Scandinavian mythology.

EDDYSTONE, three ridges of rock in the fairway from Start Point to the Lizard, and therefore necessarily a place for a light-house. The first two light-houses were of wood; the one was washed away, the other burnt. Smeaton's celebrated stone erection lasted from 1759 until 1882, when the present building was erected. He dovetailed his granite blocks into the rock and to one another, but the undermining of the foundations at length rendered a new site necessary, and his work has had to be superseded. The upper part of this celebrated light-house has been re-erected on Plymouth Hoe. The present light-house is 133 feet above the rock, and can be seen for upwards of 17 miles.

EDELWEISS, "noble-white," a perennial plant belonging to the same natural order as the daisy. It grows in the high Alps of Switzerland, and in parts of Austria and Siberia, usually in places difficult of access.

EDEN. (1) The residence of our first parents. For Eden, Milton uses the name Paradise, a Greek adaptation of a Persian word meaning a park or walled garden. The conception of the garden and of the tree of life occurs widely in eastern tradition, but the tree of knowledge of good and evil is a Hebrew conception which elevates the narrative to a moral significance. (2) A river that passes by Appleby and Carlisle and falls into the Solway Firth after a course of 40 miles.

EDENTA'TA, lit. "toothless," a misleading term applied to an order of mammals including sloths, ant-eaters, and armadillos.

EDESSA. (1) The ancient capital of Macedonia, and former burying place of its kings. (2) An ancient city of northern Mesopotamia, said to have been founded by Nimrod. It became the head quarters of an important early Christian community and was a great seat of Christian learning in the 4th and 5th centuries.

EDGAR, King of England, 959–975, known as the "peaceful." His reign was a time of national prosperity; the Danes were peaceful, and under the guidance of Dunstan, the work of reform and consolidation was carried out effectually.

EDGAR ATHELING, grandson of Edmund Ironside, and heir of Edward the Confessor, was superseded by William the Conqueror. 1066.

EDGEHILL, a bleak ridge of hills north-west of Oxford, where Charles I. met the parliamentary troops under the Earl of Essex in an indecisive encounter on Sunday, 23rd October, 1642. This was the first battle of the Great Rebellion.

EDGEWORTH, MARIA, a novelist, *b.* 1767, *d.* 1849; the lifelong comrade of her father, for whose sake she refrained from marriage. Her masterpieces of Irish life are *Castle Rackrent* and *The Absentee*. She was a friend of Scott, and was much lionised in London and Paris.

EDIBLE BIRDS' NESTS are found in Ceylon, Java, and the Eastern Archipelago. They are formed of the mucus secreted in the highly developed salivary glands of a kind of Swift, which thus constructs a nest that looks like isinglass. The Chinese use them for making soups.

EDICT OF NANTES. This was issued by Henry IV. of France on 30th April, 1598, securing freedom of religious usages to all Protestants in France, and opening all official appointments to them. Its revocation in 1685, by Louis XIV., was disastrous to France, as it led to the voluntary exile of thousands of her worthiest subjects.

EDINBURGH is unique among the cities of the United Kingdom for its picturesque beauty and historical interest. It is situated about two miles south of the Firth of Forth, and consists of the Old Town and the New Town. The former stands on the ground between Arthur's Seat and the Castle Rock, with the High Street occupying the ridge between the Castle and Holyrood Palace. The New Town is separated from it by a valley laid out in public gardens, with Princes Street flanked by Calton Hill as its main thoroughfare. Among the public buildings may be mentioned the Castle, St. Giles's Cathedral, Holyrood Palace, Parliament House, and the National Gallery. Edinburgh abounds in colleges, schools and philanthropic institutions. It has a famous university dating from 1582, and is the home of the learned societies of Scotland.

EDISON, Thomas Alva, a celebrated American inventor, *b.* at Milan, Ohio, 1847. At the age of twelve he was a newsboy and afterwards a telegraph operator. Among his numerous inventions are many telegraphic appliances of great value, the phonograph, megaphone, electric pen, and incandescent electric light.

EDITH, daughter of Godwine, the powerful Earl of Wessex, was wife of Edward the Confessor, who removed her to a monastery during the temporary exile of Godwine, but restored her to her lands and position on his return.

EDMUND IRONSIDE, the brave son of Ethelred the Unready, fought, on his father's death, with Canute for the English crown. After much indecisive fighting the two rivals agreed to divide England between them. About a month after this partition of the kingdom, Edmund died, 1016, leaving Canute sole king.

EDMUND, SAINT, a king of the East Anglians, killed by the Danes in 870, because he refused to abjure his faith. The monastery and town of St. Edmundsbury rose round his place of burial.

EDWARD THE CONFESSOR, King of England, 1042–1066; educated in Normandy; married Edith, the daughter of Godwin, died childless, and was succeeded by Harold, Godwin's son. The English laws were codified in his reign. He was buried in Westminster Abbey, which he had founded. He was canonized in 1161.

EDWARD THE ELDER, son of Alfred the Great; king of the West Saxons, 901–925; co-operated with his sister Ethelflaeda in coercing the Danes to submission; became master of the Danelagh and overlord of the Northern counties.

EDWARD THE MARTYR, *b.* 963, succeeded Edgar as King of England in 975; was supported by Dunstan and thwarted by his stepmother Elfrida, by whose orders he was murdered, 979.

EDWARD I., *b.* at Westminster, 1239; King of England, 1272–1307; son of Henry III. and Eleanor of Provence; defeated Simon de Montfort at Evesham, 1265; conquered Wales; made Balliol King of Scotland; made war on Balliol, and brought the Coronation stone from Scone; defeated and subsequently executed Wallace; instituted many constitutional reforms; died on his way to Scotland vowing vengeance on the Scots, 1307.

EDWARD II., *b.* at Carnarvon, 1284; King of England, 1307–27; son of Edward I. and Eleanor; fell under the influence of a favourite, Gaveston; defeated by Bruce at Bannockburn, 1314; murdered at Berkeley Castle, 1327.

EDWARD III., *b.* at Windsor, 1312; King of England, 1327–77; son of Edward II. and Isabella of France; won, with his son the Black Prince, a great victory over the French at Crecy, 1346; took Calais, 1347; signed the treaty of Bretigny, 1360.

EDWARD IV., *b.* at Rouen, 1441. His father was the Duke of York, whose claim to the crown in the reign of Henry VI. gave rise to the wars of the Roses. The Duke was defeated and slain at Wakefield; but his son, on gaining a decisive victory at Mortimer's Cross, was crowned King, 1461. He was driven for a short time from the throne by the Earl of Warwick, whom he afterwards overthrew at Barnet, 1471. This victory, followed by another at Tewkesbury, seated him firmly on the throne until his death in 1483.

EDWARD V., *b.* at Westminster, 1470; King of England, April–June, 1483; son of Edward IV. and Elizabeth Woodville; murdered in the Tower, June, 1483, by order of his uncle, Richard III.

EDWARD VI., *b.* at Hampton Court, 1537; King of England, 1547–53; son of Henry VIII. and Jane Seymour; being a minor, a regent was appointed to carry on the government. He took a warm interest in the Reformation, and willed the crown to Lady Jane Grey, because Mary, his eldest half sister, was a Roman Catholic.

EDWARD VII., eldest son of Queen Victoria and Albert, Prince Consort, "by the Grace of God of the United Kingdom of Great Britain and Ireland, and of the British Dominions beyond the Seas, King, Defender of the Faith, Emperor of India," was born at Buckingham Palace, Nov. 9th, 1841, and educated at Christ Church, Oxford, Trinity College, Cambridge, and Edinburgh University. He married, March 10, 1863, Alexandra, eldest daughter of the King of Denmark; in 1859 visited Italy and Spain, in 1860 the States and Canada, in 1862 the Holy Land (with Dean Stanley), in 1869 Egypt, in 1875 India, where he remained 17 weeks. In 1887 and 1897 much of the responsibility of the Jubilee and Diamond Jubilee of the Queen fell to him. After his father's death, in 1861, he had as Prince of Wales to support or fill the place of the Queen on many occasions of public interest. His recovery from a serious attack of typhoid fever in 1871 was the occasion of a memorable Public Thanksgiving at St. Paul's. In 1892 the Prince and Princess suffered a heavy blow by the death of their eldest son, the Duke of Clarence and Avondale.

In 1901 he succeeded to the throne as Edward VII., and two months later saw the departure of the Prince and Princess of Wales on the "Ophir" to inaugurate the confederation of the Australian Colonies, and to visit New Zealand, the Cape, and Canada. A sudden attack of perityphlitis caused a postponement of the King's Coronation from June 26th, 1902, until August 9th. On October 25th a Royal Progress was made through London, and the King and Queen attended on the following Sunday a Public Thanksgiving at St. Paul's. In January, 1903, the King was proclaimed Emperor of India at a great Durbar held by Lord Curzon at Delhi. In the summer, the King visited Portugal, Italy, and Paris, and received a most enthusiastic welcome. The French President came to England as the guest of the King in July, and the King and Queen of Italy in November.

Edward VII. is popular with every class of the British people. His scrupulous and untiring attention to the duties of his position as Prince of Wales fitted him to

occupy the throne with brilliant success. As a lover of outdoor life, of agriculture and sport, and as an ardent Freemason, he has reflected the characteristic tastes of the majority of his subjects. As a patron of the theatre, of art, and of letters he has done much to encourage the pursuits of culture. His zeal in the interest of hospitals, in the question of housing the poor, and above all his wonderful influence in international diplomacy, so remarkably in evidence in the Anglo-French Treaty of April, 1904, all make for the welfare of his people at home and abroad.

EDWARD, Prince of Wales, known as the Black Prince, *b.* at Woodstock, 1330; *d.* 1376; eldest son of Edward III.; distinguished himself at the battle of Crecy, 1346; achieved a notable victory at Poitiers, 1356; ruled the south of France as Duke of Aquitaine, and lost his health in a campaign in Spain.

EDWARDS, JOHN PASSMORE, *b.* in Cornwall, 1824. At the age of eighteen he joined the staff of a London publishing house, and eventually became the proprietor of the London *Echo*, the *Building News*, *English Mechanic*, and *Weekly Times*. From 1880 to 1885 he represented Salisbury in Parliament, but he is best known for his philanthropic works, more particularly for the part he has played in founding free libraries, art galleries and hospitals in his native county and in the working-class districts of the metropolis. He was also a pioneer in the movement for providing special schools for crippled and delicate children.

EDWIN, king of Northumbria, and overlord of all England except Kent; aided the introduction of Christianity under Aidan; slain at Heathfield by Penda the Mercian. 633.

ÉGALITÉ, PHILIPPE, (Duc d'Orléans), *b.* at St. Cloud, 1714, guillotined, 1793; associated himself with the revolutionary party and adopted this name; voted for the death of the king and himself suffered death at the hands of the Jacobins.

EGBERT, king of Wessex, 802–37. His authority as overlord of all England was acknowledged in 827.

EGGISCHHORN, a mountain near the head of the Rhone Valley in Switzerland; height 9,625 feet. At its foot is the Aletsch glacier, the largest in Switzerland.

EGMONT, MOUNT, an extinct volcano discovered in New Zealand, North Island, by Captain Cook, 1770; height 8,300 feet.

EGYPT proper reaches southwards from the Mediterranean up the Nile Valley as far as Wady Halfa, near the second cataract, and is bounded by the Red Sea on the east, and desert on the west. South of Assouan and Egypt proper lies the Soudanese Province with its capital at Khartoum. Egypt is entirely an agricultural country, and its cultivable land is narrowly confined to the irrigated tracts along the Nile that are affected by the annual flood. The floods occur with great regularity each June, and last until September. No rain falls in Egypt, the floods being entirely brought about in the upper waters of the river. The width of fertile soil varies from 120 miles to 12 or 15, and much has been done of late years to regulate and utilise the water by the erection of dams, the greatest of which is at Assouan (see *Assouan*). The population of Egypt proper is about 10 millions.

The history of Egypt reaches back to B.C. 5000. Between that date and B.C. 332 were 31 dynasties, of which the Ptolemaic was the last. The great pyramids were built in the fourth dynasty, 3000 B.C. The 19th dynasty was the greatest of all, and Rameses II., its greatest representative, was the builder of the wonderful temples at Luxor, Karnak, and Abydos. He has been identified with the Pharaoh of the oppression, but there is little monumental evidence that bears upon Israelitish history at all. Under Alexander, B.C. 332, Egypt came under Greek influence, and Alexandria became a famous seat of learning. The country passed into the hands of the Saracens in the 7th century A.D., and Cairo was founded in 969. In 1250, the Mamelukes usurped supreme power, and wielded it in a creditable manner. The Turks succeeded them by conquest in 1517, and three centuries of weak misrule resulted. In 1798 the country was invaded by the French under Bonaparte, but they were expelled with the aid of the English in 1801. An era of tyrannous activity commenced under Mehemet Ali, who became Pasha in 1806. M. de Lesseps completed, 1869, the Suez Canal under Ismail Pasha, the grandson of Mehemet Ali, and first possessor of the title of Khedive. Ismail began a series of great internal improvements, and met his financial difficulties by selling 177,000 shares in the Suez Canal to England. In 1880 Egyptian finance was placed under international control, and in 1882 a national rebellion against Europeans began with a massacre at Alexandria. The British bombarded Alexandria and defeated the rebels at Tel-el-Kebir. From that time British influence has been predominant in Egypt, and wonders have been worked in economical, administrative, and social reform. The treaty signed in April, 1904, by France and England has given to England the right to administer the surplus of £5,000,000 accumulated by the International Caisse de la Dette, and has given a frank recognition of the predominance of British interests in Egypt.

EHRENBREITSTEIN, a town and fortress of 6,000 inhabitants on the right bank of the Rhine, is connected with Coblentz by a bridge of boats. The fortress looks down on the river from a sheer height of 387 feet.

EIDER DUCK, a bird common in the North of both hemispheres, which lines its nest with its own feathers. These feathers grow specially during the breeding season and are much prized for bedding. The common practice in Norway and Iceland is to take away the eggs and down twice, leaving the third set of eggs to be hatched.

EIFFEL TOWER, a colossal iron structure built 1887–9, by Gustave Eiffel, on the Champs-de-Mars, in Paris. It is 985 feet high, is of three stories and served by lifts. It cost the State £60,000 and the designer £140,000, which he hoped to recover from admission fees during a twenty years' concession.

EIKON BASILIKE (i-ke), a work published immediately after the death of Charles I., by whom it was supposed to be written. It is an autobiographical review of the king's life, and is almost certainly the work of Dr. John Gauden, who became Bishop of Worcester.

EISTEDDFOD, an assembly or congress of bards and minstrels held periodically in Wales. These meetings date as far back as the 12th century, and have been held annually since 1819. They foster Welsh patriotism, and promote the cultivation of music and national poetry by open competition. Similar competitions are now held in England.

ELBA, a Mediterranean island belonging to Italy, and lying between that country and Corsica. It is mountainous and produces iron ore. Napoleon was an exile here from May, 1814, to February, 1815.

ELBE, THE, rises in Bohemia, and joins the North Sea after a course of 725 miles. It is navigable to Prague, via the Moldau. It connects Hamburg by canals with Berlin, and is the main means of intercourse in Saxony, one of the most densely peopled parts of Europe. Its course through "Saxon Switzerland" is most beautiful.

ELBERFELD, 16 miles from Düsseldorf, on a tributary of the Rhine, is a busy, manufacturing centre. It has large cotton factories, supports a great local weaving industry, and is also an engineering centre.

ELBRUZ or **ELBURZ,** (1) The highest peak in the Caucasus (18,300 feet). (2) A range of mountains extending for 450 miles along the south of the Caspian Sea.

EL DORADO, a region of fabulous wealth existing in the imaginations of Spanish and English adventurers of the 16th and 17th centuries, and supposed to lie about the sources of the Orinoco in South America. An account, in 1540, by Orellana of his voyage down the Amazon and his discoveries led to this belief.

ELEANOR OF CASTILE, wife of Edward I., *d.* at Grantham, 1290. Twelve memorial crosses are said to have been erected by Edward I. at places where the body of his wife rested on the way to Westminster. Three of these remain at Walsham, Northampton, and Geddington.

ELECTRIC ACCUMULATORS. See *Electric Motor Cars*.

ELECTRIC BELLS for household purposes are generally set in motion by a current of electricity supplied by a dry cell or battery. In its course through the apparatus the current converts a core of soft iron into an electro-magnet (see *Magnetism*). This attracts a steel arm to which the hammer is attached, draws it forward and causes the hammer to strike the gong. The forward movement of the arm withdraws it from contact with a screw through which the current had been continued, and thus causes a break in the circuit. The magnet loses its induced magnetism, the arm is set free, and its elasticity restores it to its former position. Contact is again established, the soft iron remagnetised, and there is another blow of the hammer against the gong. These operations continue as long as the current is allowed to flow from the cell.

ELECTRIC CABLES for establishing telegraphic communication between countries separated by the ocean, or for conveying the current underground for purposes of electric lighting or traction, consist usually of a core of several strands of the purest copper wire covered with a sheath of insulating and protecting material. The outer strands are wound spirally round a central wire. The insulating material consists of layers of gutta-percha, vulcanised india-rubber, jute soaked in tar, oiled paper, etc. For protection the cable is covered with a sheath of steel wire or ribbon, or encased in lead. Underground cables are further protected by being laid in earthenware or iron pipes, or iron troughs filled in with pitch.

ELECTRIC CONDUCTORS are substances that permit the free flow of electricity. The best are silver and copper while all the metals, charcoal, and water are good conductors. The human body, cotton, and dry wool are partial conductors.

ELECTRIC FISHES. The Electric Eel, the African Cat Fish, and the Electric Ray have the power of discharging an electric shock sufficient at times to disable a man. The currents have all the usual characteristics of electricity, and find their origin in a peculiar modification of muscular tissue. The organs are excited

by nerve action from the brain, and are exhausted by a series of discharges.

ELECTRIC INSULATORS, or non-conductors, are substances that resist the flow of an electric current. Among the most effective insulators are dry air, glass, paraffin, ebonite, shellac, gutta-percha, silk, wool, and oils.

ELECTRICITY. Science is still unable to give a definite answer to the question, "What is Electricity?" From the fact that, under certain conditions, it flows from one point to another, it has been spoken of as the *electric fluid*, though it resembles no other known fluid except in this one particular. It was long considered a form of energy, but recent investigations have disproved this theory, and rather suggest that Electricity is the basis of every form of matter.

Ancient Greek philosophers knew that a piece of amber, when rubbed, possessed the power of attracting and then repelling light bodies. Towards the close of the 16th century, Dr. Parker discovered that a large number of other substances, including the diamond glass, sulphur, sealing-wax, and resin possessed the same property. Later it was observed that a flash of light accompanied by a sharp cracking sound was obtained when highly electrified bodies were discharged, suggesting in miniature the lightning flash and the accompanying thunder. Machines were constructed for the production of Electricity in larger quantities. A cylinder of glass, or a disc of plate-glass, was made to revolve against a cushion of leather coated with an amalgam of zinc or tin, and the charge of Electricity thus generated was collected on a hollow metal cylinder mounted upon a glass leg, and known as the *prime conductor*. Improvements in frictional machines were introduced by Holtz and Wimshurst.

The next important development was due to Volta, Professor in the University of Pavia. He placed a clean sheet of zinc and another of copper in a vessel containing dilute sulphuric acid, and found that, when the two metal plates were connected by a short length of copper wire, a current of Electricity flowed through the wire from the copper plate to the zinc, and that the latter slowly wasted away, while a few bubbles of hydrogen gas collected on the former. The energy necessary to drive the current through the wire is due to the chemical action of the acid on the zinc. Such an arrangement is known as a cell. The copper strip, whence the current starts through the wire is called the *positive pole*, and the zinc strip the *negative pole*. Zinc and platinum, or zinc and carbon, also form good combinations for cells. A combination of two or more such cells is called a battery.

An experiment performed by Faraday in 1830 before the Royal Society has produced far-reaching results. A length of copper wire was coiled many times round a hollow cylinder of wood, the ends carried a short distance along the table, and wound into another coil over which a magnetic needle was suspended by a silken thread. When the demonstrator passed a bar magnet into the hollow of the first coil, the needle was seen to oscillate. While the magnet remained at rest within the coil the needle occupied its normal position. The same results followed if the magnet was fixed and the coil moved forward and backward over it, the deflection of the needle increasing as the movements of the coil became more rapid. The experiment proved that the movement of a coil of wire in a magnetic field—that is, the space around a magnet within which the magnetic force acts—induced a current of Electricity in the wire, and that the strength of the induced current increased with the rapidity of the motion. The apparatus used contained all the essentials of the modern dynamo, in which the current is induced by causing coils of wire to revolve very rapidly in a magnetic field. By this means Electricity is produced on a commercial scale, and electric lighting and locomotion are rendered practicable.

ELECTRIC LAUNCHES. See *Electric Motor Cars*.

ELECTRIC LIGHTING. For the lighting of public places the electricity is produced at a generating station by means of dynamos, and conveyed to the various lamps by cables laid in pipes under the ground. For a powerful light *arc lamps* are used. Two pencils of artificial coke-carbon, called *electrodes* are kept end to end and almost in contact, by some mechanism. After contact the current is able to leap the *arc* or short distance between the electrodes, and, in doing so, volatilises a small portion of the carbon between the points. The carbon vapour becomes so intensely heated that a flint would melt if placed in the arc. The carbon points also become very hot and, being solid, emit a brighter light than the arc itself. For smaller lights incandescent electric lamps are used. Carbonised filaments mounted on conducting wires are sealed into glass bulbs which are then exhausted of air. The passage of the current raises the filaments to a white heat. The light emitted varies from two to fifty candles, according to the size of the lamp. The Board of Trade unit, it may be mentioned, is a quantity of electricity sufficient to sustain a sixteen candle power light for thirteen hours.

ELECTRIC LOCOMOTION. The various systems of electric traction as applied to trains and trams have certain points in common. (1) A *Power Station* where the Electricity is generated by means of dynamos. (2) Some means of conveying the Electricity from the generating station to any point on the system. (3) A contrivance known as a "Motor," for reconverting the Electricity into engine power, and so producing motion. In the case of trains, the Motor is often placed on the engine, while with regard to trams, it is slung underneath the car. Its action depends on the principle that a current of electricity passing through a wire placed in a magnetic field causes the wire to move. In the "*Overhead System*" of trams the Electricity is conveyed along stout wires mounted on poles and conducted to the Motor by a long arm known as a "trolley." This is the system most commonly in use, and has the advantage of a much smaller initial cost. The "Conduit System" is at work on the L.C.C. lines in South London, the first section of which was opened by the Prince and Princess of Wales in May, 1903; and on a short section in Bournemouth. In this system the electric conductors are T shaped rails of soft metal, laid on insulators in a concrete conduit. The Motors pick up the Electricity by means of a "plough" trailing in the rear of each car, and reaching down to the conductor through a narrow slit in the ground. In the case of trains the current is usually conveyed along a third metal placed between the other two.

ELECTRIC MOTOR CARS. The current for the propulsion of electric launches and electric motor cars is derived from accumulators. These consist of plates of lead coated with red-lead or some other oxide of the metal, and placed in dilute sulphuric acid. The passage of a strong current of electricity through such a cell gives rise to certain chemical changes in the plates, and, on disconnecting the wires which conveyed the charge, they may remain for several days in such a condition, thus storing up the energy of the current. Hence, such a contrivance is sometimes called a *storage battery*. If, however, the plates are connected by a wire, it is found that another chemical change takes place; the plates gradually regain their former condition and, during the time this second change takes place, a current of electricity passes along the wire in the opposite direction to that in which the charging current entered. When the car is required for use, the accumulators are connected with the motor, and the motion of the latter is transmitted to the wheels. The disadvantages of the system are, the initial cost of the accumulators, their comparatively short period of effective service, the need for frequent recharging, and the time taken in the operation. Further, the weight of the apparatus amounts in some cases to more than half the total weight of the car. Many attempts have been made to construct accumulators of lighter materials, and Edison has recently patented a cell in which nickel plates, nickel oxide, and finely divided iron replace the lead of the ordinary pattern. The cell appears to have a greater capacity than usual in proportion to its weight, but at present it has scarcely passed beyond the experimental stage.

ELECTRIC TELEGRAPH. Cooke and Wheatstone brought the first form of their needle telegraph into practical use in London in 1837, though many systems of transmitting signals through wires had been invented before that time. In the single-needle instrument a magnetic needle lightly hung in a vertical position is surrounded by a coil of wire. The needle is deflected to the right or left, when a current of Electricity is passed through the wire in the one direction or in the other, and a combination of movements to the right or left indicates a certain letter of the alphabet. The whole of the letters are comprised in a code of movements understood by the operators. The current is provided by a battery of several cells linked together. To send currents in either direction through the coil, two projecting levers, known as "signalling keys" or "tappers," are fixed to the instrument and the tappers at one end of the line work the instrument at the other. [See *Wireless Telegraphy*.]

ELECTRIC WIRING for the lighting of houses consists in tapping the cable conveying the current from the generating station, by jointing to it a smaller cable from which the insulated wires supplying the various lamps radiate. At convenient points the circuit through these wires is broken, the distance between the two ends, to each of which a small metal block is fused, being greater than the current will leap. At each of these points a bar of metal is so placed that, by depressing a small lever, the ends of the bar are brought in close contact with the two metal blocks. In this way the break in the current is bridged, and the current is able to flow through the metal bar and on to and through the lamp. Such a contrivance is known as a *switch*. To guard against shock the lever is insulated from the bar and the switch is fixed to a base of porcelain or other insulating material.

ELECTROPLATING is a process by means of which baser metals are covered with a thin coating of silver or gold. The commercial process was introduced by Messrs. Elkington about the year 1840. The plating vat resembles a voltaic cell. A plate of metallic silver or gold takes

the place of the zinc strip, and the articles to be plated replace the copper strip, the liquid being a solution of a soluble salt of silver or gold. When an electric current is passed through the apparatus, the plates are slowly dissolved in the liquid, and the articles become coated with an equal quantity of the more valuable metal. In gilding the insides of cups or jugs, the vessels are filled with the gilding solution, and a plate of gold connected with one pole of a battery is suspended in it, while the side of the vessel is connected with the other pole.

ELECTROTYPING is much used for reproducing works of art in facsimile, and for multiplying copies of wood-blocks for printing. Moulds of plaster or wax, coated with a film of plumbago, are suspended in a saturated solution of copper sulphate and connected with one pole of a battery, while the other pole is connected with a plate of copper which also dips into the solution. The copper gradually dissolves and is deposited at an equal rate on the moulds, the exact impress of which it takes, but in reversed relief.

ELECTRONS. The atom is no longer held to be the ultimate particle of matter. In 1899 Professor J. J. Thompson established the fact of the existence of bodies within the atom and composing it, and to these bodies he gave the name corpuscles. These corpuscles have a mass one thousandth part of a hydrogen atom, and it may be that they are the ultimate particles of matter, atoms of different substances differing in the number of corpuscles they contain. The name electrons has taken the place of the name corpuscles, because their activity seems to afford a reasonable explanation of electrical phenomena. Electrons are in a constant state of rapid motion within the atom. When some of them pass from atom to atom in a metal conductor, an electric current is set up. The same passage in a liquid is the cause of chemical change. Recent research on radio-active bodies has led to the theory that such substances emit rays which are really electrons travelling with the speed of light. It has been suggested that the energy of the sun is attributable to similar activities. The future of this department of scientific research promises to lead to very considerable advances in our knowledge of the constitution of matter, the hitherto unexplained phenomena of magnetism and electricity, and, possibly, of the nature of energy.

ELEGY, a poem generally of a mournful or plaintive nature. The Greeks first applied the term to a funeral ode, and afterwards to any composition consisting of hexameter alternating with pentameter lines.

ELEMENTAL SPIRITS are those spirits which, in the Middle Ages, were supposed to inhabit and have dominion over the four so-called elements—fire, water, air, and earth.

ELEMENTS. Modern Chemistry has dislodged the assumption of the ancients that the universe was built up of the four elements air, water, fire, and earth. Chemists now designate as elements those bodies which have not been shown to be of compound structure, such as oxygen, carbon, sulphur. The list of elements at present recognised as such numbers 80, and is necessarily provisional. Lord Rayleigh discovered a new atmospheric element which he named *argon*, in 1894, and Ramsay soon afterwards found another gas in many ways resembling argon, and now known as *helium*. Three other gases were found in minute quantities. Even more remarkable has been the discovery of radio-active elements from uranium salts, by their photographic effects. Of these, *Radium* is the most remarkable. See *Radium*.

ELEPHANTA ISLAND, in the harbour of Bombay, got its name from the figure of an elephant that formerly stood there. The island, four miles in circuit, is famous for its rock temples hewn out of the hard stone, and still used by the natives on festivals. The caves are columnated and contain many sculptured figures, of which the bust of Siva with three heads is unique.

ELEPHANTIASIS is a tropical disease due to a certain parasitic worm [Refer to *Med. Dict.*].

ELEUSIS, a town of Attica, situated N.W. of Athens, famous for its temple, dedicated to Demeter (Ceres), in which were celebrated the Eleusinian mysteries.

ELEVATORS are granaries at the river ports of North America for the reception and lading of corn. A revolving chain of buckets carries the grain to the hold. A farmer is credited with a deposit of a certain grade of corn, and all corn of the same grade is mixed, whilst variant grades are assorted. At shipment the farmer is credited with the quantity and quality deposited, though his grain went to a common stock.

ELF, the wicked magician of northern folklore, squat of figure, ugly of feature, and with long matted hair. The elves wounded cattle and men with their elf-arrows—stone arrow-heads—and children were removed from their cradles and replaced by imbecile elf-children.

ELGAR, SIR EDWARD WILLIAM, *b.* at Broadheath, near Worcester, 1857, is a famous English composer. His most celebrated work is "The Dream of Gerontius." Among his other productions the best known are "Lux Christi," "Caractacus," "A Coronation Ode," and "The Apostles." In 1904 he was appointed to the chair of music in the Birmingham University, and was knighted in June of the same year.

ELGIN MARBLES, sculptures now in the British Museum, were taken by the Earl of Elgin, English Ambassador to the Porte, from the Acropolis of Athens in accordance with a firman empowering him to measure, examine, and remove certain stones with inscriptions. The British Government bought the marbles for £35,000, in 1816. The chief works were taken from the pediments, metopes, and frieze of the Parthenon, or Temple of Minerva.

ELI, for forty years high priest and chief judge of Israel. He suffered, in his old age, the curse that followed upon his neglect of the evil courses of his sons, Hophni and Phinehas. On hearing that the ark of the Lord was taken by the Philistines, he fell from his seat at the gate of Shiloh and broke his neck; 1 Sam. iv. 18.

ELIJAH, or **ELIAS,** one of the most notable of the prophets of Israel, lived during the reigns of Ahab and Ahaziah, in the 9th century B.C. See 1 Kings xvii.–xvi., and 2 Kings i. and ii.

ELIOT, GEORGE, the nom de plume of Mary Ann Evans, *b.* in Warwickshire, 1819, *d.* 1880, a famous novelist. The strenuousness and robust character of her father appear in the delineation of Adam Bede, and of Caleb Garth in "Middlemarch." "The Mill on the Floss" also reflects much of her early home life. Her first story, "The Sad Fortunes of the Rev. A. Barton," appeared in 1856, and within the next ten years "Scenes of Clerical Life," "Adam Bede," "The Mill on the Floss," "Silas Marner," "Romola," and "Felix Holt" were published. Her power of characterisation, as shown in her treatment of middle-class people of the Midlands, is remarkable, and she is certainly to be placed among the first novelists of the 19th century.

ELIOT, SIR JOHN, born in Cornwall, 1592, *d.* in the Tower, 1632; in the reign of Charles I. acted as leader in the House of Commons of a patriotic party that resisted the king's illegal actions in raising money without the consent of Parliament. In 1629 Eliot with nine other members was sent to the Tower for their violent speeches, and there he died in 1632, having refused to utter a word of apology. He may be regarded as a martyr to the cause of freedom of speech in Parliament.

ELIOTT, GEORGE, Baron Heathfield, *b.* in Roxburghshire, 1717, *d.* 1790; an English general who became governor of Gibraltar, which he defended against the French and Spaniards, 1779–82.

ELISHA was chosen by Elijah to be his successor as a Prophet of Israel; he lived in the 9th century B.C., and prophesied through four reigns, a period of 55 years (see 1 Kings xix. 19; 2 Kings ii.–ix., xiii. 14–21).

ELIXIR, a term in alchemy denoting a soluble substance capable of transmuting to gold or silver the grosser metals. Also a potion that confers eternal youth.

ELIZABETH, QUEEN, *b.* at Greenwich, 1533, *d.* 1603; queen of England 1558–1603; daughter of Henry VIII. and Anne Boleyn; was brought up as a Protestant; became a good classical scholar under Roger Ascham; remained unmarried, though her hand was sought by the kings of France and Spain; her peace was marred by a series of plots by Roman Catholics to seat on the English Throne Mary, Queen of Scots, whom she executed in 1587. The following year saw the defeat of the Spanish Armada. Her reign was one of enterprise and intellectual activity, and the spirit of the time was reflected in the character of the Queen. Her womanly sympathies and weakness were controlled by great strength of will, and she put the interests of the State before her personal desires.

ELIZABETH, QUEEN OF BOHEMIA, *b.* in Falkland Palace, Fifeshire, 1596, *d.* 1662, was the daughter of James VI., of Scotland and James I., of England. Her husband, the Elector Palatine of the Rhine, was the leader of German Protestantism, and in 1619 accepted the throne of Bohemia from the revolted Protestants. Defeated in battle by the Emperor Ferdinand in 1620, he lost both Bohemia and his hereditary dominions, and sought with his wife refuge in Holland. Rupert and Maurice, the two sons of Elizabeth, were distinguished cavalry leaders during the Civil War, and her daughter Sophia became Electress of Hanover and the mother of George I.

ELIZABETH, QUEEN OF ROUMANIA. See *Carmen Sylva*.

ELK, or **MOOSE,** the largest deer extant, a full grown animal being six feet high at the shoulders. It is long limbed and short in the neck, and browses off bushes; it has a broad, hairy, overhanging upper lip, and basin-shaped antlers. It is found in the marsh and forest lands in northern latitudes, and chiefly in North America. Lonely in habits, and timid in disposition, it is difficult to stalk.

ELLEN'S ISLE, in Loch Katrine, the favourite resort of Scott's heroine in his "Lady of the Lake."

ELLIPSE, a complete geometrical curve such as may be described by a pencil which keeps taut a loop of thread whose ends are fastened at two points. The ellipse is of interest as being the curve made by a planet in its orbit.

ELM, one of the commonest trees in England, yields timber of great strength, toughness, and closeness of texture, which resists the action of water, and is remarkably free from any liability to split. It is therefore used in ship-building, and by the cart-wright. Coffins also are usually made of elm. Few trees yield a like amount of timber in so short a time.

ELMO'S FIRE, SAINT, the name given by sailors to the pale blue flame seen playing round the masts of ships during thundery weather. The same phenomenon is also noted in connection with spires and other lofty, pointed objects. It is due to the action of electricity.

EL OBEID, the scene of the massacre of Hicks Pasha's army by the Mahdi, 1883; the chief town of Kordofan, 200 miles south-west of Khartoum.

ELSINORE, a seaport town of 12,000 inhabitants on the island of Zealand in Denmark, with a fair harbour and excellent road-stead without. Elsinore is the scene of the events of Shakespeare's *Hamlet*.

ELSWICK, a populous district that has grown up around the engineering works established by the first Lord Armstrong, in 1817, in the neighbourhood of Newcastle-on-Tyne. The works at first were devoted to the manufacture of the owner's inventions in hydraulic machinery, but now include one of the greatest ordnance factories in the world, and a ship-building yard capable of turning out the largest battleships and the fastest cruisers. The ships already built comprise the most powerful vessels of the Japanese navy.

ELY, a city on an eminence among the Fens, 16 miles north north-east of Cambridge, with perhaps the most beautiful of English Cathedrals, whose massive western tower, and exquisite central octagon, are visible for miles around. Cromwell, who was an East Anglian, probably did much to prevent the desecration of the cathedral during the Civil War.

ELY, ISLE OF, a plain in Cambridgeshire, north of the Ouse, lies rather higher than the surrounding fen land, and so formed an island. Hereward the Wake used it as a stronghold against the Conqueror. Modern drainage has converted the fen district to good farm land.

ÉLYSÉE, the palatial Parisian residence of the French President, built in 1718, and subsequently used as a residence by Napoleon I.

ELYSIUM, in classical mythology is the abode of the blessed after death, also called the "Elysian Fields." It was variously placed, on the western confines of the earth, in the Islands of the Blest, or in the nether world.

EL'ZEVIR, the name of the remarkable family of Dutch printers who issued cheap and wonderfully beautiful editions of the classics, religious and other works between 1592–1681. These books have a remarkable value at the present day, both from their rarity and their excellence.

EMBALMING is a means of preserving dead bodies from corruption by filling and covering them with aromatic and antiseptic herbs or preparations. The practice reached its height among ancient Egyptians, who not only impregnated the body with balsams but also enveloped it in cloths similarly treated. Bodies thus treated are called "Mummies," many of which have lain in tombs and pyramids some thousands of years, the most ancient dating from 3600 B.C. This custom arose from the desire of the Egyptians to preserve the body from corruption, so that it might be ready for the soul to reinhabit on its return. As the result of embalming, the bodies of Edward I. and Canute were found entire in the 18th century; and some of the kings of ancient Egypt are still to be seen in the form of mummies in the British Museum.

EMBARGO. See *Commercial Dictionary*.

EMBER DAYS, which occur at four periods of the Church year, on the Wednesday, Friday, and Saturday after the 1st Sunday in Lent, after Whitsunday, after 14th September, and after 13th December, are days set apart to be observed as days of fasting and of prayer for those about to be ordained to the ministry.

EMBLEMENTS. See *Commercial Dictionary*.

EMBLEMS. Refer to *Index*.

EMBOSSING is the process of stamping under a press, or of beating out a relief pattern upon metal, leather, or other suitable substance. It is to be distinguished from stamping, in which the lamina is pressed by a form into a mould, whereas the under surface in embossing is a plane face of felt or other yielding material. For bold relief, the material is softened and pressed into a mould with tools. Repoussé work is the embossing of thin metal by beating upon the reverse side.

EMBRACERY. Refer to *Index*.

EMBROIDERY is the working of a needlework pattern upon a piece of fabric. It is a method of ornamentation subsequent to the process of weaving, and is thus distinguishable from tapestry where the weaving involves the creation of the pattern. It may be a kind of art-needlework done by hand, or it may be done by machinery.

EMBRYOL'OGY, that branch of science that deals with the development of embryos. Embryos are the early stages of development in an animal, before the parental form is recognisable; or the germ resulting from the action of pollen upon the ovule, in the seed of a plant.

EMERALD, a precious stone, a kind of beryl, of a rich transparent green colour. The finest jewels are found in Colombia, South America.

EMERSON, RALPH WALDO, *b.* 1803, *d.* 1882, an American poet, lecturer and essayist. He was educated at Harvard; became a Unitarian minister, but left his first cure at variance with his parishioners, and took to lecturing; met Carlyle in 1833, in Scotland, and became a regular correspondent. His first volume, *Nature*, a poetical prose work, contained the ideas of all that followed, in its idealism, its advocacy of instinct, its individualism, and its rationalistic tone.

EMIGRANTS' INFORMATION OFFICE was established in 1886 under the direction of the Colonial Office. Intending emigrants are supplied with information on the various fields for emigration. Circulars and handbooks on the colonies and certain foreign countries are published, and printed particulars are issued for exhibition in every post office and in many public libraries and other institutions. A monthly report is printed in the *Labour Gazette* in connection with the labour department of the Board of Trade. Letters for information, which need not be stamped, should be addressed to 31 Broadway, Westminster.

EMIGRATION. Refer to *Index*.

ÉMIGRÉS, LES. After the outbreak of the French Revolution in 1789, many of the aristocracy, officials and clergy left the country. Some of these gathered round the Royal refugees on the German frontier of France, and formed a nucleus for foreign interference. These exiles were known as *les émigrés*.

EMIN PASHA, Eduard Schnitzer, *b.* of Jewish parents, 1840, in Silesia, and killed by Arabs in Central Africa, 1892. A remarkable linguist and natural scientist, he proceeded from the University of Berlin to Turkey where he gained an intimate knowledge of Mohammedanism. He took office in the Soudanese provinces under the Egyptian government and acted as medical officer under Gordon at Khartoum, where he also undertook various diplomatic missions. Gordon made him Governor of the Equatorial Province, an office which he held until Stanley's expedition arrived in 1889. The work he did here, single handed, as a governor, ethnologist, surveyor and collector of botanical and entomological specimens, as well as in the recording of meteorological observations, proves him a man of remarkable character and versatility. He met his death in the service of the German government whilst leading an expedition to extend the influence of the German East African Colony.

EMMETT, ROBERT, *b.* 1778, *d.* 1803, was an enthusiastic but unfortunate member of the revolutionary society of "United Irishmen." He endeavoured to obtain the co-operation of Napoleon in a personal interview, failed in an attempt to take Dublin Castle, and was executed. There was much in his eloquence and infectious zeal to awaken Irish sympathy.

EMPIRE CITY, a name given to New York City, the chief city of the Empire State.

EMPIRE STATE, a name given to the State of New York on account of its pre-eminence in population, wealth, and industrial enterprise.

EMPIR'ICISM is a system of philosophy that recognises actual experience as the only source of knowledge. Opposed to the empirical school among the Greeks was the Idealist school of which Plato was an exponent.

EMU, a bird, native to Australia, much like the ostrich. It is about six feet in height, of a dark brownish colour, with legs and skin of slaty-blue. It is a fleet runner but weak of wing. It kicks powerfully forwards. Its flesh is prized and its eggs are edible, but it is rapidly becoming a rare bird. In size it is intermediary between the cassowary and the ostrich. Its plumage is plentiful and not a little resembles hair.

ENAMEL is a vitreous substance or glass, coloured if necessary by the admixture of earths or metallic oxides before fusion, used as a surface for porcelain or metal, for decorative or useful purposes. *Cloisonné enamel* is applied to a surface divided into a pattern of compartments by fine partitions, each compartment containing a distinct colour; *champlevé enamel* is placed upon a hollowed ground, and is largely used in jewellery; *surface enamel* forms a uniform coating like the white enamel face of a time-piece. Enamels for art work may be had in sticks. These are powdered and applied to the surface and then baked until the powder fuses and adheres. Modern enamels may be had in numerous tints, whereas ancient enamels are found in few but well contrasting colours.

ENCAUSTIC TILES are tiles of a very close texture used in the making of mosaic pavements for churches, etc. They are either plain or figured, and are square or triangular in shape. The clay, which in fineness is intermediate between that used for ordinary tiles and that used for porcelain, is coloured and placed in steel moulds, and then submitted to a pressure of many hundred tons by means of a

plunger which exactly fits the mould. The tiles are then dried, glazed, and fired.

EN'CRINITES, fossil crinoids, "lily stars or sea lilies," occurring so plentifully as to form great strata of marble in Europe. They produce varied sectional figures in the strata, as may be seen in Derbyshire marble.

ENCYCLICAL, a letter, sent by the Pope to the Bishops of the Roman Church, advising them on the policy to be pursued by the Church in dealing with questions of great public importance.

ENDIVE, a common garden plant, introduced into Europe from the East Indies, the bleached leaves of which are used for salads. The long, fleshy, and milky root of another species of the same genus is cut into pieces, dried in kilns, roasted, ground, and then, under the name of chicory, mixed with coffee. The mixture is said to possess a better aroma and to be less astringent than pure coffee.

ENDOGAMY is the restriction of marriage to members of the same clan.

ENDYM'ION in mythology was the son of Jupiter; being beloved of Selene (Diana), he was wrapt in endless sleep on Mount Latmos, where she could look upon him at night. Keats took the myth as the subject of one of his earliest poems.

ENGADINE, a famous Swiss Valley of Eastern Switzerland, along the river Inn, some 60 miles in length. Its villages are now almost all holiday or health resorts, especially for consumptive patients.

ENGHIEN, DUC D'. See *D'Enghien.*

ENGINEERING, a term denoting the various fields of activity of the civil, electrical, hydraulic, military, mining, marine, and mechanical engineer. *Civil engineering* refers to the construction of roads, bridges, canals, railways, drainage works, harbour works; *electrical engineering* involves the use of electrical power, as in rail and tram service, signalling and telegraphy, &c.; *hydraulic engineering* covers the employment of hydraulic engines, which are suitable for the most part for intermittent work; *military engineering* involves fortification, temporary or permanent, surveying, road making, pontoon building, &c.; *mining engineering* includes the surveying, selecting, opening, and superintending the works of mines; *marine engineering* is concerned with the building and management of a ship's engines.

ENGLAND, together with Wales and Scotland, forms the Island of Great Britain. It looks eastward over the North Sea towards the sea board of Northern Europe, southward across the Channel to France and Spain, and westward to Ireland and the Atlantic. Its position at a converging point of radiating waterways in the centre of the land masses of the northern hemisphere has contributed to its maritime ascendency. The development of road, bridge and canal building, and of machinery in the 18th century, together with the consequent development of its coal mining, weaving and spinning industries has given it the foremost position in the world in wealth and solidarity of influence. It has an area of 50,823 square miles, and a population of 33 millions. Its centres of industry are on the coal-fields, if we except London, and these all lie north of a line from Humber to Severn. The main coal-fields are the Durham, the "Cotton and Woollen," between the Ribble and the Trent, and the "Black Country and Potteries." Its manufactures, as shown by its exports, stand in the following order of importance: cotton goods, iron and steel, coal and coal products, machinery, woollen goods, ship-building, chemicals, fisheries, manures, boots, earthenware, colours, arms and ammunition. London, the capital, and seat of government, has a population of 4½ millions, exclusive of the adjacent boroughs like West Ham, that have a separate local government; Liverpool, Manchester, and Birmingham have each over half a million inhabitants; Leeds and Sheffield, over 400,000; whilst eight cities have over 200,000, and more than twenty have over 100,000. South Lancashire is the seat of the cotton industry, the West Riding of Yorkshire of the woollen, South Staffordshire and the Durham coal fields of the iron, Sheffield of the tools and cutlery, North Staffordshire of the pottery, Leicester and Nottingham of the boots, hosiery, and lace, and the Weaver valley in Cheshire provides the country with salt. Over £200,000,000 is expended annually on the importation of food stuffs into the United Kingdom, a fact which renders necessary the maintenance of a strong navy to protect its commerce in time of war. Agriculture tends rather to the rearing of good stock than to the cultivation of all the available land, as the profits from the raising of wheat crops are extremely small. Refer to "England" in *Index.*

ENGLISH CHANNEL, separating England and France, is 21 miles across at the narrow eastern end, and increases in width westward. Plans have been made for the construction of a Channel tunnel from Dover to Calais, but the idea finds little favour in England. The Dover-Calais passage takes an hour, the passage from Folkestone to Boulogne two hours, from Newhaven to Dieppe four hours ten minutes, and from Southampton to Havre eight hours.

ENGRAVING. (1) The art of designing or cutting inscriptions on any hard substance, as stone or wood. (2) A method of reproducing or printing designs and pictures by impressions from wood or metal. Metal plates are cut, corroded or photographically treated: then for printing they are washed in ink and cleaned so that the impression is taken from the residual ink in the lines. Wood blocks are cut in relief after the manner of a die.

ENSIGN. (1) The flag flown over the stern of a vessel to distinguish her nationality. Among British ships those belonging to the Royal Navy, the Royal Yacht Squadron, and the Coast Guard Service fly the White Ensign; vessels connected with the Naval Reserve and many yacht clubs are distinguished by the Blue Ensign; while the Red Ensign marks the merchant ship. (2) A term formerly applied to sublieutenants in infantry regiments because they carried the regimental colours. In the French and some other navies the title is held by officers of lowest commissioned rank.

EN'SILAGE is the storage of green fodder under pressure. Originally carried out in silos or pits this system has recently become popular as a means of preserving forage in covered stacks. It renders the farmer independent of the weather during the gathering of his crops, and preserves the nutritive qualities of the fodder.

ENTAB'LATURE, a term denoting that horizontal part of a classic structure which is imposed upon the columns. It is of three parts: first the *Architrave,* which rests immediately upon the columns; next the *Frieze,* which is usually ornamented by triglyphs (upright flutings with three ridges) separated by an open space called a metope, which is often occupied by a design in relief; and, thirdly, the *Cornice* which overhangs the other two and forms a kind of hood by a series of projecting mouldings.

ENVIRONMENT denotes the surroundings amongst which an organism lives. For an organism to live it must be adapted to some extent to its surroundings, and the more perfectly it is so adapted, the greater is its chance of surviving and of leaving descendants. If the environment changes with the seasons of the year, the organism, as a rule, presents corresponding changes. Man is more independent of environment than other organisms; indeed, the whole of civilisation has for its object the adaptation of the environment to suit man, thus reversing the natural process; for example, by means of artificial light, fire and clothing we make the environment within doors very much what we please. We are, however, still largely at the mercy of our mental and moral environment, specially that in which we spend our youth.

EPAMINON'DAS, a Theban general who defeated the Spartans at Leuctra, B.C. 371, and founded a city (Megalopolis), in Arcadia. He died from wounds received in his last victory at Mantinea, B.C. 362.

EPAULETTES, ornaments worn on the shoulder by naval and other officers. By their pattern, material, or number they serve to distinguish the wearer's rank. Their use in the British army was abolished in 1855.

EPERNAY, a town on the Marne, in the north-east of France, the centre of the champagne industry, with extensive storage vaults cut in the chalk.

EPHEM'ERA, insects that live but a few hours. As a rule they appear in the evening of a summer day in clouds above the water from which the day's heat has brought them. Strangely enough the transition from egg to larva, and from larva to the winged stage, takes many months, and the brief summer dance ends their existence at its very height; having dropped their eggs into the water they die.

EPHESUS, one of the greatest of the ancient cities of Asia Minor, situated near the mouth of the Cayster river, which flows into the Ægean Sea. It had a magnificent temple dedicated to Diana, and it was the head-quarters of a Christian community established by St. Paul. There are now extensive ruins to bear witness to its former grandeur, including the great theatre, and the temple of Artemis (Diana), but the site is occupied by mean villages.

EPHESUS, COUNCIL OF, the third General Council of the Early Church, held under Cyril of Alexandria, A.D. 431. There were present 198 bishops, and for the first time papal delegates from Rome. It condemned the Nestorian heresy, which asserted that Christ as Son of God was one person, and as Son of Man another person.

EPHOD, a significant and important part of the ecclesiastial dress of the Jewish High Priest. It was of the nature of a vest with shoulder pieces, on each of which was an onyx stone. It was made of gold and coloured thread.

EPHRAEM SYRUS, a theological poet of the early Syrian Church, who settled at Edessa, Mesopotamia, where he died about 370 A.D.

EPIC POETRY, or heroic poetry, takes as its subject the heroic achievements of a national hero, or events of national interest in so far as they form a poetic whole. In Greek, the Iliad and Odyssey, in Teutonic literature, the Nibelungenlied, and in Anglo Saxon, the Beowulf, are examples of the national epic. The literary epic is exemplified in Virgil's Æneid and Milton's Paradise Lost.

EPICTETUS, *b.* about 60 A.D., was a famous Stoic philosopher who lived and taught at Rome until the expulsion of the philosophers by Domitian. His doctrines were of an elevating nature, and included obedience to conscience, the love of practical goodness, and trust in Providence. His discourses and maxims were collected by his disciple Arrian, and published under the title "Enchiridion."

EPICU'RUS, an Athenian philosopher (B.C. 342–270), who maintained that the highest good for man was happiness, and that man's greatest obstacle to happiness was fear. He and his followers lived simple and temperate lives as being most conducive to happiness, although in later days a misconception of his idea of pleasure led to the connection of Epicureanism with luxury and sensuality.

EPIGRAM, whether in prose or verse, implies the terse and happy expression of a single thought or subject, and in verse the point of the epigram is usually accentuated by a striking conclusion. The term was first applied to Greek inscriptions, and afterwards to a concise kind of poem often satirical in feeling.

EPILOGUE, a short speech in prose or verse addressed to the audience at the end of a play, and intended either to elucidate certain points in the piece, or to crave indulgence for any weakness in the play or among the players. Many of Shakespeare's plays are thus concluded.

EPIPH'ANY, "a manifestation," is the name of a Christian festival commemorative of the manifestation of Christ to the Gentiles, in the persons of the Magi, who visited the infant Saviour in Bethlehem, where they presented gifts of gold, frankincense, and myrrh. The festival is held on 6th January.

EPISCOPACY, the system of Church government by bishops who alone have the power to admit to Holy Orders. This form of government is common to the Anglican, Roman, and Greek Churches.

EPITHALA'MIUM, a wedding song, a poem in honour of a newly married pair. Edmund Spenser wrote his "Epithalamium" in honour of his own bride in 1595.

EPSOM, 15 miles south-west of London, a market town of Surrey, 10,000 inhabitants. It was a health resort in the early part of the 18th century, famous for its "Epsom Salts" springs. Epsom Downs has long been famous for its race-course, especially since 1780, when the "Derby" and the "Oaks" were first instituted.

EQUERRY, an officer of state under the direction of the Master of the Horse. The six equerries in ordinary are selected from among naval and military officers, and each is in attendance on the king for a month at a time. An equerry is also attached to the suite of other members of the royal family.

EQUINOX, the name given to each of those times of the year (March 21st and September 22nd) when the day and the night are of equal duration all over the world. This occurs when the sun is vertically above the earth's equator.

ERA, the period reckoned from a certain epoch, or fixed point of time; sometimes used in the same sense as "epoch." The *Jewish Era* dates from the traditional year of the creation, 3760 B.C., a date which Freemasons have retained in their ritual. The *Roman Era* dates from the year of the founding of Rome. "Anno urbis conditæ," (A.U.C.), which is usually allowed to be 753 B.C. The *Christian Era*, now in almost universal use, was introduced into Italy by Dionysius Exiguus, a Roman Abbot, in the 6th century, and was gradually adopted by the other Christian countries. It is supposed to date from the birth of Christ, but it is commonly held that Dionysius was four years late in his reckoning. The *Mohammedan Era* dates from the "Hegira," or Flight of Mohammed from Mecca to Medina, which occurred 15th July, 622 A.D.

ERASMUS, *b.* at Rotterdam, 1465, *d.* at Basel, 1536; the famous Dutch classical and theological scholar of the Renaissance; educated in the monastery of Stein and at Paris University; visited England 1498–9 and 1510–14, when he formed a close friendship with Colet and More. He declined ecclesiastical preferment that he might devote his life to scholarship. As a reformer he was opposed to all violent changes. His most celebrated work was his Greek Testament, which had a great influence on the thought of leading men of his time. He is said to have "laid the egg that Luther hatched."

ERASTIANS, upholders of the tenets attributed to Thomas Erastus, a German controversialist (1524–83), who proposed to restrict the power of the Church. Erastianism now implies State control of the Church, a policy that goes beyond that favoured by Erastus.

EREBUS, in Greek mythology, was the son of Chaos and Darkness, and the father of Light, Day, and the Fates. From the circumstance that he was turned into a subterranean river the name came to be applied to the Infernal Regions.

ERICSSON, JOHN, *b.* in Sweden, 1803, *d.* 1889, a distinguished engineer whose locomotive, the *Novelty*, competed unsuccessfully with Stephenson's *Rocket* for the prize offered for the best. He afterwards devoted himself to marine engineering and naval architecture; and is sometimes credited with the invention of the screw-propeller. In 1861 he designed the *Monitor* for the United States' navy. He was also the inventor of a torpedo boat, and applied steam to the working of a fire-engine.

ERIE CANAL, the chief canal of the States, connects the Hudson River at Albany with Lake Erie at Buffalo; 350 miles long.

ERIS, in mythology, the sister of Mars and the goddess of discord. She originated the dispute for the prize of the golden apple, and was thus the first cause of the Trojan War. In revenge for not being invited to the wedding of Peleus, she threw a golden apple among the guests with the message, "To the Fairest." The shepherd Paris awarded the apple to Venus who, in return, promised him the fairest of women.

ERITREA, an Italian colony on the Red Sea, with Massowah, the natural port of Abyssinia, as capital.

ERMINE, the stoat, a member of the weasel family, a thin, short-legged carnivorous animal found in cold countries. In particular, the term is reserved for the animal in its white winter fur with a black tipped tail. The fur of the ermine, when made up, is arranged to display the black tail tips at regular intervals. As a facing used in the robes of English judges, ermine has come to represent judicial fairness.

EROS or **CUPID,** which see.

EROSION is the wearing down of the land surface of the globe by the action of running water, the waves, currents, frost, ice, etc. Rivers hollow out their beds and convey the eroded material to a lower level; glaciers have scooped out mighty valleys and formed the beds of lakes; frost is constantly disintegrating and pulverising the rocks, while the waves undermine the cliffs and produce immense falls of rock.

ERRATICS, a term applied by geologists to water-worn boulders and masses of rock that differ entirely in character from the strata with which they are in contact. Blocks of Norwegian granite are found on the plains of Denmark; huge boulders from the Grampians are seen on the low-lying lands of Fifeshire and Midlothian; and the Cumbrian Hills have contributed "erratics" to the Moors of Yorkshire. They have been transported, long ages ago, on the backs of glaciers or ice-sheets.

ERSKINE, THOMAS, *b.* at Edinburgh, 1750, *d.* 1823, was an eminent lawyer and orator. After four years spent in the navy and six in the army, he devoted himself to the law, and soon acquired a leading position, being engaged in most of the *causes célèbres* of his day, including the defence of Admiral Keppel and of Tom Paine. For many years he represented Portsmouth in Parliament, and was a determined opponent of Pitt and his policy. He became Lord High Chancellor in 1806.

ERZERUM, capital of Turkish Armenia, near the northern source of the Euphrates. It stands on a beautiful plain 6,000 feet above sea level, and is an important trading centre and fortress.

ERZGEBIRGE, a range of mountains between Saxony and Bohemia, rich in minerals and attaining a height of 4,000 feet.

ESARHADDON, (680–668 B.C.), son of Sennacherib, was king of Assyria. Under him the Assyrian kingdom reached its highest glory. He conquered and governed Egypt, rebuilt and restored Babylon, and made at Nineveh a palace of great magnificence.

ESCHATOLOGY, the branch of theology that deals with the state of man after death, including such subjects as resurrection, judgment, and the future state. The term literally means, "an account of the last things."

ESCORIAL, or **ESCURIAL,** a palace of the Spanish kings, situated 30 miles north-west of Madrid in the hills. It contains a palace, a mausoleum, and a monastery, and has an austere aspect in its wind-swept situation. It was built by Philip II. in honour of St. Lawrence, in allusion to whose martyrdom by burning on a gridiron, the ground plan was made in the form of a gridiron.

ESKIMO DOG, rather heavier than a Scotch collie, which it somewhat resembles; this long-nosed, bushy-tailed dog is the one domestic animal of the Eskimos. It is used in teams to draw sledges, and it is said that in this way 40 miles a day has been covered comfortably with ½-cwt. for each dog. They are much overworked, are ill-tempered, and prone to disease. They retain much of their native savageness, and are therefore, as beasts of burden, inferior to the reindeer of the Lapps.

ESKIMOS, the aboriginal inhabitants of Greenland, and the Arctic regions of America. As a rule they live near the sea, but, as their numbers have been computed at 40,000, and the area they inhabit is more than 15,000 square miles, it is plain that they are thinly scattered. They are very conservative in habit, and show small inclination to adopt civilized manners of speech or life. This is perhaps due to the necessity of adhering to all their customary devices in obtaining their hard won sustenance. They are a short people, akin to the American Indians, and they live by hunting and fishing. Their most remarkable invention is the kayak, a light skin canoe, 18 feet by 2 feet, with an opening in the top, in which the occupant seats himself, low down, wrapped in waterproof skins. In this canoe they are able to capture seals, which they take with harpoons to which is attached a

line with floats. Ashore they use their dogs and sledges in the chase. In summer they reside in tents near open water. Their winter huts are made of turfs and snow, and heated by oil lamps. They congregate in stations of twenty or thirty families.

ESPALIER, a frame of trelliswork on which fruit trees are trained so that they may be exposed to the sun and the air. The name is also applied to trees so trained. In England they are usually found forming the borders of the paths of a garden, but on the Continent they are often placed obliquely or even horizontally to gain the most effective exposure. In this way the mischief of wind is reduced.

ESPARTO grass abounds in North Africa and the south-east of Spain. Its use for the manufacture of paper is more particularly confined to England; but it has from ancient times been variously used in the making of string, baskets, sandals, matting, and similar things. It needs little cultivation or rain, and the crop is plucked, not cut. Careless and indiscriminate treatment has necessitated official regulations, both in Algiers and Spain, for the preservation of this natural asset. In 1902 Great Britain took £242,000 worth of grass from Spain alone. The grass is steamed and the pulp is used for paper making. France and Spain use rye, oats and other grasses, and it may be said that the use of esparto is peculiarly English.

ESPERANTO, an artificial, international language, invented by Dr. L. L. Zamenhof, of Warsaw, who first published his ideas in 1887. It is not intended to replace any natural language but to act as an auxiliary in promoting intercourse between peoples, for the interchange of ideas, and for assisting commercial transactions. A marked feature of the system is its simplicity. There are no exceptions to rules and no irregularities. The pronunciation is phonetic. It is claimed that the whole of the grammar, which is embodied in seventeen terminations and thirty prefixes and affixes, may be learnt in an hour. The vocabulary consists of a number of words which are already common to most civilised languages, and about two thousand root words, the meaning of which may be so modified by the prefixes and suffixes as to express any desired shade of thought. Esperanto was introduced into England in 1902, and societies, groups, and clubs have been formed in many towns. It is still more widely spread through France and Russia, has been welcomed in Germany, and is gaining a footing in the United States of America.

ESQUI'MALT is a British Naval Station at the south end of Vancouver Island, guarding the western terminus of the Canadian Pacific Railway, just as Halifax in Nova Scotia guards its eastern end. It is near to Victoria, the capital of British Columbia.

ESQUIRE. This name was originally applied only to the two attendants of a knight, and it frequently was used in its abbreviated form, squire. As a title, it was reserved in time for people of certain rank or standing, by birth or profession. Thus, the eldest son of a knight or the younger son of a nobleman might claim the title, as also might men in certain official positions, notably, officers of the king's household, barristers, sheriffs, and all holders of the king's commission. It is hardly necessary to point out that its usage at the present day is almost entirely indiscriminate.

ESSAY ON MAN. A didactic and philosophical poem in four Epistles, written in heroic couplets, by Alexander Pope, and published between 1732–4. It contains much of Pope's most brilliant work, although its philosophy, which perhaps Pope owed to his friend Bolingbroke, is now neglected.

ESSAYS AND REVIEWS, a volume of theological essays written for the most part by clergymen of the Church of England, and first published in 1860. The unorthodox views expressed by some of the writers gave rise to a lengthened and bitter controversy, and were condemned by Convocation. Dr. Temple, who became Archbishop of Canterbury, was one of the essayists. His election to the see of Exeter in 1869, was strongly opposed, not for the views expressed in his essay, but on account of his association with the other essayists.

ESSEN, in Rhenish Prussia, on the Dusseldorf coal field, is largely devoted to the manufacture of iron. The Krupp steel and ordnance works have their great establishment here, and there are also tobacco factories, dye works, and breweries. Essen has an old church of much antiquarian interest, dating from the 9th century.

ESSENES, a Jewish sect of the 2nd century B.C., who have been the object of much historical enquiry because of their possible influence on religious life in our Lord's time. They aimed at extreme priestly sanctity, and abstained from worldly affairs. They established communistic settlements in the deserts and encouraged celibacy. They were strict in their obedience to the Levitical Law.

ESSEX, EARL OF. See *Devereux*.

ESTATES OF THE REALM. The king, together with the three estates of the Realm, form the Parliament of Great Britain and Ireland. The three estates are the Lords temporal or Peers, the Lords spiritual or Bishops, and the Commons. It was out of the action of the third estate (tiers état), who sought equal voting power with the other two, that the French Revolution made its first steps in 1789. The term fourth estate has been humorously applied to that all-important political factor, the press.

ESTHER, from whom the Old Testament book takes its name, was the adopted daughter of one Mordecai, of the tribe of Benjamin. She was made queen by the Persian king, Ahasuerus (480–465 B.C.), in the place of the deposed queen Vashti. In this position she was able to defend her compatriots from the plots of Haman, the king's chief minister, who was hanged on the lofty gallows prepared by himself for Mordecai. In this way Esther brought about the deliverance which the Jews commemorate in the feast of Purim. It is remarkable that the book is almost devoid of religious sentiment. The name of God is not once mentioned. Perhaps it was intended to be read at the general festival of Purim. Luther disapproved of its inclusion in the canon.

ETCHING is the art of drawing on metal plates so that the drawing may afterwards be transferred to paper. In dry-point etching the drawing is scratched directly on to the plate by means of an etching-needle. More frequently the plate is thoroughly cleansed, covered uniformly with a thin coating of a resinous substance known as etching ground, and then smoked. A paper with the outline of the subject in lead pencil is damped, laid face downwards on the prepared plate, fixed in position, and the whole passed through a roller press, with the result that the outline is transferred, in reverse, to the plate. The artist now draws with a point, through the resinous ground, the lines that are necessary to represent the various forms and the shading, each line penetrating the "ground" completely, but merely scratching the metal surface. In the *biting-in* process these lines are deepened by the corrosive action of an acid solution. Depth of tone is obtained by exposing the lines to the action of the acid for a longer time than that required for the lighter shades. The finishing touches are sometimes put in by dry-point etching. The term *etching* is also applied to drawing on glass by the corrosive action of an acid.

ETESIAN WINDS, periodical northerly winds prevalent over the Mediterranean and North Africa during the summer, and due to the rarefaction of the air over the African deserts.

ETHELBERT, KING OF KENT, reigned from 560 to 616. His marriage to Bertha, a Christian princess, was followed by the mission of Augustine, 597, and the conversion of the king. Civilization and knowledge spread in his kingdom, and, about the year 600, Ethelbert promulgated the earliest written code of Saxon laws.

ETHELRED THE UNREADY, or Ethelred II., reigned 978–1015; his sobriquet denotes "lacking counsel." He made a political blunder in endeavouring to buy off the Danes by payment of Danegeld, and he ordered a general massacre of them on St. Brice's Day, 1002. Sweyn of Denmark came to avenge this atrocity, and Ethelred fled to Normandy, to return on the death of Sweyn.

ETHELWULF, an Anglo Saxon king, *d.* 858, the son of Egbert, and father of four English kings, of whom Alfred the Great was the youngest. Danish invasions troubled his reign.

ETHER. (1) The propagation of light, sound, radiant heat, and electro-magnetic stresses is explained as being of the nature of wave-movement, and this supposition, which we may assume to be established, necessitates the existence of a universal medium through which the waves are transmitted. Such is the medium that physicists name *ether*. It permeates all matter and pervades all space. It has been likened to an impalpable and all-pervading jelly through which waves of light and heat are for ever throbbing, but a jelly whose rigidity is one thousand millionth of that of steel, and whose density is infinitesimal. Illustrations of the nature of this hypothetical medium, however, are bound to leave much to the imagination. Light-undulations and electro-magnetic undulations possess properties whose identity is explicable at present only on the hypothesis of one medium, but its precise nature may be the object of new conceptions with each advance in physical research. (2) Ether is also the name of a volatile liquid obtained from alcohol and used as an anæsthetic.

ETHICS is the science of morals. It endeavours to formulate the distinctions between right and wrong, to show what are the duties of man, and why those duties should be performed.

ETHIOPIA originally implied the African territories inhabited by the uncivilised dark races of the ancient world. Subsequently, it became more definite, and denoted the land of the Upper Nile. It included part of Abyssinia and the present Soudanese provinces. The people were of Semitic origin, and most probably they came from Arabia. Their chief city was Meroë, whose ruins lie on the Nile, midway between the Atbara and Khartoum.

ETHNOLOGY, the science that investigates the physical and mental characteristics, the origin, migrations, and present distribution of the various families of the human race. Ethnologists have divided mankind into four main groups, the

Caucasic, American, Mongolic, and the Ethiopian or Negro.

ETIQUETTE. Refer to *Social Guide.*

ETNA, the highest volcano of Europe, situated near the east coast of the island of Sicily, may be ascended from the town of Catania. The mountain rises evenly, as a cone, to a height of 10,835 feet, but on the east side it has an enormous chasm or precipitous gorge, known as the Val del Bove. Its base is well cultivated and fertile. Above the cultivated belt is a zone of forest, but the last 4,000 feet is a dreary waste of volcanic debris, usually mantled in snow. Over 90 eruptions have been recorded and described, and 16 of these occurred during the 19th century. An observatory stands on the mountain, on the south side, at a height of 9,000 feet, and is the highest inhabited house in Europe.

ETON, a small town of Buckinghamshire on the left bank of the Thames, opposite to Windsor, is mainly dependent on the College, which has over 1,000 pupils. The College was founded in 1440 by Henry VI. The older parts, or College proper, are reserved for the 70 scholars or "collegers"; the remaining pupils, known as "oppidans," live in the various masters' houses. The College is governed by a provost and ten fellows, and is intimately connected with King's College, Cambridge, its sister foundation, to which there go up annually certain of the collegers or oppidans, who have won in competition the various valuable scholarships that connect the two establishments.

ETRURIA. In ancient geography, a division of Italy which nearly corresponds to modern Tuscany.

ETTRICK SHEPHERD, THE. See *Hogg, James.*

ETTY, WILLIAM, R.A., *b.* 1787, *d.* 1849; an English painter of historical subjects, a great colourist, and an untiring student of the living figure. His landscapes and drapery always harmonize admirably with his figures.

EUBŒ'A, or Negropont, a long, mountainous island in the Ægean Sea, separated from the mainland of Greece by a tortuous strait, which near Chalcis narrows to forty yards. The island is 98 miles long and 30 wide, and it is rich in iron and copper. Its highest mountain is Mount Delphi (5725 feet). In the south the beautiful Cipolino marble is quarried.

EUCALYPTUS, a genus of evergreen trees of which 120 species flourish in Australia. The thick leaves are alike on both sides, and usually are suspended vertically, so that they throw but small shadow. The trees are often of an extraordinary height, and, because they exude a kind of gum, they are commonly known as gum trees. The leaves of the *Eucalyptus Globulus*, or *blue gum tree*, yield the oil well known as a remedy for colds, and called "Eucalyptus."

EUCHARIST, "Thanksgiving," a name given to the sacrament of the Lord's Supper, because it is a special act of praise and thanksgiving for "the sacrifice of the death of Christ, and of the benefits which we receive thereby."

EUCLID, a famous Greek geometrician, who lived at Alexandria about 300 B.C. His "Elements" are contained in thirteen books, I.-IV. and VI. treating of plane geometry, V. of proportion, VII.-IX. of the properties of numbers, X. of incommensurable numbers, and XI.-XIII. of solids. On the Continent and in America, Euclid has been superseded by modern methods of treating geometry, and England is now beginning to follow this example.

EUGENE, PRINCE OF SAXONY, *b.* at Paris, 1663, *d.* 1736. On the exclusion of his mother, a niece of Cardinal Mazarin, from the court of Louis XIV., and the refusal of a commission by the king, he attached himself to the Austrians, with whom, as commander-in-chief, he did brilliantly against the Turks (1696–9). He commanded the Austrians against the French in Northern Italy in the early campaigns of the War of the Spanish Succession, and defeated Villeroi at Cremona (1702). He shared with Marlborough the victory of Blenheim (1704), and the series of successes in the Netherlands (1705–10). After the peace of 1714 he returned to Vienna, and again took the field against the Turks, whom he routed at Peterwardein (1717), and against whom he carried Belgrade and received it is said, his 13th wound. He spent his remaining years in Vienna, a popular hero and an energetic politician. Energy and promptness were his characteristic traits.

EUGENE ARAM was a highly cultured, self-educated schoolmaster, *b.* 1704 in Yorkshire, executed for murder, 1759. Whilst at Knaresborough he murdered a shoemaker whom he suspected of an illicit love for his wife. Thirteen years later, an accomplice brought about his arrest by unguarded references to the skeleton in a cave. During these thirteen years Eugene Aram had continued his wide studies, and successfully conducted schools. His defence was brilliant but unavailing, and he was hanged at Tyburn. Bulwer Lytton (the first Lord Lytton) published in 1832 a novel dealing sympathetically with the unhappy scholar, and the poem by Thomas Hood, "The Dream of Eugene Aram," displays with terrible reality the deep tragedy restlessly re-enacted in the sensitive mind of the cultured usher.

EUGÉNIE, EMPRESS, *b.* 1826, at Granada, in Spain, married Napoleon III., Emperor of the French, in 1853. The fall of the Emperor's government on his surrender to the King of Prussia at Sedan, 1870, brought the Empress as a fugitive to England. She settled at Chislehurst, Kent, where, at the end of the Franco-German War, she was joined by her husband, who died there in 1873. The Empress was a great personal friend of Queen Victoria, and has always been regarded in England with popular sympathy, a feeling that was accentuated when she lost her son, the Prince Imperial, in the Zulu War. She now resides at Farnborough Hill.

EUMEN'IDES (i-des) or "well wishers," a euphemistic name for the Erinyes or Furies whom the kinder title was meant to propitiate. The Furies were three, Alecto, Megæra, and Tisiphone, and they were, in Greek mythology, "the avengers of blood." It is noteworthy that Milton confuses them with the three Parcae, or Fates in his lines,

> "Comes the blind Fury with the abhorrèd shears,
> And slits the thin spun life." [*Lycidas.*

EUNUCH, an oriental official, who has often risen to high political influence. Being castrated, he is assigned the duty of attendant in the harem. Hence the name is applied in general to a castrated man, of whom many were formerly employed in choral work in Italy, as the retention of the boyish voice is one of the effects of this barbarous custom.

EUPHEMISM, the name of a figure of speech in which an ugly idea receives a fair name, (see *Eumenides*). Instances of euphemisms are common in every-day talk, as when a serious offence is alluded to as an indiscretion or a peccadillo, a thief as "one of the light-fingered gentry," or a retreat is described as a strategic movement.

EUPHRA'TES, a river, originating in the junction of eastern and western branches from the hills of central Armenia, breaks through the Taurus mountains, and after a course of 1,700 miles enters the Persian Gulf. One hundred miles from its mouth it receives the waters of the Tigris, the land enclosed between the two rivers being known as Mesopotamia. From the junction of these rivers to the sea the river takes the name of Shatt-el-Arab, and on it stands Basra, a town which has developed with steam navigation. The ancient civilization of the Euphrates Valley, like that of the Nile, depended upon canals and irrigation works, and upon the utilization of the annual floods. Ancient Babylon stood on its banks, Nineveh and Bagdad on its twin river the Tigris.

EUPHROS'YNE, one of the three Graces, whose name Milton freely translates, "heart easing mirth" [*L'Allegro*]. Her sisters were Aglaia and Thalia, and the three were representative of beauty and grace.

EU'PHUES (u-es). John Lyly, one of the early Elizabethan poets and Dramatists, set a fashion in literature by his work "Euphues, or the Anatomy of Wit." This romance abounds in conceits, puns, and fashionable circumlocutions, and its influence is apparent in the early works of Shakespeare, notably in the "Two Gentlemen of Verona." Euphuism became a cult, and did not altogether pass away until the Puritan Revolution.

EURASIAN, a term used in India to designate half-castes sprung from European fathers and Hindu mothers.

EURIP'IDES (i-des), *b.* 480, *d.* 406 B.C., the third of the three great Greek Tragedians, in point of time. Æschylus and Sophocles were more heroic in their conceptions, Euripides more human, and yet more moving and dramatic. He is pessimistic, and does not deal kindly with his women folk, although he is the author of *Alcestis*, the world's masterpiece of wifely dutifulness and sacrifice. Of the 80 plays he wrote, 18 are extant.

EURO'PA, daughter of King Agenor of Phœnicia, was carried off by Jove, who appeared in the form of a white bull, to the island of Crete, where she became the mother of Minos and Rhadamanthus.

EUROPE is geographically a peninsula of Asia, but it has developed its own western characteristics and has become the leading factor of the world's civilization and progress. Its most notable geographical feature is the great extent of coast line it possesses in relation to its area, and to this fact may be attributed the extraordinary use it has made of its position in the centre of the land masses of the Northern hemisphere as a means of extending its influence over-seas. Great Britain, France, Germany, Italy, Holland, Belgium, Spain, and Portugal all possess extensive colonies widely separated from the home country. The political weight of Europe is in the hands of the six great Powers—Great Britain, France, Austria, Germany, Russia, and Italy, who act together as the "Concert of Europe." Geographically, Europe is a continent of peninsulas, but it is traversed by a great plain widening as it proceeds eastward from the Netherlands across Prussia and Poland, to include the vast territory of Russia. This plain is crossed by large rivers, the Rhine, Elbe, Oder, and Vistula, which flow northward from a mountain system whose nucleus or core is found in the Alps of Switzerland. From these central highlands there flow in other directions the Loire and Rhone of France, and the great Danube of

Austria-Hungary. The Russian plain has it own magnificent river basin of vast drainage, that of the Volga, a river falling slowly to the Caspian Sea. The peoples of Europe may be roughly divided, according to language, into the Teutonic races of the north-west, the Latin races of the western Mediterranean, the Slavonic peoples of the Danube and Volga basins, the Celts of the western fringe, and the Greeks and Mohammedans of the Eastern Mediterranean. Of these, the Teutonic peoples exert a predominating influence in world politics by reason of their maritime ascendency. The population of Europe is about 400 millions.

EURYD'ICE, (i-ce), in Greek mythology, was the wife of Orpheus. She died of a snake bite, and Orpheus insinuated his way by his power of music to an audience with Pluto, who was won over to restore her. There was, however, one condition. Orpheus should be followed by his wife to the upper air if he forbore to look back upon her. In his anxiety, when on the point of emerging from the lower world, Orpheus looked back, and Eurydice was snatched back again.

EUSEBIUS OF CÆSAREA, *b.* about 264, *d.* 340, one of the most learned of the Fathers of the Christian Church, and a pioneer in Ecclesiastical History. He was present at the Council of Nicea, 325, and was distinctly moderate in his attitude towards Arianism. He wrote a *Chronicon*, or history of the world down to 328 A.D., and an ecclesiastical History recounting the chief events in the life of the Church till 324. Both works are of interest, because they refer to authorities and authors no longer available, but the Ecclesiastical History would have been more useful if it had not been silent about the dissensions and weaknesses of the early Christians.

EUTHANASIA means painless death. The name has been applied to the general question of alleviating the pains of dissolution by drugs or other means.

EU'TYCHES (ty-ches), of Constantinople, the originator of the Eutychian heresy, that Christ had only a divine nature, was condemned by a general Council at Ephesus, 451.

EUXINE, ancient name of the Black Sea, meaning "inhospitable," and so called because of its treacherous weather and sudden storms.

EVANGELICAL is a name adopted by all those reformed sects of Christians who base their authority on a personal appeal and reference to the Evangel or Gospel, rather than to the traditional authority of the Church. Nonconformists, English Low Churchmen, and Scottish Presbyterians alike emphasise the evangelical tenets, viz., the necessity of conversion from an unregenerate state, justification by faith alone, forgiveness through the Atonement, the inspiration of the Scriptures, and a final appeal to them for authority. The strong personal appeal that marks the Evangelical movement was initiated by the great revival under the Wesleys and Whitfield, during the religious apathy of the 18th century.

EVANGELICAL ALLIANCE, an association of Christian denominations from all parts of the world, the members of which are agreed on certain fundamental doctrines, and are united in their efforts to obtain and maintain religious freedom. The alliance arose out of a Conference held at Liverpool in 1845, and was organised in 1846.

EVANGELINE, a poem of sentiment written in hexameters by Longfellow, and published in 1847. It is founded on the removal of the French settlers in Acadia, (Nova Scotia), by the British in 1755.

EVAPORATION is the process by which a liquid or a solid becomes changed to a gas. The reverse process is known as condensation (of liquids), sublimation (of solids). The rapidity of evaporation depends on temperature, exposure of surface, and the state of saturation and the pressure of the enveloping air. Camphor, a solid, evaporates freely, and even snow diminishes in long continued frosts. It may be stated that there is no particular reason for using the term vapour in preference to the term gas. In the phenomena of dew and hoar frost, we have instances of the condensation and sublimation respectively of the water vapour in the atmosphere. All evaporation is accompanied by loss of temperature, and volatile liquids, like eau-de-Cologne, have consequently a cooling effect on the skin, and may be used effectually in soothing a headache.

EVELYN, JOHN, *b.* at Wotton, Surrey, 1620, *d.* 1706, a miscellaneous writer who spent much of his early life in travelling on the continent of Europe, "not in the counting of church spires," but in the study of the people and their customs. His most celebrated publications were "Sylva," or a Discourse on Forest Trees, and his "Memoirs" which include an interesting diary and correspondence.

EVEREST, MOUNT, the highest point in the Himalayas, and thus in the World, is named after Sir George Everest (*b.* 1790, *d.* 1866), the greatest of Indian surveyors, and the founder of the Indian survey. The mountain lies within the province of Nepal, and is 29,002 feet above sea level.

EVESHAM, a town within a bend of the Avon, about 25 miles due south of Birmingham. Simon de Montfort here suffered defeat at the hands of Prince Edward (afterwards Edward I.), in 1265.

EVIL EYE. It has been a very real belief among certain classes of people at all times that the glance of an evil eye was an unavoidable yet dire calamity. It is intimately connected with popular ideas of witchcraft. The Romans denoted the power of the evil eye by the word *fascinum*, whence comes our significant word fascination. The Greek myth of the petrifying glance of Medusa, the mediæval idea of the basilisk, and even St. Paul's reference in Galatians iii. 1, where the word "bewitched" refers to the idea of an evil eye, are familiar instances of this popular superstition. Among the Neapolitans there is a vivid belief in the influence of the "jettatore" even to this day.

EVOLUTION. See *Darwinism.*

EWING, JULIANA HORATIA, *b.* at Ecclesfield, Yorkshire, 1841, *d.* 1885, gained a reputation as a writer of stories for the young. Some of the most popular are:—"Land of Lost Toys," "Jackanapes," and the "Story of a Short Life."

EXARCH. (1) The name borne by the viceroys who governed the central portion of Italy as a province of the Eastern Empire from the 6th to the 8th centuries. (2) In modern Greece the *Exarch* visits the provincial bishops and churches as the deputy of the Patriarch. (3) The title of the head of the Bulgarian Church.

EXCAL'IBUR, a mysteriously effective sword wrought by the Lady of the Lake, and received from her by King Arthur, who had it returned to her before his death. The story of the returning of the sword by Sir Bedivere, and of the incident of an arm rising up to take it, is told in Tennyson's "Passing of Arthur."

EXCHANGE, THE ROYAL. An exchange or bourse is a place where merchants meet. Sir Thomas Gresham introduced the idea into England after experience of the Bourse at Antwerp, and Queen Elizabeth gave his Bourse the name of the Royal Exchange in 1571. The fire of 1666 demolished that building, and its successor suffered the same fate, 1838. Queen Victoria opened the present building in 1844. The tesselated pavement of the present building is the original one of Gresham's building. The chief business hour is from 3.30 to 4.30, and Tuesdays and Fridays are the chief days.

EXCHEQUER, anciently that department of the King's Court or Curia Regis that received the shire and other revenues, and kept the tallies. The name is held to be connected with the chequer pattern formerly upon the official table or table cloth. The chief finance minister of the Crown is known as the Chancellor of the Exchequer, and he presents to the House of Commons the annual Budget. All the judicial administration that formerly was attached to the court of Exchequer has been relegated to other courts, and the Chancellor is now a finance minister solely.

EXCHEQUER BILLS are promissory notes issued by the Government for £100, £200, £500, and £1000, bearing interest per diem from the day of issue, and paid off at par or renewable annually. See *Commercial Dictionary.*

EXCHEQUER BONDS. See *Commercial Dictionary.*

EXCHEQUER, CHANCELLOR OF THE. Refer to *Index.*

EXCISE is an inland tax on certain commodities produced and consumed within the country, and on licences to undertake certain trades and professions. Refer to "Excise" in *Index.*

EXCLUSION BILL, a bill unsuccessfully introduced into Parliament in 1679, to exclude from the succession to the English throne James, Duke of York, the Roman Catholic brother of Charles II. On a second attempt to pass the bill in 1681 Charles dissolved parliament.

EXCOMMUNICATION denotes exclusion from Church privileges, either in whole or part. The *Lesser Excommunication* debars simply from Holy Communion, the *Greater Excommunication* cuts off from the Church altogether. In mediæval times we find that the *Greater Excommunication* was sometimes accompanied by a "Papal Interdict," whereby a whole kingdom was at once excluded from all church privileges, an example of which occurred in the reign of King John. In England excommunication is now practically obsolete, and no civil penalties can follow upon ecclesiastical censure, except under the sanction of what is essentially a civil court. The most recent instance of excommunication in the Anglican Church is the sentence pronounced by Bishop Gray, of Capetown, upon Colenso, his suffragan bishop in 1863, for his destructive criticism on the Pentateuch.

EXEGESIS, a Greek word meaning the exposition or interpretation of any writing, but particularly the Scriptures. It includes textual criticism and the exposition of doctrinal and ethical conclusions based upon the text.

EXEQUATUR. A consul accredited to a foreign country receives formal recognition from that country under the form of an official note named an *exequatur.* See *Commercial Dictionary.*

EXETER, the county-town of Devon, on the banks of the Exe, a quaint old city, still retaining a part of its ancient walls. Its cathedral dates from the 12th century, and is celebrated for its magnificent west front.

EXETER HALL, the head-quarters of the Y. M. C. A. in the Strand, London, was purchased for the Society in 1880.

The great hall, which is provided with a large organ, accommodates 5,000 people and is used principally for religious and philanthropic meetings.

EXHIBITION, THE GREAT. This distinctive title is still attached to the first international exhibition held in London, 1851, although in magnitude it has been greatly surpassed by many others, notably those held in Paris, Chicago, and St. Louis (1904). If the idea of a great international exhibition did not originate with the Prince Consort, he certainly took the leading part in giving effect to it. The building, constructed of iron and glass, was planned by Mr. Joseph Paxton, and erected in Hyde Park. It was opened by Queen Victoria, May 1st, 1851, and during the 144 days it remained open was attended by upwards of six million persons. At the close of the Exhibition, the building, under the name of the "Crystal Palace," was removed to Sydenham, Kent.

EXMOOR, a wild district in the south-west of Somerset and north-east of Devon, rising in Dunkerry Beacon to the height of 1,717 feet. It is for the most part treeless, and it is remarkable chiefly for its breed of stout little ponies, for its horned sheep, and for the red deer that are still found in the wild state. It is the scene of Blackmore's "Lorna Doone," in which the lonely valleys and bleak ridges are admirably described.

EXODUS, "the departure," is the name of the second book of the Old Testament. It describes the history of the Israelites in Eygpt, their bondage, their deliverance under Moses, their heaven-aided departure, and continues their history up to the giving of the Law on Mount Sinai. Traditionally, the book was attributed to Moses, but it is believed by modern critics to be of composite character and of much later date.

EXOGAMY is the opposite of endogamy, and prohibits the marriage of a man with a woman of his own tribe. One outcome of this custom was the practice of marriage by capture.

EXORCISM is the name used for the act of bidding evil spirits, in the name of Christ, to depart from an afflicted person. In Baptism it was customary to exorcise the original spirit out of infants as well as adults. The practice was omitted in the Second Prayer Book of Edward VI. The Exorcist was in one of the minor orders, and his functions usually were exercised in Baptism, in supposed cases of personal possession by evil spirits, and in blessing the holy water and oil.

EXTRADITION is the act of delivering up to the government of a foreign country a person accused of committing crime within that country. All civilized countries have extradition treaties, and there is generally little hesitation in transferring criminals. A foreign criminal would be extradited from this country only on the request of the diplomatic agent of the power made to the Home Secretary, who would refer the matter to a magistrate. After allowing the defendant fifteen days for appeal against the magistrate's decision, the extradition would become effective. Political offences do not, in England, come within the purview of extradition treaties.

EXTREME UNCTION, a sacrament of the Roman Catholic Church which is administered when the recipient is believed to be at the point of death. The holy oil used is blessed by a bishop on Maundy Thursday and is reserved. The priest anoints with the sign of the cross the eyes, ears, nose, mouth, hands, and feet, and prays that through this unction pardon may be vouchsafed for all sins that have been committed through seeing, hearing, smelling, speaking and eating, touch, or walking.

EYCK, JAN VAN, *b.* about 1389, *d.* 1440, a Flemish painter, who, with his brother Hubert, is held to have invented the use of oils as a medium for colours, in place of the gums previously used in Italy. His pictures are wonderful for their brilliant delicacy of finish, their clear colouring, and exquisite draughtsmanship.

EYE. See *Med. Dict.*

EYLAU, a town in eastern Prussia, 22 miles from Konigsberg, was the scene of a battle between Napoleon and the allied Russians and Prussians in 1807. Both sides lost very heavily.

EYRE, EDWARD JOHN, *b.* 1815, *d.* 1901, began life as an Australian emigrant, succeeded in making the overland journey from Adelaide to Albany (1841), was made lieutenant-governor of New Zealand (1846), governor of the West Indies (1854) and of Jamaica (1862.) His stern suppression of rebellion in Jamaica, in 1865, led to his prosecution by a committee headed by J. S. Mill, whilst Carlyle aided in raising funds for his defence. The costs of his case were refunded by the Government on his acquittal.

EZEKIEL, a Hebrew prophet, was taken into captivity by Nebuchadnezzar, along with Jehoiachim, king of Judah. The book of Ezekiel deals with the overthrow of Judah, and attributes it to desertion of God, and breach of faith with Babylon. It threatens retribution on the seven surrounding nations, who were exulting over Judah's downfall, and it prophesies the restoration of Jerusalem and the coming of a great deliverer.

EZRA, a Jewish scribe, one of the exiles in Babylon, stood so high in the favour of King Artaxerxes that he was authorised to lead back a band of his fellow-countrymen to Jerusalem (458 B.C.). On arriving at Jerusalem he assembled the Jews who had returned in Cyrus's reign, separated them from their heathen connections, and began the re-establishment of their religious life. In 445 B.C. Nehemiah established the community in safety and rewalled the city, at the conclusion of which task, Ezra instituted a great religious restoration, and the people entered into a solemn covenant to abide by the Mosaic Law. He wrote the books of Ezra and Nehemiah, and is supposed to have revised and edited the earlier books of the Bible.

FABER, FREDERICK WILLIAM, *b.* 1814, *d.* 1863, theologian and hymn-writer. Educated at Shrewsbury and Oxford, where he won the Newdigate, he came under Newman's influence and joined the Church of Rome. He founded at Birmingham a Brotherhood of "Wilfridians" and with them joined the Oratory of St. Philip of Neri (Brompton Oratory). Among his many popular hymns, we may mention "Sweet Saviour, bless us," "O Paradise!" and "Pilgrims of the Night."

FABIAN SOCIETY, founded in 1883 to teach people by lectures, discussions, and tracts the aims of socialism. The society works in connection with the Independent Labour Party. The name suggests that the aim of the Society is to win its way by the slow means of education rather than by the suddenness of revolt.

FABIUS MAXIMUS, *d.* 203 B.C.; five times a Roman Consul, was elected Dictator after the great Roman defeat by Hannibal at Lake Trasimenus, 217 B.C. He saved Rome from the great Carthaginian by persistently withdrawing from a direct encounter, and by restlessly harassing the enemy from positions of vantage on the hills. For this reason he was nicknamed "Cunctator" or the "delayer." Rome grew tired of his apparent want of initiative, and appointed a colleague to share the supreme command, but Fabius had soon to save him from being entrapped. In 209 B.C. Fabius took Hannibal's stronghold of Tarentum, and his work for Rome was completed. Hannibal, within reach of Rome, had struggled for eight years with all the ingenuity of a great general, and was foiled by the "Fabian policy."

FABLE. Myths, parables, allegories and apologues or fables, all contain a secondary significance deeper than their mere narrative explicitly states. The myth is a primitive way of figuring out the mysteries of nature and life by parallels drawn from common experience. It grows up with the nation and becomes traditional. The parable draws its events from every day experience, and embodies a truth, spiritual or moral, in its intention. The allegory is literary and more continuous than the parable or myth. The fable differs from the parable in that it is not confined to the ordinary events of everyday life. Dr. Johnson well defined it thus: "A fable or apologue seems to be, in its genuine state, a narrative in which beings irrational and sometimes inanimate . . . . are for the purpose of moral instruction feigned to act and speak with human interests and passions." La Fontaine likens the fable and its morality to the body and the soul, yet the earliest animal fables are without moral significance. Hindustan is the home of the fable as we find it in Æsop. Chaucer employs it effectively in his Nun's and Priest's Tale. But La Fontaine (*le fablier*), has given to France a reputation beyond that of all other modern nations for the adequate treatment of this source of delicate satire or deep morality.

FACULTY. (1) A name signifying the powers of the mind, such as memory, imagination, &c. (2) An order granted by the Ordinary or Bishop allowing something otherwise illegal; thus any important internal alteration in the arrangement of church furniture, organ, galleries, &c., would necessitate a faculty. The Court of Faculties, an Archbishop's Court, founded by Henry VIII, now confines its attention chiefly to granting licenses of marriages without publication of banns. (3) The term also designates the body of persons constituting one of the learned professions, as the faculty of law, medicine, &c.

FAED, THOMAS, R.A., *b.* 1826; a Scottish painter, whose subject pictures of "Scott and his friends at Abbotsford," and "The Mitherless Bairn," have gained for him a great reputation.

FAERIE QUEENE, THE, an allegorical poem by Edmund Spenser, published partly in 1590 and partly in 1596. By describing the adventures of twelve knights who represent twelve virtues, and are sent out from the court of the faerie queen Gloriana, Spenser intended to build up a great allegory of chivalrous perfection. Six Cantos out of the twelve were finished and a fragment of the seventh also exists. The allegory is twofold. A moral allegory underlies the narration of the knightly adventures with the dragons of temptation in the caves and noisome places of sin, but there is also the historical, contemporary reference to Queen Elizabeth and her foes the Roman Catholics, who were endeavouring to replace her by Mary Queen of Scots. Thus whilst Una represents truth and Duessa falsehood, they also represent Queen Elizabeth and Queen Mary.

FAGGING is a custom of English Public School life. The smaller boys are

expected to fag for the older, that is, to perform certain well defined offices, such as fielding at cricket, running errands, and keeping up the fire. There is much to be said for a practice which defines the relationship of the boys when not under the direct care of the masters. It is freely accepted by the smaller boys, who on the whole are none the worse for it, and it certainly prevents bumptiousness.

FAGGOT-VOTE. Before 1884, votes known as faggot-votes were created by party politicians by subdividing property amongst nominal owners, or by such sale of property under mortgage or otherwise, as would entitle these owners to a vote. The extension of the franchise in 1884 to all rural householders destroyed the practice.

FAHRENHEIT, GABRIEL, *b.* at Dantzig 1686, *d.* 1736; first used mercury for the thermometer, thereby securing a sensitive and uniform expansion. He adopted the system of graduation associated with his name, and fixed the freezing point at 32°. His scale has been retained in England, although it does not find favour on the Continent.

FAINÉANTS ROIS. "The sluggard kings," a name applied to the eleven Merovingian kings of France, who reigned between 650 and 750 A.D. They resigned all real power into the hands of their "Mayors of the Palace," who subsequently assumed the nominal as well as the real power, and reigned as the Carolingian House.

FAIRBAIRN, SIR WILLIAM, *b.* at Kelso 1789, *d.* 1874; apprenticed at North Shields as an engine-wright, became the friend of George Stephenson, and like him raised himself to prominence by application to study and work. He went to Manchester and made his name by introducing iron in the place of wood in the structural details of the cotton mills. He paid much attention to the use of iron in ship-building, and became an authority on the use of that metal for boilers, furnaces, and bridges. He carried out the designs of Stephenson in the Menai tubular bridge, and built many similar iron bridges himself. He may be described as a pioneer in the extension of the structural uses of iron.

FAIRFAX, SIR THOMAS, *b.* 1612, *d.* 1671; succeeded the Earl of Essex as commander-in-chief of the parliamentary forces during the Civil War, with Cromwell acting as his Lieutenant-General. He declined to pursue the war in Scotland, and made way for Cromwell. He worked hard for the restoration of Charles II., co-operating with General Monk, and he was leader of the deputation commissioned to treat with Charles II. at Breda for his return.

FAIRIES are diminutive beings, the creation of the human imagination, who are supposed to influence folk kindly, malevolently, or out of a desire to teach them. They appear under various names, and with different characteristics, as elves, goblins, sylphs, gnomes, genii, and water spirits or undines. They personify the supernatural agencies to which people most often fancy themselves subjected. In the stormy, sea-faring north, fairy-lore is highly imaginative and varied, whilst in homely agricultural districts it is simple, and deals with domestic affairs. Shakespeare has introduced with wonderful grace and playfulness in his Midsummer Night's Dream, not only the fairies of the flowers and nature, Titania and Oberon, but also the homely traditional sprite Puck, or Robin Goodfellow. In Ariel (*The Tempest*) he gives us a true sylph or spirit of the air, one of those agents of storm and sunshine, who do the bidding of a higher mind. Very beautiful conceptions of fairies are found in the writings of La Motte Fouqué, whose *Undine* is a charming imaginative allegory of a water-spirit.

FAIRY RINGS are circles of greater or less luxuriance than the surrounding grass of the pastures where they are usually found. Tradition attributed them to the ring dances of the fairies, and less imaginative people have said that they were due to lightning. They are the effect of fungous growths of the agaric or mushroom kind. Where the agaric has grown, grass will not grow, and the fungus spreads to exhaust new soil. This spreading takes place in the form of a ring, which at first shows signs of the exhaustion of the soil, but subsequently bears a greener grass, nourished by the decay of the spawn.

FAITH-HEALING, as practised by the Peculiar People, Christian Scientists, Zionists and others, finds its scriptural warrant in St. James v. 14. Faith-healers claim that sickness may be treated without medical aid if the prayers of the healer are supported by the true faith of the sufferer.

FAKIR, literally means "a poor man," a Mohammedan religious mendicant or ascetic, who espouses poverty as being consonant with his sense of spiritual insignificance. The life is one of inactivity, contemplation, and penitence, and doubtless there are many fakirs of the highest type. The prosecution of the art of begging has, however, lowered the status of this class of zealot in India. They do not necessarily adopt the hermit life, but are frequently to be met in companies indulging in demonstrative religious excesses revolting to the ordinary man by reason of the abjectness and squalor at which they aim, and the frenzies they seem to cultivate.

FALCONRY. The falcon is a genus of the family *Falconidæ*, birds that prey by day. In Europe the term usually denotes the birds trained for falconry, and for this purpose the peregrine falcon is specially fitted. The peregrine female, a larger and stronger bird than the male, is pre-eminently the falcon of the chase. The male, which is about one-third smaller, is known as a tercel. The peregrine takes her quarry in a swoop from above, "towering in her pride of place," and for this reason is termed noble, as distinct from the ignoble falcons of a smaller kind that capture by direct chase. The Merlin and Hobby, other British species, prey on larks and small birds, and they too were trained for hawking. Gyr falcons, which are common in northern Europe, take their name from their circling flight or gyrations. Hawking is a sport of great antiquity, reaching back to B.C. 2000, according to Chinese records and Babylonian bas-reliefs. It was popular in mediæval England, as the references to it in the writings of Shakespeare testify. It declined in the Puritan period, and has not again recovered its old popularity although it is still practised. In the Bayeux tapestry, King Harold carries a hawk, and in the Magna Charta every freeman was allowed to have his falcons. Heron hawking was the favourite sport, because the heron tries to save itself by constantly rising, whilst the hawk in swift circles gains the upper hand and swoops. When borne to the ground it was rare to find the heron capable of inflicting serious damage with his sharp long bill. Pheasants, partridges, ducks, woodcock, and indeed almost all wild birds were flown at, as well as hares and ground game.

FALKIRK, Stirlingshire, 22 miles north-east of Glasgow, the centre of a busy coal and iron district (see *Carron*). Together with Airdrie, Hamilton, Lanark, and Linlithgow, it sends one member to parliament. Wallace was defeated here by Edward I. in 1298; population about 30,000.

FALLING STARS. See *Meteors*.

FALLOW DEER is the half-tame variety of English parks, so called because of its fallow or yellowish colour. It is smaller than the stag or red deer, stands about three feet high at the shoulders, and only the buck is antlered. It is a native of southern Europe, of Asia, and Africa, and it has been imported at some time unknown into Britain. The extinct Irish Elk is claimed as a native relative of the species. The development of the antlers takes about six years, and the stages are denoted by the names fawn, pricket, sorrel, soare, buck of the first lead, and buck complete. In winter the colour turns somewhat grayer, and the spots are less frequent. Venison, the flesh of the fallow deer, is highly esteemed.

FALMOUTH takes its name from the Fal on whose estuary it stands, 18 miles to the north of the Lizard. It possesses one of the best harbours in England, the entrance to which is overlooked by Pendennis Castle on the west and the castle of St. Mawes on the east, both of 16th century date. Though it has ceased to be a packet-station, Falmouth is still a great port of call, where home-coming vessels anchor to await orders from their owners; population about 18,000.

FAMILIAR, literally "a servant," is a spirit supposed to attend in visible form a magician or master of the black arts. The black dog of Cornelius Agrippa, and that of Mephistopheles, Aladdin's "Slave of the Lamp," and a witch's legendary black cat are instances of familiars.

FANDANGO, a Spanish dance in triple time, very popular in southern Spain, and in the Spanish Americas, performed by two persons, who mark the time by castanets, and dance to a guitar. The dance, which grows in vivacity as it proceeds, is intended to mark the development of a love passage.

FANTASIA, a musical composition incapable of classification under the orthodox forms; an outcome of the composer's fancy. Modern fantasias are often medleys of popular airs with fanciful connections.

FARADAY, MICHAEL, son of a blacksmith of London, *b.* 1791, *d.* 1867. Apprenticed to a bookbinder, he yet interested himself in the study of science, and became assistant to Sir Humphry Davy at the Royal Institution, where he happened in 1812 to be attending a course of his lectures. In 1827 he succeeded his master as Fullerian professor of chemistry, a position which he retained until 1865. His first discoveries in the domain of chemistry were connected with alloys of steel, chlorine compounds, and the composition of glass for optical purposes; but his chief discovery was that magneto-electric induction is established by the revolution of a magnet in the neighbourhood of an induction coil (see *Dynamo*). His subsequent research in electrical work has been wonderfully suggestive to his successors. He excelled in lecturing as a master of simple lucid expression. He was granted a Civil-List pension of £300 in 1835.

FARCE differs from comedy only in the broadness of its comicality, its grotesqueness and unrestrained freedom. It is the aim of both to arouse mirth, but farce goes further, and by exaggerations would provoke loud laughter. It was a secular substitute for the interludes and comic adjuncts of the religious drama of the middle ages, and true comedy grew out of it.

FARRAR, FREDERIC WILLIAM, *b.* at Bombay, 1831, *d.* 1903, graduated at Cambridge, took orders, and became a master at Harrow. He was appointed Head-master of Marlborough (1871). Canon of Westminster and Rector of St. Margaret's (1876), Archdeacon (1883), and Dean of Canterbury (1895). He was an eloquent preacher and an attractive writer. His chief literary works include "The Life of Christ." "Eternal Hope." "The Early Days of Christianity," and "Lives of the Fathers."

FARTHINGALE, the hooped petticoat familiar in Elizabethan portraits. It re-appeared in the 18th century, and again as crinoline, in the 19th.

FASCES, a bundle of rods with an axe enclosed, borne by lictors before certain Roman magistrates. The rods symbolized the power of inflicting corporal punishment; the axe, the power of life and death. As none but dictators possessed the latter power within Rome, the axe was usually omitted from the fasces.

FASCINATION is the act of bewitching by the influence of word, spell, or look. It was formerly believed that such influences were means of conveying diseases and disastrous evils, and to this day the Neapolitans and others maintain a popular credulity regarding the "evil eye." Against such sources of mischief various charms and medicines were used. Snakes and other venomous reptiles are supposed to exercise a demoralizing fascination over their victims, but it is questionable whether this is anything but the outcome of a paralysing fear.

FASHODA, a post on the Nile 470 miles south of Khartoum. In 1898, after the occupation of Khartoum by Lord Kitchener, he found a small French Company under Major Marchand in possession of Fashoda, a post within the accepted sphere of British influence. The French government withdrew Marchand and the incident was closed by a signed declaration in 1899.

FASTI, days on which business might be transacted by Romans. The priests determined the *dies nefasti*, or "holy days," and the tablets or calendars constructed by them were named *fasti*. Ovid's Fasti is a series of poetical compositions based on the Roman calendar. Compare Spenser's "Shepherd's Calendar."

FASTING. See *Med. Dict.*

FATA MORGANA, a mirage seen from the shores of the Straits of Messina, caused, it was supposed, by the fairy (*fata*) Morgana.

FATHERS, THE APOSTOLIC, were those leaders and teachers of early Christianity who during part of their lives were contemporary with the Apostles. They are in order of time, Barnabas, Clement of Rome, Hermas, Ignatius, Papias, and Polycarp. The last named died in 155 A.D.

FAURE, FRANCOIS FELIX, *b.* at Paris, 1841, *d.* 1899, made a fortune as a shipowner at Havre, and entered the National Assembly where his authoritative knowledge of commerce enabled him to take office as Colonial Minister. He was elected President in 1895, and contributed much to the formation of the Franco-Russian Alliance.

FAUST, DR. JOHANN, a German magician, astrologer, and scholar, the historical original of the Faust of Gœthe and of Marlowe, is said to have died in 1588, after a life of unscrupulous license. He was supposed to be in league with the devil, who attended him in the form of a black dog. His life was published in 1587, and appeared in an English Translation a year afterwards. In 1588 Marlowe idealised the story in his drama of Faust, and Gœthe published his masterpiece in 1808, substituting the lovable, homely Margaret for the divine but distant Helen of classical fame.

FAWCETT, HENRY, *b.* 1833, at Salisbury, *d.* 1884; was remarkable for the prominent and beneficent part he played as a politician in spite of the total blindness caused by a gun accident at the hands of his father. In 1865 he entered parliament as member for Brighton. He took a leading part in the movements for the abolition of religious tests at the universities, the advocacy of compulsory education, the preservation of commons and open spaces, and the amelioration of the condition of the natives of India. His enthusiasm for India gained for him the title of "the member for Hindustan." He likewise worked ardently for the fuller representation of women in the affairs of the country. He was created Postmaster General in Mr. Gladstone's administration of 1880, but without cabinet rank. In this position he initiated the parcel-post, sixpenny telegrams, the savings bank, and postal orders. He worked indefatigably in the interest of the employés of the post office, instituted the employment of women and a system of promotion, and devoted himself whole heartedly to the consideration of the welfare of every servant of the postal service.

FAWKES, GUY, *b.* at York, 1570, of Protestant parentage; he became a zealous Catholic, and acted as an agent of the so-called Spanish party in England. He fought for the Spaniards in the Netherlands and returned to England at Catesby's invitation to assist in the Gunpowder Plot (1605). During the delays caused by the prorogations of Parliament, Fawkes again went abroad to enlist soldiers to support the conspiracy. Despite news of the warning sent to Lord Monteagle, Fawkes persisted in the scheme, and was arrested in the cellar beneath Parliament House, and hanged 1606.

FEATHERS form an important article of commerce, the value of imports into the United Kingdom exceeding two millions sterling. Many are made into boas, whilst ostrich feathers and the plumage of tropical birds are much used in the trimming of hats. The smaller feathers of poultry and game birds are used to stuff cushions and beds, quilts being stuffed with the delicate down of the eider duck. The quills are used for pens, tooth-picks, and paint brushes.

FEDERATION is the union of several states under one government, so that they stand before the world as one united body. The Commonwealth of Australia furnishes a recent instance of federation, and it is to be noted that the several States reserve certain departments of administration for their own control. In the Australian Commonwealth everything not specifically reserved for the Federal government is under the jurisdiction of the several States; whereas in the Dominion of Canada the opposite principle prevails, and there everything is under the jurisdiction of the Federal Government unless otherwise stated.

FELLAHS or **FELLAHEEN,** a term of contempt used by the Turks of the "tillers" or peasants of Eygpt. They are a composite race representing the old Egyptian peoples. Although their lot has been wonderfully improved under British government, they are still a degraded folk. They live chiefly on millet, and thrive on it. Industrious, healthy, and of great endurance, they are yet quarrelsome, obstinate, and unreasonably opposed to taxation.

FELLOWSHIPS. Refer to *Index.*

FELO DE SE. See *Suicide.*

FELUCCA, a fast sailing boat used in the merchant service in the Mediterranean. It has either two or three masts with lateen sails.

FENIANS, a modern English form of the old Irish "Fianna," the name of the members of various tribes who united to form a kind of national militia. Finn, the hero of the Ossianic legends, is the mythical head of this order, round which traditions grew like those of the Round Table. In 1857 a brotherhood of Irishmen was formed in New York to secure the independence of Ireland. The society spread rapidly among Irishmen all over the English speaking world. It not only made sundry attempts to raise insurrection in Ireland, but it also essayed an invasion of Canada. Its organization consisted of a senate which controlled local "circles," over each of which a "centre" presided. From the first the Fenians excluded the Catholic clergy. A second attempt on Canada was frustrated in 1871 by the United States government, and after 1872 the society became a secret one. In 1882 the Phœnix Park murders and, between 1883–5, the existence of a society advocating the use of dynamite showed a development of the Fenian spirit.

FENNEL, an aromatic plant, commonly cultivated in Europe and India. Its seeds are used medicinally as a stomachic remedy for flatulency, particularly in veterinary practice. The oil obtained from the seeds is used in the manufacture of cordials and stimulants. Common fennel is cultivated in English gardens for its leaves, which are used in salads and as an accompaniment to fish.

FENS, THE. A flat tract of land comprised under the name of the Bedford Level, of 60 miles by 40 in area, reaching from Peterborough to Northampton, and from Cambridge to the sea. Since the 17th century drainage has gained most of it for cultivation.

FERDINAND, surnamed "The Catholic" *b.* 1452, *d.* 1516. In 1469 he married Isabella of Castile, over which he reigned with her jointly. In 1479 he succeeded his father as King of Aragon. He made war on the Moors of Granada, and added that province to his kingdom in 1492. Navarre was conquered and annexed in 1515. He thus united under his sway the four kingdoms of which Spain had previously consisted. It was under the patronage of Ferdinand and Isabella that Columbus, in 1492, set sail from Spain on a voyage of discovery across the Atlantic.

FERGUSON, JAMES, *b.* in Banffshire 1710, *d.* 1776; a self-educated astronomer, who, as a shepherd boy, made models of mills and spinning gear, and mapped the stars with threads and beads. He supported himself and his parents by clock mending, designing and portrait painting, meanwhile continuing his sidereal studies. At the age of 38 he began to lecture on astronomy and mechanics, and soon took a recognised position among the scholars of his day. He was elected F.R.S. and was awarded a pension by George III.

FERGUSSON, SIR WILLIAM, *b.* at Prestonpans, 1808, *d.* 1877, a great surgeon, was professor of surgery at King's College (1840–70), and became President of the Royal College of Surgeons. He invented many surgical appliances now in use, and wrote a standard work, "System of Practical Surgery."

FERIÆ, the Roman sacred festivals, days on which business was unlawful, and prayers and sacrifices were offered. See *Fasti.*

FERMENTATION. See *Med. Dict.*

FERRERS, (Lawrence Shirley), **EARL,** *b.* 1720, *d.* 1760, the last peer executed

as a criminal, was convicted by the House of Lords of shooting his steward. He was hanged at Tyburn with a silken rope.

FERRET, an albino variety of the polecat, bred for killing rats and rabbits. Its lithe and sinuous body enables it to enter burrows. It is white or yellowish, and has pink eyes. The ferret is put into a hole, whilst the keeper nets the possible exits, or waits over them with a gun. It frequently kills within the burrow, so that the keeper has to dig to get the quarry.

FETICHISM, a religious belief in the custom of using fetiches. A fetich is a possession in which a spirit is supposed to dwell. The custom is common in West Africa, where the negro believes that a spirit may dwell within any material object. The spirit is supposed to make his principal abode in a certain thing, and the negro possessing that object may worship it, commune with it, or even make it his slave. "Rubbishy trifles," "stones, claws, bones, a pot with red earth, and a cock's feather stuck in it . . . and so forth," such are the fetiches used. If the owner is dissatisfied, he changes his fetich for one more effectual. The name is a Portuguese one meaning "magic." The natives do not use the word, which is quite European. The most striking feature of Fetichism is the childish way in which the negro will treat his deity. "He does not hesitate to punish a refractory Fetich, and hides it away if he does not wish it to know what is going on." (Lord Avebury.)

FEU, a Scottish law term denoting the sale of land for a rent in perpetuity instead of a capital amount. The notice "Land to Feu," is as common in Scotland as "Land for Sale" in England.

FEUDALISM is a system of social organization which arose among the nations of Europe in the days of the disruption of the Roman Empire. It is primarily a system or association for purposes of safety, the weaker folk placing themselves under the care of an over-lord, and surrendering to him their lands, which they subsequently took again on feudal tenure. In return for this protection they did homage to their protector, swore fealty to him, and undertook to serve him on the field of battle. Thus they became his followers, living on land awarded to them, and looking to him for justice and safety. With the growth of nationalities, local feudal lords became a menace to the royal power. William the Conqueror obviated this danger by constituting himself the direct over-lord of every freeman in England, and by distributing widely the lands of the more powerful barons.

FEU DE JOIE, a running discharge of firearms as a mark of rejoicing. A discharge of seven guns is thrice followed by a sequence of musketry shots proceeding from end to end of the ranks.

FEUILLETON, a space reserved at the bottom of a newspaper for a serial or a light *causerie* on topics of general interest. This feature of French newspapers has been followed by some of the English papers.

FEZ. (1) The national head-dress of the Turk, a crimson skull-cap with a long tassel. (2) The chief city of Morocco, which has many beautiful mosques, and contains the tomb of the founder of the city, the sanctuary of Mulai Idris, the holy of holies amongst Moors. In 1905 a German mission visited Fez to neutralise French influence. As a result an international conference on the government of Morocco in its relations to the Powers was held at Algeciras, in Spain, 1906.

FIDEI DEFENSOR ("Defender of the Faith"), a title conferred by the Pope on Henry VIII. for his "Defence of the Seven Sacraments" against Luther. The Pope withdrew the title after Henry's dissolution of the monasteries, but parliament reconferred it. The title appears on the "heads" of our coins in the abbreviated form FID. DEF.

FIDELITY GUARANTEE, Refer to *Index.*

FIELD, CYRUS WEST, *b.* Mass., 1819, *d.* 1892, the founder of the Atlantic Cable Company. He made his fortune as a paper maker and then devoted his talents to submarine cables. Having connected Newfoundland with America by a cable in 1856, he organized a company to connect Newfoundland with Ireland. This was finally accomplished in 1866. (See *Atlantic Cable.*)

FIELDING, HENRY, *b.* 1707, *d.* 1754; dramatist and novelist, was educated at Eton, and in Germany. His early work was for the theatre, and consisted of satires, burlesques, and comedies. He made his appearance as a novelist in 1742, with "Joseph Andrews," following it up in the next year with "Jonathan Wild," and later by "Tom Jones" and "Amelia." He died at the age of 48, at Lisbon, whither he had voyaged for health. Scott called him the "Father of the English Novel."

FIELD-MARSHAL, the highest rank in the British Army. Appointments are entirely in the hands of the king, promotions being made from the list of general-officers. The list of field-marshals (January, 1906), includes Sir F. P. Haines (1890), Viscount Wolseley (1894), Earl Roberts, V.C. (1895), the German Emperor (1901), Duke of Connaught (1902), Sir Evelyn Wood, V.C. (1903), Sir George White, V.C. (1903), Emperor of Austria (1903).

FIELD OF THE CLOTH OF GOLD, the name given to a meeting between Henry VIII. of England and Francis I. of France. The brilliance and magnificence of the display on either side led to the name. As Henry VIII. had already secretly met the Emperor of the German Empire and concluded a treaty, the meeting was absolutely useless.

FIERY CROSS, THE, a summons to arms, anciently in use in the Scottish Highlands. It consisted of a light wooden cross whose extremities had been fired and dipped in the blood of a freshly killed goat. It was then carried swiftly from place to place.

FIFTH MONARCHY MEN, a body of extreme Puritans who looked on Cromwell as representing the fifth of the monarchies foreshadowed in the book of Daniel, and as destined to found the true kingdom of Christ on the earth. Cromwell had to check their excesses and intrigues, and imprison their leaders.

FIGARO. (1) A comic character in Beaumarchais' Comedies, "Mariage de Figaro," "Barbier de Séville" and "Mère Coupable." Mozart based his opera of "Figaro" on the first of the three. (2) A French newspaper of wide circulation.

FIG, THE, a species of the genus *ficus,* which occurs in most tropical and sub-tropical countries, and includes the common fig, the banyan, and the caoutchouc or india-rubber tree. The common fig abounds along the Mediterranean shores, and is cultivated in the south of England. Two crops may be raised in a year, one from the older wood, the other from the young shoots, but the latter needs a warm climate to reach maturity. Green figs are ripe but undried, and are considered a delicate fruit, but the dried figs of the Levant are most in demand both for dessert and for general cooking.

FIJI. Refer to *Index.*

FILDES, LUKE, *b.* at Liverpool, 1844, joined the Academy Schools, and began his professional career as an illustrator. He exhibited "The Casual Ward" in 1874, "The Doctor" in 1892 (now in the Tate Gallery), and his state portrait of King Edward VII. in 1902. He was knighted in 1906.

FILIBUSTER, a buccaneer, freebooter. The term is used particularly of adventurers from the United States, who at various times have attacked parts of the Spanish Americas under the plea that annexation to the States was the best thing for them.

FILIGREE, a species of jewellery of ancient origin, and now so characteristic of Malta as to be called "Maltese work." It consists of fine gold, silver, or other wire wrought into delicate scrolls and tracery.

FILTER, A, is a medium through which a liquid containing solid particles in suspension is passed in order to clarify it. Blotting paper forms a simple filter for minor purposes. For use on a larger scale among the many materials available are sand, gravel, charcoal, sponge, asbestos, porous stone or brick, and various fabrics. These form a bed through which the liquid percolates under pressure. For drinking water, various filters are in use, many of which aim at filtering upwards under pressure so as to keep the deposit of sediment clear of the filtered water.

FINGAL'S CAVE, a remarkable cave 200 feet long, in the island of Staffa, some seven miles west of Mull in the Inner Hebrides. It has been hollowed out of the Columnar basalt by the sea. It takes its name from Fingal, the hero of the Ossianic legendary poems by Macpherson.

FINGER-PRINTS are taken by placing the tips of the fingers on an inked slab and then pressing them on a sheet of white paper. The print of an individual's fingers never alters its form, and no two people show the same "furrows." The practice comes from India where a system of classification by Mr. E. R. Henry, C.S.I., was recently adopted, based on the researches of Mr. Galton. On becoming Commissioner of the London Metropolitan Police, Mr. Henry prevailed on the Home Office to adopt his system, 1901. Prints are now taken from prisoners convicted of certain crimes only and sentenced to more than a month's imprisonment. In 1904 there were more than 5,000 identifications established. The value of the system was well shown in the case of an extensive burglary at the Conduit Street Gallery, London, early in 1904. A thumb print, left on a piece of dirty glass in a sky-light, led to the identification and subsequent arrest of the burglar. (See *Anthropometry.*)

FINIAL, an architectural term denoting the ornamental termination at the apex of a pinnacle, gable, or spire. It is essentially a Gothic ornament and it reached its highest development in the 13th and 14th centuries, when each available point was crowned with finials designed, as a rule, on the basis of natural foliage.

FINLAND, lies along the north eastern shores of the Baltic, and has an area of 145,000 square miles. It was annexed by Russia in 1809. Four-fifths of its people are peasant proprietors, the inhabitants of Abo and its capital, Helsingfors, being mostly Swedes. It is a country of lakes, waterways, and vast forests owned by the State. Snow lies from November till April, when there follows a short spring and a hot summer. The Emperor of Russia is Grand-Duke of Finland, and the government is vested in him, a senate of Finnish subjects nominated by him, and a diet.

FINSEN, NIELS RYBERG, *b.* in the Faroë Islands, 1861, *d.* at Copenhagen, 1904, discovered that intense light concentrated upon any part of the body,

afflicted with lupus, destroys the tubercle bacillus which causes the disease. But to prevent the light from also destroying the skin, it is by his system deprived of its heat rays before being applied to the patient. His system of light therapeutics has probably a great future before it.

FIORD, a narrow inlet of the sea, bordered by high cliffs. Such inlets abound on the west coast of Norway. They combine grandeur of scenery with safety of anchorage, but the absence of land approaches renders them of small commercial value.

FIR is a general name for pines, larches, spruce firs, silver firs, and other cone bearers, but the name is better reserved for the spruce firs and their kindred. These trees all yield excellent timber, whilst resin, turpentine, tar, lampblack, and various products are got from the different species. The Norway spruce yields common frankincense and Burgundy pitch, the black spruce yields essence of spruce, a useful ship medicine, and from the Silver Fir is got Strasburg turpentine. Firs grow to a great height, do not branch extensively, and they flourish in all temperate climates, even as far north as the Arctic Circle.

FIRE-ARMS. See *Breech-loading Fire-arms.*

FIRECLAY is found in beds of varying thickness up to two feet, amongst coal measures. It is worked on the Northumberland, Clyde, and Staffordshire coal fields, and on the coal fields of other countries. It makes a fire-resisting brick, and is therefore in demand for fire-bricks, chimney pipes, and crucibles which have to resist continuous and extreme heat.

FIRE-DAMP is the ordinary name for the carburetted hydrogen which issues from "blowers" or fissures in coal seams. It is inflammable and, when mixed with air in certain proportions, is highly explosive. Its ignition is attended by the danger of an attendant explosion of coal dust.

FIRE-ENGINE, a machine for throwing a continuous jet of water to extinguish a fire. The principle of compressing air within a chamber containing water, by alternating pistons, is the one employed. Steam power is employed, and, in order to ensure a rapid generation of steam, a gas flame is kept in the fire box of the engine as it stands ready in the Fire Station, and special light and clean fuel is used.

FIRE-ESCAPES are devices by whose aid people may escape from the upper part of burning buildings. The London Brigade Fire Escape consists of a ladder with three supplementary sections, mounted on a light carriage. It has an underslope of netting down which one may slide with safety. Fire brigade methods of escape are various, and include the tubular sack, the jumping sheet held taut below the window, oblique ropes with suspended baskets or hanging bars on pulleys, as well as the simple but effective knotted rope.

FIRE-FLY, the popular name of certain insects that emit a luminous phosphorescent glow—some of them shining steadily, others intermittingly. The most brilliant of these insects are natives of the American tropical forests, the most remarkable example being the *Cucuyo* of Brazil. While asleep they emit a dull glow, brilliance following upon the rapid respiration of their waking hours. This phosphorescence, may be increased by an artificial supply of additional oxygen. Mexican Indians use these insects for lighting purposes, and one may read from the light given off by two or three in proximity.

FIRESHIP, an old vessel filled with explosives and combustibles, and navigated or sent adrift amongst the ships of an enemy's fleet in order to destroy or confuse them. The English employed this stratagem with effect on the ships of the Spanish Armada anchored off Calais in 1588.

FIRMAN, an edict issued by the Sultan of Turkey, or other Mohammedan prince. Also a permit to reside in Turkey.

FIRST AID. See *Med. Dict.*

FIRST-FRUITS. See *Annates* and *Queen Anne's Bounty.*

FIRTH, MARK, *b.* 1819, *d.* 1880, a Sheffield steel maker who founded, with his brothers, the Norfolk Ordnance works. His benefactions to Sheffield were munificent, and included a public park, Firth College, and almshouses.

FISHER, JOHN, bishop of Rochester, *b.* in 1469, at Beverley, executed on Tower Hill, 1535. One of the group of scholars of the Renaissance, a friend of More, Erasmus, and Colet, an advocate of reasonable reformation in the English Church, but an opponent of Lutheranism; he opposed the divorce of Henry VIII., and was executed for his denial of the King's ecclesiastical supremacy.

FISHERIES, BRITISH. In considering this important source of food supply, it is noteworthy that the exportation of fish from the British Islands, over and above the home consumption, is valued approximately at four millions sterling annually. The fish may be roughly divided into four principal kinds, according to the manner of the fishing. Flat fish, which live near the bed of the sea, are taken by trawlers, and include halibut, turbot, soles, plaice, and flounders. Line fishing, which is largely practised off the East coast, yields the chief supply of white fish, that is, conger, cod, ling, haddock, and skate. Mesh nets are used against the fish that go in shoals, and these are principally herrings on the east coast, mackerel on the south and south-west of England and Ireland, and pilchards off Cornwall. Crustaceans are taken in-shore, and include crabs and lobsters, which are caught in basket traps, shrimps, prawns, and cray fish, which are caught in hand-nets, and oysters, mussels, and the smaller shell fish. In addition to these four classes of fishery, there is the whale fishery of the Scottish east-coast ports, which send out their heavy whalers to the Arctic seas.

FISHER, SIR JOHN ARBUTHNOT, *b.* 1841, First Sea Lord of the Admiralty and chief naval aide-de-camp to the king. He commanded the *Inflexible* at Alexandria, became director of naval ordnance and superintendent of the Portsmouth dockyard, and was afterwards appointed controller of the navy and commander-in-chief of the Mediterranean fleet.

FISHES. In noting the general characteristics of these vertebrates, attention is claimed by the fins and tail, which serve, the former to raise, lower, and partly guide the fish, and the latter to propel it. The fins are found in a line with the backbone, and connected with it, and also in pairs on the side and under side as a primitive kind of limbs. The un-paired fins thus represent a once continuous upper and under fringe, and the paired fins, of which there are only two pairs, are the forerunners of the legs and arms of higher animals. The muscles are greatest in the trunk and tail, which are the chief locomotive organs. Fish do not breathe by inhalation, but by aerifying the blood through the oxygen contained in the water. The organ by which this function is performed is the gills, which are usually in the form of plates, plentifully supplied with minute blood-vessels. Water containing air is constantly taken in at the mouth and passed over the gills, where the blood is oxidised. Many fish possess a swim-bladder containing air, the forerunner of the lungs of higher types, whilst the mud-fish actually uses it as a lung when the pool dries up in which they lie. Fish perpetuate the species by a deposit of spawn or eggs. Salmon and sea-trout ascend fresh water streams and spawn amongst gravel; eels spawn in the sea. Some fish deposit their eggs on the bed of the sea, and others shed their roe at large. In most cases the eggs are fertilized by a deposit of milt from the male upon the spawn. Some attach their eggs to seaweed (dogfish); others form nests (stickleback); by others the eggs are laid into a pouch on the under surface of the male, which swims about with them until they are hatched (pipe-fish). In some the fish are born alive (vivaparous blenny).

FISHING. *Trawling* is usually managed from a sailing vessel, but tugs are also employed. The net is a long cone-shaped bag weighted by a heavy beam on runners, which keep it from dragging the bottom. The mouth of the net is kept open by a frame, to which is attached a long cable. *Line fishing* is of equal importance with trawling. Bait, usually mussels or whelks, is very carefully selected and adjusted before departure. Lines of great length are used for the bigger fish, and are shot at some considerable distance out at sea. Haddocks are caught nearer the shore with shorter lines. *Drift nets* are used for herrings, mackerel, and pilchards, and the size of the mesh varies in the three cases. The net hangs vertically between floats and sinks. The *seine* is an estuary net used to take salmon and bull-trout. It is carried out in a curve by a boat, and brought round to meet the shore end again. It is important to notice that the waters for three miles out are held to belong exclusively to the home fisheries, and that a strict watch is kept against the infringement of this limit by foreign boats.

FISK UNIVERSITY, at Nashville, Tennessee, worthy of special notice as an institution for coloured students. From this university came the famous "Jubilee Singers," in 1871, all of whom had been slaves or their children, and who made the tour of the world collecting funds for their university.

FITZROY, ROBERT, *b.* 1805, *d.* 1865, admiral and meteorologist. He surveyed the coasts of Patagonia and Tierra del Fuego, and commanded the surveying expeditions of the *Adventure* and *Beagle*, being accompanied on the latter expedition by the celebrated naturalist, Darwin. He was governor of New Zealand (1843–5) and a staunch friend of the Maoris. The weather forecasts of the daily papers are an outcome of his system of storm warnings.

FIUME is a Hungarian sea-port at the head of the beautiful Gulf of Quarnero, and is of about the same size as Dover. To some extent it stands in competition with Trieste, the Austrian port, from which it is separated by the peninsula of Istria. It has been greatly developed and improved by the Hungarians, and is now a handsome, well-built port. It exports grain, flour, timber, live stock, salt, dried fruits, and wine, and has a large import trade, chiefly in petroleum, manufactured goods, and fabrics. Most of the trade is done in British vessels: population about 40,000.

FIVE MILE ACT, passed in 1665, forbade any clergyman to teach in schools, or come within five miles of any corporate town or borough, unless he had subscribed the Act of Uniformity, sworn to the doctrine of passive obedience, and undertaken to make no attempt to change the government of Church or State.

FLAG. The military use of the flag in England is as old as the Norman Conquest,

if we may accept as a proof the occurrence of pennons and flags in the representation of the Conqueror's troops on the Bayeux tapestry. Of mediæval flags, the *pennon*, small and tapering, was a mark of knightly rank. The *banner*, rectangular in shape, was carried by all above the rank of knight, including the king. The *standard proper* was a tapering flag richly embroidered, and slit slightly at the narrow end. It was borne by any peer or knight of importance during the later Middle Ages. *Regimental flags*, commonly called "the colours," are of silk, with gold and crimson cords and tassels. The old disused colours are placed in the parish church or minster, at the headquarters of the regiment, and the presentation of new colours is a religious ceremony of much dignity and military solemnity. *The Royal Standard* is a banner in shape, with the arms of England, Scotland, and Ireland quartered. It is hoisted as a mark of the sovereign's residence, and on certain times at various important places.

The Union Jack, our national flag, has an interesting past. In 1603 James VI. of Scotland became James I. of England, and united the crowns of the two countries. The first union flag united the devices of England and Scotland. The English flag bears a St. George's cross, a rectangular red cross on a white field; the Scottish flag bears the white diagonal cross of St. Andrew on a blue field. The union was effected by keeping the blue field and St. Andrew's cross, and representing the English white field by a narrow border or fimbriation around the St. George's cross. In 1801 Ireland joined the union, and the St. Patrick's cross was incorporated with the other two. Lest, however, it should be deemed that either of the diagonal crosses took precedence of position over the other, it will be noticed that the white and red limbs are alternately uppermost. *The ensign* is a naval flag and is of three colours, red, white, and blue, according to an obsolete three-fold division of the fleet. The red ensign is now used by merchant vessels, the white is only used by the Navy and the Royal Yacht Squadron, and the blue is carried by the naval Reserve and certain yacht clubs.

FLAGELLANTS were religious fanatics of the Middle Ages, who marched in bands, undergoing public chastisement to propitiate the Divine Being. These bands became particularly offensive and extravagant during the plague periods of the 14th century, and it was no uncommon thing to meet them, either in England or on the Continent, proceeding from town to town in wild excesses, and undergoing self-castigation.

FLAG SHIP is the ship in a fleet which carries the flag of the Admiral, and consequently the one from which orders proceed.

FLAMBOYANT is the name given in architecture to the last development of Gothic tracery. In England, decorated tracery was succeeded by perpendicular, in France by flamboyant. In this style of architecture the tracery flows upwards in long wavy divisions like flames of fire. It prevailed in France during the 15th and part of the 16th centuries.

FLAME is the result of the combustion of gaseous matter. The accompanying heat is the outcome of the chemical combination which is being effected between the gases and the oxygen of the air. If a gas flame be examined, it will be seen to contain a dark nucleus surrounding the orifice. This is the gas, unmixed with oxygen, and therefore incapable of chemical combination with it. Surrounding this nucleus is a luminous envelope which marks the union of gas and atmospheric oxygen, and beyond this again is a more luminous part where full chemical union is taking place.

FLAMENS were priests who dedicated themselves each to the service of one of the several Roman deities. The flamen of Jupiter was of importance beyond the others, and possessed many privileges and rights. Originally there were three flamens, but subsequently the number was increased to fifteen, the original three retaining a pre-eminence in rank and dignity.

FLAMINGO, a bird of a flaming red colour, from which its name is derived. It has long slender legs, a long slender neck, a beak long and curiously bent, and a small body. It is web-footed, and while resembling the stork and heron in build, it is a swimmer like the web-footed birds. It is found in Central and South America, Africa, and India, and when it is feeding in flocks there is a brilliant show of colour. The nest is a mound of mud, on which the female sits with her feet dangling behind, whilst a single egg is hatched.

FLAMSTEED, JOHN, *b.* 1646, *d.* 1719; was the first astronomer of the Greenwich Royal Observatory, in the reign of Charles II., and the first Astronomer Royal of England. He may be said to have commenced modern practical astronomy, and he is known to have assisted Newton by supplying him with data. Flamsteed took holy orders after his appointment at Greenwich.

FLANDERS, the former country of the Flemings, is now partly contained in Holland, partly in Belgium, and partly in Northern France. It was the home of the Belgae, of whom Cæsar speaks, of the Counts of Flanders of the mediæval days, and contained the woollen manufacturing cities of the Flemings of the fifteenth and sixteenth centuries. It formed the Spanish Netherlands, or Low Countries.

FLANNEL. The best flannel is made in Wales, the original home of the industry, from the wool of the mountain sheep. The process resembles the weaving of other woollens, but the yarn is more loosely twisted in order to give a softness to the fabric. The fleecy softness of "raised flannels" is got by teaseling or carding; flannel, however, that has the pile slightly raised wears better and shrinks less than if highly carded. The French excel in fine-dyed flannels; American flannels are smooth in texture, and, being made of close-twisted yarn, do not shrink.

FLASH POINT. The lowest temperature at which an illuminating oil gives off vapour in sufficient quantity to form with the air around an explosive mixture depends on the extent to which it has been freed from its more easily vaporised constituents in the refining process. The minimum temperature at which an explosive mixture is produced is called the *flash-point*. In Great Britain the minimum legal flash-point is 73° F., when the oil is submitted to "Abel's closed oil-tester."

FLAVIAN EMPERORS, THE, were three Roman Emperors of plebeian origin—Vespasian, Titus, and Domitian, who, though of one house, were very different in characteristics. Vespasian was severe and just, Titus "the delight of mankind," and Domitian, a mean tyrant. During this epoch, 69–96 A.D., Jerusalem was taken, 70 A.D., and the Coliseum and Arch of Titus were built.

FLAX is a native of Europe and Northern Africa, cultivated most largely in Russia, and extensively in America, Germany, and the North of Ireland. From the earliest known times it has furnished the raw material out of which linen is made, traces of it having been found in Swiss lake-dwellings, whilst the linen mummy-cloths bear witness to its use in ancient Egypt. The flax is plucked, root and all, for use; then the seeds are removed. The next stage, called retting, consists in leaving the flax to ferment in the dew or rain and sunlight, but the same softening influence may be attained by soaking. After drying, the flax is broken up and then combed. Its seed, under the name of *linseed*, yields oil; and the solid mass that remains after the oil is pressed out is used as food for cattle and sheep. New Zealand flax is a fibre plant of quite another kind, often appearing as an ornamental plant in English greenhouses. The leaves yield a strong, fine fibre, which the Maories use for dresses, mats, and ropes. It is now in great demand by British firms for rope, sailcloth, and tough fabrics.

FLAXMAN, JOHN, R.A., *b.* at York, 1755, *d.* 1826; a famous sculptor. As a boy he was feeble in health, but he imbibed a love of art from his home surroundings, his father being a moulder of figures. He became an Academy student, and found some scope for his genius as a designer for Wedgwood. In 1782 he began to devote himself to statuary and monumental sculpture, and thus established his fame as the greatest of English classical sculptors. His designs for the great Homeric epics are deservedly famous. He is buried in St. Giles-in-the-Fields, London.

FLEET PRISON, until 1846, existed as a debtors' prison. Its site is now occupied by a Congregational Memorial Hall, built in the Gothic style, on the east side of Farringdon Street. It took its name from the Fleet, a brook which flowed down the Holborn valley to join the Thames at Blackfriars. Originally it was the King's prison, and it was used both during the Marian persecutions and for Star Chamber victims. It was one of the prisons reported upon by Howard, the Prison Reformer, who found there over 200 debtors, with their wives and families. Within the precincts of the prison were contracted the clandestine "Fleet marriages." These were conducted by parsons of the prison, immured for debt, and they were not abolished until an Act was passed in 1753, declaring marriages illegal unless solemnised in a parish church or licensed chapel, after due announcement of banns or by licence.

FLEMINGS, the people of Flanders, a branch of the Low German stock of the Teutonic people. In Mediæval times they formed a county under the leadership of the Counts of Flanders, but, with the growth of the woollen industry, their rich cities became a prey to Spanish and French ambition.

FLEMISH, the Low German tongue spoken by the Flemings. It differs from Dutch chiefly in spelling, which in Holland has undergone reform.

FLETCHER, JOHN, *b.* at Rye, 1579, *d.* 1625; an English dramatist, the friend and partner of Beaumont, with whom he collaborated in the production of thirteen plays, in addition to his own independent work. The coarseness of much of the subject matter of these plays renders their presentation on the stage impossible. He died of the plague and was buried in the Church of St. Saviour's, Southwark.

FLEUR DE LIS, the heraldic device of the Bourbons, and thus of Monarchical France. It consisted of a conventional form representing three lilies, banded at the stalk, and arranged symmetrically.

FLIES, HOUSE, See *House Flies*.

FLINDERS, MATTHEW, an English navigator and discoverer, *b.* in East Anglia, 1774, *d.* 1814. Taking with him

a ship's surgeon named Bass, and a small crew, he explored the Australian coasts south of Port Jackson, sailing through the strait named Bass Strait, and thus proving that Tasmania was an island. The Government gave him the command of an expedition in the same waters, and he mapped the Eastern Coast of Australia, with its Great Barrier Reef. His work is detailed in his "Voyage to Terra Australia," a book which he published in 1814.

FLINT, a mineral consisting chiefly of silica, found in layers embedded in chalk. Before the use of metals was established, knives, hatchets, spear and arrow heads and other implements were made of flint. The facility with which the flint-knapper flaked flints rendered them peculiarly suitable for this purpose. For the use of flint and steel as a means of ignition, see under *Tinder*.

FLODDEN, BATTLE OF, fought in 1514, between James IV. of Scotland and Henry VIII. of England, whose army was led by the Earl of Surrey. The Scots held Flodden Hill, but were skilfully cut off from retreat by the English army crossing the river Till, a tributary of the Tweed. The Scottish left was victorious, but forfeited their advantage in a too ardent pursuit. The battle ended in a concentrated attack on the Scottish centre, where the King fought stubbornly to the end. The day was a disastrous one for Scotland; the king and twelve earls were slain, and few noble families escaped without the loss of one member. Scott describes the fight in the 6th Canto of "Marmion."

FLOORCLOTH. Linoleum has now largely superseded oilcloth as a serviceable floorcloth. The latter has a tough canvas ground, which is treated with size, and successive coats of paint, whilst screwed taut on a frame. The paint is allowed to dry slowly, and is laid on with a kind of trowel. The pattern is printed from wooden blocks. Linoleum is also based on a canvas ground, the coating consisting of powdered cork mixed with oxidised linseed oil and resin. Great attention is given to the preparation of the mixture, which is finally crushed into the canvas ground under steam at a high temperature.

FLORENCE, a city of Italy, on the river Arno, of over 200,000 people, has greatly outgrown its old boundaries. Few cities are so rich in works of art, in archæological and historical records and relics. The dome of the Cathedral, by Brunelleschi, is the central object of Florence. Near it are the elegant Campanile and the octagonal Baptistery of San Giovanni, with its famous bronze gates, called by Michael Angelo "the Gates of Paradise." It is a city of famous churches; here is the Church of *Santa Croce*, with its monuments of Dante, Galileo, Machiavelli, and other great Florentines; here, also, is the church of *San Lorenzo*, built by Brunelleschi at the command of the Medici, and containing the wonderful Medicean chapel and the New Sacristy. Its splendid palaces might have claimed prior mention, such as the *Palazzo Vecchio*, the seat of the Republican Government till 1530, the *Uffizi Palace*, with its famous library and its wonderful collection of Florentine art, and the *Pitti Palace* with its great paintings and library.

FLORIDA, a large peninsula in the south-east of the United States, partly forming the eastern enclosure of the Gulf of Mexico. It is about 400 miles in length and 100 in breadth; market gardening and general agriculture are the dominant industries. The leading products are cotton, oranges, corn, and timber, and there is no lack of modern American enterprise in turning to account its resources. Florida was colonized by Spain in the 16th century, and ceded to the United States in 1819; its population exceeds half a million.

FLORIDA STRAIT, or the Strait of Bemina, separates Florida from Cuba and the Bahama Islands. Through it the Gulf stream flows, carrying its warm current to meet the ice floes of the Arctic Ocean off Newfoundland. The distance across the strait to Cuba is about 100 miles, and to the Bahamas, about 50.

FLOTSAM. See *Commercial Dictionary*.

FLOWERS are the reproductive organs of the higher plants. A typical flower has a *pistil*, which contains immature seeds, and *stamens*, which produce pollen. The pollen must reach the pistil, if the flower is to grow into a fruit, and that the pollen can do by means of the wind, or by insects coming from another flower of the same species.

There has been a marked increase in the cultivation of flowers for the market during the past twenty-five years, especially in the London area, the narcissus or daffodil being notably foremost. Roses and daffodils prevail in the Thames valley, and lavender, chrysanthemums, asters, poppies, calceolarias, and geraniums about Wimbledon and Mitcham, and in Kent. The early spring flowers come largely from the Scilly Islands, where the winter is mild and short, and the spring early and warm. Over 500 tons of flowers are sent annually from these islands. The district round the Wash is now increasingly devoted to bulb and flower cultivation. From abroad, and particularly from France, we import annually £250,000 worth of flowers, but the supply of British grown flowers is increasing more rapidly than that of the imported.

FLUOR SPAR is a compound of fluoric acid and lime with certain organic matter present; it occurs in various colours and shades, as a crystalline or non-crystalline mineral, usually of much beauty. It occurs plentifully in Derbyshire, where, under the name of "Blue John," it is occasionally made into ornamental vessels and small articles, and sold to tourists. Fluor-spar is used as a flux in the smelting of metals.

FLUSHING is a fortified port on Walcheren Island, in the Netherlands, on a branch of the Rhine delta, called the Scheldt. It is connected by a regular service of boats with Queenborough, in Kent.

FLUX is the name applied to any substance which is used in the smelting furnace to gather up the foreign matter in the ore, and to form it into a kind of scum, which can be easily removed, leaving the pure metal behind. Thus, in smelting iron, sand and limestone are mixed with the ore for the purpose of forming a flux.

FLYING DUTCHMAN, THE. A myth of the sea which provided Wagner with the subject for one of his operas. The original Dutchman is said to have been a captain named Van Straatin, who restlessly expiates his sins in a ship off the stormy waters of South Africa without being able to reach harbour. The idea of a spectral ship is common among sea-going Teutonic peoples, and Coleridge used the idea in his "Ancient Mariner."

FLYING FISH are found mostly in the warm southern seas. Their paired pectoral fins are elongated and developed so that they can maintain a flight of several hundred yards, but without any flapping motion. They keep an undeviating course, parabolic in curve, and they fly most in choppy or rough seas, in shoals. They are often carried on to the deck of a ship, and they are netted in flight by South-sea natives.

FLYING MACHINE. See *Aeronautics*.

FLY WHEEL is a heavy wheel working in direct conjunction with the propelling force of an engine, in order to produce smoothness of action, or to reduce the inequalities arising from the jerk of the piston. The principle involved is as follows: a heavy mass in rotatory motion resists any sudden alteration in its momentum or direction, whether due to increase or decrease of velocity.

FOG, mist, or rain occurs when the water-vapour, with which the atmosphere is always charged, becomes condensed. Condensation cannot occur without existing nuclei, about which the water particles may form, and as dust particles coexist with water-vapour as an atmospheric element, they form the required nuclei. Changes of temperature produce changes in the capacity of the air to hold vapour in solution. Thus the coolness of the evening air leads to condensation, and so brings about the mists that overspread low lying, moist grounds. Equally, the genial heat of the morning sun raises the capacity of the air to hold vapour in solution, and disperses the evening mist. Large cities are more susceptible to fogs than other places, because of the smoke-particles and dust with which the air is heavily laden. London has an evil reputation for its fogs, which occur sometimes with frequency, sometimes at long intervals, between November and February. Generally speaking, these fogs are worst along the river, and in the low-lying districts, and less dense in the hills to the north, but no part is free from their invasion.

FÖHN, a wind of the Alpine valleys, causing great discomfort, by reason of its unusual dryness and warmth.

FOIL is metal extremely finely rolled or beaten into sheets. It is thin enough, in the case of tin-foil, to form the inner wrapping for packing tobacco or sweets. Still finer than foil is the gold leaf of the gilder; but a more durable foil is used by jewellers, and for theatrical display, under the name of tinsel. Foil is used by jewellers under the setting of precious stones, to add a lustre to them.

FOLEY, JOHN HENRY, R.A., *b.* at Dublin, 1818, *d.* 1874; a sculptor who received his education in art at the Royal Academy, and attracted attention by his classical works. He subsequently took a foremost place as a sculptor of public statues, among which may be mentioned his statue of Prince Albert for the Albert Memorial, his figures of Selden and Hampden in the Houses of Parliament, and his Dublin statues of Goldsmith, Burke, and O'Connell.

FOLKESTONE, about seven miles west of Dover, on the coast, is a fashionable and charming sea-side resort, and a busy packet-station, with a daily service of steamers, running in connection with the South Eastern Railway to Boulogne. The harbour at the east end of the town is in a gap in the cliffs, and the holiday quarters lie on the lofty grass-fronted Leas at the west end. The front is beautifully laid out in lawns, cliff gardens, and terraces. There is a fine old parish church on the edge of the cliff, and it has been most beautifully decorated with mural paintings. A statue of Harvey, a native of Folkestone, memorializes his discovery of the circulation of the blood; population over 30,000.

FOLKLORE, the comparative study of the survivals of archaic beliefs, customs and traditions. The subject was first handled by Aubrey (1626–97), who collected materials for a work on ancient and modern superstitions. Ballads were collected by Percy and Scott in the 18th

century. The Brothers Grimm were the pioneers of German Folklore, and they first instituted the collection of folk tales on a scientific plan. Hartland, Frazer, and Andrew Lang are among the leading authorities of recent times. The Folklore Society (1878) has done much to render the study of the subject methodical, and its publication, "Folklore," extends to fifty volumes.

FONTAINEBLEAU is a French town on the Seine, about 40 miles south-east of Paris. It is famous for its magnificent castle, and its equally magnificent forest, which covers an area of 60 square miles. The forest is the home of colonies of French artists, and the forest village of Barbazon is famous for its connection with Millet and his school of art. The castle was a country residence of the French kings. It was begun in the 10th century, and bears the marks of every period of French history. Louis XIV., "the Grand Monarch," made it his chief resort, and Napoleon occasionally resided there. It has been the home of royal refugees, royal favourites, and state prisoners, and it was the scene of such momentous acts as the signature of the revocation of the Edict of Nantes (1685), and of the abdication of the throne by Napoleon (1814).

FONTENOY, a Belgian village, near Tournay and the French frontier, where, in 1745, the French gained a doubtful victory over the allied forces of England, Holland, and Austria, during the War of the Austrian Succession. The Duke of Cumberland, the victor of Culloden, led the Allies.

FOOT AND MOUTH DISEASE is an eruptive fever, marked by blisters in the mouth and sores in the feet, which attacks cattle and pigs, making it difficult for them to walk or eat. It is highly contagious, and spreads, if not prevented, near and far. The disease is scheduled under the Diseases of Animals Act, which is administered by the Board of Agriculture. Any case occurring within the United Kingdom must be reported at once to the police by the owner, when measures are immediately taken to isolate the infected farm or district; and danger from foreign importation is obviated in the case of this or any other contagious disease, by the slaughter of all imported cattle at the port of entry. The latter rule does not apply to importations from Ireland.

FOOT GUARDS, include the four infantry regiments of the British Army—the Grenadiers, the Coldstreams, the Scots Guards, and the Irish Guards. They form the garrison of the Metropolis and of Windsor, and are considered the finest infantry regiments of the army.

FORAMINIF'ERA are found in the deep sea, where they deposit their shells, and so form the chalk of future ages. They represent a most elementary form of life, and reproduction takes place by a process of division, the parent form cleaving and falling away in divisions, each of which becomes an independent living organism. In time each new organism is enclosed in its shell, which may vary in size from microscopic dimensions to a diameter of half an inch.

FOREIGN ENLISTMENT ACT. Refer to *Index*.

FORESTERS, ANCIENT ORDER OF, a friendly society established in Leeds in 1790. It has over 900,000 members, and an annual income of over £1,000,000, of which about three-quarters is annually paid in cases of necessity, sickness and death. Refer to "Friendly Societies" in *Index*.

FORLORN HOPE, a body of troops told off to do a desperate work, such as storming a breach, leading a charge at a critical moment, or, in general, undergoing a great but apparently necessary danger. The word is derived from the Dutch *verloren hoop*, "a lost troop or band."

FORMOSA, a large island off the east coast of China, 400 miles east of Hong Kong, ceded by China to Japan, 1895. It is very mountainous (Mount Morrison, 12,850 feet), and its mountains are densely forest clad. Vegetation is wonderfully luxuriant, and there are many birds unknown elsewhere. The Japanese are developing the great resources of the island, but internal communication and harbourage are defective. The exports include coal, tea, sugar, camphor, and timber, and its chief imports are opium and cotton fabrics.

FORSTER, WILLIAM EDWARD, *b.* 1819, *d.* 1886; entered Parliament as a member for Bradford in 1861, and became a prominent member of Mr. Gladstone's cabinets from 1870 onwards. He was a member of the Society of Friends, and highly esteemed for his integrity, strong common sense, and sturdy bearing. He introduced and carried through the Education Bill of 1870, by which "School Boards" were established. In 1880 he became Chief Secretary for Ireland, a post of great difficulty and no little danger, as the assassination of his successor soon showed. He endeavoured to meet the needs of the Irish peasants, but was compelled to take a strong line of action against the "Land League." He was an ardent Imperialist, and opposed to the separation of English and Irish parliaments.

FORTESCUE, SIR JOHN, an English judge of the 15th century, and an ardent supporter of the Lancastrian party. He accompanied the luckless Queen Margaret in her exile, and there wrote his "De laudibus Legum Angliae," a famous work on English Law, for the use of his pupil, Queen Margaret's son, Edward. He became reconciled to the Yorkist king, Edward IV., and died in England at an advanced age.

FORTH BRIDGE. This wonderful bridge—the largest yet built—on the east coast route of the North British Railway, was erected (1882–9) across the Firth of Forth to obviate the *détour* around the head of the Firth. It crosses the Firth at Queensferry, where the channel is comparatively narrow, and where the islet of Inchgarvie stands in mid-channel, and supports the central pier. This is built of granite in four separate columns, as also are the piers that stand on either shore. The two main spans are each 1710 feet long, and are formed of two cantilevers, each 680 feet long, united by a girder 350 feet in span. The steel towers supporting the cantilevers are 361 feet high, and the road for the trains is 152 feet above high water. The total length exceeds 8000 feet. The engineers were Sir John Fowler and Sir Benjamin Baker.

FORTH, FIRTH OF, the estuary of the river Forth, gradually widens from Alloa, and loses itself in the North Sea, 52 miles further east. It is a quarter of a mile wide at Alloa, and attains a maximum width of 19 miles. At Queensferry, a peninsula on the north side reduces the width to one mile, and it is here that the Forth Bridge crosses the Firth. Near the bridge is the roadstead of St. Margaret's Hope, immediately west of North Queensferry. This roadstead has been reserved by the Government for a future naval station, to be known as *Rosyth*, the name of a neighbouring castle.

FORTUNATE ISLANDS, THE. An ancient name for the Canary Islands.

FORTUNATUS, a popular character in mediæval stories, who received from Fortune an inexhaustible purse and stole from a Sultan a cap that could transport its wearer wherever he would go. The Elizabethan dramatist Dekker has used the story in his "Old Fortunatus."

FORUM, THE, literally the market place, was the official centre of the corporate life of Rome or of any Roman city. Here were collected the temples and statues and the most notable monuments. Here justice was administered, and crowds gathered to hear their favourite orators declaim. Remains of the forum at Rome and of its buildings are still considerable, and every effort has recently been made to preserve its ancient aspect.

FOSSILS are bodies or traces of the existence of bodies, whether animal or vegetable, which have been buried in the earth by natural causes. Owing to the wearing effects of rivers, seas, and rain, the surface of the earth is constantly undergoing changes, and the present condition of the earth's crust is the result of ages of such changes. By examining fossil remains, geologists are able to describe the alterations that have taken place. Thus they know that chalk and limestone were formed on the bed of the sea, that sand-stone and sand were once at the shore of the ocean, and that coal-measures represent the forests and vegetation of bygone days. Shells, corals, and remains of fishes are the commonest fossils, and it is interesting to note that marine shells are found at the top of Snowdon, thus showing that this mountain was once at the bottom of an ocean.

FOTHERINGAY CASTLE is in Northamptonshire, on the river Nen, nine miles south-west of Peterborough. The castle, of great antiquity, was the birth-place of Richard III., and the scene of the execution and last years of Mary Queen of Scots. It was allowed to fall into ruin by her son, James I. of England.

FOUNDING, or moulding, is a method of casting metals by preparing a mould in green or dry sand or in loam. A pattern, usually of wood, is used, the sand is firmly beaten about it and damped, the pattern is withdrawn, and the molten metal run in. In order to withdraw the pattern it is necessary that the mould should be made in two parts, which fit upon one another.

FOUNDLING HOSPITAL. There do not exist in England any foundling hospitals in the true sense of the term, such, for instance, as the *Hospice des enfants trouvés* in Paris. The Foundling Hospital in Holborn, London, was founded in 1739 by Captain Coram for the reception of "deserted children" who were placed in a basket outside the entrance. It is now a home for illegitimate children whose mothers are known. There are over 500 boys and girls, their uniform is a quaint one, and they are well trained in music, a feature begun under the influence of Handel.

FOUNTAINS ABBEY, a beautifully situated ruin of a Cistercian Monastery, four miles from Ripon, in Yorkshire. Nothing could exceed the beauty of the approach to this most charming of English ruins, through the wonderful garden grounds of Studley Royal. The monastic buildings are built over several great water conduits, through which the stream of the valley passes. Founded in the 13th century, it represents every period of church architecture down to the dissolution of the monasteries, when its great tower was hardly completed. Fountains possesses in common with Durham the remarkable feature of an eastern transept known as "the chapel with nine altars."

FOURTH ESTATE, a term applied by Edmund Burke to the English Press. (See *Estates of the Realm*.)

FOWLER, SIR JOHN, *b.* 1817, *d.* 1898, civil engineer. He built the Manchester, Sheffield and Lincoln, and the Metropolitan Railways, and co-operated with Sir Benjamin Baker in the construction of the Forth Bridge.

FOX, THE, is akin to the dog and the wolf, and occurs in different varieties throughout the northern hemisphere. It is carnivorous, and preys on farm-yard fowls, lambs, and other small animals, and is under public protection in Great Britain from the sport it affords in the chase. For this last purpose the animal makes excellent quarry, because of the strong characteristic scent proceeding from its anal glands, the cunning devices it adopts for escape, its fleetness and its endurance.

FOX, CHARLES JAMES, *b.* 1749, *d.* 1806, son of the first Lord Holland, was educated at Eton and Oxford. He travelled and moved when a young man in the gayest continental society, showing a strong propensity to gambling. On returning to England he took a prominent part in Parliament, and distinguished himself as a debater and orator of the first rank. In the dispute with the American Colonies (1765–83), he sided with the colonists, and endeavoured to prevent their estrangement. He was strongly disliked by George III. for his independence, and more than once dismissed from office, as a minister, owing to the royal displeasure. For twenty-two years (1784–1806) this great parliamentary leader was kept out of office. For the greater part of this period he was the rival and opponent of Pitt, the Prime Minister. On the death of Pitt, in 1806, Fox became Secretary of State for Foreign Affairs, but he died a few months afterwards, and was buried in Westminster Abbey, near his great rival.

FOX, GEORGE, *b.* 1624 at Fenny Drayton, in Leicestershire, *d.* 1691; the founder of the Society of Friends, commonly known as Quakers. He was the son of Christopher Fox, a Puritan weaver, who apprenticed him to a shoemaker. He felt a divine call in 1643, after an evening during which he had resisted the invitation of his fellows to "drink healths." For nine months he remained away from home in solitariness, and for the next four years he wandered about shunning any religious profession. In 1647 he began to preach, and to show marks of a mystical insight that impressed his hearers. His followers became known as "Truth's Friends," or simply "Friends;" but their nickname, "Quakers," they got in Derby in 1650, after Fox had bidden the town magistrates "tremble at the name of the Lord." The enthusiasm and excesses of his early following subsided before his calmness and "discipline of silence." His wife, Margaret Fell, was of the greatest assistance to him in the organization of his new society. His labours were extraordinary. He travelled in Scotland, Ireland, the West Indies, America, and Holland, and everywhere impressed his hearers by his sturdy moral fibre and his "awful, living, reverent, frame in prayer."

FOXE, JOHN, *b.* 1516, *d.* 1587; was a fellow of Magdalen, tutor of the children of the Earl of Surrey, a student of theology, and keenly interested in the Reformation movement. He met the leading reformers in Germany while in exile during Mary's reign. On his return, under Queen Elizabeth, he held various positions in the Church, without obtaining any notable preferment. He wrote many treatises and sermons of a controversial nature, but his name is indissolubly connected with his famous "Book of Martyrs," which lacks nothing to give it a morbid interest, but is nevertheless a notable example of good English prose. He was buried in St. Giles's, Cripplegate, London.

FOYERS, FALLS OF, two well known waterfalls on the short river Foyer, 1⅛ miles above its entrance into Loch Ness. The British Aluminium Company generates electrical power from the falls.

FRAM, THE, a specially constructed vessel in which the Norwegian Arctic explorer, Nansen, sailed in June, 1893, with the intention of drifting from the Siberian coast across the north pole. He reached the high latitude of 86° 13′ 6″.

FRANCE has an area of 207,000 square miles; it was shorn of 5,600 square miles in 1871, as a result of the Franco-German War. The country is divided into 87 departments, of which Corsica is one, and the government is a Republic presided over by a President, who is elected septennially. The four great rivers of France—the Seine, the Loire, the Garonne, and the Rhone—provide the country with excellent waterways, and as the mountains lie back from the sea, the water-courses are not impeded by falls. The eastern frontier is entirely mountainous, most rugged towards the south, and ending in the gentle slopes of the well-wooded Ardennes in the north-east.

Fruit trees are everywhere cultivated; apples, pears, and plums in Normandy and northern France; olives, almonds, citrons, figs in the south; whilst the vine yields nearly 900 million gallons of wine annually. Wheat, barley, rye, maize, oats, potatoes, beet root (for sugar), and hops are the principal agricultural products. The mineral wealth is not great; coal is found in the north, and in the St. Etienne district, between the Loire and Rhone, and iron is worked in the latter coal field. The chief manufactures are of metals, watches, jewellery, cabinet-work, pottery, glass, dyeing, woollens, carpets, linen, silk, and lace. French fisheries are of importance, the Normandy and Breton fisher-folk being a hardy race of seamen. The population, about 39 millions, increases slowly. Of French goods imported into Britain, the principal are silks, woollens, and millinery; then at a distance come wines, butter, dressed skins, and leather goods. Coal is the chief import from Britain. The national debt of France is enormous (1169 million sterling); but the people of France are thrifty, happy and industrious, and their love for "la belle France" is proverbial.

FRANCIS JOSEPH, EMPEROR OF AUSTRIA, *b.* 1830, succeeded to the throne of the Austrian Empire in 1848, when his country was engaged in war with Italy, and in civil strife with its Hungarian subjects. His reign has been one of great national reverses, but the universal respect in which he is held has enabled him to maintain the integrity of the Empire. Cavour, the Italian statesman, succeeded in winning Lombardy from Austria in 1866. In the same year the fatal battle of Sadowa crowned with success the plans of Bismarck, for the supersession of the Hapsburgs of Austria by the Hohenzollerns of Prussia, and the latter became the leading German power. These losses were taken by the Hungarians as an opportunity for pressing for equal rights with the German speaking Austrians, and in 1867 they won an independent capital at Buda-Pest, and the emperor was crowned king of Hungary. A long reign marked by disaster was clouded still more towards its close by family losses. His son and heir took his own life in 1889, and his devoted and beloved queen was assassinated in Italy in 1898.

FRANCIS OF ASSISI, ST., *b.* at Assisi, 1182, *d.* 1226, the founder of the famous order of friars known as the Grey Friars, or Minorites, was a truly remarkable man. Of humble origin, he displayed much gaiety and reckless generosity as a youth, and became a daring soldier. Sickness turned his thoughts to religion, and he arose from his bed of illness to devote himself to a life of poverty, almsgiving, and self-renunciation. His enthusiasm soon found imitation, and in 1210, a brown-robed brotherhood left Rome, approved by Pope Innocent III. Although the subsequent extension of the orders of Friars may have led to a grave lapse from the pure aims of the founder, yet the followers of St. Francis were a powerful instrument for good in the social life of the Middle Ages.

FRANCISCANS is the name usually applied to the order of Friars founded in 1208 by St. Francis of Assisi. Friars were a distinct class of the community in the Middle Ages. See *Friars*.

FRANCIS OF SALES, SAINT, *b.* 1567, *d.* 1622, a French bishop who worked among the Protestants of Geneva, winning many over to the Roman Catholic Church. He tried to establish a basis for a reunion of the Protestants and Romanists, but failed to convince the leaders of the former party. His devotional works, "Introduction à la Vie Dévote" and "Traité de l'Amour de Dieu" are widely read.

FRANCO-GERMAN WAR, July, 1870–May, 1871. War was declared by Napoleon III. partly to avoid internal embarrassments, but the Prussians were prepared for war at every point. Within a month of the declaration of war they had mobilized over 500,000 troops with 1,600 guns, whilst the French had an ill-equipped force of 300,000 with 900 guns, inferior in range to those of the Prussians. The Emperor of the French took the initiative, in the neighbourhood of Metz, in Lorraine, with Marshal Macmahon on his right in a strong position on the Vosges mountains. The Germans drove Macmahon in disorder out of the Vosges, and a reverse at Spicheren led the Emperor to retreat on Metz, and delegate the command to Marshal Bazaine. Meanwhile the Germans had a second army on the road for Paris, in the Moselle valley. When this became known to Bazaine, a retreat from Metz began, but the Germans cut the retreat and forced a battle at Gravelotte, which resulted in the return of the French to Metz, and, within two months, the entire surrender of the fortress and army. Troops had been concentrated at Chalons to oppose the advance of the Germans, and these had set off by a northerly route to join hands with Bazaine. The Germans, however, intercepted them, and drove them in upon Sedan, where, after a brief and hopeless struggle, an army of over 80,000 surrendered with the Emperor (2nd September). A Republic was proclaimed in Paris, the Empress fled to England, and after the fall of Strasburg the French capital was completely invested. Paris succumbed to famine after a four months' siege, and opened its gates to the enemy. The German troops occupied Paris for only a few hours. In the terms of peace, signed at Frankfort, May, 1871, France ceded Alsace and part of Lorraine, and gave a war indemnity of over £200,000,000. The Emperor spent the rest of his days in England, and died at Chiselhurst, in Kent, 1873.

FRANCS-TIREURS, sharp-shooters in the French service forming a body of irregulars, peasants for the most part, who harassed the Germans in the war of 1870–1, cutting off stragglers, and menacing the lines of communication.

FRANKENSTEIN, a romance by Mary Godwin, the second wife of Percy Bysshe Shelley. The hero Frankenstein contrives to make and animate by his intimate knowledge of the mysteries of nature, a monster in human form, who becomes the constant torment of its maker's existence. Hence in general the name implies the unhappy reaction upon himself of an author's creation.

FRANKFORT ON THE MAIN stands on the right bank of the river, 20 miles above its confluence with the Rhine. It is the home of the Rothschilds, whose house still stands to mark the old Jewish quarter. It is one of the leading money markets of the world, and many of its bankers are Jews. It has a large industry in machinery, chemicals, soap, and perfumes, and does a good trade in leather, skins, wine, and beer. Seven railways meet here in one of the finest of European stations. Goethe was a native of Frankfort, and so was Gutenberg, the inventor of printing. Historically, Frankfort possesses many features of interest. In the Kaisersaal of the Roemer, or town hall, the emperors were elected, to be crowned subsequently in St. Bartholomew's church. Here also used to meet the North German Diet or Senate. But the town has been greatly modernised, and is rich in all those institutions of amusement and enlightenment that mark the growth of modern cities; population over 300,000.

FRANKING OF LETTERS, a system of free delivery of letters that are "franked" or initialled by privileged persons. In England, until the establishment of the penny post, members of the Houses of Parliament could send ten and receive fifteen franked letters a day.

FRANKLIN, a mediæval landowner, independent of the patronage of any nobleman and usually untrained in arms or letters. Chaucer's Franklin was a county magistrate, a sheriff, a hearty and hospitable entertainer, a man "of rude speech," and a "knight of the shire," or member of parliament. It was from this class of freeholder that the House of Commons took its spirit of patriotic independence.

FRANKLIN, BENJAMIN, *b.* 1706, *d.* 1790, was one of a large family in poor circumstances. He commenced work as a printer with his brother, educating himself at the same time. In 1732 he began to publish "Poor Richard's Almanac," which soon achieved a popularity that the judgment of time has justified. He became an official in the state service, and, in 1746, began to turn his versatile mind to scientific research, a domain in which he established his name by giving the world his theory of positive and negative electricity, his suggestion of the use of lightning conductors, his discovery of the passage of storms over great areas, and his theories of the nature and course of the Gulf Stream. After the age of 50, however, he was engaged principally as a statesman and diplomatic representative. He represented the American colonists in England with success, until the outbreak of the American War of Independence, 1775, when he returned to America, and took a prominent part in public affairs. In 1776 he was sent as ambassador to Paris, where he secured French assistance for the Americans. The last years of his life were spent in office at Philadelphia, where he died, leaving behind him a name equally great in literature, science, and diplomatic history.

FRANKLIN, SIR JOHN, *b.* 1786, *d.* 1847, a British admiral and a famous Arctic explorer. He fought at the battle of Copenhagen, joined the Flinders expedition to investigate the Australian shores, and, on his return, fought at Trafalgar. In 1818 he made his first voyage in Arctic discovery, and again in 1819 and 1825 made further expeditions to find the north-west Passage. From 1834 to 1843 he was Governor of Van Diemen's Land, (Tasmania). In 1845 he made his last and fatal voyage in the Arctic seas. Many expeditions went in search of the gallant navigator, and Lady Franklin bore a noble part in the efforts that were made. In 1857 she fitted out the *Fox*, under Captain M'Clintock, who found relics of the discoverers among the Eskimos, and, along the shores of Boothia, fragments of the ships and some skeletons. A cairn was found containing a record of the expedition up to 1848, and showing that the explorer's two vessels, the *Erebus* and *Terror*, were abandoned in 1846, and that Franklin had died 11th June, 1847.

FRANKS, THE, a Germanic people who settled to the north of the western Goths, in the north of France during the early part of the 5th century A.D. Clovis the first king of the Franks, drove the Goths out of France in 481, the country taking its name (France) from the conquerors just as Southern Britain (England) took its name from the invading Angles. Clovis became a Christian and was baptized at Rheims in 496, and buried with his wife, Clotilda, in the Church of St. Geneviève that she had built at Paris.

FRAUNHOFER, JOSEPH VON, *b.* 1787, *d.* 1826, a German optician, noted for his improvements of the telescope and other optical instruments, and especially for his elucidation of the lines in the spectrum called after him, "Fraunhofer's lines." (See *Spectrum Analysis.*)

FREDERICK II. OF PRUSSIA, known as "Frederick the Great," king of Prussia 1740–86. He spent his youth in submission to his father's rigid restraints, developing meanwhile a taste for French philosophy and literature. On ascending the throne he showed himself inordinately ambitious, working for Prussian aggrandisement with unswerving zeal and untiring energy. He ruled Prussia single-handed, made of it a training ground of armies, and, in the intervals of war, legislated for it in an arbitrary but keen-sighted way. He annexed Silesia at the expense of Austria, took by diplomacy what is now Prussian Poland, in eastern Germany, and acquired by arms the Franconian duchies. The central aim of his policy was to put Prussia in the place of Austria at the head of a confederation of German States, and, if the worth of policy be best estimated by its results, this prince of the Hohenzollerns should be credited with having laid the foundations of the present greatness of Germany.

FREDERICK III. OF PRUSSIA, *b.* at Potsdam, 1831, *d.* 1888, was the son of the Emperor William I., and married the Princess Royal of England, eldest daughter of Queen Victoria. He fought through the Danish, Austrian, and French Wars with undoubted distinction. His handsome figure and noble bearing evoked great admiration in England in the great Jubilee procession of 1887. In 1888 he succeeded to the throne of the German Empire, but succumbed in the same year to a malignant growth in the throat. A knightly soldier, of a modest, unassuming nature, but powerful influence, he merited the title of "Frederick the Noble," no less than the homely name, "Our Fritz," by which his troops spoke of him.

FREE CHURCH FEDERATION, THE, founded 1892, is an association of the leading nonconformist churches in the British Isles, formed to promote the common objects of the nonconformist bodies and to promote intercourse and mutual action.

FREE-LANCES were bands of mercenary troops of the Crusading days, ready for employment by any one willing to pay for their services. In Italy they were known as Condottieri.

FREEMAN, EDWARD AUGUSTUS, *b.* 1823, *d.* of small pox at Alicante, 1892. He was Regius Professor of History at Oxford, the author of the "History of the Norman Conquest," and a voluminous writer on Architecture, Teutonic customs, and local Antiquarianism, particularly of South-western England. Freeman was extraordinarily learned, and was full of an enthusiasm which, his critics assert, led him to exaggerate the importance of his own views.

FREEMAN, MRS., a name assumed by Sarah Jennings, Duchess of Marlborough, the favourite of Queen Anne, who consented to be called Mrs. Morley, so that the two ladies might correspond and converse without the restraints imposed by their unequal positions.

FREEMASONRY, as at present existing, is of English origin, and arose in the 18th century on the foundation of the corporations of architects and builders that had existed in various parts of Europe from the 7th century. Its traditional history is carried back to the building of King Solomon's Temple at Jerusalem. The order includes three degrees, those of the apprentice, the craftsman, and the master-mason, and a special ceremony attaches to the admission of a candidate to each degree. The members are known to one another by signs and passwords. One great principle inculcated by the craft is that of the relief of the necessitous, and large sums are annually subscribed by the brethren to the various masonic charities.

FREEMEN. The conditions of freedom of a borough differ with different municipalities, but, in general, a man may be eligible for it (*a*) by birth, (*b*) by apprenticeship to a freeman, (*c*) by marriage. Except in the last case a freeman may register for a parliamentary vote on a six months' residence within seven miles of the borough. A borough may elect to an honorary freedom any person who has rendered great service to the borough, but the honour carries with it no right of voting or sharing in the local privileges of freemen.

FREE PORT, A, one which may be used by the vessels of any nationality without the payment of any customs duty or protective charge, except the ordinary harbour dues. Originally intended to draw trade, free ports have almost ceased to exist under the modern systems of high protective duties, and of bonded warehouses. Hong Kong, Singapore, and Zanzibar are free ports under British control.

FREE TRADE. See *Commercial Dictionary.*

FREISCHÜTZ, DER, literally, "the free-shot," was the name of a hunter of German legend who bartered his soul to the devil for seven bullets, six of which should hit what the hunter aimed at, and the seventh go as the devil directed.

FREMANTLE, on the Swan River, in Western Australia, is the port of Perth, the capital, from which it is 12 miles distant; population 23,000.

FREMONT, JOHN CHARLES, *b.* 1813, *d.* 1890; a noted American explorer, surnamed "the Pathfinder," who by his explorations in the Rocky mountains first opened up a practical route for roads and railways to California and the Pacific.

FRENCH REVOLUTION, THE. Refer to *Index.*

FRERE, SIR HENRY BARTLE, *b.* 1815. *d.* 1884, an eminent Indian and Colonial statesman. He was chief commissioner of Sind when the Indian Mutiny broke out, and he succeeded in preventing the spread of the rising to his province. As governor of Bombay he reformed the revenue system. In 1872 he treated successfully with the Sultan of Zanzibar for the abolition of slavery within his dominions. He was governor of the Cape, 1877–80, and was the first high commissioner of South Africa. The Zulu war (1878–9) and the obstructive tactics of the Boers ruined his plans for the confederation of South Africa, and Africa, the grave of the white man's reputation, claimed another victim. Subsequent events, however, have re-instated him in the estimation of his fellow-countrymen.

FRESCO, the art of painting upon plaster walls, with such colours as resist the decomposing effect of lime. True fresco is worked upon fresh laid damp plaster, on which the figure of the cartoon is traced and coloured. At the close of the day's work the fringes and edges of unused plaster are cut away and a fresh coat is laid next day before proceeding. The existence of such joints either in the shadows or along the outlines of the figures is evidence of the use of true fresco. The colours combine with the lime and are permanent. The artist must work unerringly and rapidly, as errors may be removed only with the plaster, and as his colours are few, and his outlines decided, he must be bold in conception and dignified in design. Dry fresco, a modern substitute for true fresco, consists in painting in the same restricted colours on plaster that has dried and been moistened.

FRET-WORK, is the cutting of scroll ornament on specially prepared sheets of wood. The "buhl" or fret saw, resembles the letter D in shape. The work is commenced by passing the blade through a small hole in the wood and then screwing it into the "ben" or frame. The quickest and most effective fret-work is done with a treadle-worked saw arranged on the plan of a sewing machine.

FRIARS were members of the mendicant, or "begging" orders of itinerant clerics in the Middle Ages, as distinguished from the "cloistered" monks and parish clergy. The friars had head quarters, from which they were sent out to preach in the streets, and lanes and bye-ways, trusting for a living to the alms of the people. They lodged in the lowest slums, and regarded those afflicted with leprosy, plague, or fever, as the objects of their special care. The Franciscans, Dominicans, Augustinians, and Carmelites were the four great orders of the Middle Ages, in the latter part of which they degenerated, too often, into a set of lazy mendicants.

FRIDAY takes its name from a Saxon divinity, Frigga, the mythical wife of Odin. The classical name was *Dies Veneris* or "Day of Venus." The Christian Church has always kept Friday as a weekly fast in commemoration of the Crucifixion, which is specially solemnized on Good Friday. Friday is considered an ill-starred day on which to start on a venture. Sailors have a universal dislike for it, as bringing ill luck to the ship that sets out on that day.

FRIENDLY SOCIETIES. Refer to *Index.*

FRIENDS, SOCIETY OF. Refer to *Index.*

FRIGATE, originally a long, swift Mediterranean craft, rigged with sails and carrying oars. The name was afterwards applied to a fast-sailing man-of-war carrying all its guns on a single deck, and employed in scouting.

FRISIANS, a Teutonic people akin to the Angles and Saxons, dwelling on the low lands now occupied by the Zuyder Zee. They joined in the Anglo-Saxon invasions of Britain, and peopled the district between the Humber and Thames, known as Mercia. Their dialect became the standard of "King's English," and is thus the parent of modern English. An old couplet exemplifies this relationship well :—

Good butter and good cheese
Is good English and good Freese.

FRITH, WILLIAM POWELL, R.A., *b.* at Studley, near Ripon, 1819; was an English painter of portraits and subject pictures, which have achieved popularity through their striking dramatic qualities. "The Derby Day," "The Road to Ruin," "The Railway Station," and "Margate Sands" are among his best known works.

FROBISHER, SIR MARTIN, *b.* 1535 in Yorkshire, *d.* 1594, discovered Labrador in attempting to reach China (Cathay) by the North West Passage. He assisted Drake in the West Indies, and was knighted for his prowess in fighting against the Armada.

FRÖBEL, FRIEDRICH, *b.* 1782, *d.* 1852, a German educational reformer, who held strongly to the idea that educational development should be sought in the full and combined activity of all the faculties, bodily and mental. He opened a "Kindergarten" school in 1836, and spent the rest of his life in advocating his system, and in training teachers in his principles.

FROG belongs to the class *Amphibia,* which is a group of vertebrates that breathe by gills in the early part of their life history, and by lungs in their adult condition. The eggs are laid in ponds in March and consist of black yolks embedded in a gelatinous mass of white of egg. A fortnight later the tadpole hatches and attaches itself to a water weed. At an early stage it is practically a fish, breathing with gills and using its tail for swimming. It gradually undergoes changes. As its hind-limbs develop its tail dwindles, and as its lungs develop the gills shrink and disappear. In the course of three months, the tadpole has become a frog. In winter it hibernates at the bottom of a pond.

FROGMORE, a palace in Windsor Park, purchased by Queen Charlotte in 1800. It was the home of the Duchess of Kent, the late queen's mother, who died in the same year (1861) as the Prince Consort. The queen had a magnificent mausoleum built in its grounds to contain the two tombs, and thirty years later she was laid to rest beside her husband. Monuments to other members of the royal family are also contained within it. The house is used by the Prince of Wales.

FROISSART, JEAN, *b.* 1337, *d.* 1410; a famous French chronicler of the wars of France, England, and Scotland, that took place in his own lifetime. In 1360 he was welcomed to England by Queen Philippa as a fellow-countryman. He was a great traveller and was known at most of the Courts of Europe, where he gathered his information from the knights and courtiers whom he met.

FRONDE, THE, a faction in Paris, 1648–1654, which was opposed to the Court, and particularly to the exactions of the Prime Minister, Cardinal Mazarin, who, despite a temporary exile, returned to assert the royal power as vigorously as ever.

FROST is the condition of the air or of the earth when the temperature has fallen to 32° F., which constitutes the freezing point of water. *Hoar Frost* is a deposit of rime upon exposed objects when they have cooled by radiation below the dew-point. Exposure to excessive cold produces a deadness in the affected part of the body that is known as "frost-bite." Restoration of the circulation of the blood is best effected by a process of rubbing with snow.

FROUDE, JAMES ANTHONY, *b.* at Dartington, Devon, 1818, *d.* 1894, an English historian. He was educated at Oxford, where he came under Newman's influence and took deacon's orders. His faith suffered a revulsion, and he resigned his orders, stating his views with clearness and pathos in his "Nemesis of Faith," a work that cost him his fellowship. He published his "History of England from the fall of Wolsey to the defeat of the Spanish Armada" between 1856 and 1869. His narrative is vivid and picturesque in style, but marred by prejudice and inaccuracy. Of his other works the principal are "Short Studies on Great Subjects," "The Life and Letters of Erasmus," "The English Seamen of the 16th century," and his "Life of Carlyle."

FRY, ELIZABETH, *b.* 1780, near Norwich, *d.* 1845, was one of the Gurneys of Norwich, a well known, wealthy Quaker family. She managed a school for poor children when she was eighteen, and at twenty married and came to London. In 1813 a visit to Newgate prison disclosed to her the awful condition of the women and children in jail. Prison reform became the object of her life, and it is not too much to say that her work, her visits to prisons in England and abroad, and her enthusiastic power of enlisting supporters revolutionized prison life in England. She had eleven children, and was a preacher among the Society of Friends.

FUGLEMAN, a leader in military drill who stands in front, at the end of a file, to serve as a model to the others in their exercises; hence any one who sets an example for others to follow.

FULAHS, a Mohammedan people of the Soudan, who became a conquering people in the beginning of the 19th century. They founded great kingdoms in Nigeria, which are still well-organised states under British suzerainty. The Fulah Empire is also known as the Sokoto Empire.

FULLER, THOMAS, *b.* 1608, *d.* 1661; a writer of much charm both in divinity and history, a man of quaint wit, a divine of rare influence, and free from prejudice in an intolerant age. His best known work is his unfinished "British Worthies," a wonderful compilation of local history and anecdote. His own suggestion, "Here lies Fuller's earth," was not used as his epitaph.

FULLER'S EARTH is a clay containing a sufficient admixture of flinty matter to cause it to crumble instead of clogging when moistened. It has the property of absorbing grease or oil, and was formerly in great demand for "fulling," that is, cleansing and thickening woollen stuff. A useful source of supply is worked at Nutfield, near Redhill, in Surrey.

FULTON, ROBERT, b. 1765, *d.* 1815; an American engineer, was the first man to use steam in navigation with success. His first boats were employed in river navigation in America.

FUNCHAL, the capital and chief port of the island of Madeira, has a fair harbour. The town is a resort of invalids and convalescents; population 21,000.

FUNDS. See *Commercial Dictionary.*

FUNDY, BAY OF, runs northwards between the peninsula of Nova Scotia and the mainland of New Brunswick. Its length and narrowness render it liable to violent tides, which attain a height of over 60 feet.

FUNGI differ from ordinary plants in one marked characteristic. The latter

assimilate carbonic acid gas and reject oxygen, whilst fungi are incapable of absorbing carbonic acid gas. They live on organic substances, that is, they draw their nourishment from other plants and animals. All bacteria are fungi, and so too are many surface growths, like mildew. The yeast fungi, and the organisms that cause fermentation, have been enlisted into the service of men, whilst dry-rot, plant-rust, and potato disease, on the other hand, are a mischief to be fought against. Mushrooms and other edible fungi of the family called *agarics* are used for the table. Ringworm may be mentioned as an instance of a fungous growth on the human skin. (For poisonous fungi refer to "Poisonous Plants" in *Med. Dict.*)

FUNNY BONE. A blow upon the inner and under side of the elbow may give rise to a tingling sensation that seems to reach the little finger. It is the ulnar or elbow nerve that has been struck, and the curious sensation has led to this common misnomer.

FUR is an incrustation deposited upon the inside of boilers and of kettles, when hard water is used. Hard water often contains carbonate of lime in solution. The act of boiling liberates the acid that holds the lime in solution, and an incrustation of carbonate of lime is deposited upon the sides of the vessel. The use of sal-ammoniac in small quantities has been tried with success as a preventive to furring, but it injures the iron of the boiler.

FURCA, an Alpine Pass about 8,000 feet above sea level, leading over the watershed between the Reuss and the Rhone.

FURIES. See *Eumenides.*

FURLOUGH, holiday from service of non-commissioned officers and men in the British army. Discretion rests entirely with the commanding officer, and unless a man has a duly signed pass he is liable to be treated as a deserter. The name is also applied to the home-leaves of officers in the Indian army.

FURNESS is a peninsula between Morecambe Bay and the Irish Sea. The ruins of Furness Abbey rank with those of Fountains Abbey as among the best English examples of a Cistercian monastery. The iron and steel works of Barrow-in-Furness have developed greatly in recent years.

FURNITURE. The modern age of furniture began in England with the Restoration when veneering, marquetry, gilding, the use of mirrors, rococo work and lacquering were introduced. The celebrated furniture makers—Chippendale, Lock, Sheraton, Hepplewhite, and the brothers, James and Robert Adams—belong to the latter part of the 18th century.

FURNIVALL, FREDERICK JAMES, *b.* 1825, an enthusiastic and untiring student of the English Language and Literature. He is the founder of "The Early English Text Society," "The Chaucer Society," "The Ballad Society," "The New Shakespeare Society," "The Browning Society," and "The Shelley Society." His introduction to the "Leopold Shakespeare" is probably better known than any other, and deservedly so. He is a great "river man," and is the inventor of several improvements in rowing craft. He has further made himself known in London as an ardent worker in the clubs of working men and women.

FURS. The most valuable furs, as those of the bear, beaver, sable, seal, &c., come from the Arctic borders of America or Russia. The costliest of all furs is the Russian sable, and the darker the fur the more valuable it is. In London, Leipsic, and Nijni-Novgorod annual sales are held, when the undressed skins of the great fur-trading companies are bought by the manufacturers to be dressed for the market. There is a large trade done in furs from Australia and Africa, in opossum skins and black monkey respectively. Furs are steeped before dressing commences, then scraped to remove fat, and dried. They are then trodden under foot in a mixture of sawdust and butter to give them suppleness, then trodden in dry sawdust and finished off.

FUSEL OIL, or potato spirit, is an impure product of fermentation occurring in the distillation of whisky from potatoes, barley, &c. It has a peculiar and offensive smell, and is a violent intoxicant. It is said that its presence in spirit may be detected by the milky appearance of the liquid when mixed with water.

FUSILIER (Fr. *fusil*, a musket), a foot soldier formerly armed with a light musket. The term has now lost its original significance, but is retained as a title by certain regiments of foot.

FUZE, a train or connection by which an explosive mixture is fired. For blasting, and for such military purposes as occur in roadmaking or demolitions, a special fuze is made, consisting of charged tapes enclosed in gutta percha. For shells and projectiles, either a time fuze or a percussion fuze is used. The former acts at a certain interval of time after the moment of projection, the latter acts upon impact.

GABBATHA, "the Pavement," where Pilate delivered judgment on our Lord. It was a tesselated pavement outside the judgment hall, with a tribunal. See John xix, 13.

GABELLE, a French word denoting a tax on salt, first levied in France in 1286, and removed by the first parliament of the French Revolution in 1789. This tax was most unpopular, and its collection often caused local riots.

GABERLUNZIE, a Scottish beggar licensed to solicit alms within a certain area. Hence the term came to be applied to any mendicant. Edie Ochiltree is described by Scott in his preface to the "Antiquary" as a true specimen of the once respected class of wayfaring gaberlunzie.

GABIONS are cylindrical baskets without bottoms, used in fortification, to hold earth, as a protection against rifle fire. They are arranged in rows, and filled with the earth that has been thrown out of the trench. In this way an embankment of earth can be built up without any liability to slipping away or breaking under fire.

GABRIEL, "hero of God," one of the archangels, twice mentioned by name in the Bible, Daniel viii. 16, and St. Luke i. 19. In the latter passage is described the Annunciation of the birth of Jesus to the Virgin.

GADFLY is also known as the botfly or warble fly. There are several species, three of which are important. The *horse gadfly* lays its eggs on the horse; the horse licks them off and swallows them; the maggots develop in the intestine and finally are discharged from the body, when they burrow in the earth and change into a chrysalis. The *ox gadfly* is a more serious pest; it lays its eggs in the skin of the ox and the maggots burrow into the flesh producing troublesome sores; finally it leaves the ox, burrows in the earth, and changes into a chrysalis. Oxen when attacked by gadflies usually stampede and often die from exhaustion in consequence. The *sheep gadfly* enters the nostrils of sheep and lays its eggs in the nasal cavity. The maggots burrow into the nasal and jaw bones causing much irritation; when full fed they make their way to the surface and falling to the ground burrow in the earth to change into a chrysalis.

GADSHILL, three miles from Rochester, is the scene of Falstaff's encounter with the men in buckram, so humorously described by himself in one of the scenes of Shakespeare's Henry IV. Dickens, the novelist, lived here, at Gadshill Place, for the last ten years of his life.

GAEL, to be strictly correct, implies either the primitive Irish, the Scots of the Highlands or the Manx of the Isle of Man. These peoples originally came from Ireland, where they were known to the Romans under the name of Scotti. The name Gael means, however, in popular usage, the Highlander of Scotland.

GAELIC, the language spoken by the Gaels. There is an essential similarity between Erse Gaelic, the Gaelic of Scotland, and that of the Isle of Man. We may look upon them as dialects, differing from one another only in details. There is an extensive literature of Scottish Gaelic, dating as far back as the Danish invasions, when many Gaelic monks fled to quieter quarters for safety, and so saved their books. John Knox's Liturgy was the first book to be printed in Gaelic. The late Professor Blackie's collection of Gaelic poetry contained specimens of the work of a bard of Islay, William Livingstone, who died in 1870.

GAINSBOROUGH, THOMAS, *b.* 1727, *d.* 1788; one of the greatest portrait painters or landscape artists that England has produced. He was born at Sudbury, in Suffolk, studied art under an engraver in London, and removed thence to Bath, where he became famous as a portrait painter. The National Gallery contains his great portraits of Mrs. Siddons, and also his famous landscapes, "The Market Cart" and "The Watering Place."

GALATIA, an inland country of Asia Minor, is chiefly remarkable as the home of a Christian colony to whom St. Paul addressed the "Epistle to the Galatians." The aim of the epistle was to counteract the influence of the Judaisers, who had appeared in Galatia, seeking to enforce on Gentile Christians the duty of observing the Jewish Law.

GALAXY, or "Milky Way," is a luminous band that appears among the stars on a clear night, reaching overhead from horizon to horizon. In reality it consists of innumerable stars that are immensely distant from the earth, and so appear as a band of light across the heavens. The name galaxy is also gallantly used of a concourse of the fair sex.

GALEN, *b.* 131 A.D., a Greek physician, who long remained the supreme authority in medicine. In his travels he came to Rome, where he was appointed physician to the Emperor Marcus Aurelius. He wrote many books on medicine, and is looked upon as a really great anatomist. His theoretical work was injured by his reliance upon the idea of Hippocrates, of the four elements, and the four humours of the body that corresponded to them.

GALICIA, (1) a territory lying to the north of the Carpathians, bordered by Silesia, Poland, and Russia, and forming part of Austria. The inhabitants, numbering about six millions, are mostly of the Slavonic race; chief towns, Cracow and Lemberg. (2) A province in Spain, in a backward condition; the inhabitants are poor and in summer go forth from their homes to gather the vintage in other parts of Spain and in northern Portugal.

GALILEE, the most northerly of the three provinces into which Palestine, west of the Jordan, was divided in the time of our Lord. It was occupied by

a mixed race, who were regarded with contempt by the people of Judea. Its chief town was Tiberias, on the shores of the Lake of Tiberias, otherwise called the Sea of Galilee, or the Lake of Gennesaret. The margin of the lake, formerly studded with towns on its western shore, is now almost deserted.

GALILEO, *b.* at Pisa, 1564, *d.* 1642; takes a foremost place among scientific discoverers. Observing a sanctuary lamp swinging in Pisa cathedral, he compared its time of oscillation with the beat of his pulse, and found that the time of swinging was constant. This led him to experiment with the pendulum, and afterwards to embody his discoveries in the first astronomical clock. He held positions as Professor of Mathematics at Pisa, and later at Padua Universities. At the former place he expounded the then novel truth that falling bodies descend in vacuo at the same rate of velocity whatever their weight. He was the first to construct an astronomical telescope, and by its aid he convinced himself of the truth of the theory of Copernicus, that the sun, and not the earth, was the centre of our system of planets. He discovered the satellites of Jupiter, and was the first to notice the rotation of the sun by the movement of sun-spots. His publications were regarded as heretical by the authorities of the Roman Church, and he was forced by the Inquisition to deny his theories. He outlived this attack, and continued his researches in retreat, near Florence, to the end of his days.

GALL, FRANZ JOSEPH, *b.* 1758. *d.* 1828; a German physician and the founder of phrenology. Having convinced himself that men's powers and dispositions may be accurately inferred from the external formation of the skull, he began a course of lectures on the subject at Vienna. These attracted general attention and met with increasing success until, in 1802, they were interdicted by the Government as dangerous to religion. He then carried on the work at Paris with great *eclat*, until he was disabled by an apoplectic seizure.

GALLEON, a Spanish vessel of the 16th and 17th centuries, used for conveying to Spain the cargoes of gold and silver from the Spanish colonies in the Americas. They were three-decked, and built high and heavily fore and aft.

GALLEY, a sea-going boat that uses sails and is propelled by oars. The Greeks and Romans used vessels of this class both for merchant and war service. The rowing was done by mercenaries or slaves, who stood chained to their oars under the deck. Larger galleys, or galleasses, were used by the French until 1748, and convicts were used to man the oars. From this practice we get the phrase "galley-slave."

GALL and **GALL-FLY.** The Gall-fly belongs to a family of insects allied to the bees and wasps. These insects lay their eggs in various plants and so irritate the plant tissues, that a morbid growth of the plant occurs resulting in a gall. Within this gall the larva feeds and changes into a chrysalis. Galls are sometimes very complex in structure and in certain cases contain starch and other food materials deposited there by the plant apparently to feed the parasitic larva. This phenomenon is remarkable and very exceptional, as the host as a rule develops poisons to destroy the parasite instead of food to nourish it. The oak-apple and the red mossy growth on the rose are the two most familiar galls.

GALLIO was Roman proconsul in Greece at the time St. Paul visited Corinth. He refused to intermeddle in the dissensions among the Jews at the preaching of the apostle; for, as a Roman magistrate, he had no concern with religious questions. "Gallio," we read (Acts xviii. 17), "cared for none of these things," and so he is regarded as typical of men who about religious matters are indifferent.

GALLOWAY, the south-western corner of Scotland, includes the county of Wigtown and a part of Kirkcudbright. It is a pastoral district, and has famous breeds of ponies and of black horuless cattle. Its climate is exceeding mild. Stranraer, at the head of Loch Ryan, is a busy port with a considerable Irish trade.

GALLY, MERRITT, *b.* 1838, an American inventor who has specialised in typefounding, in telephonic instruments, and in systems of pneumatic action in piano-playing instruments such as the pianola and the æolian.

GALTON, FRANCIS, *b.* 1822, an English statistician, anthropologist, and traveller. He has distinguished himself by the remarkable work he has done in anthropometry or measurements of the human body. (See *Anthropometry.*) For some years he conducted a system of anthropometrical records at South Kensington Museum, compiled from measurements taken from visitors to the museum, who were rewarded by a copy of the details of the measurements taken.

GALVANI, LUIGI, *b.* at Bologna, 1737, *d.* 1798; became professor of anatomy at Bologna University. His name is connected with his discoveries in animal electricity, and it may be said that the scientific treatment of electrical currents dates from his time; hence we find his memory preserved in the names *Galvanic* cell, battery, and current.

GALVANISED IRON is not in any way electrically treated, as the name might seem to imply. It is simply iron dipped in molten zinc. The zinc forms with the iron an alloy which resists rust.

GALVANISM, a term, now going out of use, denoting a branch of the science of electricity. The name of the founder of modern discoveries in current electricity, Luigi Galvani (1737–1798), is preserved in this term, as well as in the better known "galvanic battery."

GAMA, VASCO DA, *b.* 1469, *d.* 1525; was the foremost of Portuguese navigators. In 1497 he set out from Lisbon with three ships to attempt to round the Cape of Good Hope. He succeeded in reaching India, and in two years was back again in Lisbon. The Portuguese made a settlement at Calicut in India, and Da Gama was sent out, on two occasions, with a fleet to support the governors, who were subjected to much annoyance from the native princes.

GAMALIEL, the grandson of Hillel, a reformer of the Pharisees, was himself a famous and liberal-minded Pharisee, and "teacher of the law." Amongst his pupils was St. Paul who, we are told, "sat at the feet of Gamaliel" (Acts xxii. 3).

GAMBETTA, LEON, *b.* at Cahors, 1838, *d.* 1882; a French statesman and patriot. On the surrender of Napoleon III. at Sedan, 1870, he took a leading part in proclaiming a Republic. He escaped from Paris in a balloon during its siege by the Germans, and with wonderful energy raised one army after another to oppose the enemy. To him, in no small measure, France is indebted for the establishment of a Republican government on a sound, popular basis. Though Gambetta did not actually become President, he was looked upon as the foremost man in France, when he met his death through a pistol wound in the hand.

GAMBIA. Refer to *Index.*

GAMBLING, or **GAMING.** Refer to *Index.*

GAMBOGE is imported into Britain chiefly from Burma and Siam. It is a gum resin obtained from the bark of the gamboge-tree, and is used both as a colouring matter and in medicine.

GANDA or **BARGANDA,** a people of some importance who occupy the country to the north-west of Lake Victoria. See *Uganda.*

GANGES, THE, is the sacred river of the Hindoos and the great waterway of northern India. It rises, at a height of 13,800 feet, in the Himalayas, emerging from an ice cave. At Allahabad it receives its sister stream, the Jumna, and the tongue of land at their junction is regarded as a sacred place. It passes the sacred city Benares, and at a point 200 miles from the sea branches out and forms a delta. The great Brahmaputra joins the main channel of the delta, the two streams forming a broad estuary. The Hugli, however, or western channel, is the chief course for navigation, and on it stands Calcutta. The total length of the Ganges exceeds 1,500 miles. Thousands of devotees visit the sacred cities on its banks each year; for to bathe in its waters is in their belief to be cleansed from sin, and to die on its banks is the desire of the devout Hindoo.

GANNET, a web-footed sea-fowl, of the same family as the pelican and cormorant. It is well known to visitors to the Bass Rock in the Firth of Forth as the Solan Goose. It chooses as its breeding place the ledges of some sea-beaten rock. It feeds on fish and goes out to sea for considerable distances in search of food. Pilchard fishers off Cornwall are said to be able to locate the shoals by the presence of the birds. The Gannet makes a nest of sea-weed and grasses, and lays one egg, on which it sits very closely. The bird has often to be removed from the egg by the rope-climbers who go in quest of eggs and young birds.

GANYMEDE, a beautiful Trojan boy, who, according to Greek fable, was carried by Jove's messenger, the eagle, to the top of Olympus, where he became cup-bearer to the king of the gods.

GAP OF DUNLOE, a pass in Kerry, near Killarney, noted for its romantic beauty.

GAPON, FATHER, a Russian priest and demagogue, who won great influence over the Russian people. He took a prominent part in the St. Petersburg strikes at the close of the Russo-Japanese War (1905), and became a refugee in Switzerland, where he wrote the story of his life. (See *Strand Magazine* 1905–6).

GARCIA, MANUEL, *b.* 1805, *d.* 1906, a great teacher of singing, son of a famous Spanish operatic tenor, was fêted in London in 1905 on attaining his hundredth birthday, and presented with his portrait, painted by Sargeant. He taught in the Conservatoire at Paris until 1850, and then removed to London. He has trained many of the foremost singers of his time, has written on voice production, and was the first to use the laryngoscope in voice-training.

GARDEN CITIES. The Garden City Association was founded in 1899, and four years later a company, "Garden City, Ltd.," purchased a site near Hitchin, and commenced the construction of roads, sewerage works, waterworks, &c. Accommodation and facilities are offered both for large works and small holders, every residence is to have its garden, open spaces are to be preserved, and the town is to be surrounded by an agricultural belt. The Company has a capital of

£300,000, and it is expected that the ground rents based upon a scale depending on the progress of the city, will obviate the need of rates. To a certain extent the movement owes its origin to the model villages of Cadbury's and Lever's at Bournville, near Birmingham, and at Port Sunlight, near Birkenhead.

GARDINER, SAMUEL RAWSON, *b.* 1829, *d.* 1902, a reliable English historian. He devoted himself particularly to the period of the early Stuarts and the Commonwealth, and his extensive works on this difficult period show a remarkable power of painstaking research allied with a gift of unfailing lucidity in style. His great work consists of seventeen volumes.

GARDINER, STEPHEN, *b.* about 1485, *d.* 1555; became secretary to Cardinal Wolsey, and was intrusted by Henry VIII. with the task of furthering at Rome his designs for the divorce from Catharine of Aragon. In 1531 he became bishop of Winchester, and supported the royal supremacy, in Church as well as State. On account of his opposition to Cranmer's reforming measures, in the reign of Edward VI., he was deposed and imprisoned. Queen Mary restored him to his see, and he is said to have been responsible for much of the persecution which the Protestants suffered in Mary's reign.

GARFIELD, JAMES ABRAM, President of the United States, *b.* 1831, assassinated 1881. He was one of four children of a widowed mother who succeeded without assistance in bringing them up in the loneliness of a cabin in the woods of Ohio. By great exertion and pluck the boy James educated himself, and assisted in maintaining the home. In 1856 he took his degree at a College in Massachusetts. On the outbreak of Civil War he commanded the Ohio volunteers, and was made Major-General for service and bravery. He became a senator of the United States in 1880, and was elected President in 1881. A disappointed office seeker shot him shortly after his inauguration, and he died after lingering for two months.

GARGANTUA, a giant of immense size, well known in the legends of southern France. If he drank at a river, he would swallow oxen and drovers who were crossing the ford. Rabelais used this character, and embellished the traditions that were abroad, in his great burlesque, "The Chronicles of the Grand and Enormous Giant Gargantua," published 1532.

GARGOYLES, projecting spouts that carry off the water from the roofs of Gothic buildings. They form a noticeable feature of mediæval churches, particularly because of the extraordinary devices and ingenuity displayed in rendering them grotesque. Griffins, open-mouthed animals and curious-looking human figures, were carved in stone to serve as gargoyles.

GARIBALDI, GUISEPPE, *b.* at Nice, 1807, *d.* 1882; a leader of irregular troops, an Italian patriot, and a central figure in the achievement of Italian independence and the union of Italy. His early life was one of adventure, during which he became famous as a leader, on land and sea, in South America. He returned to Italy, and led a troop of "red shirts" in the struggle of the revolutionary Italians. In 1854 he was given a command under Victor Emmanuel, king of Sardinia, and he succeeded in liberating Sicily and Naples. On the coronation of Victor Emmanuel as king of Italy he declined reward, and retired to his farm on the island of Caprera. The generosity of English friends enabled him to become owner of the island, whither he had always returned in the intervals of war, and there he died. The figure of the red-shirted peasant patriot is cherished in the memory of all lovers of liberty.

GARNETS are crystals found usually in metamorphic rocks, or in loose sand that has been worn away from the rocks. The precious stone, the garnet of the jeweller, is found in sand and old river beds in India, Ceylon, Brazil, and Scotland. The best are red and transparent. The carbuncle is a blood-red garnet cut in a particular way.

GARONNE, the chief river of South-western France, rises in Maladetta, the highest peak of the Pyrenees. It passes Toulouse, where it is connected by the Canal du Midi with the Mediterranean, and near its mouth stands Bordeaux, a port that can be reached by ocean steamers. Twenty miles below Bordeaux it receives the waters of the Dordogne, and then it widens into an estuary, 50 miles long.

GARRICK, DAVID, *b.* at Hereford, 1717, *d.* 1779; a celebrated actor, who was for a time a pupil of Dr. Samuel Johnson, with whom he set off to London to study law. In 1741 he took to the stage, and made a great impression by his Richard III. In six years he became joint manager of Drury Lane Theatre. He infused an air of reality into all his acting, and aimed at making the stage the counterpart of nature. His versatility enabled him to make a name in farce, comedy, and tragedy.

GARROTTE, a method of execution formerly practised in Spain. A cord, fastened about a post, was passed round the neck of a man seated on a chair, and then twisted tight by means of a stick, until strangulation ensued. In 1862–3, a method of assault adopted by robbers received the name of garrotting. Approached from behind, the victim was half strangled until the robbery was effected. Flogging was effective in stamping out this offence.

GARTER, ORDER OF THE. Refer to *Index.*

GAS, COAL is obtained by the distillation of coal in large chambers or retorts. The distillation proceeds for about four hours under a great heat, and the products are broadly, coke, gas, and coal-tar. The gas is then cooled, washed with water, and treated with slaked lime to remove impurities. The large cylindrical vessels so prominent in all gas-works are the *gas holders*, from which the supply issues to the consumers. These holders rise and sink in a tank of water by their own weight and the upward pressure of the gas inside. It will be observed that this movement is made on pulleys placed upon the uprights that support the gas holder. The gas is conveyed from the holder by *mains*, and from the mains to the consumer by *service pipes*. At the lowest point in the level of the main a trap hole takes off any deposit of water that may form in the pipes. Meters are used by the consumer to measure the gas supplied, and they include the varieties known as the dry meters, wet meters, and, recently, penny-in-the-slot meters. It is important for the consumer to regulate the supply of gas to the burner, and this can always be done by a second tap or governor. For heating purposes, coal gas is used mixed with air. It produces a smokeless blue flame of high temperature, but cooking stoves ought to be provided with chimneys to carry off fumes. The idea of burning gas probably arose from the inflammable streams of gas emitted from coal beds in the mining districts. The Royal Society published a letter from Dr. Clayton, Dean of Kildare, describing experiments with coal-gas carried out about 1690. In 1792 a house and office were lit by gas at Redruth, Cornwall, and the owner, William Murdoch, lit up Boulton and Watt's factory at Birmingham in 1798. The Chartered Gas Company was established in 1810, and from that date gas gradually made way as the chief means of lighting streets, shops, and houses.

GASCOIGNE, SIR WILLIAM, *b.* 1350, *d.* 1419; a fearless judge, who refused to obey an order from the king (Henry IV.) to sentence Archbishop Scrope and Earl Mowbray for their connection with a rebellion in the north of England in 1405. There is no historical foundation for the stories of his strict dealing with the riotous Prince Hal, and certainly Gascoigne did not retain the office of chief-justice after the prince's accession as Henry V.

GASCONS. The people of Gascony, the land lying between the Garonne, the Pyrenees, and the Bay of Biscay. The Gascons were a brave, spirited people, but so addicted to boasting that excessive bragging and bravado goes by the name of *gasconade.*

GAS-ENGINES, take their motive power from the explosion within the motor-cylinder of a compressed mixture of coal gas and air. This form of engine, invented in 1860 by Lenoir, was improved by Otto in 1866 and again in 1876, and became a serious rival of the boiler engine for driving light machinery. In 1889, Mond invented a process by which a cheap gas might be produced from slack and refuse coal. This "producer-gas" has made the employment of powerful gas-engines possible from the point of view of economy.

GASKELL, MRS., *b.* at Chelsea, 1810, *d.* 1865, a novelist who has graphically described the life and trials of "the factory hands" of Lancashire. Among her best works are "Mary Barton," "Ruth," and "Cranford."

GATESHEAD, a flourishing town of Durham, situated on the south bank of the Tyne and joined to Newcastle by three bridges, the hydraulic swing bridge taking the place of an old Roman bridge. The N.E.R. Company has a locomotive depôt and workshops here. Besides locomotives, Gateshead manufactures anchors and chain cables, and has large chemical and glass works. (For population, etc., see p. 902.)

GATLING, RICHARD JORDAN, *b.* 1818, in North Carolina, is famous for mechanical inventions. Among these are agricultural machines for sowing and ploughing; but his name is better known, perhaps, in connection with his "Gatling gun," with its ten barrels capable of firing 1,200 shots a minute.

GAUCHOS, the herdsmen of the plains of South America. They are skilled in the use of the lasso and the bola. With the lasso they can capture any animal they please in a herd of horses or oxen. With the bola, which consists of two lead balls, connected by a leather thong, they can generally bring to the ground any bird or beast they wish to secure.

GAUL or **GALLIA** was the Roman Province that included the territory now called France. The adjective Gallic is still applied to the French people, and it carries with it a suggestion of national quickness of wit and liveliness of disposition.

GAULT is a form of clay occurring in the lowest stratum of the upper cretaceous rocks. It is blue in colour and marine in origin.

GAUTAMA, a name by which Buddha, the founder of the great Buddhist religion, is sometimes known.

GAUTIER, THÉOPHILE, *b.* 1811, *d.* 1872, a French prose writer of great charm and influence. He was an admirer of Victor Hugo, and his voluminous writings include romances, biographies, literary criticism, archæological studies, works on the history of movements in art, and even a *Paradis des Chats*, for he was devoted to cats.

GAUZE, a light woven fabric of silk used for veils. Wire gauze is used for confining flames, as in the safety lamp, and the mantles of incandescent burners are made of specially treated gauze.

GAVELKIND, a usage universal in England before the Conquest, by which if a man died intestate his lands passed equally to all his sons, or failing issue to all his brothers. The custom survives in Kent where, unless property has been "disgavelled" by special Act of Parliament, the law assumes that gavelkind obtains.

GAY, JOHN, *b.* at Barnstaple, 1685, *d.* 1732; a popular poet, best known for his fables. His greatest literary success was "The Beggars' Opera," and "Black-eyed Susan" was his most popular ballad.

GAZELLE, a species of antelope of light and graceful form. The horns of the male are ringed, and curve slightly. Herds of these animals are found in the borders of the northern Sahara. Dogs are useless in pursuit of them, because of their great swiftness; they are often trapped, however, near their drinking places. Tame gazelles are kept as pets in Eastern harems, and their gentleness is a general subject of reference in Persian poetry.

GAZETTE, LONDON, an official organ of the Government, founded in 1665, and published twice a week. It is the medium of legal and official announcements, and of intimations of a private character necessary by law, particularly of matters concerning the interests of creditors. To be put in the gazette is a method of expressing bankruptcy.

GEDDES, JENNY, who kept a vegetable stall in High Street, Edinburgh, started the riot in St. Giles' Church, Edinburgh, in 1637, by flinging a stool at the head of the Dean, who was beginning to read the collect. Archbishop Laud had attempted to introduce a new service book in Scottish churches, and the action of Jenny Geddes represents the spirit in which the Scots received this attempt to interfere with their religion.

GEHENNA, or the valley of Hinnom, is a gorge to the south-west of Jerusalem, where the kings of Judah set up the idolatrous worship of Moloch. The shameful practice of sacrificing children was included in the rites of this idolatry. On the restoration of the old faith under Josiah, the valley was made an abomination, and became the cesspool of Jerusalem. In the New Testament it is referred to as a type of hell.

GELATIN. See *Med. Dict.*

GELLERT, the faithful hound of Prince Llewellyn, that (according to Welsh tradition) was left in charge of an infant, slew a wolf in its defence, but was himself slain by his master under the mistaken belief that he had killed the child.

GEMARA, the exposition of the Mishna in the Talmud (which see).

GEMINI, "Twins," the name of the constellation of Castor and Pollux, which forms the third of the signs of the Zodiac.

GEMMI PASS, a pass in the Bernese Alps leading from Leuk in the Rhone Valley to the Bernese Oberland; height 7,641 feet.

GEMS, precious stones cut and polished to be used as jewels and ornaments. Strictly the term denotes only hard stones that have been engraved as seals or cameos, the former being sunk as dies, the latter cut in relief. The more precious stones, however, such as the diamond, ruby, emerald, and sapphire are cut in facets to display their brilliance. Paste gems are made without much difficulty, now-a-days, by taking an impression of a stone in "paste," and melting into the mould a piece of glass of the required colour and size.

GENERAL ASSEMBLY. The Established Church of Scotland, the United Free Church of Scotland, and the Free Church of Scotland each hold in May a general assembly extending over a fortnight. Delegates from each presbytery, and in the case of the Established Church, from the universities and royal boroughs, are summoned. The assemblies form a court of appeal and an advisory court to the presbyteries, they also legislate for their several churches. New legislative measures must, however, be submitted to the local presbyteries and receive a majority of assents before the Assembly can proceed to pass them.

GENESIS, a Greek word meaning "origin," is the title of the first book of the Pentateuch. It deals (1) with the Creation and God's covenant with Adam, (2) with the Flood and God's covenant with Noah, (3) with the separation of the chosen people and God's covenant with Abraham. The Sabbath, the Rainbow, and the rite of Circumcision were the signs of the three covenants. The history of the chosen race is related as far as the death of the patriarch Joseph.

GENEVA, capital of the Swiss canton of the same name, became the head of an independent republic in 1527, and afterwards adopted the principles of the Reformation. Under Calvin it became a centre of the Protestant movement. The Rhone passes through the town, clear as glass, after leaving its sediment behind in the Lake of Geneva. Geneva is famous for the making of clocks, watches and chronometers, jewels, and scientific instruments; population 75,000.

GENEVA CONVENTION, THE, (1864), is an international agreement regarding the treatment of the wounded in war, and the amelioration of the evils of warfare. It secures immunity from attack for all engaged in tending the sick and suffering.

GENEVIÉVE, SAINT, *b.* near Paris, 424, the patron saint of that city. She took the veil at the age of 15, and became famed for her devoted labours on behalf of the poor. By her prayers she was thought to have saved Paris from attack by Attila and his Huns. She raised a church over the tomb of St. Denis, and was herself buried there.

GENGHIS KHAN. See *Jenghiz Khan.*

GENII, a Latin word originally signifying the spirits that existed within every created thing; trees, and places, as well as human beings and states, possessing their own genii. The genii of the "Arabian Nights" are eastern demons, whose name Jinn was translated into mediæval Latin by the word genii.

GENOA, an Italian city and seaport, which stands at the head of the Bay of Genoa in Northern Italy. It possesses a fine commercial harbour and naval station, and the view of the town from the sea is wonderfully impressive, terrace rising above terrace amid groves of orange trees and olives. The town itself is inconvenient, the streets are narrow and gloomy, and the thoroughfares are steep. A great shipping business is carried on in the exportation of wine, oil, silks, macaroni and marble, and goods to the value of £20,000,000 pass through the port annually. It is a great port of emigration for South America. In the Middle Ages Genoa, like many of the Italian cities, was a Republic. It was the birth-place of Columbus.

GENRE-PAINTING. Refer to *Index.*

GENSERIC, became king of the Vandal kingdom in Spain, 419, but in that year the Vandals were driven out by the Visi-Goths and crossed into Africa. Genseric took possession of all the Roman provinces in Northern Africa, capturing Carthage in 439, and in 455 dared to sail up the Tiber and pillage Rome. (See *Vandals.*)

GENTLEMEN-AT-ARMS, the king's body-guard, founded by Henry VIII., attends at drawing-rooms, levées, courts, coronations, &c. Appointments to the body-guard are made by the sovereign, on the recommendation of the commander-in-chief. The captain receives £1,200 a year.

GEOFFREY OF ANJOU, son of Count Fulk of Anjou, married the daughter of Henry I. of England, and founded the Angevin House of England, his son Henry II. being the first Angevin or Plantagenet king.

GEOFFREY OF MONMOUTH, a famous English chronicler, who lived during the first half of the 12th century. His great "Chronicle of the Britons" is the quarry from which the Arthurian legends, the story of Cymbeline and of King Lear and the prophecies of Merlin, were taken. So far from being a history, however, the Chronicle is a highly imaginative romance, which traces the descent of the Britons to Brut, the son of Æneas, and so connects them with the Greek heroes.

GEOGRAPHY is a science dealing with the description of the earth. If the earth itself, without reference to man and his works, be the subject of investigation, we have the branch known as *Physical Geography*, a branch which also investigates the causes of the phenomena of night and day, of the varying seasons, of tides, of eclipses, of the phases of the moon and the motions of the planets. On the other hand, *Political Geography* deals with the distribution of peoples and races over the earth; it treats of their methods of government, their corporate life in cities, their sources of wealth, and their commerce. The phrase *Descriptive Geography* may be applied either to Physical or Political geography, and merely implies the statement of geographical facts.

GEOLOGY is the science that investigates the nature and formation of the earth's crust. It aims at explaining the changes that have taken place while the earth has been gradually assuming its present surface, and it treats of the changes that are now in course of operation.

GEOMETRY is a branch of mathematics dealing with the properties of space. So long as geometry deals with lines and figures on surfaces, whether flat or spherical, it is called geometry of two dimensions. Thus the figure of a square has length and breadth, but no third dimension or thickness. Geometry of three dimensions introduces the idea of solidity, or of more surfaces than one; thus a pyramid has height as well as length and breadth. The general truths of geometry were collected and arranged (about 300 B.C.), by Euclid, a Greek mathematician, and his *Elements of Geometry* is still a text book on this subject.

GEORGE, HENRY, *b.* 1839, at Philadelphia, a prominent land reformer, came to England in 1881, was arrested in Ireland under Mr. Forster's Coercion Act, but acquitted. His chief work, "Progress and Poverty," published in America, 1879, had an enormous sale. Other works were

on the Irish Land Question, and Protection and Free Trade.

GEORGE I., *b.* in Hanover, 1660, king of England, 1714–1727; succeeded Queen Anne in accordance with the terms of the Act of Settlement; married Princess Dorothea of Zell, from whom he was divorced; favoured the Whig party, who were opposed to the restoration of the Stuart dynasty; saw the failure of the rebellion of 1715 in favour of the "Old Pretender," and in the latter half of his reign entrusted sole power to Sir Robert Walpole.

GEORGE II., *b.* in Hanover, 1683, king of England, 1728–1760; married Caroline of Anspach, a woman of sterling character: his chief ministers were Walpole and the elder Pitt; he fought with courage at Dettingen, 1743; his son, the Duke of Cumberland, defeated the "Young Pretender" at Culloden, 1746; and in the closing years of his reign Clive won his great victory at Plassy (1757), in India, and Wolfe took Quebec (1759), thus founding the British empire in India and Canada.

GEORGE III, *b.* in London, 1738, king of England, 1760–1820, was received with acclamation, and won respect by his honesty, straight-forwardness, and affability; married Charlotte of Mecklenburg Strelitz; endangered his popularity by taking too much power into his own hands, took Lord North as his Prime Minister (1770–1782), and during this period lost the American Colonies, which won their independence and became the United States of America. Meanwhile John Wilkes had won the right of the press to report and comment upon the conduct of the government and of Parliamentary business. The younger Pitt was in power, 1783–1801, and under him the king regained popularity; the French Revolution broke out in 1789, Trafalgar was won in 1805, and Waterloo in 1815; the last years of the king's life were clouded by mental trouble, his eldest son, George, acting as Regent.

GEORGE IV., *b.* in London, 1762, *d.* 1830; Prince Regent from 1810, and king of England, 1820–1830. He married his cousin Caroline of Brunswick, from whom, after the birth of their daughter, he lived apart. He was utterly selfish, and offended the nation by his undutiful conduct towards his father and his neglect of his wife. The chief event of his reign was the Emancipation of the Catholics, 1829.

GEORGE, PRINCE OF WALES, *b.* 1865, second son of King Edward VII., became heir-apparent to the English throne on the death of his brother, the Duke of Clarence, in 1892. He married in 1893, his second cousin, Princess Mary ("May") of Teck. With the princess he visited the British Colonies, in 1901, and made a long tour in India, in 1905-6.

GEORGE I., KING OF THE HELLENES, *b.* 1845, son of Christian IX. of Denmark, brother to Haakon VII., king of Norway, and of Alexandra, Queen of England, accepted the Greek throne in 1867.

GEORGE, SAINT, the hero of a legendary adventure with a dragon, whereby he rescued a captive lady, was in mediæval times the patron saint of chivalry in Europe. He was, in particular, the national saint of England, of Aragon, and of Portugal. His history is most obscure. Probably, he was a Cappadocian of noble parentage, who became a distinguished soldier, and was put to death for his faith during the persecutions of Diocletian in 303 A.D. Another George of Cappadocia, a fraudulent army contractor, has sometimes been confused with St. George.

GEORGIA. (1) One of the southern states of the United States of America, on the Atlantic sea-board. It is one of the cotton-growing states, and its chief port is Savannah. It was founded as a colony in 1733 by a company of benevolent gentlemen, as a refuge for the destitute, and named after George II. (2) A province of Russian Trans-Caucasia, lying in the mountainous district between the Black Sea and the Caspian. The people belong to the fair or Caucasian race, and are remarkable for their beauty. Long subjection under Mohammedan rule has depressed the spirit of the people, but they have maintained their Christianity. Since 1829 Georgia has been a Russian province, and has greatly improved under the more generous treatment of its new rulers.

GERMAN OCEAN. See *North Sea.*

GERMS. See *Bacteria* in *Med. Dict.*

GERMANS are a people of the Teutonic stock of the Aryan family of nations. The Germans of the low lying lands about the river mouths are known as Low Germans, and those of the hill country to the south are known as High Germans. The Angles and Saxons who invaded and peopled Great Britain in the 6th century were of the Low German stock. The present German Empire represents the High German branch, and since Luther's time, High German, the language of his translation of the Bible, has been the national language of the country. The Germans have taken a foremost place in every department of art, philosophy, and political activity. Goethe ranks amongst the greatest of poets; Kant and Hegel have done more than any other philosopher since Plato and Aristotle to systematize human thought and knowledge; Pestalozzi, Fröbel, and Herbart have been the great pioneers in modern education and child-study. In history and Biblical criticism, German scholars have shown infinite pains, and have had the courage to subject sacred history to the same keen scrutiny that they apply to secular history. Humboldt instituted scientific observation in travel, Grimm made a science of the comparative study of languages, and we find German authorities prominent in all branches of research in medicine, archæology, chemistry, physics, and classical learning. In music, Germany stands foremost with the great composers Bach, Handel, Mozart, Beethoven, Schubert, Mendelssohn, and Wagner. This success in the domain of mental activity is accompanied by achievements equally great in the political and commercial world. Their success is chiefly due to thoroughness and a capacity for taking infinite pains under the guidance of strong common sense and far-sightedness.

GERMAN SILVER, an alloy of copper, nickel, and zinc, is largely used in the manufacture of spoons and forks, teapots, salvers, and similar articles. It is readily attacked by vinegar and acids, and for that reason forks and spoons made of it are usually plated with silver.

GERMANY. The German Empire was formed in 1871, after the Franco-German War, by the confederation of 26 States, many of which had already been united as the North German Confederation. The government is vested in the Emperor, a Federal Council, or Bundesrath, and a representative parliament called the Reichstag. Prussia comprises the greater part of the Empire, and the king of Prussia is the Emperor. Of the other states, Bavaria, Saxony, and Wurtemburg are kingdoms; six are Grand Duchies; five are Duchies; seven are principalities; Lübeck, Bremen, and Hamburg are free towns; and Alsace-Lorraine is an imperial province. Germany is becoming more and more a manufacturing country. The mineral produce is over £65,000,000 annually, as against £122,000,000 produced in England. Nine-tenths of the population are supported by German produce. Exports to Great Britain stand in the following order: sugar, woollens, timber, iron goods, glass, cottons, and corn. Germany now ranks second to our own country in shipping, her advance being chiefly noteworthy in the excellent services of fast mail steamers that run to America and the East. Education is more highly developed and better organised there than in any other country except Switzerland.

GERONTIUS, DREAM OF, a poem by Cardinal Newman, descriptive of the passage of the soul after death to Paradise. The poem has been set to music by Sir Edward Elgar in a work which occupies perhaps the highest place amongst the works of living English composers.

GERRYMANDERING, a word compounded of the name of "Gerry," a governor of Massachusetts (1810), who so arranged the electoral district of that State, as to promote the interests of his party, and "Salamander" which the electoral Map of Massachusetts resembled. To *gerrymander* is to manipulate electoral divisions, as Gerry did, for party purposes.

GESTATION, or pregnancy, is the act of carrying the young in the womb previous to giving birth. The period varies with different animals from 18 days to 600. In the case of man it is on an average 280 days.

GESSLER, HERMANN, a steward of the Emperor of the Germans, persecuted the peasants of the canton of Uri, in Switzerland. He was shot by the patriot William Tell, who is said to have subsequently secured the independence of Switzerland.

GETHSEMANE, a garden on the western slope of the Mount of Olives, about half a mile from Jerusalem, where our Saviour used to resort with his disciples. He passed there the night of His Agony, before the day of His Crucifixion.

GETTYSBURG, a small town in Pennsylvania, where General Meade defeated General Lee, in 1863, after a fierce struggle, in the American Civil War. The fight lasted three days, and there were about 80,000 men engaged on each side.

GEYSERS are to be met with in Iceland, in the Yellowstone region of North America, and in New Zealand, where they formed the once famous pink terraces. They are intermittent fountains of steam and hot water. The Yellowstone geysers are wonderful and numerous, some reaching a height of 200 feet. The geysers of Iceland are near Mount Hecla. The two chief ones are known as the "Great Geyser" and the "Churn." In each case the orifice is built around by a deposit or coating of siliceous matter, and a discharge may be aroused by throwing in turf to choke the opening. Geysers occur near the seat of volcanic action. The cause of the phenomena is believed to be the sudden generation of steam in the lower part of the cavities with which the tube of the geyser is connected.

GHATS, or **GHAUTS,** are two ranges of mountains, running parallel to the east and west coasts of India, and meeting in the south. They are known as the Eastern and Western Ghats, the latter being the loftier and more continuous. The plateau between the two ranges is named the Deccan. The rivers crossing the Deccan run, in general, from the western Ghats through the gaps of the eastern into the Bay of Bengal. The name "Ghats" is also applied to the steps leading to the Ganges for the bathers who come to bathe in the sacred river.

GHEE, or **GHI,** butter prepared from cow's or buffalo's milk clarified by boiling, and so converted into a thick oil. It is much used in the East Indies by the natives in cooking and for sweetmeats.

GHETTO, or Jews' Quarter, an enclosure in Rome formerly set apart for the Jews, who were forbidden to appear outside unless the men wore a yellow hat and the women a yellow veil. They were crowded together and subjected to oppressive regulations and great persecutions. The limits and restrictions have now been abolished. The name is also applied to the Jews' quarter in other cities.

GHURKAS, or **GOORKAS,** a race of thick-set, sturdy people who live in the kingdom of Nepal, on the slopes of the Himalayas. They supply a most useful part of the Anglo-Indian Army, ten regiments being recruited from their mountain villages. The Ghurka troops have often proved their prowess and loyalty in our service.

GIANT'S CAUSEWAY, near Fair Head and Portrush, in County Antrim, Ireland, is one of a number of local basaltic rock formations. The rocks are grouped in hexagonal columns. A similar formation exists in Fingal's cave in Scotland. In both cases the name is connected with the Celtic legends of the giant Finn.

GIBBET, a gallows on which notorious criminals were hanged, and on which their bodies remained as a warning to evil doers. The last instance of the practice was in 1839.

GIBBON is the smallest and most monkey-like of the man-like apes. It is noteworthy, however, as being the only ape which habitually walks and runs in the erect position. The arms are so long that the fingers touch the ground when the ape is standing upright. It lives mainly amongst the tree tops and is found in Eastern Asia and the Malay Archipelago.

GIBBON, EDWARD, *b.* at Putney, 1737, *d.* 1794; a celebrated English historian, author of the "Decline and Fall of the Roman Empire." He was sent to Lausanne at the age of seventeen, to read under a Calvinistic minister, and to be reclaimed from the influence of Roman Catholicism. He read deeply the bulk of French Literature and the Latin Classics, but in losing his faith as a Roman Catholic became more of a sceptic than a Protestant. Between 1758 and 1783 he lived in England, and had a seat in the House of Commons. During this time he issued three volumes of his great work, which he afterwards completed in six volumes while residing at Lausanne.

GIBBONS, GRINLING, *b.* 1648, *d.* 1721; a great carver in wood, was born in Rotterdam, and was employed in the work of decorating the choir of the chapel at Windsor. He executed much of the wood carving in the choir of St. Paul's Cathedral, and some of his best work is found at Chatsworth and Petworth. Gibbons was discovered to the world by Evelyn, the diarist, who found him at work in a London workshop upon a copy of the Crucifixion.

GIBBONS, ORLANDO, *b.* 1583, *d.* 1625; a great English master of Church music. He was organist of the Chapel Royal, and a composer of anthems, madrigals, and instrumental music of rare quality. The Civil War and the reign of Puritanism made an end of the old English church music, and Gibbons stands as the last and best of its representatives.

GIBRALTAR, a British fortress on the Spanish mainland, at the entrance to the Mediterranean. "The Rock," as it is called, is three miles in length, ¾ mile broad and 1,439 feet high, and it is connected by a low isthmus with the Spanish territory. It was taken by Sir George Rooke in 1704, and has withstood many attempts at recapture by the Spaniards and French. The siege of 1779–1783 lasted over three years. The town stands under the rock on the north-west side. Gibraltar is a free port, and its revenues from port dues, customs, and rent of crown lands exceed the expenditure by £20,000. A new naval harbour with three graving docks capable of taking the largest vessels is in course of construction at a cost of £4,000,000. There are 6,000 troops stationed on the rock, and the town has a population of 20,000. As a coaling station, Gibraltar is of the utmost importance, and it is confidently felt that it is impregnable. The mean distance across the straits is 14 miles.

GIBSON, JOHN, R.A., sculptor, *b.* 1790, *d.* 1866. He began his career as a cabinet maker in Liverpool, found patrons, and, in 1817, went to Rome, where he entered the school of Canova. He seldom afterwards left Rome, where he developed a classic purity of style. His most successful statues are those of Peel, George Stephenson, and Queen Victoria.

GIDEON, the greatest of the Judges of Israel, aroused his country from idolatry and lethargy, and drove out the Amalekites and Midianites. See Judges vi.-viii.

GIFFORD LECTURES, THE. Lord Gifford, a Scottish Judge, left by his will in 1887 the sum of £80,000 among the universities of Scotland to establish lectureships in natural theology. He directed that the lecturers should not be subjected to any dogmatic test.

GILBERT, SIR HUMPHREY, *b.* at Dartmouth, 1539, *d.* at sea, 1583; an English navigator, educated at Eton and Oxford. He attempted the north-west passage in 1578-9 in company with his nephew, Sir Walter Raleigh. The voyage ended in failure, but a second attempt was made in 1583. The *Squirrel*, with Gilbert on board, went down on the homeward voyage from Newfoundland. The last words of the great sailor heard by his comrades on *The Hind* were, "We are as near to heaven by sea as by land."

GILCHRIST SCHOLARSHIPS, founded in 1841, by John B. Gilchrist, a Scottish orientalist, "for the benefit, advancement and propagation of learning." They are awarded by competitive examination.

GILDAS, surnamed "the wise," *b.* in Wales, 511, *d.* 570; the most ancient British historian, was a monk of Bangor. The only work of his which is extant is a treatise, "De Calamitate, Excidio, et Conquestu Britanniæ," which describes the miseries of the Britons and their ruin by the Saxons. In it is the letter sent to Rome, headed, "The Groans of the Britons."

GILLS are the organs by which breathing is carried on by fishes and many other aquatic animals, under water. The water, which holds oxygen in solution, passes through the gills, and is brought into close contact with the thin skin of the under sides of the gills. In this way the blood is oxygenized through the skin by the air in the water, and at the same time from the body of the fish carbonic acid passes out. The gills may be described as overlapping plates, usually arranged in pairs on each side of the head, and opening and closing to admit and reject the water.

GIMBALS, two brass hoops, each moving perpendicularly to its plane about two axes at right angles to each other, used to suspend a ship's compass, so that by its free action in two directions at right angles to each other it remains horizontal, whatever the ship's motion.

GIN. See *Med. Dict.*

GINGER is a plant whose root yields the well-known article of domestic use. It is cultivated in India and China and in the West Indies, and grows with little attention. The root is taken after the stalks have withered, and then scalded and dried. It may be exported dry in the root form, ground, preserved in syrup, or candied.

GIOTTO, *b.* 1266, *d.* 1337, a famous early Italian painter and architect. It is said that the painter Cimabue discovered him drawing a lamb, whilst tending sheep on the hills near Florence, and that he took him as a pupil. His works are chiefly frescoes. He designed the wonderful Campanile at Florence, but did not live to see it finished. The skill with which he drew a circle before a Papal deputation is perpetuated in the adage, "As round as the O of Giotto."

GIPSIES are a nomadic people found in every nation of Europe, in Asia, Africa, and America. Their language shows little variation, whatever their country, and they are expert linguists. They have not an alphabet of their own, nor do they seem to have a religion. They have existed in Europe from unknown antiquity. They were subjected to oppression in the Middle Ages, and to this cause may be attributed their mingled gloom and vivacity, deceit and frankness.

GIRAFFE, the tallest of four-footed animals, is a native of Africa, and is found in herds of 10 to 40 in the country to the south of the Sahara. In spite of its long neck there are only seven joints in it as in that of man.

GIRONDISTS, or **GIRONDINS,** a party in the French Revolution who favoured moderate and well reasoned reforms. Their leaders represented the province of Gironde, which gave them their name. The invasion of France by the Austrians and Prussians threw the chief power into the hands of the extremists, the Jacobins, and in the Convention formed for the government of the nation no Girondist was a member. They fell victims to the fanaticism of the Committee of Public Safety, and over forty of their leaders were guillotined.

GIRTON COLLEGE. Refer to *Index.*

GLACIERS are rivers of compressed snow and ice, that move very slowly (a few feet in a day), down some valley in the mountains. The accumulation of snow in the higher altitudes causes both the compression and the movement. The friction of the moving ice with the sides of the valley, and the falling of detached rocks on either side through the action of frost, leads to a collection of stones and other debris—called a *moraine*—on the sides of the glacier. If two glaciers converge and join, a central moraine is formed. At the end of a glacier the melted ice gives rise to a river, and the rock debris is deposited as a terminal moraine. In the Arctic regions the formation of icebergs is directly due to the snapping off of large portions of glaciers that have reached the sea.

GLADIATORS were professional combatants, who fought with men or beasts in the arena of a Roman theatre. The practice began in 264 B.C. at Rome, and spread throughout the Roman Empire, until no town of any size from Britain to Syria was without its gladiatorial combats. Gladiators were commonly obtained either from prisoners of war, or slaves, or criminals condemned to death. When a gladiator was so wounded as to be unable to fight any longer, his antagonist stood over him with uplifted sword, ready to slay him if the spectators willed his death, and this they indicated by turning their thumbs upwards. Constantine issued a decree against the barbarous

practice, in 325, but it did not cease entirely until the time of the Emperor Theodoric, about 500 A.D.

GLADSTONE, WILLIAM EWART, *b.* in Liverpool, 1809, *d.* 1898; was educated at Eton and Christ Church, Oxford, where he was a prominent debater at the Union at the time of the Reform Bill (1832). His strong churchmanship made him look to the Tory Party for safety from revolutionary measures. In 1839 he was described by Lord Macaulay as "the rising hope of the stern, unbending Tories." Peel was his Parliamentary leader and friend, and he acted as a colleague of the Conservative minister until 1845. The great Corn Law movement and Cobden's struggle for free trade engaged Gladstone's attention, and he was henceforth found amongst the Liberal Reformers. His first great speech was delivered in 1852, in reply to a scathing attack by Disraeli, and a wonderful parliamentary duel between these masters of debate was kept up for the next twenty-four years. He became Chancellor of the Exchequer in 1853, and made the first of his remarkable Budget speeches. The narrative of Mr. Gladstone's services in Parliament as Chancellor of the Exchequer, Leader of the House of Commons, and Prime Minister—an office which he held four times—is almost tantamount to the history of Parliament during the next forty years. The veteran statesman having failed to carry his Irish Home Rule Bill, resigned in 1894, after sitting, with the exception of a year and a half, as a member of the House of Commons from 1832. After four years of literary leisure, Gladstone died, and was publicly honoured by a state funeral in Westminster Abbey. One of the greatest of Parliamentary debaters, Gladstone had a wonderful gift of eloquence, and an exquisitely beautiful voice. He has left behind him a great record of reforms and of wise domestic measures, but his foreign policy suffered from the overpowering impulse of his sympathies with all nationalities struggling to be free and independent.

GLAMORGANSHIRE, the great coal county of South Wales, comprises one of the richest coal-fields in Great Britain. At Merthyr-Tydvil are large iron-works, and copper smelting is carried on at Swansea and Neath. Cardiff, the chief port, does a great carrying trade both in coal and Spanish ores.

GLANDERS, a contagious and fatal disease to which stablemen as well as horses and asses are liable. It shows itself in inflamed ulcers, which break out on the nose and in various parts of the body. Unhealthy or ill-ventilated stables render an animal liable to the disease. The Board of Agriculture compels the immediate slaughter of every glandered horse.

GLASGOW, the industrial metropolis of Scotland, has increased tenfold in population during the past century, and is now the second largest city in the United Kingdom. It stands on the Clyde, in the county of Lanark, and owes its commercial importance to its river, the neighbouring coal-fields and iron-works, and the enterprise of its citizens. Steel ship-building is the most important industry in the district, whilst the making of engines, chemicals, pottery, and textile fabrics of all kinds occupies a large industrial population. It boasts a university, founded in 1450, and a cathedral that has escaped the destructive zeal of the early reformers; population 798,000.

GLASS is produced by the combination of silica or flint with an alkali, such as lime, or one of the salts of sodium. The raw materials are melted in furnaces, and the fluid glass is passed from one compartment to another until all impurities have been removed. It is then used for bottle making, window glass, or crown glass. A process of slow cooling in ovens, known as annealing, takes away the excessive brittleness that the glass otherwise possesses.

GLASS PAINTING or **STAINING** is an art of Northern Europe, which arose in the 12th century, and reached its turning point in the time of the Tudors. The development of mosaics and frescoes on the walls of Italian churches rendered it an unnecessary art in that country. The best work is now done, as it was in the Middle Ages, by the method known as "mosaic glass." It may be distinguished by the characteristic way in which the leads do not follow the outlines of the figures, but boldly intersect them, enclosing rich and variegated plots of colour. An inferior method called "enamelled glass" proceeds by painting entirely on white glass, and fusing the pigments to fix them. The leads in this case follow the contours of the design, and are concealed; but transparency is lost, and the effect is a blurred one.

GLASTONBURY, in Somerset, near Wells, is a small township of 3,000 inhabitants, and possesses the ruins of a monastery and many quaint domestic buildings. Hither, tradition had it, Joseph of Arimathea carried the Holy Grail, and here he planted his staff, which took root and grew into a thorn tree that blossomed every Christmas Eve.

GLENCOE, a valley in the north of Argyllshire, forming a gloomy pass. Here, in 1692, occurred the massacre of Glencoe, when thirty-eight of the Macdonald clan were butchered. The head of the clan, MacIan, was late in submitting to William III., and in order to make an example of him, the royal troops, whilst entertained as friends, treacherously attacked his assembled kinsfolk.

GLENDOWER, a Welsh chief who opposed Henry IV. He carried on a harassing border warfare until 1403, when he joined Earl Percy (Hotspur), who was in rebellion against the king. Hotspur was slain at the Battle of Shrewsbury, but Glendower died without submitting to English rule.

GLENMORE, a long narrow valley extending from the Moray Firth on the north-east to Lock Linnhe on the south-west, a length of 100 miles, contains three lochs—Ness, Oich, and Lochie. The Caledonian Canal connects these lochs, thus forming a complete communication between the east and west coasts of Scotland.

GLOBIGERINA is a unicellular animalcule, enclosed in a shell perforated by innumerable pores through which the animal thrusts out processes to obtain food. It lives in the ocean, and in some regions, e.g., the Atlantic, it occurs in such myriads, that the empty shells accumulating on the ocean floor form a mud known as globigerina ooze. This ooze is chalk in the process of manufacture. The great chalk cliffs of England have been formed in this way, layer by layer, at the bottom of some prehistoric ocean in the course of a vast period of time and then gradually raised above sea level by subterranean forces.

GLOUCESTER, the county town of Gloucestershire, situated on the river Severn, where it begins to be tidal. It is an ancient city as witness its many Roman remains. The siege and defence of Gloucester in 1643 are famous. Robert Raikes here founded the first Sunday School in 1780. The cathedral dates back to the 11th century, and many parts are extremely beautiful; population 50,000.

GLOW WORM, the English name of a species of beetle, which emits a green phosphorescence from the end of the abdomen. The female alone is a glow-worm proper; it is a wingless, grub-like insect. The male is a winged beetle, and is attracted to the female by the pale green light it displays.

GLUE, an impure gelatine made from the hides and hoofs of cattle and horses, and the refuse and clippings of tanneries. These are treated in tanks with quicklime, and afterwards steamed and boiled. The resulting jelly is then drawn off and dried. Scottish glue, which is considered the best in the market, is largely used by piano and cabinet-makers.

GLUTEN. If wheat flour be kneaded in a stream of water, so that the soluble matter, starch, be carried away, there remains a sticky substance called gluten. It is this gluten that enables the dough to undergo the process of baking, without crumbling to dust. In a moist state, the gluten rapidly putrefies, but it does not readily decompose after being baked. It contains the chief flesh-forming constituents of the grain.

GLYCERINE, called by its discoverer, in 1779, "the sweet principle of oils," is obtained by the separation of fats into their constituent parts, glycerine and acids. It is largely produced in the manufacture of soaps. It is much used as a medicine. See *Med. Dict.*

GNOMES, imaginary dwarf beings supposed to exist in the inner parts of the earth and to be guardians of mines, minerals and quarries.

GNOSTICS. During the 1st century, A.D., an effort was made by a body of philosophers, who assumed this name, to fathom the true, inward meaning of the various mythologies and religious systems existing among the numerous races included in the Roman Empire, and to arrive at a comprehensible solution of the riddle of the universe. Greek and Roman mythology, Persian and Chaldean beliefs, the tenets of various schools of Greek philosophy, the Jewish religion, and even the doctrines of Christianity appear to have been analysed to build up the religion of the Gnostics. According to their earliest teachings, the Supreme Being is eternal, the source of all good, and dwells in the abyss at an infinite distance from the earth. Matter, from which all things are made, is also eternal, but the source of all evil. From the Supreme Being and Matter were generated the *æons*, spirits gifted with the power of creating matter from the visible universe. The most celebrated names among the Gnostics are Cerinthus, Basilides, Carpocrates, and Saturninus.

GNU or **WILDEBEEST,** as the Boers call it, is an animal found in South Africa, combining the characteristics of the antelope, horse, and buffalo. Its size is that of a small horse; its flesh is nutritious; and its horns, which are common to both sexes, resemble those of the buffalo. It feeds in herds, which are continually becoming smaller through the hunter's deadly rifle, and soon this animal will be rarely seen south of the Limpopo and Orange Rivers.

GOA, a Portuguese city and the surrounding district, situated on the west coast of India. Hemp, cowries, betelnut, &c., are exported. Area about 1,400 square miles; population 475,000.

GOAT, an animal found in practically all parts of the world outside the Arctic and Antarctic regions. It is remarkably surefooted and agile, and is especially adapted to mountainous districts. Its milk

is recommended for consumptives, and its skin is used for making morocco leather. The *Cashmere goat* of North India has long, silky hair, which is used in the manufacture of shawls. The *Angora* goat of Asia Minor has been introduced successfully into Cape Colony, Australia, France and the United States. From its hair the finest variety of camlet is made.

GOAT ISLAND, situated in the Niagara River, divides the Niagara Falls into two parts, known as the American and Horse-Shoe Falls. It is connected by a bridge with the United States mainland.

GOBELINS, the name given to tapestries produced at a manufactory in Paris. Early in the 16th century a family of dyers named Gobelin settled in Paris, and there set up tapestry works, which in 1662 were bought by Colbert, the minister of Louis XIV., with a view to providing the upholstery of the royal palaces. The most celebrated painters supplied the designs for the tapestries. The richness of the colouring and the fidelity with which they follow the designs make "gobelins" incomparable among tapestries. The works are still carried on.

GOBI, DESERT OF, an immense stretch of desert occupying about 300,000 square miles of the central depression of the great plateau of Asia, north of the Himalayas. It is covered with shifting sands or pebbles, and is almost bare of vegetation. A sparse population inhabits the borders. It is thought that a large inland sea once occupied the centre of this region, and the evidence of sand-covered cities shows that at one time it possessed a large population, whose exodus was probably the origin of the waves of invasion that led to the fall of the Roman Empire.

GODFREY OF BOUILLON, *b.* about 1061, *d.* 1100, was the leader of one of the armies of the First Crusade. In 1096 he conducted his army from Germany along the Danube valley to Constantinople, then a Christian city. In 1097 he captured Antioch with some difficulty, and in 1099 took Jerusalem. Refusing the title of king, he styled himself "Defender and Guardian of the Holy Sepulchre." A great victory on the Plain of Ascalon over an immense Moslem army, under the Sultan of Egypt, made him supreme in Palestine, but he died while organising his new state. He was equally conspicuous for his bravery and magnanimity.

GODIVA, the wife of Leofric, earl of Mercia and lord of Coventry. It is related that when (about 1040), entreating her husband to mitigate certain grievous taxes from which his subjects suffered, Leofric demanded as the price of his acquiescence that she should ride naked on horseback through the streets of Coventry. Having first acquainted the people of the degradation she intended to suffer for their sake, she ordered them to keep within their houses at the time appointed, and to refrain from looking at her. According to the story, only one man, a tailor, afterwards known as "Peeping Tom of Coventry," failed to follow the request, and he was struck blind.

GOD'S TRUCE. Towards the end of the 10th century the Church made a strong effort to decrease the havoc caused in continental states by turbulent nobles in their private wars with one another. By threatening heavy penalties, the Church obtained from the nobles an agreement by which they promised to abstain from fighting from each Wednesday evening to the following Monday morning, and also during certain fast days and holy festivals, and to refrain from molesting women, priests and people who followed peaceful callings. *God's Truce,* as this agreement was called, was first instituted in France, and soon became general in western Europe. In the 13th century, the centralisation of power in the person of sovereigns of large monarchies removed the necessity for this compact.

GODWIN, Earl of Wessex, received his earldom from the Danish king, Canute, for services rendered in helping the latter to gain the Crown of England. In 1042 he was instrumental in putting Edward the Confessor on the throne, and his daughter Edith became queen-consort. He headed a popular rising in 1051 for the expulsion of Edward's numerous French favourites. The movement failed, and Godwin and his sons went into exile. Returning in 1052, the people in a body joined his standard and he recovered his old power almost without a blow. He died in 1053, leaving a family of able sons, of whom Harold became king of England.

GOETHE, JOHANN WOLFGANG VON, *b.* at Frankfort-on-the-Main, 1749, *d.* 1832 the greatest of the poets of Germany. During his three years at the university of Leipzig he began seriously that acute analysis of his own feelings and motives which later became habitual, and served as the basis of his great poems. During his long life he studied enthusiastically a great variety of subjects, art, chemistry, optics, botany, law, etc., on most of which he produced prose works displaying much original thought. At the age of twenty-five he attracted the notice of the Duke of Saxe-Weimar, who ennobled him, made him president of his council, and remained his friend for life. "Faust" stands first among Goethe's works; "Iphigenia," "Count Egmont," "Tasso" and "Wilhelm Meister" are probably the best of the remainder.

GOG AND MAGOG. It is thought that the biblical characters bearing these names are symbolical for unknown nations dwelling north of the Caucasus, and inimical to the Jews. The Gog and Magog in the Guildhall, London, are two gigantic figures, each 14 feet high, copies of those burnt in the Great Fire. They are supposed to be images of two giants, who, according to Caxton, were the last survivors of a race of giants that once inhabited Britain. Up to 1837 wicker-work images of the two giants figured in the Lord Mayor's Show.

GOLCONDA, a fortress whose walls enclose a very extensive area in the native State of Haiderabad, India. Near it are the ruins of the capital of the ancient kingdom of Golconda, which lasted till 1687, and was famous for its diamonds. Diamonds are still cut and polished within the fortress, which contains the Nizam's treasury.

GOLD, a valuable yellow metal, used principally for coinage, ornaments, and decorative purposes. It resists oxidisation, and the only acid which dissolves it is aqua-regia, a mixture of nitric and hydrochloric acids. The largest proportion of the world's gold supply comes from gold-bearing rocks in which the metal appears in thin streaks or veins; occasionally the presence of gold in such rocks can only be detected by assaying. Quartz is the most common gold-bearing rock, but there is scarcely a mineral with which gold has not been found associated. The gold-ore is extracted by ordinary mining methods and then crushed by machinery. Various methods are adopted to separate the gold from the crushed ore. The latter is sometimes placed in sloping troughs and water allowed to flow gently over it. The gold, being heavy, sinks, and is prevented from escaping with the waste, by strips of wood fixed at the bottom of the trough. Mercury is more commonly used to separate the gold, since it readily forms an amalgam with the precious metal, and can afterwards be distilled by heating. In the Rand mines the gold is usually extracted by cyanide processes. In the case of gold found free in river beds and in alluvial soils, it may be assumed that water has already performed the work of disintegration, which, in the case of gold-bearing rocks, must be done by crushing machinery.

GOLD-BEATER'S SKIN is the thin, tough, outer coat of the cœcum—a part of the large intestine—of the ox. After this coat has been stripped off it is carefully cleansed and stretched, coated first with fish-glue and then with albumen. It is used in the manufacture of gold-leaf, and when placed upon slight flesh-wounds prevents bleeding.

GOLD-BEATING, the process of producing extremely thin leaves of gold. An ingot of gold is taken, rolled into a thin strip about 1½ inches wide and, after annealing, is cut into squares. These squares are placed in piles of seventy-five, each square being placed between pieces of tough paper, about four inches square, a square of vellum replacing the paper at intervals. The whole is then placed in a bag of vellum and beaten with a heavy hammer till the squares of gold have the same area as the squares of paper. Each square of gold is then divided into four equal parts, and the beating is repeated, the paper and vellum being replaced by gold-beater's skin. The dividing and beating is again repeated, until the gold leaves have a thickness of about the 282,000th part of an inch. Pure gold-leaf is best for out-door decoration, but the gold is often alloyed with silver or copper, sometimes both, to produce different shades.

GOLD COAST, THE. Refer to *Index.*

GOLDEN BULL, an edict issued by the Emperor Charles IV., in 1356, to regulate the proceedings at an imperial election. It remained in force until the close of the "Holy Roman Empire" in 1806.

GOLDEN FLEECE, THE, in Greek mythology, was the fleece of the winged ram on which Phryxus and his sister Helle, the children of king Athamas of Thebes, escaped from the wrath of their step-mother, Ino. Helle fell off into the sea and was drowned on the journey, but Phryxus reached Colchis, the kingdom of his relative, Aetes. Phryxus, on his arrival, sacrificed the ram to Jupiter, and was shortly afterwards murdered by Aetes for the sake of the fleece. The recovery of this fleece was the object of the famous voyage of the Argonauts under Jason, who was connected by blood with Phryxus. The story is prettily told in Kingsley's "Heroes."

GOLDEN GATE, THE. (1) A strait, 2 miles in width, connecting San Francisco Bay with the Pacific Ocean. (2) A gate in the wall of Theodosius, Constantinople, now walled up because of a Turkish tradition that the conqueror of the city shall enter through it.

GOLDEN HORN, THE, a narrow, crescent-shaped inlet of the Bosphorus, about 6 miles in length, that forms the harbour of Constantinople and separates it from its suburbs, Galata and Pera. It is usually crowded with shipping and boats.

GOLDEN LEGEND, THE. A collection of the lives of the principal saints compiled in Latin by Jacobus de Voragine in the 13th century, translated into the languages of Western Europe, and during the Middle Ages read with religious fervour. It is also the name of a dramatic poem by Longfellow, set to music in a cantata by Sir Arthur Sullivan.

GOLDEN ROSE, an ornament of wrought gold, solemnly blessed by the Pope, and sent annually to some prince

or community whom he wishes especially to honour, on account of their loyal services to the Church.

GOLD LEAF. See *Gold-beating.*

GOLDSMITH, OLIVER, *b.* at Pallas, Ireland, 1728, *d.* in London, 1774, was the son of a Protestant clergyman. After disappointing his relatives by wasted courses of study at Trinity College, Dublin, and at Edinburgh, he made the "grand tour" of Europe on foot, supporting himself chiefly by his flute, on which he was a moderate player. The experiences gathered during this tour served him in good stead when he began his literary career. Returning to London in 1756, he produced numerous works in prose and verse, which, but for his simple good-nature and lack of prudence in money affairs, would have brought him ease and affluence. His poems, "The Deserted Village" and "The Traveller," his plays, "She Stoops to Conquer" and "The Good-natured Man," his novel, "The Vicar of Wakefield," and his many charming essays are full of kindly humour and human sympathy, and give him a very high place in literature.

GOLDSMITHS' COMPANY formed in London, 1130, for the protection of the trade. The assaying of gold and silver was the chief of the Company's powers, which continue to this day. Even the metal coined at the Mint is tested by them. The company is very rich and spends about £40,000 a year on education, charities, &c. In 1645 goldsmiths began to act as bankers. Goldsmiths' Hall is in Foster Lane, Cheapside. (See *Hall Marks.*)

GOLD STICK, a court official in England who attends the sovereign in state ceremonies, carrying as the insignia of his office a gilt stick or wand. The office is held in turn by the colonels of the three regiments of household cavalry.

GOLF is a game played with small balls and clubs of various shapes, on uneven ground, more or less waste. Each player has a separate ball. The course has at intervals of 150 to 500 yards a number of smooth greens, each with a hole in it, and the object of each player is to get his ball into each of these holes in turn and so round the course with the least number of strokes. The one who wins at the greater number of holes wins the round. Sometimes two players on each side strike the same ball alternately; the match is then called a "foursome." Golf has been played in Scotland for some centuries. It was introduced into England in 1864, and has since become very popular.

GOLGOTHA. See *Calvary.*

GOLIATH, the giant of the Philistines, who was slain by the shepherd-boy, David, in the war between the Philistines and the Israelites under King Saul. See 1 Samuel xvii.

GON'DOLA, a long, narrow boat with curved ends rising high out of the water, chiefly used on the canals of Venice. The boats average 30 feet in length by 4 in breadth. There is usually in the centre a sort of curtained cabin for the passengers. The gondolier, standing in the stern, propels and guides the boat by means of a broad-bladed oar, in the proper handling of which great skill is necessary. The increase of small steamboats seems likely to drive these picturesque vessels from Venetian canals.

GOODALL, FREDERICK, *b.* 1822, *d.* 1904, showed an early talent for art; when only seventeen exhibited a picture in the Royal Academy, and in 1863 became R.A. His early pictures were chiefly English social and historical subjects. After visiting Egypt and Italy he painted Eastern pictures.

GOOD HOPE, CAPE OF, a promontory near the southern extremity of Africa. It was discovered by Bartholomew Diaz in 1486, and called by him the *Cape of Storms,* but his sovereign, John II. of Portugal, gave it the name it now bears. It was first doubled, in 1497, by another Portuguese mariner, Vasco da Gama.

GOOD PARLIAMENT, THE. In 1376 the court of Edward III. had become so corrupt, mainly owing to the evil influence exerted by a courtesan, Alice Perrers, over the King, that Parliament, backed by Edward the Black Prince, impeached Perrers and the most guilty of the courtiers, punished the offenders, and received promises of redress of grievances. The death of the Black Prince the same year, and the subsequent assumption of power by John of Gaunt, undid the good work accomplished by this parliament.

GOOD TEMPLARS, a temperance society of strict total abstinence principles, founded in the United States, 1852. It has ceremonies, badges and passwords similar to those of the Freemasons. It was introduced into England in 1868. Its headquarters are in Birmingham.

GOODWIN SANDS, THE, are dangerous sandbanks stretching for about 10 miles in a direction parallel to the coast of Kent, from which they are separated by a roadstead, about 5 miles in width, called the Downs. At low water large patches of the sand are left firm and dry. Four lightships, of which three are provided with gongs and one with a syren for use in foggy weather, numerous buoys, and the ever increasing proportion of vessels driven by steam, have rendered these sands practically harmless. Tradition says that the sands once formed part of the mainland, that they were included in the estates of Earl Godwin, and that the sea, in 1097, broke down the protecting dykes and overwhelmed the district.

GOODWOOD, the country seat of the Duke of Richmond, stands near the summit of the South Downs among charming scenery, about 3½ miles from Chichester. Its picturesque racecourse is the scene of one of the best-attended and most fashionable race meetings of the year. "Goodwood Week" follows the close of the London season.

GOODYEAR, CHARLES, *b.* 1800, *d.* 1860, an American iron manufacturer, who made valuable improvements in the preparation of rubber and discovered the method of vulcanising it; thus enabling it to be used in a great variety of ways.

GOORKAS. See *Ghurkas.*

GOOSE, a well-known web-footed bird which is much esteemed for its flesh; its quills and soft feathers are also in constant demand. Though proximity to water is necessary for their proper rearing, they seldom swim and never dive. Geese are reared in all parts of England, particularly in Lincolnshire and East Anglia. Before the draining of the Fen District, the wild goose, from which the common domesticated variety is descended, bred there in thousands. Holland and Germany supply the London markets with enormous quantities of geese. The liver of the goose was considered, even in Roman times, a great delicacy, artificial means being employed to enlarge the liver in the living bird. The *paté de foie gras* of Strassburg, is obtained from geese confined in an apartment kept at a high temperature, to produce morbid enlargement of the liver. In their flight, wild geese take up a V formation, with a single gander leading at the angular point.

GORDIAN KNOT, THE. Phrygian delegates consulting the oracle at Delphi, on the choice of a king, were told to elect the first man they met riding on an ox-chariot towards the temple of Zeus. According to the legend, the choice fell on a peasant, Gordius, who afterwards dedicated his chariot to Zeus. He is said to have fastened the pole of the chariot to the yoke with such an intricate knot that, in time, a report spread that the man who could untie it would conquer Asia. Alexander of Macedon made short work of the difficult task by cutting through the knot with his sword. "To cut the Gordian knot" now denotes a rough and ready manner of solving a difficulty.

GORDON, ADAM LINDSAY, *b.* in the Azores, 1833, *d.* 1870, the greatest of Australian poets, emigrated to Australia in 1853 to seek his fortune. After trying sheep-farming, cattle-driving and other vocations with ill-success, he committed suicide at Melbourne in a fit of despair. His "Sea-spray and Smoke-drift" and "Ashtaroth," contain, among inferior work, some beautiful lyrics; but his reputation rests on "Bush Ballads and Galloping Rhymes," which contains the popular ballad "How we beat the Favourite."

GORDON-BENNETT CUP, a trophy offered by Mr. Gordon-Bennett, proprietor of the *New York Herald,* for international competition. The first competition was held in 1900. In the first six competitions, France has won the cup four times, England once, and Germany once. The last-named with a Mercedes machine attained a speed of 49¼ miles per hour.

GORDON, CHARLES GEORGE, *b.* at Woolwich, 1833, *d.* at Khartoum, 1885, was the son of an officer in the Royal Artillery. He received a commission in the Royal Engineers in 1852, and served in the Crimean War. In the China War of 1860 he took part in the capture of Pekin by the British. Two years later he commanded a Chinese force which put down the formidable Taeping Rebellion, and was raised by the Emperor of China to the highest rank for his services. In 1873 he entered the service of the Khedive of Egypt, and for nearly seven years (the last three as governor of the Soudan) laboured indefatigably to suppress the slave trade, and establish law and order in the basin of the Upper Nile. In 1884, at the request of the British Government, he once more proceeded to the Soudan, which was now, with the exception of a few isolated garrisons, in the hands of the Mahdi and his fanatical hordes of revolted Soudanese. A month after his arrival at Khartoum he was besieged by the Mahdi. After holding out for a year, the fortress fell, and with it its brave defender. The relief expedition sent out under General Wolseley arrived within sight of the walls of Khartoum, just two days too late to save one of the most noble, humane, pious and courageous heroes of English history.

GORDON RIOTS. In 1778 the passing of a Catholic Relief Bill through Parliament roused great opposition amongst large numbers of the Protestants of London. For nearly two years the excitement increased, and finally broke out into frightful riots, when Lord George Gordon, a half-crazy fanatic, marched at the head of 50,000 persons to present a petition for repeal to the House of Commons. For five days the mob took possession of London, pillaging and burning Catholic and Protestant property alike. The riots were finally suppressed by regular troops, but not before nearly 500 of the rioters had been killed and wounded. Dickens has an account of these riots in his novel "Barnaby Rudge."

GORE, CHARLES, BISHOP, *b.* 1853, was first principal of the Pusey Memorial Library, 1884, vicar of Radley, near Oxford, 1893; Canon of Westminster,

1894–1932. He was made Bishop of Worcester in 1902 and translated to the new see of Birmingham, 1904. He is the author of many thoughtful and original essays, sermons, and other religious works, and in 1890 he edited "Lux Mundi," contributing to that work a paper on "The Holy Spirit and Inspiration."

GORGONS, THE, in Greek mythology, were three winged sisters, Stheno, Euryale and Medusa, who were represented with hair entwined with serpents, brazen hands and teeth, impenetrable scales on their bodies and eyes that turned to stone all beholders. Medusa, who alone of the three was mortal, was slain by Perseus with the aid of magic weapons given him by Hermes and Athene. Perseus presented the head of Medusa to Athena, who fixed it in her shield and employed it to overcome her enemies. This story is well told in Kingsley's "Heroes."

GORILLA, THE, the largest of the anthropoid apes, inhabits the densest parts of the Equatorial forests of West Africa. When full grown it is between 4 and 5 feet in height, and has enormous strength. It seldom seeks an encounter, but when at bay it is a dangerous enemy. Fruit forms its principal food. Among apes, it bears the closest resemblance to man in its general structure, but its intelligence is of a lower order than that of the chimpanzee. Hitherto it has proved untameable.

GORKY, MAXIM, the pen name of a popular Russian novelist, *b.* 1868. In his early days he was in turn an ikon painter, pedlar, scullery boy, gardener, watchman, and baker's apprentice. His best works have been translated into English:—"Three of Them," "The Outcasts," "The Orloff Couple," a play called "The Lower Depths," &c. Gorky is a Russian revolutionary leader.

GOSHEN, a district of ancient Egypt presented by Pharaoh to the father and brethren of Joseph. It is supposed to have lain between the eastern branch of the Nile delta and the Isthmus of Suez, and to have stretched south to the latitude of the modern Ismailia, but its exact limits are still doubtful.

GOTHENBURG SYSTEM, originated in Gothenburg, 1865, a licensing system in which all public-houses are kept by a company licensed by the authorities under a paid manager, all profits above 5 per cent. on the company's capital going to the town treasury.

GOTHIC ARCHITECTURE prevailed in the Middle Ages until the revival of the classic styles of Greece and Rome in the 16th century. The builders of the *Renaissance* (as this revival was called), first adopted the term *Gothic* to express their contempt for what, to them, was a *barbarous* style. Careful study of the principles of Gothic architecture has long since replaced contempt by admiration, and during the 19th century many fine buildings, especially churches, were built in this style. Many of the finest mediæval churches in Europe are Gothic, the most distinguishing features being the pointed arches of the doors and windows, and the groining of the roofs. Clustered pillars, spires, pinnacles and towers all add to the imposing effect of Gothic churches. In England this style began to supersede the Norman style, with its rounded arches in the middle of the 12th century, and reached its highest development in the 13th, during which century many of our noblest cathedrals and churches were built.

GOTHS, a Teutonic race whose earliest known home was the southern shores and islands of the Baltic. They gradually migrated southward through Central Europe, and early in the 3rd century, A.D., settled in districts bordering on the north of the Black Sea and the Danube. By the middle of the 4th century the Goths had become the dominant race of the non-Roman part of Europe, and their kingdom extended in a broad band from the Black Sea to the Baltic. Constant attacks on the Roman frontiers had led the Roman Emperor, Aurelian, to concede Dacia, a country north of the Danube, to a large section of the Goths, on condition that they supplied men to the Roman army. These Goths and their descendants were afterwards spoken of as *Visigoths*, i.e., Western Goths, to distinguish them from the remainder, the *Ostrogoths*, or Eastern Goths. The Hunnish invasion about 375 drove the Visigoths over the Danube, where, after severe fighting, they settled, with special privileges, under Roman rule. Under their leader, Alaric, they rose in rebellion, over-ran Greece, and entering Italy took Rome by storm in 410. On Alaric's death soon after, they left Italy for Gaul, and there helped to crush the Huns under Attila. Driven by the Franks over the Pyrenees, they formed a kingdom in Spain, but in the 8th century Moorish invasions led to closer union with the Spanish peoples, and as a distinct nation the Visigoths disappeared.

GOUGH, VISCOUNT, *b.* 1779, *d.* 1869, a distinguished British general, who, in 1842, brought the First Chinese War to a successful conclusion. In 1843 he defeated the Mahrattas at Maharajpur, and in 1845 defeated the Sikhs at Sobraon. As a reward for his services he was now raised to the peerage. In 1849 he again defeated the Sikhs at Chillianwallah—a dear-bought victory; and by a final defeat of the Sikhs at Gujerat, added the Punjab to the British Empire.

GOULD, JAY, *b.* 1836, *d.* 1892, an American financier. At the age of twenty-one he had amassed sufficient capital to begin speculating in railway shares, and, setting up as a stock-broker in New York in 1859, he gradually acquired large interests in most of the United States railways. He left about £12,000,000 at his death.

GOULD, JOHN, *b.* at Lyme, Dorset, 1804, *d.* 1881; a most enthusiastic and patient ornithologist. He was appointed curator of the Zoological Society's Museum in 1837, and soon after visited Australia, where he spent some years investigating the fauna. His chief productions are, "Birds of Australia," "Mammals of Australia," "Family of Kangaroos," and unfinished works on the birds of Great Britain, Asia, and New Guinea. His magnificent collection of humming birds is now in the Natural History Museum, South Kensington.

GOUNOD, CHARLES FRANCOIS, *b.* at Paris, 1818, *d.* 1893; a great French musical composer. He resided in England from 1870 to 1875, but the greater part of his life was spent in France. As a composer of songs and short pieces he is much admired. His longer works, which display a wonderful mastery of orchestration, include the oratorio of "The Redemption" and the opera of "Faust."

GOWER, JOHN, *b.* about 1328, *d.* 1408; one of the earliest of English poets. He contributed liberally to the funds of St. Saviour's, Southwark, in which his tomb can still be seen. His works are very sober and moral in tone, and include "Speculum Meditantis," "Vox Clamantis" (an account of the Peasants' Revolt in 1381), and "Confessio Amantis." Chaucer, his friend and probably his one-time pupil, speaks of him as the "Moral Gower."

GOWRIE, CARSE OF, a tract of lowland in Perthshire, lying between the Tay and the Sidlaw Hills. It has a rich, clayey soil, and is one of the most fertile districts in the British Isles. Wheat and beans are the chief crops.

GRACES, THE THREE, Aglaia, Thalia, and Euphrosyne were called by the Greeks, *charites*, and were represented as the daughters of Zeus. They personified grace, beauty, and mirth—three qualities which, in the older mythology, were united in one goddess, Aphrodite.

GRACE, WILLIAM GILBERT, *b.* 1848, a doctor by profession, for some forty years considered as England's "champion" cricketer, and familiarly known as "W. G." As a batsman and all round cricketer he has never been equalled.

GRADUAL PSALMS, or "Songs of Degrees," are Psalms 120–134 inclusive, and said to have been so named because one of them was sung on each of the fifteen steps between the courts of the Jewish temple.

GRAFTING, in horticulture, is the process of inserting a branch, twig, bud, or even a root of one plant into another plant of the same species, with a view to their vital union. Grafting is employed for various purposes: to preserve rare specimens which could not be reproduced with certainty from the seed, to increase the finer qualities of fruit trees, or to produce dwarf varieties of great fruitfulness. Union does not take place unless the *alburnum* (the soft white wood next the inner bark) of each plant is brought into contact. The graft always retains its own peculiar leaves, flowers, and fruit.

GRAIL or **GRAAL.** The Holy Grail, or Sangrail, was a miraculous vessel which formed the subject of many mediæval romances. There are many versions of the mediæval legend, but in most of them the grail is a cup sent from heaven and used by Christ at the Last Supper. Joseph of Arimathea got possession of it, but after his death the grail, owing to the sinfulness of its guardians, was snatched back to heaven, there to be retained until a saintly hero worthy of the charge should appear on earth. Naturally, the Holy Grail entered into the legends of King Arthur and his knights, three of whom, Galahad, Percival, and Bors set out in quest of it. The Grail in these legends symbolises chastity.

GRAMME, the unit of mass or weight in the Metric System. Refer to "Metric System" in *Index*.

GRAMPIANS, THE, a name applied to the system of mountains in Scotland, stretching north-east from the west coast of Argyle. The exact limits of the system are not clearly defined. Ben Nevis is its highest peak (4,400 ft.). The name is derived from *Mons Grampius*, a mountain whose exact locality is much disputed, which Tacitus gives as the scene of Agricola's victory over Galgacus in 86 A.D.

GRAMPUS, a cetacean animal found in nearly all parts of the ocean outside the Arctic and Antarctic regions. It is occasionally seen in British seas. It belongs to the dolphin family, and when full grown often attains a length of from 20 to 25 ft. It feeds on salmon, small dolphins, and porpoises; and troops of them have been known to attack whales. The name is a sailor's corruption of *gran pez*, the Spanish for "big fish."

GRANADA, formerly the capital of the Moorish kingdom in the south of Spain. It was captured by the Spaniards in 1492. It is famous for its old Moorish palace, the *Alhambra*, and for its cathedral, in which is the splendid tomb of Ferdinand and Isabella; population 76,000.

GRAND PRIX, LE, the "big prize" race of France, corresponding in importance to the English "Derby," is an international race for three-year-olds, run at Longchamps, situated in the Bois de

Boulogne, Paris. It was established by Napoleon III. in 1863, and is run on the Sunday of Ascot week.

GRANITE, a crystalline rock composed of quartz, felspar, and mica. It is one of the oldest of the igneous rocks. The granite of which so many mountains and cliffs consist has been brought to the surface by earth-movements and by denudation in past ages. It is extensively used for building purposes and for roads. The ancient Egyptians were very expert in manipulating this rock, their working and polishing of it being of a very high order. The grey granite of Aberdeen and the pink-tinted granite of Peterhead are used largely in England for ornamental purposes.

GRANT, SIR JAMES HOPE, *b.* 1808, *d.* 1875, fought in the Chinese War, 1841–2, in the two Sikh wars, 1845–6, and 1848–9, and played a conspicuous part in the suppression of the Indian Mutiny, 1857–8. He was in command in the Chinese War, 1859, when Pekin was captured. For his conduct in this most successful war he received the thanks of Parliament and was gazetted G.C.B.

GRANT, ULYSSES, *b.* at Point Pleasant, Ohio, 1822, *d.* 1885; a distinguished American general and president of the United States. On the outbreak of the American Civil War, Grant joined the Federal army as colonel, and soon rose to the rank of brigadier-general of volunteers. A series of victories in Louisiana over the Confederates led to his appointment to the command of the entire Federal forces. His plan of dividing the Federals into several armies and keeping up a constant attack to prevent the Confederates from resting or concentrating, met with entire success. Grant was elected president of the United States in 1868 and again in 1872. The failure of a bank in which all his money was invested led him to publish his memoirs to support his family. Although suffering agony from cancer, the work was completed four days before his death.

GRANVILLE, GEORGE LEVESON-GOWER, second earl, *b.* 1815, *d.* 1891, a statesman who played a most useful part in many Liberal ministries by his tact, courtesy, and conciliatory manners. He held the post of Foreign Secretary in Lord John Russell's government, 1851, and from that time held office in every Liberal Government, either as Colonial or Foreign Secretary. He was remarkable for his perfect command of French and was considered the best after-dinner speaker of his day.

GRAPESHOT, originally a number of small balls enclosed in a canvas bag, to be fired from cannon. In a later form the balls were joined in three tiers by circular iron plates connected by a central pin. When discharged they spread and were very effective. The latest form is *case* or *canister-shot*, the balls being enclosed in a sheet-iron cylinder.

GRATTAN, HENRY, *b.* at Dublin, 1746, *d.* 1820; a famous Irish orator and statesman. After studying law in London he was called to the Irish bar, and three years later, in 1775, entered the Irish Parliament. Here he warmly advocated the removal of the authority exercised by the English Parliament over the Irish Parliament. His attitude led to the enrolment of 80,000 Irish volunteers, ostensibly for the defence of Ireland. England, hampered by wars with France, Spain, and the American colonists, was compelled to yield to the Irish demands, and Ireland found itself the possessor of "Home Rule." Parliamentary corruption, and the Irish Rebellion of 1798, led to the Union of Great Britain and Ireland in 1801, with one Parliament meeting in London. In 1805 Grattan sat in the United Parliament, and till his death worked incessantly for Catholic emancipation. As a statesman he was broad-minded, disinterested, and patriotic.

GRAVELOTTE, a village in Alsace-Lorraine, where was fought, in 1870, the most sanguinary battle of the Franco-German War. Both sides claim the victory, but the fact that Marshal Bazaine withdrew under the protection of the walls of Metz, relinquishing his road of retreat, justifies the German claim.

GRAVITATION, an attractive force which *all* bodies exert mutually upon one another. Newton, who was the first to suggest the existence of this force, stated, after exhaustive experiments, his famous Law of Gravitation:—"Every particle of matter in the universe attracts every other particle of matter with a force exerted along the straight line joining the particles, the force being directly proportional to the product of the respective masses of the particles, and inversely proportional to the square of the distance between their centres of gravity."

GRAY, THOMAS, *b.* in London, 1716, *d.* 1771, one of the most scholarly and most polished of English lyrical poets. After three years at Cambridge University he made the "grand tour of Europe." In 1768 he was appointed Professor of Modern History at Cambridge. His "Elegy in a Country Churchyard" is considered one of the finest productions in the English language, and alone will ever give him a high place among poets. His odes on "A Distant Prospect of Eton College," "The Progress of Poesy," and "The Bard" are excellent, but do not reach the high level of the "Elegy."

GREAT BRITAIN. The name was first used officially for this island by James I. on his accession to the English throne in 1603, but its legal use dates from the Union of the English and Scottish Parliaments in 1707. Previous to 1603 the name had been employed by writers to distinguish our island from Brittany, sometimes called Lesser Britain. Geographically speaking, Great Britain consists of England, Wales, and Scotland, but the widespread acceptance of the term "Greater Britain" suggests that Ireland is now deemed an integral part of Great Britain. Refer to "United Kingdom" in *Index*.

GREAT EASTERN, THE, for many years the largest ship afloat. Its length was 691 ft., greatest breadth 83 ft., and tonnage 22,500. Both paddles and screw supplied the propelling power. It was built at Milwall and launched in 1858. The vessel proved a financial failure from the very outset. From 1865 onwards she was employed in laying cables across the Atlantic and in the Mediterranean and Red Seas. She was sold at Liverpool in 1888 for £58,000 (one thirteenth of her original cost) and broken up.

GREBE, a genus of aquatic birds of which five distinct species are found in the British Islands. The skin, especially that of the Great Crested Grebe, is used for muffs and trimmings.

GREECE, a small country in south-east Europe, about the size of Scotland, with half as many people. *Morea*, its southern half, is a peninsula, joined to the continental portion by the Isthmus of Corinth, now pierced by a ship-canal. Its islands form a large portion of the kingdom, and comprise the Ionian Islands, the Cyclades, and the Sporades, including the large island of Negropont (Eubæa). Currants, olive oil, oranges, citrons, tobacco, wine, marble, and sponges form the chief exports. Athens, the capital, abounds in splendid ruins. Its port is Piræus. Patras has a great trade in currants. Corinth is now a decayed port. No race in the world's history has influenced the secular thought of succeeding generations to such an extent as the Greeks. Homer, Hesiod, Herodotus, Euripides, Æschylus, Sophocles, Plato, Aristotle, and Demosthenes are among its most famous writers and orators. For sculpture and statuary Ancient Greece was equally remarkable, Phidias (*b.* 490 B.C.) being its greatest artist, and the temple of Athena, called the *Parthenon*, his greatest work. In the days of its greatness Greece comprised a number of small independent states. In 338 B.C. it was conquered by Philip II. of Macedon. In 146 B.C. it became a Roman province, and in the middle of the 15th century fell into the hands of the Turks. A long struggle, which began in 1820, ended in the Greeks shaking off the Turkish yoke, and in electing their own ruler, 1832.

GREEK CHURCH, THE. Refer to *Index*.

GREENAWAY, KATE. *b.* in London, 1846, *d.* 1901, a painter in water-colours, chiefly noted for her charming drawings of children. Her illustrations of children's books and Christmas cards are very delightful. In these she wrote much of the verse and prose which she illustrated.

GREENBACKS, notes issued by the United States Government, during the Civil War in 1862–5, to the amount of 450,000,000 dollars. Some of these were withdrawn at the end of the war, but the enormous issue had so inflated prices that further withdrawal was opposed and a political party was formed to keep up prices. Greenbacks were so called from the colour in which the back was printed. On 1st January, 1879, they were declared convertible into coin, specie payments being then completely resumed.

GREEN CLOTH, BOARD OF, a committee presided over by the Lord Steward, sitting originally at a table covered with green cloth, to control the royal household generally and to examine and pass all its accounts.

GREEN, JOHN RICHARD, *b.* at Oxford, 1837, *d.* 1883, a noted English historian. His most famous work was his "Short History of the English people." This was followed by "A History of the English People," "The Making of England" and "The Conquest of England," all showing a clear conception of the real bearings of English History.

GREENLAND, an extensive territory lying entirely within the Arctic regions. It is probably an island, the estimated area being 500,000 square miles, about 50,000 of which are under Danish control. The interior is covered with an immense ice-sheet, but on the east and west coasts are Danish and Eskimo settlements. The exports are skins, oil, and cryolite, a mineral from which soda and alum are obtained. In the less exposed parts a few stunted birches and alders grow, and edible berries are plentiful in summer; population 12,000, chiefly Eskimos.

GREENOCK, a flourishing ship-building town and seaport on the Clyde. It has spacious docks and harbours, and the trade with America is considerable. Ship-building yards, marine engine works, iron and steel foundries, and roperies employ the greater part of the male population. James Watt was born here in 1736; population 70,000.

GREEN ROOM, so called from green having been originally the prevailing colour of its decoration and upholstery, is a room near the stage of a theatre, in which the actors await the cue to appear and take up their parts.

GREENWELL, DORA, *b.* 1821, *d.* 1882, wrote several volumes of poems marked by deeply religious feeling, with generally a strain of melancholy. Her chief poems

are "Carmina Crucis." "Songs of Salvation." and "Camera Obscura." She also wrote prose essays and biographies.

GREENWICH, a metropolitan borough in Kent, famous for its observatory. From the meridian passing through Greenwich the longitude of all other places is reckoned by the people of English-speaking countries. Greenwich contains the "Royal Naval College," in which young naval officers receive their final training before entering the service. The college was originally a royal residence, and was presented by Queen Mary in 1691 to the nation, as a home for pensioned seamen, which purpose it served, under the name of Greenwich Hospital, till 1869. The town contains engineering, boiler, boat-building works, &c.

GREGORY I., surnamed the Great, *b.* at Rome about 540, *d.* 604, was the son of noble parents, who, at death, left him great wealth, which he devoted chiefly to the Church. He became a monk in one of the monasteries endowed by himself. Elected to the Papal Chair in 590, he became distinguished by his missionary zeal, and sent Augustine with forty monks to attempt the Christianization of England. His struggle for supremacy with the patriarch, John of Constantinople, tended to widen the breach between the Eastern and Western Churches. His "Pastoral Care" was one of the works translated into Anglo-Saxon at the command of Alfred the Great.

GREGORY VII. (Hildebrand), *b.* about 1020, *d.* 1085; the pope who did most to establish the ecclesiastical supremacy of the papacy, and who laid the foundations of its temporal power. Before his election to the Papal Chair, in 1073, he had directed the policy of the four preceding popes, and had managed to place their election entirely in the hands of the cardinals. He enforced the celibacy of the clergy, introduced many drastic reforms, and came into conflict with kings and rulers. With Henry IV., Emperor of Germany, in particular, he took a high-handed course. On being excommunicated, the Emperor found it necessary, in order to avoid deposition, to do penance before the Pope at Canossa, in Italy, 1077. The dispute was afterwards renewed, and a rival pope set up.

GRENADE, the earliest form of the modern explosive shell, was a ball of metal or strong glass filled with gunpowder and exploded by a fuse. It was used in storming trenches, and was generally thrown by hand.

GRENADIER, originally the name applied to the soldiers of a company attached to each regiment, who led the assault on trenches and fortresses and hurled hand grenades among the enemy. The grenadiers were always picked men. The name is now only applied to a foot regiment of the Household Brigade of Guards.

GRENVILLE, SIR RICHARD, one of Queen Elizabeth's sea-captains, and a cousin of Sir Walter Raleigh, whom he assisted in his attempts to colonize Virginia. He is famous for a heroic fight against a fleet of Spanish war-ships, off Flores, in the Azores, in 1591. With his single ship he maintained the unequal contest for 14 hours. He died soon after surrendering to the enemy. This extraordinary battle is described in spirited verse in Tennyson's ballad, "The Revenge."

GRESHAM, SIR THOMAS, *b.* 1519, *d.* 1579; a wealthy London merchant, who helped to consolidate and improve English trade by founding the Royal Exchange. He devoted much of his wealth to educational and charitable purposes.

GRETNA GREEN, a border village of Dumfriesshire, Scotland, about 9 miles north of Carlisle. In Scotland, for a couple to declare themselves man and wife before witnesses is tantamount to a lawful marriage; hence Gretna for nearly a century was the scene of many clandestine marriages, the parties to which found it impossible, from the opposition of parents or guardians, to become united in England. In deference to the bride's feelings the English marriage-service was usually read by the toll-keeper, the ferry-man, or the village blacksmith. An act of Parliament, in 1856, making such marriages illegal, unless one of the parties had resided in Scotland for at least three weeks previously, put a stop to the scandal.

GREUZE, JEAN BAPTISTE, *b.* 1725, *d.* 1805; a French artist, best known as a painter of domestic scenes, girls, and portraits. His work displays great delicacy and charm. "The Broken Pitcher" in the Louvre, "Girl with Doves" in the Wallace Collection, and "Girl with Dead Canary" in the Scotch National Gallery, are his best works.

GREVILLE, CHARLES, *b.* 1794. *d.* 1865, was clerk of the Council in Ordinary, 1821–1860, a post which gave him many opportunities for studying Court life, political leaders, and all the social, literary and other celebrities of the time. His "Memoirs," published in three volumes, are brilliantly written and throw much light on the history of the first half of the 19th century.

GREY, LADY JANE, *b.* 1537, *d.* 1554: was the grand-daughter of Mary, sister of Henry VIII. She early showed great mental ability, and acquired a wide knowledge of both classical and modern languages. She became the victim of the unscrupulous Duke of Northumberland, who, for the aggrandisement of himself and his family, married her to his son, Lord Guildford Dudley, and persuaded Edward VI. on his death-bed to appoint her his successor. For nine days she was nominally queen of England; but on the accession of Mary, the rightful heiress to the crown, she was sent to the Tower and there beheaded.

GREY FRIARS or **FRANCISCANS,** an order of Friars founded by St. Francis of Assisi, in the 13th century. (See *Friars.*)

GREY, SIR GEORGE, K.C.B., *b.* at Lisbon, 1812, *d.* 1898; a distinguished English soldier and administrator. In 1837 and 1838 he led two exploring expeditions in North-West and Western Australia. In 1846 he was made Governor of New Zealand, where his wise and conciliatory rule made him extremely popular with the Maoris. From 1854 to 1861, as Governor of the Cape of Good Hope, he did splendid work in smoothing out the difficulties resulting from the Kaffir War. In 1861, with a view to ending the Maori War, he was again appointed Governor of New Zealand, but the war went on in spite of his efforts till 1870. From 1877 to 1884, as Premier of New Zealand, he did much to develop the colony. The comparative high state of civilisation among the Maoris, and their friendly relations with the whites, are in great measure the results of his labours.

GRIEG, EDWARD, *b.* at Bergen, 1843; a musical composer of Scottish descent, spent his early life in the study and teaching of music. A pension being conferred upon him by the Norwegian Parliament, he devoted himself to composition. He is a brilliant pianist and most of his compositions are for the piano, including sonatas and concertos; but he has also written a number of delightful songs and a variety of pieces for the violin and 'cello.

GRIFFIN, a mythical monster, who was said to guard gold and treasures hidden in the ground. It is generally represented as having the body and hind legs of a lion and the wings and beak of an eagle. Eagles' claws also took the place of fore feet. The griffin frequently occurs in heraldry, and is found in ancient Persian carvings.

GRIMALDI, JOSEPH, *b.* 1779. *d.* 1837, the most renowned of English clowns in the days of the old-fashioned pantomime, first appeared in Drury Lane when under two years old. From the age of three he regularly appeared in Sadler's Wells pantomimes. For some months each year he took "turns" at two theatres each evening. Worn out by over work he retired in 1828.

GRIMALKIN, an old cat, generally a female. The word is an abbreviation of "grey" and "moll-kin," a diminutive of "Moll," which is itself a diminutive of "Mary." One of the witches in Shakespeare's "Macbeth" addresses her attendant cat as "Graymalkin."

GRIMSBY, a fishing town and seaport on the Humber, Lincolnshire. Its trade was considerable in the Middle Ages, but the silting up of the harbour caused its decline. The development of English railways led to a revival of its importance, and dredging and dock construction has, since 1860, made it the leading centre of the English cod and herring fishery and the chief source of the fish supply of the Northern Midlands. Its trade with the Baltic and Western European ports is considerable. (For population, etc., see p. 902.)

GRIMTHORPE, (Edmund Beckett), **BARON,** *b.* 1816, *d.* 1905, a great authority in clocks and bells, and a writer on horology and architecture. He assisted Professor Airy in designing the celebrated clock of the Houses of Parliament, and restored at his own expense St. Alban's Abbey. He was raised to the peerage, 1886.

GROG, the general name for spirituous liquors, but applied especially to a mixture of rum and water. The name is derived from "grogram," and from the fact that Admiral Vernon, familiarly called "old Grog," from the grogram breeches he generally wore, ordered, in 1745, the rum served out to his men to be diluted with water.

GROOME, FRANCIS HINDES, *b.* 1851, *d.* 1902, a man of many literary attainments who contributed to various cyclopædias and dictionaries. He was editor or joint editor of many such works. His special study was the language, lore, habits and character of the gypsies, about whom he wrote "In Gypsy Tents" and "Gypsy Folk Tales," &c.

GROTE, GEORGE, *b.* 1794. *d.* 1871, a celebrated historian. In 1823 he began the systematic study of Greek history, and the result of his labours was his famous history of Greece, twelve volumes, published 1846–56. He took a democratic view of politics, and therefore was well fitted to interpret Athenian history and culture.

GROTTA DEL CANE, (Dog's Grotto), is a cave near Naples composed of limestone from which large quantities of carbonic acid gas are evolved. The gas, being heavier than air, settles near the floor and asphyxiates small dogs that are introduced into the cave.

GROUCHY, MARSHAL, *b.* 1766, *d.* 1847, a distinguished French general. He supported the French Revolution and rose rapidly in the Republican army. At Novi, Hohenlinden, Wagram and in the Russian campaign of 1812, he distinguished himself greatly. In the retreat from Moscow he commanded the "Sacred Battalion," which consisted entirely of officers, and formed Napoleon's body-guard. On Napoleon's escape from Elba, Grouchy was one of the first to join him. After Napoleon's defeat of Blucher at

Ligny, Grouchy was left with a division to harass the German retreat, but being outmanœuvred, was unable to prevent the junction of the Allies which ended in the crushing defeat of the French at Waterloo. He led the shattered remnants of the French army back to Paris, but, on the Emperor's abdication, he went to the United States. Returning in 1819 he was re-appointed marshal in 1831.

GROUSE, the name of a family of birds which includes the capercailzie, the blackcock, the ptarmigan, and the red grouse. The red grouse is the species that attracts so many sportsmen to the Scotch and Yorkshire moors from the 12th of August each year to the 10th of December following.

GRUB STREET, now Milton Street, near Moorfields, was, in the reign of George III., the home of writers of small histories and dictionaries, and of those engaged in literary hack-work generally.

GRUNDY, MRS., a lady in Morton's play "Speed the Plough" (1800), who does not appear, but whose opinion is much feared by her neighbour, a farmer's wife. The latter's constant reiteration of "What will Mrs. Grundy think? What will Mrs. Grundy say?" has since made that lady personify the opinion of aggressively moral gossips on matters of decorum.

GUANO, an extremely fertilising manure consisting chiefly of the excrement of sea-birds that feed on fish. The best variety is found on the islands and coasts of countries with a dry, hot climate. Deposits to the depth of 60 feet have been found off the coast of Peru, Bolivia, and Chile. The supply from these sources has been gradually decreasing, but a good substitute has been found in fish guano, obtained chiefly by artificially drying and grinding to powder the heads and back-bones of cod-fish and herrings. The value of different varieties of guano depends chiefly upon the proportion of phosphates present.

GUARDS, THE, a military term applied to the regiments of picked men that serve officially as the body-guard of the Sovereign. In the English army the regiments forming the Household Brigade of Guards are the 1st and 2nd Life Guards, the Royal Horse Guards, and four regiments of foot—the Grenadier, Coldstream, Scots, and Irish Guards. During times of peace they garrison the metropolis, and from them are chosen guards for the Royal Palaces and escorts for the sovereign on state occasions.

GUELFS AND GHIBELLINES, the name, assumed by two great parties whose antagonism kept Germany and Italy, especially the latter, in a disturbed state from the middle of the 11th century to the middle of the 14th. The principles fought for varied as time went on, but, speaking generally, the Ghibellines formed the imperial and aristocratic party in Italy, and the Guelfs the papal or popular party.

GUIANA, an extensive region in South America between the Orinoco and the Amazon. It is divided into five parts, three of which are colonies possessed by England, Holland, and France respectively. The whole territory consists of a low, fertile, and rather unhealthy coast plain of alluvial soil, varying in width from 10 to 40 miles, backed by uplands covered with luxuriant forests of tropical trees. (1) *British Guiana*, obtained from the Dutch by treaty in 1814, has an area of 104,000 square miles and a population of 280,000, of which 17,000 are Europeans. Its capital is Georgetown. Sugar, rum, timber, gold, and various gums are exported. (2) *Dutch Guiana* is in a very backward condition; its chief town is Paramaribo. (3) *French Guiana*, capital Cayenne, exports pepper, cloves, nutmegs and other spices. It is used as a penal settlement.

GUIDO. See *Reni, Guido.*

GUILDS are associations formed for the protection and development either of commerce or of some particular trade. During the Middle Ages their influence was very great, especially in freeing industrial cities and ports from the power of feudal lords. The industrial revolution in England in the latter half of the 18th century proved their death-blow in this country.

GUILLOTINE, a machine used in France for the purpose of decapitating persons sentenced to death. Its chief feature is a heavy iron blade with a sharp, oblique lower edge, which can be made to fall by its own weight between two upright posts grooved for that purpose, on to the neck of the victim fastened below. Its use, under other names, dates back to very ancient times. A similar instrument, called the "Maiden," was used in Scotland during the 16th and 17th centuries. The modern name is derived from that of Dr. Joseph Guillotin, who suggested its adoption during the French Revolution.

GUINEA, the collective name for a long stretch of coast territories on the west coast of Africa, lying between the mouth of the Senegal river and Cape Negro, a distance of 4,000 miles. *Upper Guinea* comprises Senegal, Gambia, Sierra Leone Liberia, the Ivory, Gold, and Slave Coasts, the Niger Protectorate and the Cameroons. *Lower Guinea* includes Corisco Bay, the Gaboon Colony, the Congo Free State, Angola, and Benguela. English traders first visited this coast during the middle of the 16th century. Guinea, a gold coin used in England from 1663 to 1817, received its name from the fact that the gold employed in minting the first set of these coins came from Guinea.

GUINNESS FAMILY, a family of brewers of stout in Dublin. The fame and prosperity of the firm were chiefly owing to the great organizing power of Sir Benjamin Lee Guinness, *b.* 1798, *d.* 1868, who established the fame of Dublin stout and became immensely rich. At his own expense he restored St. Patrick's Cathedral, Dublin. He was created baronet in 1867, his eldest son, Sir Arthur Guinness was created Baron Ardilaun in 1880, and his youngest, Edward Cecil, was created Baron Iveagh in 1891, two years after placing £250,000 in the hands of trustees for providing workmen's dwellings at a low rent, four-fifths to be laid out in London and the rest in Dublin.

GULF STREAM, THE, an ocean current which sweeps round the Gulf of Mexico, passes through the Straits of Florida at an average rate of 6 miles an hour, and after flowing some distance along the east coast of the United States strikes north-east across the Atlantic, widening and losing its velocity as it proceeds. By the time it reaches the latitude of the British Islands it does little more than drift about 4 miles a day. The water of the Gulf Stream is a little higher in temperature than the surrounding water, and this fact tends to make the average annual temperature of the maritime countries of North-West Europe higher than it would be otherwise.

GULLIVER'S TRAVELS, the best-known work of the great satirist Swift, was produced in 1726. The marvellous yet plausible adventures of Gulliver among pigmies and giants make this work very entertaining as a story-book; moreover, the reader who knows thoroughly the political life of the reigns of Anne and George I., sees in it a clever satire on the public men and movements of the day.

GULL, SIR WILLIAM, *b.* 1816, *d.* 1890, a great physician, was created a baronet, 1872 for his skill in treating the Prince of Wales in a dangerous illness. He was professor of physiology at the Royal Institution, 1847–9, physician and lecturer at Guy's Hospital, 1847–67; also author of many valuable medical works.

GUN-COTTON, a powerful explosive, about four times as effective as gunpowder, is produced by the action of nitric and sulphuric acids upon cotton wool. It ignites at a temperature of 300° F., a detonator of fulminate of mercury being usually employed. Gun-cotton, being unaffected by immersion in water, is always stored wet, in air-tight cases, to ensure safety. After ignition, gun-cotton gives off gases too rapidly to make it of any use for guns and firearms, but for charging torpedoes and marine mines, and for destructive purposes generally, it is of the highest value. In its manufacture the purest cotton-wool is taken and dipped in nitric and sulphuric acids mixed in the proportion of 1 to 3. After being freed from waste acid and dried, it is compressed to one-third of its former bulk, divided, and finally stored as indicated above.

GUNNERY SCHOOLS. There are two of these for the navy, one at Whale Island, near Portsmouth, and the other on board the *Cambridge* at Devonport. Naval officers are required also to spend about six months in the gun factory and laboratory at Woolwich. The military gunnery school is at Shoebury Ness, near the mouth of the Thames.

GUNNING, MARIA, *b.* 1733, *d.* 1760; was the elder of two Irish sisters famed for their beauty. Coming to London, in 1751, they attracted much notice in society on account of their unusual beauty. Crowds followed them wherever they went, and on one occasion, George III. allowed Maria, who was on friendly terms with the king, the escort of a small guard of soldiers to permit her to walk unhampered. In 1752 the elder sister married George William, Earl of Coventry, and the younger, Elizabeth, married the Duke of Hamilton.

GUNPOWDER, an explosive mixture consisting of 75 per cent. by weight of saltpetre, 15 of carbon, and 10 of sulphur. The proportions, however, vary in different countries. The constituents are ground into powder, thoroughly mixed by hand, and enough water added to make the resultant mixture into a wet cake. This cake is then crushed into a kind of meal, compressed to increase its density, broken up into grains, dried by steam heat, passed through a granulating machine to sort out grains into different sizes, and finally the grains are glazed by friction in a revolving drum. Powder used for heavy guns and shells is not granular, but consists either of cubes (the largest with a 1½ inch edge) or of hexagonal prisms about 1 inch high and 1¼ inches across. The propelling power of gunpowder is due to the rapid generation of large quantities of gas in a confined space. An explosive such as dynamite or gun-cotton is found to generate gas too quickly, the result being that the projectile is driven along the bore with such rapidity that the rifling becomes damaged.

GUNPOWDER PLOT, a conspiracy of certain Roman Catholics in 1605, in the reign of James I., on account of his refusal to redress their grievances, to blow up with gunpowder the Houses of Parliament when the king and his ministers were there. Barrels of gunpowder were secretly lodged in the cellars of the House, and a Spanish soldier, named Guy Fawkes, was hired to fire the gunpowder at the right moment. But the plot was discovered in time. Guy Fawkes and many of the conspirators were executed.

GUNROOM, the living room or mess room of the junior officers of a man of war, under the care of the gunner, in the aft lower deck. The watchman, who had to keep the gunroom clean, used to be called "the lady of the gunroom."

GURNEY, JOSEPH JOHN, *b.* 1788, *d.* 1847; a warm-hearted philanthropist, who, with his sister, Mrs. Fry, worked earnestly and unselfishly for prison reform. He was a leading member of the Society of Friends (Quakers). His writings include "Prison Discipline" and "Religious Peculiarities of the Society of Friends."

GURNEY, SIR GOLDSWORTHY, *b.* 1793, *d.* 1875; an English chemist and inventor. To him we owe the Bude, oil-gas, lime and magnesium lights, and he claimed to have invented the oxy-hydrogen blow-pipe. Investigations made by him of the poisonous and explosive gases that collect in mines and sewers resulted in the invention of the High-pressure Steam Jet. In 1852 the lighting and ventilation of the Houses of Parliament was undertaken under his direction. He was knighted in 1863, and was soon after struck with paralysis.

GUTENBURG, JOHANNES, is credited by the Germans with the invention of printing by movable blocks. Nothing is known with certainty of his early experiments in printing, but in 1450 he entered into partnership with a goldsmith of Mainz named Faust, and set up a printing press in that town.

GUTTA PERCHA, a substance which must not be confounded with caout-chouc, is prepared from the juice of certain trees found in the Malay peninsula and the adjacent islands. The trees, sometimes 70 ft. high, are tapped in order to extract the juice. It oxidises and decomposes more rapidly than india-rubber, which is now often used as a substitute in the coating of submarine cables. Soles of shoes, water pipes, goloshes, golf balls, are examples of the many uses to which it is put on account of its elasticity and impermeability to water. It can be readily boiled down, and is invaluable for taking casts in which a sharp outline is needed. It is used for examining the bores of guns, the smallest defects being clearly shown on the casts.

GUY, THOMAS, *b.* in London, 1644, *d.* 1724; best known as the founder of Guy's Hospital, was the son of a lighterman and coal-dealer. In 1668 he set up as a bookseller, dealing chiefly in Bibles. Successful speculations in South Sea Stock enabled him to amass a fortune of nearly half-a-million sterling. In his business dealings he showed a certain amount of parsimony, but at his death he left nearly £300,000 to be devoted to the building and endowment of the hospital that bears his name. Many public charities benefited considerably by his wealth.

GY'GES, king of Lydia, 668–626 B.C. According to the legend in Plato, he was a herdsman who discovered a magic ring by which he could render himself invisible. With its aid he assassinated the king of Lydia and seized the sceptre.

GYPSUM, or calcium sulphate, is a widely distributed rock mineral which exists under various names according to the forms and arrangement taken by its crystals. Selenite and satinspar are both transparent, and consist of well-defined crystals. Alabaster, used so much in decorative building, is translucent and very easily worked. Ordinary gypsum, when ground to powder, makes a good manure for grass lands. Gypsum, on being heated to a high temperature, becomes Plaster of Paris, which derives its name from the gypsum deposits of Montmartre, Paris.

HAARLEM, a town in North Holland. Dutch bulbs are extensively cultivated in the surrounding district, and it is celebrated for its bleaching fields. It surrendered to the Spaniards in 1573, after a siege of seven months, and 2,000 citizens were put to death. Between this town and Amsterdam was formerly a lake 26 miles in length, named the *Haarlem Meer*. It was drained in 1840–53, and is now a fertile plain.

HABEAS CORPUS. Refer to *Index*.

HADDOCK, a fish that frequents in shoals the European and North American coasts of the Atlantic Ocean. They are caught principally with trawl nets, but also by small lines. The British catch is worth about two million pounds annually. Whilst much is consumed fresh, much also is smoked.

HADDON HALL, an ancient residence of the Manners family, situated in Derbyshire. It is of great antiquarian interest.

HADES (ha-des), was, among the ancient Greeks and Romans, the god of the lower regions, and then the name of the world below, in which dwelt the shades of the dead. In the New Testament it is the place of all departed spirits, in which they await the judgment day.

HADJ, or **HAJJ,** a pilgrimage. As a rule it means *the* great pilgrimage of Moslems, which is of course, to Mecca, and must be performed at least once by every believer possessed of the needful means and strength. Thereafter, the pilgrim is entitled to style himself "Hadji." The name Hadji is also given to any Eastern Christian who makes the pilgrimage to Jerusalem.

HÆMATITE. See *Iron*.

HADRIAN. See *Adrian*.

HAGADA. See *Talmud*.

HAGGARD, HENRY RIDER, *b.* in Norfolk, 1856; a popular novelist. Among his numerous works are "Allan Quatermain," "Jess," "She," and "King Solomon's Mines." He was living in Natal, close to Majuba Hill, during the war with the Transvaal in 1881.

HAGGIS, a favourite Scotch dish. The heart, lights, and liver of a sheep are chopped fine and mixed with oatmeal, suet, and spices. The whole is placed in a sheep's stomach and boiled for three or more hours.

HAGIOGRAPHA, a division of the Jewish Scriptures. These are divided into the Law, the Prophets, and the Holy Writings or Hagiographa. The last named consists of the Psalms, Proverbs, Song of Solomon, Ecclesiastes, Job, Ruth, Lamentations, Esther, Daniel, Ezra, Nehemiah, and the Chronicles. In earlier times this title was applied only to the first four named.

HAGUE, THE, the seat of government of Holland. It is a well-built city with a population of above 200,000. Numerous Dutch pictures are preserved in the Palace of the Prince of Orange and in the Museum. Charles II. set sail for England in 1660, from Scheveningen, now a beautiful seaside resort about four miles distant. At Ryswick, about two miles south-east, a treaty was signed in 1697 between William III. and Louis XIV. The International Peace Conference of 1899 met here and arranged for the constitution of an Arbitration Court. This tribunal has already amicably settled two disputes; the one, between the United States and Mexico; and the other, certain questions concerning the Venezuelan difficulty.

HAHNEMANN, CHRISTIAN FRIEDRICH, *b.* in Saxony, 1755, *d.* 1843; a German physician, who founded the system of medicine named homœopathy. His great work, "The Organon of Rational Medicine," was published in 1810.

HAIL, small, rounded pellets of ice. No satisfactory explanation of its origin has been given, but it may be caused by the sudden cooling of the moisture in the air to below the freezing point, by the passage of an electric current through the atmosphere. It falls chiefly in summer, usually during a thunderstorm, and is most destructive in warm and dry countries.

HAIR, MANUFACTURES OF. Chairs are stuffed with short horse-hair, and cloth is woven from long horse-hair and the hair of the Angora and other goats. Felt, for roofing and packing for pipes, is manufactured from cow-hair. Brushes for painting are made from the hair of the camel and sable, and clothes and other brushes from hog bristles.

HAKLUYT, RICHARD, *b.* 1553, *d.* 1616; the first historian of English voyages. He, an intimate friend of Sir Walter Raleigh, gave by his writings a great impetus to colonisation. He wrote "Divers Voyages touching the Discovery of America," and "Principal Navigations, Voyages, and Discoveries of the English Nation made by sea or over land . . . . within the compass of these 1,500 years."

HALACHA. See *Talmud*.

HALBERT, an axe, with a pointed head and often much ornamented, fixed upon a handle five or six feet long. It was much used in the 16th century by the foot soldiers of Western Europe.

HALCYON DAYS, calm, peaceful times. Halcyon is the ancient Greek name for the kingfisher. This bird was reputed to build its nest upon the sea, lay and hatch its eggs during fourteen days, about December 21st. The sea was said to be calm during this period.

HALE, SIR MATTHEW, *b.* in Gloucestershire, 1609, *d.* 1676; a famous judge and chief justice. He was a great student in all branches of knowledge, and wrote numerous works, especially upon Law and History. Many of his manuscripts are still preserved in the library of Lincoln's Inn.

HALF-PAY, an allowance granted to naval and military commissioned officers who are not actually serving. In the army it is called retired pay, but the nature of the payment is the same, being a kind of retaining fee in case the holder's services are again required. Thus a reserve of officers is built up.

HALIBURTON, THOMAS CHANDLER, *b.* in Nova Scotia, 1796, *d.* 1865, at Isleworth. He was a judge in Nova Scotia, but spent much of his life in England. He was the first author who used the American dialect. His principal works are, "The Clockmaker," or Sayings and Doings of Sam Slick of Slickville, "The Letter Bag of the Great Western," and "Sam Slick's Wise Saws and Modern Instances."

HALIDON HILL, near Berwick, where Edward III. defeated the Scots in 1333 and captured Berwick.

HALIFAX. (1) A Yorkshire town, whose principal industry, aided by plentiful coal and abundant water power, is the manufacture of woollen goods. It enjoys excellent means of communication with the ports of Liverpool and Hull. (For population, etc., see p. 902.) (2) The winter port of Canada, in Nova Scotia, with a population of above 40,000. In its magnificent harbour all the fleets of the world could anchor at once. It is a station of the British North Atlantic fleet, and lines of steamships sail from its port to Europe and many parts of America. It has railway communication with the United States, Quebec, and Ontario. Its manufactures are important, and include machinery and cotton and woollen goods.

HALL, CHARLES FRANCIS. See under "Explorers" in *Index*.

HALLAM, HENRY, *b.* at Windsor, 1777, *d.* 1859; one of England's greatest historians. He wrote three works, which are still considered authorities upon the subject: "View of the State of Europe during the Middle Ages," in 1818; "The Constitutional History of England from the Accession of Henry VII. to the Death of George II.," in 1827; and "Introduction to the Literature of Europe in the 15th, 16th, and 17th centuries," in 1838.

HALLAM, ARTHUR HENRY, *b.* 1811, *d.* suddenly at Vienna, 1833; a son of Henry Hallam, and a young man of great promise. Alfred Tennyson, of whom he was an intimate friend, and to whose sister he was engaged, wrote "In Memoriam" in his honour.

HALLEY, EDMUND, *b.* in London, 1656, *d.* 1742; a great astronomer and an intimate friend of Isaac Newton. He discovered that the comet of 1682, since called Halley's, was probably the same that had appeared in 1607 and in 1531. He calculated that it should return about 1758. It did so in 1759 and should again visit the earth in 1910. He showed that many comets belonged to the Solar System and travelled in elliptical orbits, and this removed many superstitions connected with them. He used the transit of Venus to measure the distance of the earth from the sun, and mapped out 350 of the southern stars.

HALL-MARKS. See *Commercial Dictionary*.

HALLOWEEN (October 31st), the eve of All Hallows, or All Saints' Day. In Scotland it used to be a general time of merrymaking as shown in Burns's "Halloween."

HALLUCINATION. See *Illusion*.

HALO. (1) A circle of light surrounding the sun or moon. It is probably due to refraction of the light by tiny ice crystals present in the intervening air. Rainbows, fog-bows, and "mountain spectres" are due to a similar cause. (2) In religious art the "nimbus," or circle of golden light surrounding the head of the person represented.

HAMAN, a favourite of King Ahasuerus of Persia. He planned the destruction of all the Jews that he might slay Mordecai. Queen Esther defeated his object, and he was hanged upon the fifty feet gallows prepared for Mordecai.

HAMBURG, an imperial city and the chief port of Germany, situated on the Elbe, 60 miles from its mouth. Steamships communicate with almost all parts, and the Hamburg-American Line possesses the largest mercantile fleet in the world. Its internal trade by means of the river, canals and railways is enormous. The value of its commerce is exceeded only by that of London, New York, and Liverpool. Its manufactures, with a population exceeding 750,000, are very varied and important.

HAMELIN, PIPER OF, the subject of a 13th century story used by Browning in his well-known poem. He charmed and destroyed the rats of Hamelin, in Hanover. He was refused his fee, and, in revenge, led, by means of his pipe, the town children to a neighbouring hill, which opened, and the children followed him through it.

HAMILTON, LADY, *b.* 1762, *d.* 1815; the humbly born and beautiful wife of Sir William Hamilton, ambassador to Naples. She is principally remembered on account of her intimate friendship with Nelson. She died at Calais, after a life of many vicissitudes, in great poverty through extravagance, leaving one daughter, named Horatia.

HAMILTON, PATRICK, *b.* 1504, *d.* 1528; a Scottish reformer and martyr. He visited Germany, where he spent some time with Martin Luther. On his return, he was burned at the stake as a heretic, at St. Andrews.

HAMLET, one of Shakespeare's tragedies, named after the principal character in the play. The scene is laid at Elsinore, in Denmark, and the story is based upon an ancient Danish legend.

HAMOAZE, the channel from the mouth of the Plym, in Devonshire, to the mouth of the Tamar. Devonport stands upon its eastern shore.

HAMPDEN, JOHN, *b.* 1594, *d.* 1643; a Buckinghamshire gentleman who refused to pay ship-money in 1635. He was an energetic and determined opponent of Charles I., and a member of the Long Parliament. On the outbreak of the Civil War he entered the field, and was mortally wounded at Chalgrove Field, near Oxford.

HAMPSHIRE, a county in the south of England, principally remarkable for its marine and rural beauty, with an area of above 1,600 square miles. The Solent and Spithead separate the Isle of Wight from the mainland, and Portsmouth Harbour and Southampton Water are the chief inlets. The principal rivers are the Itchen and Avon. The North Downs traverse the north of the county, and the New Forest is situated in the south-west. The county town is Winchester, with a fine cathedral and an ancient public school. The other important towns are Southampton, a prominent port; Portsmouth, the first naval station of the Empire; and Bournemouth, a pleasant watering place.

HAMPTON COURT, a royal palace, situated near Bushey Park, and 15 miles from London, built by Cardinal Wolsey, and appropriated by Henry VIII. It was a favourite royal home until the reign of George IV., and Edward VI. was born there. In 1604 an unsuccessful conference was held there between the Bishops and the Puritans, but the Authorised Version of the Bible was then projected. Private apartments in it are now granted by the sovereign to certain selected persons. The finest rooms are the great Hall and adjoining chambers. Its important art treasures include Lely's portraits, Kneller's portraits, and examples by Holbein and West.

HANDEL, GEORGE FREDERICK, *b.* in Saxony, 1685, *d.* in London, 1759; a world-renowned musician, buried in the Poets' Corner of Westminster Abbey. He, quite early, showed exceptional musical ability, and devoted himself to his favourite study at Halle, Hamburg, and the musical centres of Italy until 1710. He then became Chapel-master to George, Elector of Hanover, and followed his royal master to England, 1714, where he spent the rest of his life. Handel wrote many operas, now forgotten, and made a gallant but most unsuccessful attempt to establish Italian Opera in London. His title to fame rests mainly upon his oratorios, of which he produced nineteen between 1736 and 1751; among them being the Messiah, Israel in Egypt, Samson, Judas Maccabæus, and Saul.

HANDFASTING, a form of marriage once common in Scotland, in which a man and woman bound themselves to each other by word of mouth. The union lasted for a year and a day, after which the parties were free to separate or be formally married. Betrothal was called "handfasting" in former centuries.

HANDICAPPING, the putting of competitors in a game or contest upon an equality, by imposing penalties upon the more powerful or skilful. Time allowances, based upon tonnage and sail area, are granted in a yacht race, and in a motor car contest upon weight and horse-power. See *Horse Racing*.

HANG-CHAU, a port of China, situated south of Shanghai, and connected with Tientsin by the Grand Canal. Its commerce is very considerable, and a large proportion of its 700,000 inhabitants are engaged in silk manufacture.

HANKOW, a treaty port of China, situated on the Yang-tse-kiang, above 600 miles from the sea. It, with a population approaching a million, is the centre of the tea growing districts, and one of the greatest trading towns in the world.

HANNIBAL, one of the greatest generals in history. In 218 B.C., when twenty-nine years of age, he marched with 100,000 men from Carthagena, in Spain, crossed the Pyrenees, followed the Rhone, and led his troops over the Alps into Italy. He arrived in Italy, after a journey of five months, with 26,000 men, yet he maintained a war in Italy against Rome for fifteen years, often completely defeating its armies, and shaking its power to the very foundations. He was at last compelled to withdraw to Carthage, and was finally defeated by Scipio, at the battle of Zama, 202 B.C.

HANNINGTON, JAMES, *b.* at Hurstpierpoint, in 1847, *d.* in Uganda, 1885; the first bishop of Equatorial East Africa. In 1882 he went as a missionary to East Africa, but ill-health compelled him to come to England. In 1885 he returned as Bishop, and while trying to discover a new route from Mombasa to Lake Victoria Nyanza he was taken prisoner by Mwanga, king of Uganda, and put to death.

HANOVER, a province of Prussia. The rivers Ems, Weser, and Elbe drain it, and the Harz Mountains occupy its southern district. The inhabitants are chiefly engaged in agriculture and mining. Hanover, the capital and the birthplace of Sir William Herschel, has a population of above 230,000. It is interesting from its connection with England. The Elector, George Lewis, became George I. of England in 1714. He was the son of Sophia, daughter of the Elector Palatine, and grand-daughter of James I. The sovereigns of England were rulers of Hanover, which became a kingdom in 1814, until 1837. Victoria being excluded from the succession by the Salic Law, Ernest, Duke of Cumberland, being the nearest male heir, became its king. In the Prusso-Austrian war of 1866 Hanover supported Austria, and in consequence the king was deposed and the kingdom annexed by Prussia.

HANSARD, LUKE, *b.* at Norwich, 1752, *d.* 1828, founder of a great printing business, and printer of the Journals of the House of Commons from 1774 to 1828. The official records of that House are still referred to as "Hansard."

HANSEATIC LEAGUE, a confederation of German towns, formed in the 13th century for mutual protection and for the promotion of commercial privileges. The most important members, which at one time numbered ninety free cities, were Hamburg, Lübeck, and Bremen. It exerted great influence throughout Europe for more than two centuries.

HANSOM, JOSEPH, *b.* at York, 1803, *d.* 1882; an architect and the inventor of the Patent Safety Cab which bears his name.

HANWAY, JONAS, *b.* at Portsmouth, 1712, *d.* 1786; a traveller, merchant, and philanthropist. In 1753 he published an account of his travels in Russia and Persia. From that time he settled in London, and was unceasingly engaged in philanthropic work, chiefly for the

children of the poor, for whom he founded Sunday Schools. He was the first man, amid much derision, to use an umbrella in the streets of London.

HAPSBURG, HOUSE OF, the imperial family of Austria, whose ancestors held the castle of Hapsburg, in the valley of the Aar. From the time of Count Albert, in 1153, the family increased its possessions and power, so that in 1273 Count Rudolph was elected Emperor of Germany. From him were descended, through Maria Theresa, the Austrian royal house, and also the family which ruled Spain from 1516 to 1700.

HARA-KIRI, or "happy dispatch," the Japanese method of committing enforced suicide. This was done by a self-inflicted but superficial cut across the belly, followed either by a deadly cut across the throat by the victim's own hand, or by the stroke of a sword dealt by a friend's hand, severing the head from the body. The custom is now obsolete.

HARCOURT, SIR WILLIAM VERNON, *b.* 1827. *d.* 1904, one of the most distinguished of Mr. Gladstone's lieutenants and disciples, gained high honours at Cambridge University, became a Q.C. in twelve years after being called to the Bar, and gained celebrity by his writings signed "Historicus." He became Solicitor-General in 1873, and thereafter took a leading part in all Liberal governments till his death. Many thought he should have been Prime Minister on Mr. Gladstone's retirement.

HARDINGE, HENRY, VISCOUNT, *b.* Wrotham, 1785, *d.* 1856; Governor-General of India from 1844 to 1848. He served with distinction through the Peninsular War, and was a member of the Prussian Staff during the Waterloo Campaign. When Governor-General of India he served under Sir Hugh Gough in the Sikh War, and for his services was created Viscount Hardinge of Lahore, with a pension of £3,000 per annum for three lives. He was Commander-in-Chief when the Crimean War broke out, and was appointed a Field Marshal.

HARDWAR, a small town situated upon the upper Ganges. The largest fair in Hindustan is held here towards the end of March, at the time of a religious festival attended by about 250,000 people.

HARDY, THOMAS, *b.* near Dorchester, 1840; a popular novelist. Many of his numerous novels have been translated into foreign languages. His best known works are, "Far from the Madding Crowd," and "Tess of the D'Urbervilles."

HARE, a fleet and timid animal, ever watchful against dangers which threaten it from birds and beasts, while hiding in its "form." It is found in many parts of Europe and the West of Asia, at The Cape, and in Arctic Regions. It pairs in February or March, when it exhibits great pugnacity, and four or five litters, each of three or four young, called leverets, are born by the end of August. The sport of catching the hare with greyhounds is called coursing. When so chased it shows not a little ingenuity in choosing a course to thwart and baffle its pursuers.

HAREM, the portion of a Mohammedan's dwelling set apart for his wives and forbidden to strangers; also the term applied to the wives and their attendants. These wives, limited by the Koran to four, live a dull, monotonous life of sewing and spinning, only enlivened by such simple amusements as singing and dancing.

HARGRAVES, EDMUND HAMMOND, the discoverer of gold in the Blue Mountains of Australia, in 1851. He was led to suspect its presence from the evident similarity in geological character to California, from which he had just come.

HARGREAVES, JAMES, *d.* 1778; the inventor, about 1763, of the spinning jenny, by which eight threads could be spun at once. The Blackburn spinners destroyed his jenny and his house, so he removed to Nottingham.

HARLECH, a town with the ruins of an ancient castle, in Merionethshire. The Yorkists captured it during the Wars of the Roses, and in consequence the Welsh National Air, "The March of the Men of Harlech," was composed.

HARLEIAN MANUSCRIPTS. Robert Harley, first earl of Oxford, after his disgrace under George I., devoted himself to increasing the collection of books and manuscripts he had already begun. His son, Edward, added to it, and after his death his widow sold the collection to the nation for the nominal sum of £10,000. It contains about 22,000 volumes and documents, and is housed at the British Museum.

HARLEQUIN, a mute actor in a pantomime. He is clothed in tight-fitting parti-coloured garments, and is supposed to be invisible to all eyes but those of his faithful wife, Columbine. With a magic wand he plays tricks, and defends Columbine from the pantaloon and the clown.

HARLEY, ROBERT, *b.* in London, 1661, *d.* 1724; a minister of Queen Anne, a patron of literature, and a cousin of Mrs. Masham, Queen Anne's favourite. He held many high offices, and was created Earl of Oxford. In 1715 he, through his uncertain action on the accession of George I., was impeached of high treason and imprisoned in the Tower until 1717. After a public trial by the House of Lords he was acquitted, and lived in private until his death. See *Harleian Manuscripts.*

HARMATTAN, a hot, dry wind which blows from the Sahara to the Gulf of Guinea, from January to March. It seriously affects the eyes, nose, and mouth, but causes fevers to abate.

HARMONICS, or **OVERTONES,** See *Glossary of Musical Terms.*

HAROLD, *b.* about 1021, *d.* 1066; the last Saxon king of England. After the death of his father, Earl Godwin, in 1053, he and his brothers gradually brought all England, except Mercia, under their sway. In 1066, on the death of Edward the Confessor, he was chosen king. He was immediately called upon to resist two invasions: the one by his brother, Tostig, and Hardrada, king of Norway, both of whom he defeated and slew at Stamford Bridge, Yorkshire; the other by William, Duke of Normandy, who defeated and slew him in the battle of Hastings.

HARP, an ancient stringed musical instrument, played with the fingers. It is mentioned frequently in the Bible, and the harps of Scotland, Wales, and Ireland were famous in early times. The double action pedal harp has seven pedals, which are operated by the foot, and forty-three strings by the fingers.

HARPOON, a kind of barbed javelin or spear used for piercing whales and preventing their escape. It consists of a shank about 2 feet long with a barbed head, into which fitted a wooden shaft when harpoons were thrown by hand. Now they are discharged from guns and the shaft has a slot in which works an iron ring attached to the rope which checks the whale's progress.

HARPY, (1) a fabulous, filthy, winged creature, mentioned in Homer and Virgil and described as a ravenous bird with sharp claws, and with the head of a woman whose face is pale with hunger. (2) A fabulous creature appearing in heraldry as a vulture with the head and breast of a woman. (3) The largest of the eagle tribe, found in the tropical parts of South America. (4) Any rapacious or ravenous creature.

HARQUEBUS. See *Arquebus.*

HARRISON, JOHN, *b.* at Foulby, in Yorkshire, 1693, *d.* 1776, a mechanician who invented the chronometer and the "gridiron" pendulum.

HARROGATE, an inland watering place, with a population of above 28,000, situated about 24 miles west of York. Its fine baths are supplied from sulphur, chalybeate, and magnesia springs, and these waters are recommended for rheumatism, for certain skin diseases, and for digestion troubles.

HARROWS, agricultural implements. The brake harrow has a square iron or wooden frame, set with rows of iron teeth pointing downwards, and is used to break up and smooth ploughed land. The chain harrow consists of iron rings, and is used to destroy weeds or to cover seeds.

HARROW SCHOOL, one of the four greatest public schools of England, founded, in 1571, by John Lyon, a yeoman. When Dr. Wordsworth resigned the Head-mastership in 1844 there were only 69 pupils. The school took a new start under his successor (Dr. Vaughan), and the number on the roll now exceeds 500.

HARTE, FRANCIS BRET, *b.* in New York State, 1839, *d.* 1902; a popular American writer and humorist. In 1869 he published his widely read, humorous poem, "The Heathen Chinee:" and among his numerous works are "The Luck of Roaring Camp," "Outcasts of Poker Flat," "Miggles," and "Stories in Light and Shade."

HARUN-AL-RASHID, "Aaron the Just," Caliph of Bagdad, 786–809, the most renowned of the Eastern Caliphs. His authority was acknowledged, more or less, from the Indus to the Nile, and even across North Africa to Mount Atlas. The prosperity of his caliphate was greatly due to the able rule of his vizier, Barmecides. The Caliph figures prominently in many stories of the "Arabian Nights."

HARVARD UNIVERSITY, the oldest, wealthiest, and most important of American Universities, situated at Cambridge, near Boston, Massachusetts. The Rev. John Harvard founded it in 1638.

HARVEY, WILLIAM, *b.* at Folkestone, 1578, *d.* 1657; a celebrated English doctor who discovered the circulation of the blood, which was suggested to him by observing the valves in the veins.

HARZ MOUNTAINS, situated in the north-west of Germany, the loftiest peak of which, the Brocken, is nearly 4,000 feet high. They are very rich in minerals, including lead, iron, silver, copper, zinc, sulphur, and a little coal. The Brocken, in ancient legend, as adopted by Goethe in "Faust," was the annual meeting place of all German demons and witches. The *Spectre of the Brocken* is a celebrated optical illusion.

HASHISH, a drug prepared from the gum obtained from Indian hemp. It is a narcotic smoked extensively by the Arabs, and its effects are similar to those produced by opium. In India an intoxicating drink called *bhang* is made from it.

HASTINGS, a fashionable Sussex watering place, which with St Leonards has a sea front of over two miles. It has important fisheries. The scene of the fight in 1066 between Harold and William the Conqueror, at Senlac, is about 8 miles distant. (For population, etc., see p. 902.)

HASTINGS, WARREN, *b.* at Churchill, Oxfordshire, 1732, *d.* Daylesford, 1818; became the first Governor-General of India, in 1773. He did much to extend British rule in India, but on his return to England, 1785, he was impeached by order of the House of Commons for extortion and cruelty. The trial that ensued was prolonged over seven years, and is famous for the oratorical speeches delivered by Burke, Sheridan, and Fox. It resulted in an acquittal, 1795.

HASTINGS, WILLIAM, LORD, *b.* probably 1430, *d.* in the Tower, 1483; a firm supporter of Edward IV., by whom he was made a peer and endowed with great estates. He was beheaded on a charge of treason, without trial, by Richard, Duke of Gloucester, afterwards Richard III.

HATCHMENT, or **ACHIEVEMENT,** is a lozenge-shaped panel placed on the exterior of a house after the death of a member of a family entitled to armorial bearings. On it is painted the coat of arms, so as to indicate the rank, sex, and status of the deceased.

HATFIELD, a small town in Hertfordshire, about 17 miles from London. Elizabeth was living at Hatfield when Mary died. The estate was granted by James I. to Sir Robert Cecil, who was created Earl of Salisbury, and built the fine mansion known as Hatfield House, the residence of the Marquis of Salisbury.

HATTO, an Archbishop of Mayence, who is alleged to have been eaten by rats at Bingen on the Rhine, about 970, as a punishment for his cruelty in oppressing the poor. Southey's poem has made the story familiar. "The Mouse Tower," the scene of the supposed tragedy, still stands on a small island in the Rhine.

HAUSAS, an interesting African race living in West Africa, chiefly between Lake Tchad and the River Niger. They are most successful traders, with trade routes to the Mediterranean and Red Seas and the Gulf of Guinea, and their language is spoken by upwards of 15,000,000 people.

HAVANA, the strongly fortified capital of Cuba, founded by Velasquez in 1515. It is situated upon a splendid harbour, and with a population of above 270,000, is commercially the most important town of the West Indies. Sugar, tobacco, and cigars are its principal exports. It was captured by the United States in the Spanish-American War of 1898.

HAVELOCK, SIR HENRY, *b.* at Bishop-Wearmouth, 1795, *d.* 1857; a hero of the Indian Mutiny. He served in the Peninsular War and went to India in 1822. He took part in the Afghan War of 1838 and in the Sikh War of 1845. When the Mutiny broke out in 1857 he was ordered to Allahabad. He relieved Cawnpore, after fighting four battles in eight days, and then marched to Lucknow, where he was joined by Sir James Outram. They carried relief to the British garrison, but were themselves besieged until the arrival of Sir Colin Campbell. After the Mutiny he was created a Baronet and granted a pension of £1,000, but he died of dysentery while preparing to leave for England.

HAVERGAL, FRANCES RIDLEY, *b.* 1836, *d.* 1879, a religious writer and Christian worker, was the daughter of Rev. William Henry Havergal, who had no small share of poetical and musical talent, which he devoted to sacred uses. Her religious writings in poetry and prose are marked by deep devotion to Christ and His service. The "Ministry of Song" has been repeatedly republished. Among her hymns are:—"Thou art coming, O my Saviour." "Lord, speak to me," and "I gave My life for thee."

HAVRE, the second commercial port of France, situated at the mouth of the Seine. It is strongly fortified and has an extensive trade. Its important manufactures include cotton and linen goods, machinery, glass, and tobacco; population above 130,000.

HAWAIIAN or **SANDWICH ISLANDS,** twelve in number, are situated in the North Pacific Ocean. In the largest island, Hawaii, are several active volcanoes. European domestic animals thrive well, and excellent sugar, wheat, cotton, and coffee are produced. Honolulu, the capital, and a station of the United States Pacific Cable, has considerable trade. The islands were discovered by Captain Cook in 1778, and annexed by the United States in 1898. It was at Hawaii that Captain Cook was killed.

HAWKE, EDWARD (Admiral Lord Hawke), *b.* 1705, *d.* 1781, was the son of a lawyer. Entering the navy at an early age, he found himself a commander at the age of twenty-nine. In 1747, off Belleisle, and in 1759, in Quiberon Bay, he inflicted ruinous defeats on the French fleets. His services were rewarded with a pension of £2,000 a year and a peerage.

HAWKINS, ANTHONY HOPE. See *Hope, Anthony.*

HAWKINS, SIR HENRY, *b.* 1817, a celebrated lawyer and judge, was educated at Bedford School. Called to the Bar in 1843, he became Q.C. in 1858, and took part in the leading cases of the succeeding years, including the "Tichborne" case, in which he greatly distinguished himself. Made a judge in 1876, he held that position till 1899, when he resigned and was made a peer under the title of Lord Brampton.

HAWKINS, SIR JOHN, seaman and navigator, one of Queen Elizabeth's sea-dogs, was born at Plymouth about 1520. He holds the unfortunate distinction of being the first Englishman to engage in the slave trade, taking negroes from Africa to sell in the West Indies. He acted as vice-admiral against the Spanish Armada in 1588, and was knighted for his services. The non-success of an expedition against the Spanish in the West Indies proved a great blow to him, and he died of fatigue and disappointment on board his ship off Porto Rico in 1595.

HAWKING. See *Falconry.*

HAWTHORNE, NATHANIEL, *b.* at Salem, Massachusetts, 1804, *d.* 1864, a famous American author, who, after graduating at Bowdoin College, lived for some years at his old home, studying and writing. In 1837 his "Twice-told Tales" showed the world that a new genius had arisen, but not till much later did popularity attend him. "Mosses from an Old Manse," "The Scarlet Letter," and the "House of the Seven Gables" are among his most characteristic works.

HAYDN, JOSEPH, *b.* 1732, *d.* 1809, was the son of a poor Austrian peasant. His fine voice gained him admission as chorister in St. Stephen's Cathedral, Vienna. For thirty years Haydn was director of music to Prince Esterhazy, on whose death he came to London. To this visit we may be said to owe his beautiful oratorio of "The Creation." Haydn's musical works are numerous, and his influence on the art of music is generally recognised.

HAYDON, BENJAMIN ROBERT, *b.* at Plymouth, 1786, *d.* 1846, an historical painter. He studied at the Royal Academy, and in 1807 his first picture, "Joseph and Mary in Egypt," was exhibited. From this time his success as a painter was assured, but bickerings with the Academy, and inability to keep free from debt, made his life a burden, and at last he shot himself. His best picture is the "Judgment of Solomon."

HAYTI or **HAITI,** the second largest of the West Indian Islands, divided into two republics—Hayti and San Domingo. In the former, the negroes are in a vast preponderance, and all branches of government are in the crudest condition. In San Domingo, the whites and half-breeds form the majority of the population, and the government is fairly stable and the country prosperous.

HAZLITT, WILLIAM, *b.* 1778, *d.* 1830, critic and essayist, was educated for a Unitarian minister, but early took to literature. He contributed much to newspapers. His poetical and dramatic criticisms are highly valued, the chief being "Characters of Shakespeare's Plays," "Lectures on the English Poets," and "Dramatic Literature of the Age of Elizabeth."

HEART OF MIDLOTHIAN, a name given to the old tolbooth or jail of Edinburgh, and adopted by Scott as the title of one of his novels.

HEARTS OF OAK, a friendly society instituted 1842. It has nearly 300,000 members, and an income (1905) of £670,000 with a reserve fund of over three millions. Refer to "Friendly Societies" in *Index.*

HEAT. There is now no doubt that heat is a *state* of matter. The sensations to which we give the names of heat and cold are due to the greater or less rapidity with which the molecules of the body in question are in motion. Heat passes from a warm body to a cold one near it by *radiation*, just as it passes from the sun to the earth. From a warm body to a cold one in contact with it it passes by *conduction.* When hot water from the kitchen boiler passes up to the hot water cistern, it *conveys* its heat to the water in that cistern, and so that water is said to be heated by *convection.* Some bodies transmit heat more quickly than others; metals, e.g., are good conductors; wood, flannel, and silk are bad conductors. Heat, as a rule, causes bodies to expand; hence the rails on a railway have spaces between their ends to allow of their expansion in summer. All bodies with which we are acquainted possess more or less heat, but it is believed that there is a point at which heat, that is molecular motion, ceases; this point is 273 degrees below Zero of the Centigrade scale.

HEATHFIELD, BARON. See *Eliott, George.*

HEBE, (He-be) in classical mythology, the goddess of youth, and for a time the cup-bearer to the gods. She had the power to make aged persons young again. She is always represented as a young girl, adorned with flowers, and holding a cup containing nectar, the drink of the gods.

HEBER, REGINALD, *b.* 1783, *d.* 1826, the author of some of our best known hymns, was a native of Cheshire. He gained distinction as a writer of verse at Oxford, where he took his degree. After serving as vicar of his native village of Malpas, and lecturer at Oxford, he was, in 1823, made Bishop of Calcutta, but did not live long after his appointment. Among his hymns are "From Greenland's Icy Mountains," "Brightest and best of the sons of the morning," "Lo, He comes," "Holy, holy, holy," and "Jesus Christ is risen to-day."

HEBREW. The origin and meaning of the word "Hebrew" are obscure. Whether it means "one from the other side," as applied to Abraham by the Canaanites, or "descendant of Eber," the great-grandson of Shem, it soon became the distinguishing name for his descendants among the surrounding nations. The Hebrew language is one of a family of

languages once almost universally spoken in the south-west of Asia, and called the Semitic group of languages. The Phœnician language was closely allied to it.

HEBREWS, THE EPISTLE TO THE. The author of this Epistle is unknown. It has one prevailing note, and that is the continuity of Christianity with the Jewish religion, showing clearly that the Founder of the Christian religion came "not to destroy the law (Jewish), but to fulfil it," and that the Gospel is the substance of which the law was the shadow.

HEBRIDES, (i-des), a general name for the islands off the west coast of Scotland. They are divided into the Outer Hebrides and the Inner Hebrides by a channel called the Minch, which has only a breadth of 12 miles in its narrowest part. Lewis, Harris, North and South Uist, are the principal islands in the Outer Hebrides; Skye, Mull, Islay and Jura in the Inner.

HECATE (a-te), in classical mythology, a goddess to whom belonged especially the power of giving or withholding prosperity; hence she was especially invoked by magicians and witches. She had also the power of sending ghosts, and warding them off, particularly in the case of murdered persons.

HECATOMB. The sacrifice of 100 bulls was, among the Greeks, a favourite way of showing great rejoicing; hence any large sacrifice was called a hecatomb, and now we use the word to denote a great slaughter.

HECLA, a volcano in Iceland, near the south-west coast, about 5,000 feet high, which has been almost constantly in a state of eruption since the 9th century.

HECTOR, son of Priam, king of Troy, the great hero on the Trojans' side in the Trojan War. While he lived, he was the great bulwark of Troy against the Greeks, but he was at last slain by Achilles, who inhumanly dragged his body round the city in triumph.

HEDGEHOG, an insect-eating animal about 9 or 10 inches long, common to the temperate parts of Europe and Asia. Its back is covered with spines about an inch long, instead of hairs, and it has the power of rolling itself up in a ball so as to present nothing but the points of these spines to an enemy. It hibernates through the winter.

HEGEL, GEORG WILHELM, *b.* 1770, *d.* 1831, a great German philosopher, whose writings have had great effect upon modern thought both in Germany and England. He was the great upholder of the idealistic school, but his method of exposition was so obscure and involved that even his most devoted followers hesitated to say they fully understood him. His system was anticipated by Deschamps, a French philosopher of the 18th century.

HEIDELBERG, an ancient city of Germany, on the left bank of the Neckar, about 14 miles above its confluence with the Rhine. It was the capital of the Palatinate of the Rhine from the 13th century to the beginning of the 18th. It is in the midst of a most picturesque district, and the ruins of its castle are, perhaps, the finest in Europe. In a cellar under the castle is the celebrated Heidelberg Tun, holding, when full, 50,000 gallons of wine. Heidelberg University is very famous, many foreigners, especially Americans, resorting to it; population about 40,000.

HEINE, HEINRICH, *b.* 1799, *d.* 1856, a famous German poet, was born of Jewish parents at Dusseldorf. In 1825 he became, in name at least, a Christian; and in 1831 he left Germany for Paris, never to return. His fame rests chiefly on his songs, which for plaintiveness and sweetness, even in English translation, can hardly be excelled.

HEJ'IRA, or **HEGIRA,** means "flight." The Mohammedan era is reckoned from the flight of Mohammed from Mecca to Medina, September 13th, 622 A.D.

HELEN, in Greek legend, the wife of the Spartan king Menelaus, was carried off by Paris, son of Priam, king of Troy. This act caused the Trojan War; for Menelaus, having gathered all the Greek princes to aid him, sailed against Troy, which was taken after a ten years' siege.

HEL'ENA, EMPRESS (Saint Helena), was the wife of the Roman Emperor Constantius and mother of Constantine the Great. She became a Christian in later years, and made a pilgrimage to Jerusalem, where she is said to have built the Church of the Holy Sepulchre and that of the Nativity. She died 328, A.D.

HELIGOLAND, a small island in the North Sea, near the mouth of the Elbe. From 1807 to 1890 it belonged to Britain, but was then ceded to Germany in return for certain concessions in Africa. The inhabitants, about 2,000 in number, subsist by fishing and by entertaining summer visitors.

HELIOGRAPHY, signalling to a distance by means of the sun's rays reflected from a mirror or mirrors. The point one wishes to signal to having been found, it is obvious that by means of short and long flashes, on the principle of the Morse telegraphic alphabet, messages can be transmitted to any extent while the sun shines.

HELIOPOLIS, the ancient name of *Baalbec* (which see).

HELIOS, the Greek name for the sun, which was often worshipped as a god. Temples to Helios were common in Greece in very early times. Later Helios was almost identified with Apollo or Phoebus, and the light-giving god is almost always addressed as Phoebus, although the latter is never represented as riding in the chariot of day until Virgil's time.

HELIOTYPE, a method of printing from a gelatine surface chemically treated so as to be more or less absorbent of water according to its exposure to light. The action of a photographic negative on this surface produces just this condition, and the gealtine surface can then be printed from in the same way as a lithographic block.

HELIUM, a gas present in the air in very minute quantities. It is about twice as dense as hydrogen, and resembles argon and nitrogen in its "inertness," i.e., its slowness to combine with other elements. It is present in most mineral springs.

HELL. In ordinary language the word "hell" without doubt signifies "place of punishment after death for the wicked." It is so used in places in our Bible and Prayer Book; but it is equally used in them to signify "place of departed spirits," or "place of waiting," and this is what is meant in the sentence "He descended into Hell." In Hebrew the latter meaning is given by the word "Sheol," and the former by "Gehenna."

HELLENES, (le-nes), the people of Hellas, as the natives of Greece call their own country. The name Hellas had a slightly different signification in ancient times, for any place where there was a community of Greeks was looked upon as a part of Hellas, but the name Hellene was always, and is now, reserved for one of Greek descent.

HELLESPONT, in ancient geography the name of the Dardanelles (which see).

HELL-GATE, a narrow passage of East River, between New York City and Long Island. To make the passage less dangerous, an island of 9 acres in extent was blasted away in 1885, over a thousand tons of explosive being used—the greatest blasting operation yet accomplished.

HÉLOÏSE, daughter of Fulbert, a canon of Notre Dame, in Paris. Abelard, a monk celebrated for his learning and eloquence early in the 12th century, came to Paris and fell in love with Héloise. The lovers were united after much difficulty, but Héloise, not to impede her lover's ecclesiastical ambition, always denied the marriage, and Fulbert revenged himself by causing Abelard to be cruelly mutilated. From this time the lovers saw little of each other, but remained faithful, and in death their bodies were placed side by side. Their monument is one of the most interesting in the cemetery of Père la Chaise, in Paris.

HELOTS, the lowest class of the population of ancient Sparta. The name is probably derived from a word meaning "to take prisoner," and they are supposed to have been the descendants of the aboriginal people conquered by the Spartans about 1000 B.C. They had no political rights, and were bound to the soil, being obliged to work for their master, or for the State, without reward, except food and shelter.

HELPS, SIR ARTHUR, *b.* at Streatham, 1813, *d.* 1875, educated at Eton and Cambridge. He was made Clerk to the Privy Council in 1860. He edited for the Queen "Leaves from a Journal of our Life in the Highlands." His own writings were numerous. "Friends in Council" is perhaps best known, but his works on Columbus and other Spanish adventurers are of great merit.

HELSINGFORS, the capital of Finland, stands on a peninsula in the Gulf of Finland. It has an excellent harbour, one of the best in the Baltic Sea. The greater part of the trade of Finland passes through it; population about 75,000.

HELVELLYN, the second highest peak in the Cumbrian mountains, lies on the borders of Cumberland and Westmoreland. Its ascent is easy, and it gives a grand panorama of the Lake District; height about 3,200 feet.

HEMP, the fibre obtained from the stalk of a plant growing readily in temperate regions; Russia and Poland are the chief hemp-producing countries of Europe. The plant grows generally to a height of 5 or 6 feet, but may attain even 20 feet. When fully grown the stalks are tied into bundles and steeped in water for some days, after which they are spread abroad on the grass to bleach. The subsequent operations of cleaning, heckling, and spinning fit it for being made into twine, canvas, sacking, towelling, etc. Hempseed is valuable for many purposes, cage-birds being very fond of it, and it also produces a useful oil.

HENGIST and **HORSA,** the two Jute chiefs who are said to have been the first to lead their war bands into Britain after the departure of the Romans. The brothers were invited, 449 A.D. by Vortigern, king of Kent, to aid him against the Picts and Scots. They came, and finding the Britons so unwarlike, resolved to stay. Soon their arms were turned against Vortigern, and after some fighting Hengist made himself king of Kent.

HENLEY-ON-THAMES is a small market town of Oxfordshire, 35 miles from London, standing in a beautiful situation at the foot of the Chiltern Hills. Not only from all parts of England, but from the Continent, Canada, and America come oarsmen early in July to contend for the prizes that will confer on their recipients a life-long honour in the rowing world.

HENRIETTA MARIA, wife of Charles I. of England, was the daughter of Henry IV. of France. To her influence probably many of Charles's mistaken actions were

due. She exerted herself vigorously to raise money for the war. In 1644 she parted from Charles, never to see him again, and fled to France. She made two short visits to England after the Restoration, and died in France in 1669.

HENRY I., surnamed *Beauclerc*, who reigned 1100-1135, was the youngest of William the Conqueror's three sons. On the death of William II. he made haste to seize the royal treasure at Winchester in the absence of Robert, and got himself crowned king. By conciliating the English he was able to defeat the attempts Robert made to gain the crown on his return from Palestine, and his impartial rule did much to reconcile Normans and English to one another.

HENRY II., 1154-1189, son of Matilda, and grandson of Henry I., was readily acknowledged king of England after Stephen's death. He found much to do in repressing the barons, who had got out of hand under Stephen. His quarrels with Archbishop Becket, his conquest of Ireland, his constitutional reforms, and latterly his struggles with his own sons, make up the history of a reign beneficial in many ways to England.

HENRY III., 1216-1272, son of John, was only nine years of age at his accession. To the evils of a minority succeeded those attaching to the rule of a weak king. Henry's fondness for favourites caused endless troubles with his advisers, and ended in the barons rising in arms under Simon de Montfort. Montfort's death in the battle of Evesham, in 1265, left the way open for Henry, with his son Edward's aid, to resume the government.

HENRY IV., 1399-1413, who caused the deposition of Richard II., can only be said to be entitled to the crown by the election of Parliament. He was son of John of Gaunt, the third son of Edward III., and there were alive at his accession descendants of Lionel, the second son. He had much ado to keep the crown he had won, but his victory at Shrewsbury, in 1403, put an end to the most dangerous rebellion in his reign.

HENRY V., 1413-1422, the brilliant son of Henry IV., had only time in his short reign to show his capacity as a ruler and general. His victory at Agincourt (1415) is one of the most famous in our history, and his marriage with the Princess Catherine of France seemed destined to unite the two kingdoms.

HENRY VI., 1422–1461, was only nine months old when his father, Henry V., was carried off by disease. The French gladly seized the opportunity of ridding their country of the hated English, and all the efforts of Henry's guardians could not prevent them. When Henry came of age, he proved too feeble to hold the reins of government, and the Wars of the Roses led to his imprisonment and death, while the crown passed to the head of the house of York.

HENRY VII., 1485–1509, founder of the Tudor line, had little claim to the crown, in right of descent; but his claim was allowed by Parliament and strengthened by marriage with Elizabeth, daughter of Edward IV. His reign was one long and successful endeavour to sap the power of the nobles. In his reign arose the spirit of enterprise and discovery, a new world being opened up by Columbus, and a new way to India and Cathay (China), by Vasco da Gama.

HENRY VIII., 1509–1547, second son of Henry VII., had had the way prepared for a successful and prosperous reign by a series of movements all tending to make the monarchy more independent than it had been for years. He took full advantage of his opportunity, and in both his public and private relations he acted without restraint. For his unfortunate marriage with Catharine of Aragon he can hardly be held responsible, but his despotic character showed itself in his treatment of his five subsequent wives. In the early part of his reign he received from Pope Leo X. the title of "Defender of the Faith," on account of a book he wrote against Luther, but he was destined to withdraw England from Papal jurisdiction, and to initiate the Reformation.

HENRY, surnamed **"THE NAVIGATOR,"** *b.* 1394, *d.* 1460, a Portuguese prince, who took great interest in navigation and discovery. For years he sent expeditions along the west coast of Africa at his own expense, and at last had the satisfaction of seeing his countrymen join in the enterprise. The Madeira Islands and the Azores were among his discoveries.

HENRY IV. OF FRANCE, *b.* 1553, *d.* 1610, as Henry of Navarre gained a great name as leader of the Huguenot or Protestant party in France, although Admiral Coligny was its guiding spirit. On becoming king of France, he found it expedient to become a Roman Catholic, although his sympathies remained entirely with the Protestants, and to him was due the *Edict of Nantes*, which gave them toleration. His assassination by a fanatic named Ravaillac removed a strong and wise ruler from a distracted country.

HENRY, PATRICK, *b.* 1736, *d.* 1799, one of the chief movers in the American War of Independence, was a Virginian by birth and a Scotsman by descent. The Stamp Act first evoked his eloquence, and from that time he took a leading part in opposition to England. By many he is looked upon as the best orator America has produced.

HEPTARCHY, a name given to the seven kingdoms founded by the Jutes, Saxons, and Angles in England. As a matter of fact, they were hardly ever co-existent, but there were certainly at some time or other before England was united under one sovereign, kings of Kent, Sussex, Wessex, Essex, East Anglia, Northumbria, and Mercia.

HERA. See *Juno*.

HERALD, originally an officer whose business it was to convey messages from the commander of a force to his opponent. From this his function was extended to making proclamations of all kinds having a military significance, and then to superintending public processions and ceremonies. About the 14th century colleges of heralds were established in most European countries to record and blazon the arms of the nobility and gentry, and to regulate the proper use of these insignia.

HERALDRY. Refer to *Index*.

HERAT, the third most important city of Afghanistan, is situated in its south-western corner, near the Persian frontier. Commanding as it does the chief entrance into Afghanistan from that side, it is jealously watched by the English Government. As a station on one of the main routes from India to Europe, Herat has been a busy town for ages, but of late years its importance has diminished; population about 30,000.

HERBERT, GEORGE, *b.* 1593, *d.* 1633, one of the most gifted of our minor poets, gained great distinction as a scholar at Cambridge, and would probably have made a mark in the world had not his religious vocation proved too strong for his ambition. The "Country Parson" is the most popular of his works.

HERCULANEUM, an ancient city of Italy, near Naples. In 79 A.D. a stream of lava and a shower of ashes buried it so completely that it was lost sight of for centuries. Since about 1700, however, excavations have been more or less constantly going on, and now a good part of the city is open to view, including the theatre and two small temples. Many beautiful paintings and statues have been brought to light.

HERCULES, or **HERACLES,** in Greek mythology, son of Zeus (Jupiter), and a Theban princess. Hera (Juno), the wife of Zeus was Hercules' inveterate enemy, and caused to be imposed on him certain superhuman feats of strength, known as the "Twelve Labours" of Hercules. By accomplishing these he became the type of strength and endurance, while the manner of his death, through a poisoned shirt, poetically expressed the ancient belief that strength avails little against cunning.

HERCULES, PILLARS OF, the rocks of Gibraltar on one side, and Ceuta on the other, of the Strait of Gibraltar. The ancients used to ascribe to Hercules the cleaving of the rocks asunder to admit the Atlantic Ocean.

HEREFORD, county town of Herefordshire, is pleasantly situated on the river Wye, in about the centre of the county. The cathedral, begun in the 11th century, was restored by Sir Gilbert Scott. The musical festival held here triennially deserves mention. Hereford is a market for the agricultural produce of a considerable district; population about 22,000.

HERESY, the rejection of some belief held as fundamental by Christians in general, or the acceptance of some doctrine subversive of that generally regarded as true and orthodox.

HEREWARD, generally known as Hereward the Wake, was the last English leader who held out against William the Conqueror. Secure in his retreat among the almost impassable morasses of the Isle of Ely, he bade defiance to the Normans until some monks led an overwhelming force to his lair. He afterwards became a faithful adherent to William.

HERIOT, in English law is a kind of fine due on the death of a person holding land of a manor. It consists of the best piece of personal property the deceased possessed, whether beast, jewel, or chattel. The custom exists chiefly in respect to copyhold tenure.

HERIOT, GEORGE, *b.* 1563, *d.* 1624, was a goldsmith of Edinburgh, who, on the accession of James to the English throne in 1603, followed his king to London and set up in business there. Dying there without issue, he left his fortune to be expended on educational purposes in Edinburgh, which still derives considerable benefit from his bequest.

HERKOMER, HUBERT VON, *b.* 1849, in Bavaria, but brought up in England. He studied at South Kensington and Munich, then settled in London as painter and designer. The "Last Muster," exhibited in 1875, is his best-known picture. In 1883 he founded the Herkomer School of Art at Bushey, and for many years was its principal director. "Found," "The Charterhouse Chapel," and "The Guards' Cheer" are some of his well-known pictures.

HERMAPHRODITISM, the presence of the essential male and female organs and structures in one individual is practically unknown among human beings and the higher animals. It is, however, not uncommon among frogs, fishes, etc.; it is common with invertebrates, as the snail, etc.; and still more common with plants. But even where hermaphroditism is the rule, nature has provided against self-fertilisation by causing the male and female elements to mature at different times, so that the co-operation of two

individuals of the species is necessary in order for reproduction to take place.

HERMES, in classical mythology, the son of Jupiter and Maia, the herald and messenger of the gods, the guardian of travellers, the giver of good-luck, and the god of eloquence. The Romans, in later times, transferred all the attributes of the Greek Hermes to their own Mercurius, whose functions only extended originally to commerce and gain.

HERMES (TRISMEGISTUS), an altogether fabulous personage, to whose authorship were ascribed, in the early centuries of the Christian era, many books on philosophy, astrology, and learning generally. The name is really that by which the Greeks denoted the Egyptian god Thoth, who was looked on as the originator of learning and culture. Hence these treatises, of which we have only fragments, were called Hermetic Books.

HERMETIC BOOKS. See *Hermes Trismegistus.*

HERMIT, one who lives apart from other men. In the early centuries of the Christian era it was no uncommon thing for a man to retire to some solitary place the better to commune with God. Paul, the first Christian hermit, and St. Anthony, both of whom lived in the 3rd century, are among the most famous hermits. These of course soon found imitators, whose great aim was to gain notoriety. Among them was Simeon Stylites, who lived on the top of a pillar, and whose example was followed by numerous fanatics, known as *stylites* or pillar-saints.

HERMIT-CRAB, a kind of crab which, having no shell to protect its abdomen, seeks refuge in the shells of whelks and other spiral-shelled fish. As it grows, it has from time to time to find a larger abode, and as it does not always wait to find an empty shell, the process of taking possession is sometimes attended with scenes of violence. See *Commensalism.*

HERMON, MOUNT, the highest summit of Anti-Lebanon, a range of mountains in the south of Syria. It is frequently mentioned as a landmark in Holy Scripture, standing, as it does, on the extreme northern border of Palestine. Its height is 9,200 feet, and it is now called *Jebel-es-Sheikh.*

HERO, in Greek legend, a priestess of Aphrodite (Venus) at Sestos, beloved by Leander, a youth of Abydos, on the other shore of the Hellespont. Leander swam across the strait every night to visit his mistress, guided by a light which she put in a tower. But one stormy night the light was extinguished, Leander lost his way, and his dead body was cast up at the foot of the tower next morning. When Hero saw it, she cast herself into the sea and perished.

HEROD, surnamed "The Great," was an Idumæan by descent, but a Jew by religion. His father, Antipater, gained the favour of Julius Cæsar, who made him ruler of Judæa, and Antipater soon associated Herod with him in his government. On the fall of Anthony, Augustus made Herod king of Judæa, 31 B.C. Herod rebuilt the Temple at Jerusalem with great magnificence. The birth of Christ, and the massacre of the Innocents, took place in the last year of his reign.

HEROD, AGRIPPA. See *Agrippa, Herod.*

HEROD ANTIPAS was the son of Herod the Great. On his father's death he was made tetrarch of Galilee, and it was he who caused John the Baptist to be executed. On going to Rome in the hope of receiving the title of king, he was accused of treason, deprived of his tetrarchy, and sent into exile.

HERODOTUS, *b.* about 490, *d.* about 420, B.C., is regarded as "the father of history." His youth was co-temporary with the great uprising of the Greeks against the Persians. He travelled much, and was thus able to give living pictures of the various peoples mentioned in his history. The latter is not merely a history, it is rather a prose epic on the glorious victory of the Greeks over the Persians. It is also an epitome of the life and thought of the time, and despite some marvels, we cannot but feel as we read that the author thoroughly believes every word that he writes, and has done all he could, in an uncritical age, to verify the statements he makes.

HERRICK, ROBERT. *b.* 1591, *d.* 1674, a lyric poet, was born in London, and educated at Cambridge University. For some years after his university course Herrick lived in London, and enjoyed the friendship of Ben Jonson and kindred spirits. He then migrated to a Devonshire vicarage, where he spent the rest of his life, except for an enforced absence during the Commonwealth. Though marred by occasional coarseness, his short poems are delightful.

HERRING. This fish is one of the most important items of our food supply, being fairly common on one part or other of our coasts from May or June to about the end of February. The intervening time is probably spent in the deeper water. A shoal of herrings is sometimes 5 or 6 miles in length by 2 or 3 in breadth, the dimensions being marked by the seabirds which attend to seize their opportunity. The method adopted in the herring fishery is that known as drifting. A series of nets, each 30 or 40 yards long and 9 or 10 deep are joined together to make one continuous wall of net in the water, the upper edge being buoyed with corks and the lower edge weighted with sinkers. The fishes, finding themselves enclosed, try to get through the meshes, and cannot get their heads out again. Then, when the net seems full it is hauled in, the fishes seized, and the whole process repeated. The cleaning and salting of the fish is performed on land, mostly by women, who become very expert in the work. Yarmouth is the chief seat of the herring fishery.

HERRING, JOHN FREDERICK, *b.* 1795, *d.* 1865, a great animal painter, was in early life a painter of signboards. He then became a stage-coach driver, and finally settled down to paint animals, chiefly horses. Queen Victoria employed him several times to paint her favourites. His "Horse Fair" shows his skill in the delineation of the various types of horses.

HERSCHEL, SIR WILLIAM, *b.* 1738, *d.* 1822, was the son of a German musician, and came to England as a teacher of music and organist. At Bath he turned his attention to astronomy, and began constructing telescopes, in which he soon excelled. The planet called Uranus was discovered by him in 1781, and this discovery gained him a pension from George III., which enabled him to settle down at Slough and devote himself to his favourite pursuit. Here, with the assistance of his sister Caroline, he made many important discoveries, which gained him the honour of knighthood.

HERSCHEL, SIR JOHN FREDERICK, mathematician and astromoner, was a worthy successor to his father, Sir William. He had the advantage of being educated at Eton and Cambridge, and gained the highest honours the university could bestow. He devoted his attention more particularly to mathematics until his father's death, after which he continued the work his father had so well begun. In this he soon distinguished himself, and gained honours not only from his own but also from foreign countries. He spent four years in South Africa, making a catalogue of the stars visible in the Southern Hemisphere, and he added largely to our knowledge of the *Milky Way* and its composition. His writings on astronomy and kindred subjects are numerous.

HERTZ, HEINRICH RUDOLF, *b.* 1857, *d.* 1894, a keen and distinguished German scientist, made electricity his special study and carried some of its branches further than any one before him. He made the connection between light and electricity much clearer. He made researches into the discharge of electricity through rarefied gases, and thus came very close to the discovery of the "Röntgen Rays."

HESIOD, one of the earliest Greek poets, was rather a moralist and teacher in verse than a poet. His date is uncertain, probably he was contemporary with Homer, or a little later. His extant works are the "Theogony," an account of the gods, the "Shield of Hercules," and the "Works and Days." The latter gives an interesting picture of an ancient Greek rustic's everyday life and belief.

HESPER'IDES (i-des), in Greek mythology, the sisters who had charge of the garden in which grew the golden apples. The situation of this garden is variously given, but all accounts agree in locating it in the extreme west. One of the labours of Hercules was to obtain the golden apples. He slew the dragon which guarded them, and the sisters fled, leaving him free to fulfil his mission.

HESPERUS, the Greek name for Venus as the evening star. Hence, by Greek poets, Italy was often called the Hesperian land, lying as it did to the west of Greece; and for a similar reason Latin poets gave the name Hesperia to Spain.

HEXAMETER, a line of poetry containing six feet, arranged in a particular way. In this kind of verse, the Greek and Latin epics, "The Iliad," "The Odyssey," and "The Æneid" are written, but it is ill suited to the English language. Longfellow's "Evangeline" is the best example of its use in English.

HEXAPLA, "the six-fold," an edition of the Old Testament by Origen, a writer who flourished in the early part of the 3rd century. It gave in parallel columns the Hebrew text, first in Hebrew characters and then in Greek characters, a Greek version of the same, and three other versions, together with explanatory notes.

HEXATEUCH, the name applied to the first six books of the Bible, that is, to the five books spoken of collectively as the Pentateuch, together with the Book of Joshua; the latter, dealing as it does with the conquest of Canaan, logically belongs to the same section as the other five.

HEZEKIAH, a famous king of Judah, who came to the throne about 727 B.C., and reigned 29 years. He derived great assistance from the prophet Isaiah, and is mentioned as one of the greatest of the kings of Judah (See 2 Kings xviii.-xx.).

HIAWATHA, a hero of the Iroquois Indians who, according to their traditions, was of miraculous birth and was sent to teach them the arts of peace. The myth is common to several of the tribes of North America, though the name of the individual differs among the various tribes. Hiawatha is the subject of a poem written by Longfellow.

HIBBERT LECTURES, a series of lectures instituted in 1878, the object of which is to clear up disputed points in theology. Lectures have at various times been delivered by some of the greatest living theological critics. The cost is defrayed

from money left in 1849 by John Hibbert, a West Indian merchant.

HIBERNATION, the name given to the dormant state into which certain animals fall during the winter months. Hibernation seems to differ from ordinary sleep, since it is a matter of great difficulty to arouse an animal whilst in this state. It is caused by cold and sometimes by lack of food, though members of the same species are not always affected in the same way. In some cases the animal goes to sleep and does not wake again until the advent of the warmer weather, whilst in other cases it wakes up on several occasions, and after feeding retires again to its hiding place, which is usually a cave or a hollow in a tree. The animals whose hibernation is of the latter variety store up food during the summer months. Among the animals which hibernate may be mentioned the squirrel, dormouse, bat, hedgehog, frog, and some species of bears.

HIBERNIA, an old name of Ireland, first applied to that country by Julius Cæsar.

HICKS-BEACH, SIR MICHAEL, *b.* 1837, created Viscount St. Aldwyn, 1905. He entered Parliament in 1861, and soon gained office and distinction. He has shown great ability as Irish Secretary, President of the Board of Trade, and Chancellor of the Exchequer. He is a resolute economist and Free Trader. In the latter capacity he insisted on repeal of the Corn Duty at the earliest possible moment, and in the former on the expense of the Boer War being largely paid out of revenue.

HICKS PASHA, *b.* 1831, *d.* 1883; a British officer who served in the Egyptian army. He led an army of 16,000 men against the Mahdi, 1883, and was defeated and slain at El Obeid, his army being almost annihilated.

HIERARCHY means literally government in sacred things, and applies to the government of the Church, which is carried out by dividing its officers into various grades or ranks, each individual being responsible to a superior, and all being placed under one supreme head. The term also applies to the body of clergy thus organised.

HIEROGLYPHICS, the name given to the figures of men, animals, etc., which were sculptured upon monuments by the early Egyptians, and designed to express ideas, words, or sounds. They represent a stage in the history of writing which preceded the use of an alphabet of conventional symbols. Hieroglyphics are not confined to monuments, but have been found on documents, and they have also been discovered outside Egypt, notably upon the monuments erected by the Aztecs. The first translation of Egyptian hieroglyphics was made at the end of the 18th century, when a stone, since known as the Rosetta stone, was found, which contained an inscription in hieroglyphics, and in addition translations in two other styles, one of them written in Greek characters.

HIEROSOLYMA, Latin for Jerusalem (which see).

HIGHER CRITICISM, THE. Its function is to investigate the authorship and date of the writings under consideration, the characteristic style and tendency of the writer, the spirit of the age in which he lived, his environment at the time of writing, the purpose he had in view, and all other circumstances which would tend to ensure or impair the accuracy of his work. The term has often been restricted to those Biblical critics who have applied their principles to the composition and character of the Holy Scriptures.

HIGHFLYER, a famous racehorse, who during the closing years of the 18th century won large sums of money for its owner, Richard Tattersall. With his winnings the latter founded the business now known as "Tattersalls," out of which he subsequently made a fortune.

HIGHLANDS, THE, the name applied in a general sense to the mountainous district in the north and west of Scotland, including the islands situated on the west coast. The highlands are noted for their grand and rugged scenery, and contain the highest mountains in the British Isles. The inhabitants are a branch of the Celtic family, and were distinguished by their persistent support of the claims of the Stuart kings to the English throne during the 18th century.

HILDA, SAINT, *b.* about 614, A.D., *d.* 680; a descendant of Edward, King of Northumbria. She became first abbess of Whitby about 660 A.D.

HILDEBRAND. See *Gregory VII.*

HILL, SIR ROWLAND, *b.* at Kidderminster 1795, *d.* 1879; the originator of "penny postage," 1840. Previous to this date the charge for the carriage of letters was regulated by distance, and so high as to be prohibitive to poor people. Hill induced the Government to undertake the carriage of letters, irrespective of distance, within the United Kingdom, at a charge of one penny for a maximum weight of a quarter of an ounce.

HIMALAYAS, the mountain system which lies to the north of Hindustan and separates that country from Tibet. The Himalayas have a length of about 1,500 miles, and consist of two, and in the north-west three ranges more or less parallel. The highest mountains in the world are found in the system, Mount Everest, 29,000 feet, Mount Godwin-Austen, and Mount Kunchinjinga, each over 28,000 feet. There are very few passes, and those that do exist are very difficult to traverse. The rivers Indus, Ganges, and Brahmaputra all rise in the Himalayas.

HINDUISM. Refer to *Index.*

HINDU KUSH, a range of mountains extending from the plateau of Pamir, in Central Asia, in a south-westerly direction through Afghanistan. It has a length of about 360 miles, and its highest peaks are about 20,000 feet in height. It has few passes of any use, and none less than 12,000 feet in altitude.

HINDUSTAN. See *India.*

HINDUSTANI, the language which now forms the general medium of communication between the various nations and tribes of India. It is a debased form of Hindi, the language spoken in parts of the basin of the Ganges, and contains many Arabic and Persian words. It arose probably during the 11th century, at the time when the Mohammedans were engaged in the conquest of India, and was first used in the military camps.

HIPPARCHUS, the founder of the science of astronomy, lived about the years 160–120 B.C. He discovered the precession of the equinoxes, determined the length of the year, and the distances of the sun and moon from the earth, and compiled a catalogue of 1,080 stars.

HIPPOC'RATES (a-tes), *b.* 460 B.C., a famous Greek physician and the founder of the science of medicine; he is sometimes spoken of as "The Father of Medicine." Nothing definite is known of his life, though a large number of writings attributed to him are still extant.

HIPPOGRIFF, a fabulous animal with the head of a griffin and a winged body resembling that of a horse.

HIPPOLYTE (i-te), in Greek mythology, the queen of the Amazons. She possessed a belt which Eurystheus commanded Hercules to obtain for him. To secure possession, the latter was obliged to kill Hippolyte.

HIPPOL'YTUS, in classical mythology, son of Theseus, king of Athens. Phædra, his step-mother, became enamoured of him, but he rejected her advances. In revenge she accused him to his father, who prayed Neptune to destroy him, which Neptune did by sending a bull from the sea to frighten his horses as he rode along the shore. The chariot was upset, and Hippolytus dragged along till he was dead.

HIPPOPH'AGY, the name given to the practice of eating horse-flesh. The word is derived from "hippophagi," literally "horse-eaters," which was the name applied by the Greeks to certain tribes living to the north of the Caspian Sea.

HIRAM, a king of Tyre who lived about 1,000 B.C. He maintained friendly relations with both David and Solomon, and provided, from the mountains of Lebanon, the timber required in the construction of the temple at Jerusalem. Under his rule Tyre became a great state. The remains of what is said to be his sepulchre can still be seen about 3 miles from Tyre.

HIRE-PURCHASE. See *Commercial Dictionary.*

HIRSCH, BARON, *b.* at Munich, 1831, *d.* 1896; a famous Jewish financier and philanthropist. He was the son of a banker, and inherited great wealth, which was increased by successful speculation in connection with the railways of south-eastern Europe. He spent enormous sums of money in charity, especially in settling the oppressed Russian Jews in farm colonies in Canada, Asia Minor and South America. Baron Hirsch was well known in England, and was for some years a well-known owner of racehorses. His winnings on the Turf were given to the London Hospitals.

HISTOLOGY, a branch of anatomy which treats of the structure of the various tissues of a plant or an animal. It is sometimes called "Microscopic Anatomy."

HOAR-FROST. See *Frost.*

HOBART, the capital and principal seaport of Tasmania, is situated at the mouth of the river Derwent. It was founded in 1804, and previous to 1881 was known as Hobart Town. Hobart exports an enormous quantity of apples and pears; population about 35,000.

HOBBES, JOHN OLIVER, the pen name of Mrs. Craigie (née Pearl Mary Teresa Richards), *b.* at Boston, U.S.A., 1867, novelist and dramatist, and highly successful in both capacities. She had a terse style all her own, and her choice of words and expressions was remarkably apt. "Some Emotions and a Moral" (1891), was her first novel: "The Ambassador" her most successful play. She died in 1906.

HOBBES, THOMAS, *b.* at Malmesbury, 1588, *d.* 1679; a famous philosopher and writer. His greatest work is entitled "Leviathan," in which he sets forth his views on morals and politics. The book caused a great sensation, and the opinions expressed in it aroused angry discussion.

HOBSON, RICHARD PEARSON, a young naval constructor in the United States navy, who undertook to "bottle up" the Spanish Fleet in the harbour of Santiago, by sinking the collier Merrimac in the harbour mouth, June, 1898. With a crew of seven men, Hobson navigated the vessel into the harbour, but owing to the tide, did not succeed in sinking the vessel at the desired spot. He and his companions fell into the hands of the Spaniards and were treated most courteously by them.

HOBSON, THOMAS, a carrier and keeper of a livery stable at Cambridge during the 13th century. He adopted

a rough and ready method of treating a customer who was hiring a horse, compelling him to take the one nearest the door; hence the phrase "Hobson's Choice."

HODGE, the husband of Gammer Gurton in an old comedy—a name that is now commonly applied to a typical rustic labourer.

HODSON, MAJOR, *b.* 1821, *d.* 1858; a distinguished British soldier who saw considerable service in India. At the outbreak of the Mutiny he was given permission to raise a regiment of irregular horse, known as Hodson's Horse. He distinguished himself greatly during the war, and at the fall of Delhi took the old Emperor prisoner and slew his sons. He met his death during an attack upon Lucknow.

HOFER, ANDREAS, *b.* 1767, *d.* 1810. a Tyrolese innkeeper who roused his countrymen to make a stand against the French in 1809. Again and again he swept Tyrol clear of them, but the peace with Austria in October enabled them to attack the Tyrolese with success. Hofer was forced to flee, was betrayed to the French, and to their eternal disgrace, was executed by them.

HOGARTH, WILLIAM, *b.* in London, 1697, *d.* 1764; a famous English painter and engraver. His pictures deal with vices and foibles of his age, and are remarkable for their satirical humour. His greatest works are the three series known respectively as "Marriage à la Mode," a series of six pictures now in the National Gallery, "The Rake's Progress," and "The Harlot's Progress."

HOGG, JAMES, *b.* at Ettrick, 1770, *d.* 1835; a celebrated Scottish poet, who was originally a shepherd, and is in consequence frequently spoken of as the "Ettrick Shepherd." Hogg was encouraged by Scott, and became one of the leading writers of his time. His best work is entitled "The Queen's Wake"; many of his poems were first published in Blackwood's Magazine.

HOGG, QUINTIN, *b.* 1845. *d.* 1903. the pioneer of the Polytechnic as we understand it, was brother of the late Lord Magheramorne. He early took an interest in boys, living among the working boys about Drury Lane, and doing all in his power to brighten their lives. In 1882 he bought the old Polytechnic in Regent Street, and turned it to its present use. On this place he spent £200,000, and all his energies, and there he met with his lamentable death, being accidentally asphyxiated in his bedroom there.

HOGMANAY, the name given in Scotland to New Year's Eve. It is one of the national holidays of that country, and is made the occasion of noisy enjoyment, which among certain sections of the people, used to degenerate into a drunken orgie. There are several quaint customs in connection with these New Year's festivities; the children, where the old custom still holds, parade the streets and demand cakes from the householders, using in their demand the single word "Hogmanay," which has thus come to be used as the name of the cake.

HOGUE, LA, a cape situated on the north coast of France, a few miles west of Cherbourg. In the immediate neighbourhood of the Cape the English fleet inflicted a crushing defeat upon the French fleet that had been prepared to assist in the invasion of England, 1692.

HOHENLINDEN, a small village situated in Bavaria, about 20 miles east of Munich, the scene of a great battle, in which the French inflicted a crushing defeat upon the Austrians in 1800. The losses of the latter were estimated at nearly 8,000 killed and 12,000 prisoners. The battle is the subject of a well-known poem from the pen of the poet Campbell.

HOHENZOLLERN, HOUSE OF, an ancient German family, which takes its name from the castle of Zollern, in southern Germany. The family first came into prominence in 1415, when one of its members became Elector of Brandenburg. The family continually grew in importance, and in 1701 a Hohenzollern, Frederick III., Elector of Brandenburg, became the first King of Prussia. The dynasty has endured until the present time, the present German Emperor being the head of the family.

HOLBEIN, HANS, *b.* about 1497, *d.* 1543; a celebrated artist and engraver, who for some time occupied the post of court painter in England during the reign of Henry VIII. He excelled in the painting of portraits, and a large number of his works, which include portraits of nearly all the English celebrities of his age, are to be seen at Windsor Castle and in many old mansions.

HOLBERG, LUDVIG VON, *b.* at Bergen, 1684, *d.* 1754; the founder of modern Danish literature. He is not only the greatest dramatist that Denmark has produced, but also its greatest historian.

HOLDEN, SIR ISAAC, *b.* near Glasgow, 1807, *d.* 1897; the inventor of the lucifer match. Holden was originally a teacher, and was compelled to rise early in the morning to pursue his own studies. He invented the lucifer match to avoid the trouble of using flint and steel, but took out no patent, and so derived no financial benefit from the invention. Later he turned his attention to the improvement of wool-combing machinery, and in 1859 became a member of the firm of Holden and Lister, which afterwards possessed the largest wool-combing plant in the world.

HOLINSHED, RAPHAEL, a celebrated historian who lived in the 16th century and died about 1580. He wrote "The Chronicles of England, Scotland and Ireland," published in six volumes, 1578. Shakespeare derived practically the whole of the information necessary for his historical dramas from these Chronicles.

HOLMBY HOUSE, an historical mansion which formerly stood about 7 miles from Northampton. It was built during the reign of Queen Elizabeth, and was one of the places in which Charles I. was imprisoned, 1647; it was demolished a few years afterwards.

HOLLAND. See *Netherlands.*

HOLLANDS. See "Gin" in *Med. Dict.*

HOLMES, OLIVER WENDELL, *b.* at Cambridge, Massachusetts, 1809, *d.* 1894; a famous American essayist and novelist. By profession he was a physician, and for some years held the post of Professor of Anatomy at Harvard University. In 1858 he gave up his profession and devoted the whole of his time to literature. His works include the well-known "Breakfast Table Series," the "Autocrat," "Professor," and "Poet," originally published in the Atlantic Monthly, and his best known novel is entitled "Elsie Venner." His essays are written in an unconventional and chatty style, and abound in humorous passages.

HOLOGRAPH, a deed, will or other document which is written throughout by the person from whom it proceeds. In Scotland a holograph will requires no witnesses, though no such distinction exists in English law.

HOLY ALLIANCE, an alliance formed, 1815, by Russia, Prussia and Austria, and subsequently joined by all the European states, excepting Great Britain and Rome. Its avowed object was to introduce into the management of both the internal and external affairs of the various states a spirit of Christian kindness and forbearance, but its real object was to guard against revolutions of the people, and thus to ensure the continued existence of the dynasties as they then were. The utter hypocrisy of its promoters was quite obvious, and this country curtly refused to have anything to do with it. The Alliance came to an end in 1830, on the occasion of the revolution in France.

HOLYHEAD, a seaport and packet station, situated on a small island of the same name off the coast of Anglesey. It is the chief port in connection with the cross sea traffic to Dublin, from which it is distant about 60 miles; population about 10,000.

HOLYOAKE, GEORGE JACOB, *b.* at Birmingham, 1817, *d.* 1906; a well-known journalist and author. He was one of the pioneers of the Co-operative movement in England, and many of his writings deal with that subject. Holyoake introduced the use of the term "secularism" to describe his views on religious and social matters.

HOLY ROMAN EMPIRE, founded by Charlemagne, king of the Franks, 800 A.D. The emperors claimed to be the successors to the emperors of ancient Rome, and exercised a purely nominal authority over some of the states of central and western Europe. From 1438 until the beginning of the 19th century the title of Emperor was borne by various members of the powerful House of Hapsburg, the last to bear the title being the Emperor Francis I. of Austria. The Emperors were elected, the elective body being composed of the Archbishops of Cologne, Mainz, and Treves and certain German princes.

HOLYROOD, a royal palace of Scotland, situated at Edinburgh. The palace dates from the reign of James IV. of Scotland, though most of the present structure is more modern. It was occupied by several of the Scottish sovereigns, and was the scene of the murder of Rizzio during the reign of Mary Stuart. From 1600 until the end of the 18th century it was not used by royalty, but George IV., Queen Victoria, and King Edward VII. have made short stays there. Previous to the construction of the palace, there existed on the same site an abbey, which was dedicated to the Holy Rood, that is Holy Cross. The rooms of Queen Mary are preserved and are open to public inspection.

HOLY WEEK, the name given to the week preceding Easter Sunday. It is sometimes called "Passion Week," from the fact that it marks the occurrence of the Passion or Sufferings of Christ. The special days which fall in this week are Palm Sunday, Maundy Thursday, and Good Friday.

HOMAGE, originally a term used in connection with the Feudal system. It was the name given to the formal acknowledgment made by a tenant on entering into possession of property, that he was his lord's vassal and liable to be called upon to serve as a soldier for a period not exceeding forty days a year. The ceremony consisted in the vassal, bare-headed and kneeling, placing his hands between those of his lord, and taking an oath of fealty.

HOME COUNTIES, the name applied to the counties situated in the immediate neighbourhood of the Metropolis; they are Middlesex, Hertfordshire, Essex, Kent and Surrey.

HOME OFFICE. Refer to *Index.*

HOME RULE, the name popularly given to the proposed establishment of a separate parliament for Ireland. After many years of agitation, the Irish party in the House of Commons induced Mr. Gladstone, in

1886, to introduce a bill to establish such a parliament, but it was defeated in that House on its second reading. A second bill, introduced in 1893, was passed by the Commons, but thrown out by the Lords by an enormous majority. Mr. Gladstone's proposals in 1886 caused a split in the Liberal party, the seceding section who opposed it being afterwards known as Liberal Unionists.

HOMER, the greatest of epic poets. Nothing definite is known concerning Homer; he was probably born near Smyrna, in Asia Minor, though at least seven towns are given as his birth-place, and the date of his birth, as given by various authorities, varies from 1100 B.C. to 700 B.C. Homer was probably a wandering minstrel, and his great works are the "Iliad" and "Odyssey," though both these works probably contain portions written by other poets.

HOMILDON HILL, situated in Northumberland, was the scene of a battle, 1402, in which a Scottish army, 10,000 strong, led by the Earl of Douglas, met with a crushing defeat at the hands of an English force, commanded by the Earl of Northumberland with the assistance of his famous son, Harry Hotspur.

HOMILY, a discourse which was originally a simple explanation of some passage in the Bible, the explanation following the order of the narrative. It is often used in the same sense as the word "sermon," though the sermon is of a more rhetorical character. The homilies of the Church of England are two collections of sermons, published respectively in 1547 and 1562, which were written with the object of securing uniformity of teaching.

HOMŒOPATHY, See *Med. Dict.*

HOMOOUSIAN AND HOMOIOUSIAN. These two words, so slightly different in appearance, contain the germ of one of the greatest contests that have ever rent the Christian Church. The Homoousians, who may be said to include all branches of the Christian Church except Unitarians, maintain that Jesus Christ is of "*one* substance with the Father"; the Homoiousians that He is "of *like* substance with the Father." Arius (260–336) was the author of the Homoi-ousian doctrine, and the Nicene Creed is the Church's authoritative denial.

HONDU'RAS, BRITISH. Refer to *Index.*

HONEY, a sweet liquid which is collected by bees and other insects from the nectaries of flowers. The bee stores the honey in its honey sac until it reaches its hive, where it is placed in combs composed of hexagonal cells. The honey seems to undergo some chemical change whilst in the sac of the bee. The colour of honey depends upon the flowers from which it is collected, but is usually white or brown. Its production of late years has become quite a scientific industry. The honey is extracted from the combs by means of a centrifugal extractor, the comb being placed upon a wheel and rapidly rotated, with the result that the honey is shot out and collected in a vessel placed in a suitable position.

HONG-KONG. Refer to *Index.*

HONOLULU, the capital of the Hawaiian or Sandwich Islands, which are situated in the North Pacific Ocean. Honolulu stands upon a good harbour, and has regular steamship connection with San Francisco, Japan, and Australasia; population about 46,000. Since 1898 the United States has exercised a protectorate over the Sandwich Islands, and Honolulu has in consequence become an important naval station.

HOOD, ADMIRAL, *b.* in Devonshire, 1724, *d.* 1816; a famous British naval commander. After seeing considerable service in American waters, he was appointed, 1793, to the command of the Mediterranean fleet, and got possession for a few months of Toulon, the principal naval station of France in the Mediterranean, and in the following year took Bastia (Corsica).

HOOD, ROBIN. See *Robin Hood.*

HOOD, THOMAS, *b.* in London, 1798, *d.* 1845; a celebrated poet and humorist. Much of his work appeared in two papers edited by himself, and known respectively as "The Comic Annual" and "Hood's Own." His humorous work bristles with puns, and in addition to this class of work he is the author of several well-known and exceedingly pathetic poems. Among his best productions are "The Song of the Shirt," "The Bridge of Sighs," "The Dream of Eugene Aram," and "Miss Kilmansegg."

HOOK, THEODORE, *b.* in London, 1788, *d.* 1841, an author of comic operas, would-be funny books, and practical jokes, was worthy of the times he lived in and the society he frequented, which included the Prince Regent. He died in poverty after having enjoyed an annual income of thousands. "Jack Bragg" is his least objectionable production.

HOOKAH, a large tobacco pipe much used in Turkey, Persia, and other eastern countries. It consists of two bowls, one placed over the other. The upper bowl contains the tobacco, and is connected by a tube with the lower, which is partially filled with water; the connecting tube passes down into the water. The stem, which is usually a long flexible tube, is connected with the air space above the water, and thus the smoke must pass through the water before reaching the smoker; in passing through it is cooled and deprived of most of its harmful constituents.

HOOKER, RICHARD, *b.* near Exeter, 1553, *d.* 1600; a famous theological writer, whose sound learning and well-balanced judgment earned for him the descriptive title of "The judicious Hooker." His great work: "Of the Laws of Ecclesiastical Polity," was published in eight volumes, and is a learned defence of the doctrine and ritual of the Church of England. It is still regarded as a standard work, and its literary style alone would have secured it a permanent place in English literature.

HOOPER, JOHN, *b.* in Somerset, 1495, a bishop and Protestant martyr. In the reign of Edward VI. he was appointed to the See of Gloucester. On the outbreak of the persecution in Mary's reign he was one of the first to be charged with heresy, and as he refused to recant he was burned at the stake at Gloucester, 1555.

HOPE, ANTHONY, the pen-name of Anthony Hope Hawkins, *b.* 1863. Educated at Marlboro' and Oxford, he studied for the law, and practised as a lawyer until the brilliant success of his "Prisoner of Zenda" turned him wholly to literature. "A Man of Mark." "Mr. Witt's Widow." "The Chronicles of Count Antonio." and "Phroso" are some of his other works.

HOPS the produce of a climbing plant used in the manufacture of beer, to which it gives its characteristic bitter taste, and which it helps to prevent from turning sour. In England, hops are grown in Kent, Sussex, Hampshire and Worcestershire. The plants are trained on poles about 12 feet in length, and the hops are picked in late August and September. They are then carefully dried—for, if at all damp, they soon turn musty—and they are afterwards packed tightly in sacks. Hops are usually sold by the "pocket," which is equivalent to half a sack and has a weight of about 168 pounds.

HORACE (QUINTUS HORATIUS FLACCUS), *b.* 65, *d.* 8, B.C., a celebrated Latin elegiac poet. Horace was educated at Rome and Athens, and fought during the civil war in the army of Brutus against Cæsar. He was present at the battle of Philippi, 42 B.C., and on his return to Rome shortly afterwards found that his property had been confiscated. He was patronised and assisted by Mæcenas, and subsequently became a personal friend of the Emperor Augustus. His writings include odes, epodes, satires and epistles.

HORÆ, in classical mythology, the goddesses who presided over the changes of the seasons and the weather, and in later times were worshipped as the goddesses of order and justice.

HORATII, THE THREE, were three Roman brothers, who during the reign of Tullus Hostilius, king of Rome, met in battle three brothers of the Alban nation, called the Curiatii, to decide a dispute between the two nations. The fight took place in the presence of both armies, and two of the Horatii were quickly killed, but the third, having separated his three opponents, who were wounded, by simulating flight, turned and slew them, one by one. He returned in triumph to Rome, and was upbraided by his sister, who mourned her lover in one of the dead Albans; he stabbed her, and barely escaped execution.

HORN BOOK, the primer by means of which the alphabet was formerly taught to children. It was in use until the end of the 18th century, and consisted of a single sheet, upon which were printed the alphabet in capital and small letters, the Lord's Prayer, the Roman numerals, and usually a few monosyllabic words. The front of the sheet was covered by a thin plate of transparent horn, designed to keep it clean, hence its name.

HORN, CAPE, a cape situated on a small island at the extreme south of South America. Its name is derived from "Hoorn," the name of a small town in Holland, and it was so called by the Dutch navigators, Lemaire and Schouten, who rounded the Cape, 1616.

HORNET, a species of wasp, the largest of its kind found in England. When fully grown it is about an inch in length, and its body is brown in colour with some patches of yellow. Hornets usually live in colonies of about 200, and make their nests in hollow trees. They feed upon the sap of various plants, though occasionally they eat flesh. The female hornet is provided with a particularly powerful sting.

HORSE GUARDS, a large building in Whitehall, erected in 1753. The archway forming the entrance is guarded by two mounted troopers in the day time. Here until 1872, the Commander-in-Chief and the principal administrative officers of the army had their offices, and hence we often say the "Horse Guards" when we mean the governing body of the army.

HORSE LATITUDES, a region of the Atlantic between about 30° and 35° North Latitude. Here calms are frequently encountered, and ships taking horses to the West Indies and America often had to cast them overboard for want of food. Hence the name.

HORSE, MASTER OF THE, a Court Officer who has charge of the Royal stables and horses, and everything pertaining thereto, of which he is allowed the use for himself. The appointment is one much sought after, but it terminates when the holder's political party quits office.

HORSE-POWER, a term used in engineering to denote the rate of doing work. An engine of one horse-power is capable (theoretically) of doing 33,000 foot pounds of

work in one minute, that is, it could raise a weight of 33,000 pounds vertically through one foot in one minute. An engine of ten horse-power could do ten times as much work in the same time. The term was introduced by Watt, and the unit was considered to represent the rate of working of a normal horse, though the estimate is too high.

HORSE-RACING. Though this sport dates from the earliest times, it attracted but little attention in England until the time of James I. That king patronised the sport with the idea of encouraging the scientific breeding of horses, and since that time it has gradually attracted more and more notice. Its present popularity is no doubt largely due to the opportunities it affords for gambling, though the improvement in the horse must not be ignored. The head-quarters of the racing world are situated at Newmarket, where there is a fine course and many famous training establishments. The races may be divided into flat races, hurdle races, and steeplechases. Racing on the flat is under the control of the Jockey Club, a body composed of the principal owners of racehorses. This body makes the laws which govern the sport, and appoints stewards to every race meeting to see that these laws are carried out. The principal flat races of the year are the Derby, Oaks, Two Thousand Guineas, One Thousand Guineas and the St. Leger. These are termed "classic" races, though the prizes attached to them are not the most valuable. In the case of certain races, such as the Derby, all the horses are of the same age and all carry the same weight. Handicaps are of two kinds. In weight for age handicaps, horses of different ages run together and carry weights according to their age, the older the horse the heavier the weight. The age of the horse is always reckoned from January 1st of the year in which it is foaled. In other handicaps, the weights to be carried are decided by the previous performances of the horses; it is in handicaps of this kind that fraud most easily arises. Hurdle racing and steeple-chasing are under the control of a body known as the National Hunt Committee; this class of racing arouses considerably less interest than flat racing.

HORSE, THOROUGHBRED, a horse or mare whose pedigree is registered in the *Stud-Book* kept by the official agents of the Jockey Club. The founders of the lineage of the thoroughbred race-horse are said to be three Eastern horses: Byerly Turk, Darley Arabian, and the Godolphin Arabian or Barb. To one or the other of these three all the horses now registered in the Stud-Book trace their ancestry.

HOSPICE, a house of shelter for pilgrims and travellers, usually founded and maintained by some religious order. Hospices are frequently met with in the mountainous districts of Switzerland, those of the St. Gothard and St. Bernard passes in particular being famous.

HOSPITALLERS, originally members of a religious order whose work was of a purely charitable nature. They tended the sick and aged, and ministered to the wants of pilgrims. The original order of hospitallers was founded about 1050 at Jerusalem, with the name of the Hospitallers of St. John of Jerusalem; and the special work of its members was to attend to the pilgrims who visited the Holy Sepulchre. It eventually became a powerful military organisation, and after the taking of Jerusalem by the Turks, had its headquarters at Cyprus, then at Rhodes, and finally at Malta, which was the property of the order from 1530 until its suppression 1799.

HOSPITALS, originally refuges for pilgrims maintained by hospitallers. The name was afterwards given to institutions which in some respects resembled the modern almshouse; the naval and military hospitals at Greenwich and Chelsea respectively are of this type. It was also applied to schools supported by voluntary contributions, Christ's Hospital being an example. In its purely modern sense it is restricted to institutions intended for the reception of the sick and injured. Most of these hospitals are supported by subscriptions, though some of the older institutions are endowed. Admittance may be obtained by the production of a letter of introduction obtained from a subscriber, except in cases demanding prompt treatment, when no such letter is required. Some hospitals reserve certain wards for the reception of patients who pay for their accommodation, etc.

HOST, in the service of the Roman Catholic Church, the consecrated wafer, which during the celebration of mass is regarded in some sense as the body of Christ, and offered as a sacrifice.

HOTEL DES INVALIDES, a hospital for infirm soldiers, situated in Paris, and corresponding to the military Hospital at Chelsea. It was founded in 1670, and in addition to accommodating a number of invalid soldiers is used as a military museum and storehouse. The magnificent tomb of Napoleon is situated in this building.

HOTEL DE VILLE, a French term corresponding to some extent to the English word "town-hall." An Hôtel de Ville usually contains a barracks, prison, the offices of the various local bodies, the residence of the local chief magistrate, and the court house. The most famous is that of Paris, which contains many valuable works of art. It was burnt to the ground during the Commune riots in 1871, but has since been rebuilt.

HOTTENTOTS, one of the native races of South Africa. They are a quiet race of herdsmen and hunters, and, in appearance, are distinguished by their prominent cheek bones and very pointed chins. Their language is remarkable from the fact that it contains a number of queer "clicks," which are produced by pressing the tongue against the teeth or palate. One of these clicks is prefixed to most of their words, and their presence makes it a difficult language for Europeans. The Hottentots number about 180,000.

HOUDIN, JEAN EUGENE, *b.* 1805, *d.* 1871, a celebrated French conjurer and juggler. In 1855 he was granted a gold medal for the invention of an electric clock, and in the following year was sent by the French government to Algeria to expose the tricks practised by the priests of that country upon the inhabitants, a task in which he was quite successful.

HOUGOMONT, a chateau situated on the field of Waterloo. It was situated on the extreme right of the English position, and was the most important position on the right wing. The battle raged around Hougomont for the whole day, but the English troops defended it gallantly, and the French were finally compelled to abandon their attempts to take it.

HOURI, the name given in the Koran to a nymph of the Mohammedan paradise. A houri is represented as a beautiful and voluptuous woman, and to each of the "Faithful" entering paradise a number of them are assigned.

HOUSE-FLY. The common house-fly is found in practically every portion of the globe. They deposit their eggs upon some putrefying matter, and the larvæ are hatched under favourable circumstances within twenty-four hours, and become full-grown in about four weeks. The house-fly feeds upon almost anything, but prefers putrefying animal and vegetable matter, and it thus forms a most dangerous agent in the spread of disease.

HOUSEHOLD, ROYAL. Refer to *Index*.

HOUSEHOLD TROOPS, the members of those regiments which are engaged in personal attendance upon the members of the royal family, either as escorts or guards for the palaces. They are usually stationed either in London or at Windsor, and include the cavalry regiments known as the Life Guards and "the Blues" in addition to the foot guards, composed of the Grenadiers, the Coldstreams, the Scots Guards and the Irish Guards.

HOUSE OF COMMONS. See *Parliament* and refer to *Index*.

HOUSE OF LORDS. See *Parliament* and refer to *Index*.

HOUYHNHNMS, the name given by Jonathan Swift in "Gulliver's Travels" to a breed of horses, endowed with remarkable intelligence, who ruled over a degraded race of men known as Yahoos. The word is possibly intended to represent the neigh of a horse.

HOVAS, the ruling tribe of Madagascar. Till early in the 19th century the numerous tribes of Madagascar were independent, but then the Hovas, who occupied the central regions, under their far-seeing king, Radama, extended their sway over the whole island, and undoubted progress was being made on all sides, when in 1895 the French annexed the island.

HOWARD OF EFFINGHAM, LORD, *b.* 1536, *d.* 1624, a famous English sailor, who became Lord High Admiral of the Fleet, 1554. He was in command of the fleet which defeated the Spanish Armada, 1588, and in 1596 assisted in the capture of Cadiz.

HOWARD, HOUSE OF. See *Norfolk Ducal House of*.

HOWARD, JOHN, *b.* in London, 1726, *d.* 1790, a famous philanthropist, who devoted his life to securing reforms in the management of prisons and prisoners. He visited the prisons of many European countries, and his descriptions of the sanitary and moral conditions under which the prisoners lived, led to a great improvement, not only in the general treatment of the prisoners, but also in the conditions under which they spent their time. Howard died at Kherson, Russia, of a complaint probably contracted whilst visiting the military prisons of that country.

HOWE, ELIAS, *b.* in Massachusetts, 1819, *d.* 1867, inventor of the sewing-machine, or rather the first man who made it commercially workable. He secured the patent both in England and America, but sold the former. Soon competitors arose on all sides, with much litigation, but Howe triumphed at last, and all makers had to pay him royalty or percentage. He made about £500,000 out of his invention.

HOWE, RICHARD, EARL, *b.* in London, 1726, *d.* 1799, a famous British admiral. He saw considerable service during the war of the American revolution, and on June 1, 1794, defeated the French in a great battle fought off Cape Ushant. The day of this victory was long known as "The glorious First of June." For his services he was raised to the peerage with the title of Earl Howe.

HOWITT, MARY, *b.* 1799, *d.* 1888, née Botham, married William Howitt in 1821, with whom she at once entered upon a joint literary career. Her tales for children, her translations of Hans Andersen and Frederika Bremer, and her writings on Natural History, as "Birds and Flowers and other Country Things" show keen

observation and good descriptive power. Her poetry has much quiet charm.

HOWITZER, a short, light gun used in mountain warfare. It possesses a smooth bore, and is used to discharge a small shell at a short range. Its principal advantage is its portability.

HUBER, FRANCOIS, *b.* at Geneva, 1750, *d.* 1831, often called the blind naturalist. He lost his sight early, but with the aid of his devoted wife and an intelligent domestic, he made many important observations on the habits of bees and ants and corrected many previous false notions.

HUBERT, FRANCOIS, *b.* about 656, *d.* 727, a son of a Duke of Guienne, the patron saint of huntsmen, who after spending some portion of his life in dissipation, retired to a monastery and subsequently became Bishop of Liège; he has since been canonised. Saint Hubert is usually represented as a hunter, and according to tradition forsook his evil ways as a result of meeting, whilst hunting, on one Good Friday, a stag which carried between its antlers a glittering cross.

HUDDERSFIELD, a town situated in the West Riding of Yorkshire, and engaged in the manufacture of woollen goods. (For population, etc., see p. 902.)

HUDIBRAS, a title of a humorous poem written by Samuel Butler, and published 1663. In Hudibras the poet caricatures the Puritans.

HUDSON. A river of North America, which rises in the Adirondack Mountains and flows into New York harbour, having, at its mouth, New York on the left bank and Jersey City on the right. It was explored by Henry Hudson, from whom it derives its name, 1609; its length is about 350 miles.

HUDSON, GEORGE, *b.* 1800. *d.* 1871, the "Railway King" of the early 19th century. He was the leading spirit of the railway speculations of the "forties," but some of his latter transactions were very questionable. He died a comparatively poor man.

HUDSON, HENRY. A famous navigator. In 1607 he attempted to discover a north-east passage to the Pacific, and two years later explored the Hudson River. He then sailed to the Arctic Ocean, hoping to find a north-west passage. He discovered and named Hudson Strait and Hudson Bay. His crew then mutinied, and with eight others he was cast adrift, 1611, and never afterwards heard of.

HUDSON, SIR GEOFFREY, *b.* at Oakham, 1619, *d.* 1682, a famous dwarf, who until he was about thirty years of age was less than 20 inches in height. His first public appearance was made before the Duke of Buckingham, to whom he was served up in a pie. He subsequently became page to Charles I. Sir Geoffrey Hudson is introduced by Sir Walter Scott into "Peveril of the Peak."

HUDSON BAY, an enclosed sea situated to the north of Ontario and Quebec, and connected with the adjoining ocean by Hudson Strait. It was discovered and named by Henry Hudson. Hudson Bay has a length of about 1,600 miles, and at its widest part a width of about 600. The Hudson Bay Territory was the name originally given to the land adjacent to the coasts of the Bay, but the name was afterwards applied loosely to all Canada situated to the west of the Bay. This territory was granted to the Hudson Bay Company, 1670, and with it the sole right of collecting furs from the district. The Company is still in existence, but the territory was ceded to the Dominion of Canada on the payment of £300,000.

HUGGINS, SIR WILLIAM, *b.* in London, 1824, an English astronomer. Educated at the City of London School, he early took to science, and for some years made microscopical studies in physiology. In 1885 he built his famous observatory on "Tulse Hill," London, in which he investigated, with his wife as fellow-worker, the physical constitution of the sun and other heavenly bodies by means of spectrum analysis.

HUGHES, DAVID EDWARD, *b.* in London, 1831, *d.* 1900, the inventor of the printing system of telegraphy, now in use on all important lines. He began his career in Kentucky as a musician, but was attracted to telegraphy in 1854, and moved to New York to develop his system. He soon got his system adopted in France, but England refused to accept it for some years. In 1878 he invented the microphone, a useful adjunct to the telephone. He was the author of many improvements in telegraphy, and as such received honours from all civilised countries.

HUGH or **HUGO, SAINT,** *b.* at Avalon, France, 1135, *d.* 1200, was appointed to the see of Lincoln, 1186. He was renowned for his holiness and toleration, and exerted considerable influence over King Henry II.

HUGHENDEN, a village situated in Buckinghamshire, near High Wycombe. Hughenden Manor is famous as the former residence of Lord Beaconsfield, who, together with his wife, is buried in Hughenden Churchyard.

HUGHES, THOMAS, *b.* 1823, *d.* 1896, the author of "Tom Brown's School Days," "Tom Brown at Oxford," and other works, was educated at Rugby, under the celebrated Dr. Arnold. After leaving Oxford he interested himself in social reform, became a Christian Socialist, and assisted Denison Maurice at the Working Men's College, Great Ormond Street, London, W.C. On the death of the latter, he became the Principal of the institution.

HUGH OF LINCOLN, a boy said to have been decoyed into a Jew's house in Lincoln, crucified in mockery of Christ's death and flung into a well, where his body was miraculously discovered. This tale, with variations and additions, seems to have overrun England in the 13th century, and has been revived in Continental cities at intervals whenever a pretext for persecution was needed.

HUGLI or **HOOGHLY,** the most westerly of the branches by which the Ganges enters the Indian Ocean. It has a length of 150 miles and a width at its mouth of about 15. The Hugli is very difficult to navigate owing to the presence of a swift current, shifting sand-banks formed by the mud brought down, and a tidal bore which at spring tides attains a height of nearly 7 feet. Calcutta is situated on the left bank of the Hugli, about 80 miles from the sea.

HUGO, VICTOR, *b.* at Besançon, 1802, *d.* 1885, a poet, dramatist and novelist, one of the most distinguished of the French writers of the 19th century. His best known works in England are his novels; amongst them may be mentioned "Notre Dame," "Les Misérables," "Les Travailleurs de la Mer," and "Hans d' Islande." Of his plays, "Hernani" and "Ruy Blas" are the most famous.

HUGUENOTS, the name given to the French Protestants, during the 16th and 17th centuries, who banded themselves together to secure personal liberty and religious freedom. The origin of the word is unknown, but it was probably a nickname. A long and bitter struggle commenced in 1562, and culminated in the awful massacre of the Huguenots on St. Bartholomew's Day, 1572. In 1598 the French king, Henry IV., granted them their rights by the Edict of Nantes, but in 1685 this Edict was revoked, and large numbers of the Huguenots emigrated to England, America, South Africa, and other countries. The name is sometimes applied at the present day to the Calvinists of France.

HULL, or Kingston-on-Hull, one of the most important seaports in the British Isles, is situated upon the northern bank of the Humber, in the county of Yorkshire. Much of its trade is with the Baltic and North Sea Ports. Its imports include wool, timber, flax, iron, and foodstuffs, and its exports, manufactured goods and coal. It has an important fishing industry. (For population, etc., see p. 902.)

HULLAH, JOHN, *b.* 1812, *d.* 1884, a teacher of music who took a leading part in spreading a taste and knowledge of music among the people of England. His singing-classes in Exeter Hall taught on his system were famed all over the kingdom. He also acted as Inspector of Music for the Education Department. He was strongly opposed to the "Tonic Sol-Fa" methods.

HULSEAN LECTURES, four lectures delivered annually before the University of Cambridge on some subject connected with the evidences of the Christian religion. The lecturer is appointed annually, and paid out of a bequest made for the purpose, in 1789, by the Rev. John Hulse.

HUMANE SOCIETY, ROYAL. The original object of the Society, which was established in 1774, was to teach the correct methods of resuscitating the apparently drowned. It now grants medals for gallant attempts, both successful and unsuccessful, to save persons from drowning, encourages the teaching of swimming by granting prizes, and supplies at its own expense boats and boatmen to watch swimmers at many of the public bathing stations. It is supported largely by subscriptions.

HUMANIST, a student of human affairs or human nature. In this sense Shakespeare is called the great humanist. But it more generally means a student of "the humanities," as Scotsmen call them, i.e., of the Latin and Greek languages, literature, and antiquities.

HUMBER, the estuary of the rivers Trent and Yorkshire Ouse. It is 40 miles long and its greatest width is about 7 miles. The Humber divides Yorkshire from Lincolnshire. The principal ports on its banks are Hull, Grimsby and Goole.

HUMBERT, KING, *b.* at Turin, 1844, *d.* 1900, son of Victor Emmanuel II., ascended the throne of Italy 1878. In his foreign policy he was a firm supporter of the Triple Alliance (Germany, Austria and Italy), though exceedingly friendly towards Great Britain. He also advocated the somewhat disastrous attempts at colonisation on the Red Sea littoral. His home policy was marked by wisdom and humanity, and he was very popular with the nation. He was assassinated by an anarchist named Bresci, August 1900. His son, Victor Emmanuel III., succeeded him.

HUMBOLDT, FRIEDRICH, BARON VON, *b.* 1769, *d.* 1859, naturalist, scientist, traveller, and author, began his travels in 1799, exploring a good part of South America in that and the next four years. The results of his explorations were published in Paris, between 1805 and 1827. In 1829 he accepted the direction of an Asiatic exploring expedition, and thoroughly examined the country between the Urals and the central plateau. His great work is the "Cosmos," a bold attempt to classify and co-ordinate the whole range of scientific facts. His "Travels in America" and "Central Asia" are full of interest.

HUME, DAVID, *b.* at Edinburgh, 1711, *d.* 1776, a distinguished philosopher and historian. His philosophical works were widely read both in England and on the Continent, and caused a very heated discussion on account of the sceptical nature of his arguments. They include "Treatise of Human Nature," "Essays, Moral and Political," and his principal historical work, a "History of England."

HUMMING BIRD, a small and exceedingly beautiful bird, a native of America and the West Indies. The bird is so called because of the humming sound which is produced by the rapid vibration of its wings. About 400 species have been recognised, the largest being about 9 inches long and the smallest about 2½. The humming bird feeds upon insects which it collects from the cups of flowers by means of its long, slender bill. From the fact that the bird usually goes to flowers when seeking food, it was formerly believed that it lived wholly upon honey.

HUMPHREY, GOOD DUKE, *b.* 1391, *d.* 1447, Duke of Gloucester, the youngest son of Henry IV., was educated at Balliol College, Oxford, and was an ardent collector of books. He built the Divinity School with the library above it known now as the Bodleian. On the death of Henry V. he and the Duke of Bedford became regents, and whilst the latter was directing the war in France, Humphrey managed the home affairs, with but moderate success.

HUNDRED DAYS, THE, the name given to the period which elapsed between the departure of Napoleon from Elba, March, 1815, and his defeat at Waterloo, June 18th of the same year.

HUNDRED YEARS WAR, properly the series of wars waged between France and England between the years 1338 and 1453. The principal campaigns occurred during the reigns of Edward III., Henry V., and Henry VI. Success attended the English down to about 1428, and a large portion of France was conquered by them; but after that date the French gradually won back their territory, and at the conclusion of the war Calais alone remained in the possession of the English. The most important battles were fought at Crecy, 1346, Poitiers, 1356, and Agincourt, 1415.

HUNGARY, one of the two independent states forming the empire of Austria-Hungary. It occupies the eastern portion of the basin of the Danube and, including Croatia-Dalmatia, has an area of about 127,000 square miles and a mixed population of Magyars, Slavs, Germans, and Jews numbering 19½ millions. Minerals are abundant in the Carpathians, but the bulk of the inhabitants are engaged in agriculture and cattle rearing. The principal exports are wheat and flour, maize, wine, and cattle. The only port is Fiume, situated on the Adriatic Sea, the only place where Hungary touches the sea; many of the exports find their way down the Danube to the Black Sea. Hungary was acquired by the Magyars, a Mongolian race, during the 9th century. In the 16th century the Magyars were conquered by the Turks, who a century later gave place to the Austrians. Various attempts were made by the Magyars to recover their liberty, the most notable being that led by the patriot Kossuth, 1848-9. In 1867 the Austrians granted Hungary its independence, and since that date the two countries have managed their own affairs, but have been under the same ruler and have possessed a combined parliament which settles such matters as affect the common interests of the two states.

HUNS, a Mongolian race who invaded Europe during the 4th century of the Christian Era. They waged war with the Goths, then inhabiting Central Europe, and drove them south into Spain, Italy, and the Balkan Peninsula, thus indirectly causing the destruction of the Roman Empire. The Huns reached as far west as Gaul, but all trace of them in Europe has been lost.

HUNT, HOLMAN, *b.* in London 1827; a celebrated artist, one of the leaders of the Pre-Raphaelite School. Among his many works the most celebrated is "The Light of the World."

HUNT, LEIGH, *b.* 1784. *d.* 1859. poet and essayist. a voluminous writer of the early 19th century. "Rimini" is his longest poem; "The Old Court Suburb" perhaps his best prose work.

HUNTER, JOHN, *b.* in Lanarkshire, 1728, *d.* 1793; a famous surgeon, who was for some years chief surgeon at St. George's Hospital, London. He was a brilliant and skilful operator, and introduced many improvements in the practice of surgery. His private museum bequeathed to the nation formed the nucleus of the Museum of the Royal College of Surgeons.

HUNTINGDON, SELINA, COUNTESS OF, *b.* 1717. *d.* 1790. became a widow just about the time that Wesley and Whitfield were becoming known through the kingdom. Adopting the Calvinistic doctrines of the latter, she devoted her time and fortune to aiding him, founding chapels, and establishing a college for the training of ministers, which still exists at Cheshunt.

HUSSARS, light horsemen, clothed in tunic and busby, and carrying carbine and sword. The name is derived from an old Hungarian and Servian word signifying freebooter, robber. There are thirteen Hussar regiments in the British army.

HUSS, JOHN, *b.* in Bohemia, 1370, *d.* 1415; a famous reformer and martyr. His preaching brought him into opposition with the Church of Rome, and he was summoned to a council held at Constance, 1414. Here he fearlessly defended his views and refused to recant. He was burned at the stake the following year.

HUXLEY, THOMAS HENRY, *b.* at Ealing, 1825, *d.* 1895; a famous biologist. After serving as assistant-surgeon on board H.M.S. *Rattlesnake* for a short time, during which he studied zoology, collecting specimens and dissecting from morning to night, he took a post as lecturer at the Royal School of Mines. Huxley advocated the systematic study of biology in medical schools, and interested himself in educational matters, especially in the teaching of Natural Science.

HUYGENS, CHRISTIAN, *b.* at the Hague, 1629, *d.* 1695; a celebrated astronomer who discovered Saturn's ring and one of its satellites. He improved the telescope and invented a pendulum clock.

HWANG-HO, the second longest river of China. It rises in Central Asia, and after a course of 2,400 miles flows into the Gulf of Pechili. It is a rapid stream, practically useless for navigation, and brings down with it a large quantity of yellow mud, from which fact it is often called the *Yellow River*. The mud is deposited on its bed when the waters reach the plain, causing the bed to rise higher than the surrounding country, and necessitating the construction of artificial banks. Through these, however, the river sometimes breaks, causing immense damage. In 1851 the river not only broke through the banks, but completely changed its course; previous to that date it emptied its waters into the Pacific Ocean, south of the Shantung peninsula.

HYDE, EDWARD, *b.* 1608, *d.* 1674; first Earl of Clarendon, a prominent statesman in the reign of Charles II. He was in exile with Charles during the Protectorate, and at the Restoration was appointed Lord High Chancellor. Hyde was impeached, 1667, and banished, largely as the result of jealousy. His daughter Anne contracted a marriage with the Duke of York, afterwards James II. Hyde was a historian of importance. His works include a "History of the Rebellion," and one of his own life.

HYDER ALI, a famous soldier, a native of India, who rose from an obscure position and became Maharajah of Mysore. He entered into an alliance with the French, who at that time were contending with the British for the possession of India, and took Arcot, 1769. In 1781 he was defeated in several engagements by Sir Eyre Coote, and died shortly afterwards.

HYDRA, (1) in classical mythology a fabulous animal which dwelt in the swamps of Lerna, situated in the south of Greece. It was a dragon with nine heads, or, according to some writers, a hundred heads, one of which was invulnerable. When one of its heads was cut off, two others grew in its place, unless the wound was cauterised. The destruction of the Hydra was one of the "Labours" of Hercules. (2) A fresh-water anemone which possesses a remarkable power of repairing any portion of its body that has been removed.

HYDROGEN, a colourless, tasteless gas which burns in air with a pale blue flame. It is the lightest of all the elements; if equal volumes of hydrogen and air be taken under the same conditions as regards temperature and pressure, the latter will be found to weigh 14½ times as much as the former. The chemical combination of hydrogen with oxygen produces water. If a test tube be held over a hydrogen flame, drops of water will be formed on the inside of the tube; and by exploding, by means of an electric spark, a mixture composed of two volumes of hydrogen and one of oxygen, a small quantity of water is produced. It is possible to separate water into its two elements by means of an electric current.

HYDROPATHY. See *Med. Dict.*

HYDROPHOBIA, a morbid, unnatural dread of water, a symptom of the disease known as rabies, though frequently used as the name of the disease itself. Rabies is a disease especially common amongst dogs, and is communicated to other animals through the saliva; it, therefore, will be communicated by a bite from a dog suffering from it. Rabies usually terminates fatally, and though Dr. Pasteur claimed in 1885 to have discovered a cure, expert opinion differs on the value of his treatment. In England the disease has been stamped out, at any rate for a time, by the enforcement of the Muzzling Act during the years 1897-1901. The word *Hydrophobia* means "fear of water," and is applied to the disease because one of its symptoms is a contraction of the throat which occurs when drink is offered to a person suffering from it.

HYGIEIA, in classical mythology, the goddess of health. She was worshipped in various parts of Greece, and was represented as a maiden bearing a snake—the emblem of health—in her hand.

HYGIENE, that branch of medical science which treats of the preservation of health. It is really sanitary science. It deals with the proper treatment of the body from the point of view of cleanliness, and with the general external conditions which affect the health of the individual. Thus it deals with sanitation, ventilation, construction and situation of houses.

HYMEN, in classical mythology, the god of marriage; the original meaning of the word was "bridal song." Hymen is represented as a winged youth, bearing in one hand a nuptial veil and in the other a torch.

HYNDMAN, HENRY MAYERS, *b.* in London, 1842, journalist, socialist, and economist. He was war correspondent for the *Pall Mall Gazette* in Italy during the troubles of 1866–67; has travelled in Australasia and America, and is the founder of the "Social Democratic Federation." His writings on social and economic questions are numerous.

HYPATIA, the daughter of Theon, an astronomer of Alexandria. Hypatia lived during the 4th and 5th centuries, A.D., and was a scholar of the Platonic school; she was remarkable alike for her beauty and her intelligence. She gave great offence by her teaching to the so-called Christians of the city. In the course of a fight between her partisans and the Christian party she was dragged from her carriage and torn to pieces. "Hypatia" is the subject of a novel by Charles Kingsley.

HYPERBOREANS, a people believed to live beyond the region from which the north wind came. They, in consequence, were supposed to enjoy perpetual summer and were immortal. As the geographical knowledge of the ancients increased, the name was applied to the tribes of Northern Europe.

HYPNOTISM, a kind of sleep which is induced by artificial means, usually by holding a bright object a short distance in front of the eyes of the person operated upon. The optic nerve after a short time grows tired, and the person falls into a state resembling unconsciousness. The hypnotist usually makes a few passes with his hands—largely for the benefit of the onlookers. Not every person can be hypnotised, and it is generally admitted that the state is produced, not by any extraordinary power of the hypnotist, but as the result of some particular mental condition of the person operated upon. It is possible to suggest dreams to a hypnotised person, and if music be played, it is occasionally possible to induce the patient to dance; the power of walking is not lost whilst in this state. Hypnotism has been practised for a long time, but by many people is still regarded as a kind of fraud. It seems, however, to have been used with some success, by physicians, in the treatment of mental diseases. It can be induced in animals as well as in man.

HYPOSTASIS, that which underlies, or forms the foundation of something, hence the substance, or essential part of anything. By early Christian writers the term is used as equivalent of "person," when we say there are three "persons" in the Godhead.

HYPOTHEC, the right a landlord and certain other persons have in Scotch law over the effects of a debtor. Thus a landlord has a hypothec over the furniture of his tenant, the sailor over the cargo and vessel he has worked in, etc. The English word is *lien*.

HYPOTHESIS, literally "a placing under," the laying down of some supposition in order that some conclusion may be, as it were, built on it. The term is also used in science to denote some theory which, while it has not been demonstrated, is consistent with, and helps to explain, observed facts. Thus the universality of the law of gravity is an hypothesis.

HYTHE, cinque port, 5 miles from Folkestone, in Kent. See *Musketry, School of*.

IBIS, THE SACRED, is one of the wading birds. It was worshipped by the ancient Egyptians and is still venerated by the Arabs. Ibises were kept in the Temples, and were unmolested in the cities. After death they were mummified, and in this state are found in great numbers in the tombs at Thebes and Memphis.

IBO, a district of West Africa in the delta of the Niger.

IBRAHIM PASHA, the adopted son of Mohammed Ali, the Viceroy of Egypt, was born in 1789. Between the years 1822 and 1831 he twice invaded Syria, and on the second occasion made himself master of that country. In 1833 peace was concluded between Syria and Egypt, and Ibraham returned to his own country. In 1848 he went to Constantinople, and was appointed Viceroy of Egypt. He died in November of the same year.

IBSEN, HENRIK, *b.* at Skein, Norway, 1828, *d.* 1906, a poet and dramatist, commenced writing poetry in his 19th year. In 1850 he worked as a journalist while studying at the university of Christiania. In 1851 he was appointed director of the theatre at Bergen, where he wrote and brought out several dramas. Afterward, at Christiania, in connection with the National Theatre he produced the "Warriors in Helgeland" and other plays. He then travelled in Germany and Italy, and wrote lyric dramas, the chief being "Braund" and "Peer Gynt." Later he wrote several plays dealing with the problems of social life. Several of his works have been translated into English.

IC'ARUS, the son of Dædalus, soared too high on wings his father made him. The sun melted the wax that cemented the wings, and Icarus was drowned in the sea.

ICE is water in a solid form, and as it is lighter than water it floats. As the temperature falls water becomes denser and heavier until it reaches 39·2°, F. It is then at its greatest density, and from that point it expands until it reaches its freezing point at 32°, F. It is this expansion that causes water-pipes to burst during winter, although the mischief does not show itself until a thaw liberates the water in the pipes. For the same reason, the lower waters of the Arctic seas are less cold than the upper waters, and remain unfrozen. If it were not for this remarkable property all the rivers and lakes in the Polar regions would long ago have been solid masses of ice.

Ice is formed artificially by means of rapid evaporation, and large quantities are produced in this way. There is at the present day a large trade in ice. In the year 1902 more than 300,000 tons were imported into this country, chiefly from Norway, the declared value of which exceeded £200,000.

ICEBERGS are masses of ice which are found floating in the north and south Polar Seas. They are detached from the glaciers that are formed on land in those icy regions. These bergs stand sometimes more than 200 feet above the surface of the sea, but for every cubic foot above the surface there are eight cubic feet below. Their uncertain movements make them dangerous to vessels sailing across the Atlantic. When icebergs from the Arctic seas approach the coast of Newfoundland, they meet the warm waters of the Gulf Stream and are dissolved. The *débris* thus deposited has formed the banks so famous as a fishing ground.

ICE-BREAKERS are vessels used for the purpose of breaking up the ice in ice-bound waters, so as to make navigation sooner possible at the end of the winter. They are very strongly built, and armoured at the bow. They are used by the Russian Government in the Baltic, and by the Canadian Government in the St. Lawrence.

ICELAND is an island belonging to Denmark, on the borders of the Arctic Ocean. Its coast is almost unbroken, and the interior is mountainous. It has an active volcano, named Hecla, and many geysers, or boiling springs. Most of the country is covered with glaciers, barren heaths, and bogs. It has important fisheries of seal, herring, and salmon. It exports wool, oil, fish, feathers, sulphur, and Iceland moss. Capital, Reikjavik; population of the whole island, about 75,000.

ICELAND MOSS, a lichen, is found in the northern parts of the world. In Iceland it grows in abundance, and is collected both for food and for exportation. When boiled in milk it forms a nourishing diet for persons suffering from a severe cough.

ICELAND SPAR, or **CALCITE,** a transparent calcareous spar found largely in Iceland, filling up the clefts in basalt rocks. Its crystals are rhomboidal. It exists in hundreds of secondary forms, one of the commonest being known as Dog-tooth Spar. It is used for optical purposes, but is becoming rare.

ICE'NI, a tribe of ancient Britons inhabiting the country that is now Norfolk and Suffolk. One of their sovereigns was the famous Boadicea.

I'CHABOD, "The glory is departed," the name given by his mother to the son of Phinehas, born after his father was killed in battle with the Philistines. 1 Samuel iv. 21.

ICH DIEN, a German phrase, literally "I serve," the motto of the Prince of Wales. It was originally the motto of John, the blind king of Bohemia, who was slain at the battle of Crecy, 1346, and it was appropriated by the victor, Edward the Black Prince.

ICHNEUMON, a small carnivorous quadruped, which in shape and habits closely resembles the weasel. About twenty species are recognised, of which the Egyptian ichneumon and the Indian mongoos are the best known. The former is usually from two to three feet in length and possesses a long slender body and a pointed snout. It feeds upon rats and mice and hunts for crocodiles' eggs as a special delicacy. Probably for this reason it was regarded as sacred by the ancient Egyptians. [See *Mongoos*.]

ICHNEUMON FLY, one of the membranous winged insects. It is distinguished by its habit of laying its eggs in either the bodies of other insects or their larvæ. When the eggs are hatched the young feed upon the living tissues of the creatures in which they have been deposited, and so destroy them. In some cases the ichneumon fly lays its eggs in those of another insect, as in wasps' eggs. When this is the case, instead of wasps emerging, an immense number of Ichneumon flies appear.

ICHOR, a thin watery humour discharged from wounds, ulcers, &c.; originally the ethereal fluid which took the place of blood in the Greek gods.

ICHTHYORNIS is a fossil bird found in the cretaceous rocks of Kansas. Its name, literally "fish-bird," is due to the fact that this bird possesses teeth, though in other respects it is a typical bird. This species is thought to throw light on the descent of birds from lower vertebrates. [Refer to *Birds* and *Archæopteryx*.]

ICHTHYOSAURUS, one of the extinct reptilian animals whose remains are found in the lias and oolitic systems. It was a gigantic and voracious marine animal resembling in some points of structure a fish, and in others a crocodile.

ICON'OCLAST, literally one who breaks or destroys images; figuratively, one who attacks cherished beliefs. In Church history, the Iconoclasts were those who supported Pope Leo III. in his contest against image worship, and who, when they had the power, destroyed all images in churches.

ICTI'NUS, a Greek architect who designed a celebrated temple of Apollo,

the sculptures of which are among the treasures of the British Museum, and the still more celebrated temple of Athene, called the Parthenon, built at Athens, 433 B.C.

IDA, a mountain range in Asia Minor, at the base of which the city of Troy was built; also a mountain in Crete.

IDDESLEIGH, (Stafford Northcote), **FIRST EARL OF,** *b.* 1818, *d.* 1887; a Conservative statesman, who, as Chancellor of the Exchequer in Mr. Disraeli's Ministry, 1874, introduced the Sinking Fund for the reduction of the National Debt. In 1885 he was raised to the peerage and appointed First Lord of the Treasury. In 1886 he became Foreign Minister in Lord Salisbury's administration, but resigned before the end of the year, and died soon afterwards.

IDEAS, ASSOCIATION OF, is one of the intellectual processes of the human mind. When two objects of thought have been *repeatedly* presented to the mind together, the connection is retained, and if one of these associated objects of thought is brought back to the mind there is a tendency to bring back the other without any voluntary effort. The primary factors which regulate the action of this faculty are resemblance, contrast, cause and effect, and accidental contiguity.

IDES, according to the Roman calendar, were the 15th of March, May, July, and October, and the 13th day of the other months. These days were sacred to Jupiter and other deities.

IDIOSYNCRASY. See *Med. Dict.*

IDO'MENEUS, in Greek legend a king of Crete, and one of the bravest heroes of the Trojan War. He vowed to sacrifice to Poseidon (Neptune), whatever he should first meet on landing, if the god would grant him a safe return. This was his own son, whom he accordingly sacrificed, but as Crete was shortly afterwards afflicted by a plague, his people banished him. (c.f. *Jephthah*).

IDRIA, a town in Carniola, Austria, noted for its quicksilver mines.

IDRIS, a giant of Welsh mythology whose chair hewn in the rock may be seen on the summit of Cader Idris.

IDUME'A lies to the south of Palestine. In early Bible times it was called Edom, and now forms part of Arabia.

IDYLLS OF THE KING, THE, a series of poems by Lord Tennyson, founded on the legends of King Arthur and his knights. The poems are based on Malory's *Morte d'Arthur*, from which episodes are selected and adapted to illustrate the origin, rise and fall of a noble institution.

IGNATIEFF, a Russian diplomatist, who was successful in concluding treaties with China, Khiva, and Bokhara advantageous to his country. He was Russian Ambassador at Constantinople before the Russo-Turkish War in 1878, and took a leading part in negotiating the treaty of San Stefano. He afterwards became minister of the Interior, when he tried to put down Nihilism.

IGNATIUS, SAINT, Bishop of Antioch, in the latter part of the 1st century. He is said to have been a disciple of the Apostle John. He remained at his post during the persecution of the Christians under Domitian, and afterwards was summoned before the Emperor Trajan, who tried to persuade him to renounce his faith. This he refused to do, whereupon Trajan condemned him "to be led a prisoner to Rome, there to be made the food of wild beasts for the amusement of the people." His martyrdom took place in or about 107 A.D. Twelve epistles attributed to Ignatius are in existence.

IGNEOUS ROCKS, the name given in geology to rocks formed by the action of heat. The igneous rocks are:—(1) Granitic, comprising granite, syenite, and porphyry. (2) Trappean, comprising basalt, greenstone, clinkstones, amygdaloids, and pitchstone, the source of the newly discovered radium. (3) Volcanic, comprising obsidian, pumice, lavas, trachyte, scoriæ, &c.

IGNIS FATUUS, meaning foolish fire, a flame-like appearance floating in the atmosphere a few feet above the ground, in marshy and other places where there is decaying animal matter. When approached it seems to recede. It is supposed to be due to the escape of phosphuretted hydrogen gas. The word, when used figuratively, means something foolish, illusory.

IGUANA is a lizard of South America and the West Indies. It attains a length of three to five feet, lives amongst the trees, feeding on insects and plants. Its flesh and eggs are prized by the natives.

IGUAN'ODON, a gigantic animal of the lizard kind which formerly lived in the southern part of England. Its remains have been found near Maidstone.

ILEX, THE, or evergreen oak, is a native of the south of Europe and north of Africa. It grows well in Britain, especially near the sea, but is seen at its best in Italy. Ilex is also the botanical name of holly.

ILFRACOMBE, a watering place and seaport on the north coast of Devon, noted for its picturesque scenery.

ILIAD, a celebrated Greek poem ascribed to Homer, consisting of twenty-four books. The subject of the poem is the Trojan War during the siege of Troy.

ILIUM. (1) Another name for Troy. (2) The hip bone.

ILKLEY, a village in the West Riding of Yorkshire, on the banks of the Wharfe, is noted for the beauty of its surrounding scenery, and for its hydropathic establishments.

ILLINOIS. They formed a confederacy of North American Indians, formerly occupying Illinois and the adjacent country. In the wars between the French and the British they sided with the former.

ILLUMINATION OF MSS., the adorning of manuscripts by drawings and coloured letters or figures. This art is of great antiquity, the Egyptian papyri being the oldest known illuminated manuscripts. The Greek and Latin MSS. show various styles of decoration, and some fine specimens of English work are to be seen in the British Museum.

ILLUSION, a false mental image or impression of a real object or action due to the misinterpretation of what is seen, heard, or felt; good instances of which are the illusions produced by the conjurer and juggler, and the phenomena produced, as in mirage, by the reflection and refraction of light under unusual conditions; whereas an hallucination is a mental image without any corresponding object or external cause, such as the supposed appearance of rats in delirium tremens. [Refer to "Hallucination" in *Med. Dict.*]

ILLYRIA, the ancient name given to the country lying on the eastern shore of the Adriatic Sea. From the earliest times the inhabitants were known as a warlike and barbarous people, who were at last subdued by the Romans. By degrees the name was dropped until it was revived by Napoleon. The kingdom was dissolved in 1849, and the name has again disappeared.

IMAGES, or representations, sculptured or painted, of any person or thing, seem not to have been used in worship in the earliest ages of the Christian Church. In the 4th century they came into use, and their use rapidly extended in the next three centuries, although condemned by many bishops. The second Council of Nice sanctioned the use of images as aids to devotion, but directed that no kind of worship should be paid to the images themselves, but only through them to the persons represented, and this is what the Roman Catholic Church and the Lutherans still allow. The English reformers rejected the use of images as idolatrous; Luther allowed them as aids to devotion. The ikons, or images, used in the Greek Church are pictures, not what is popularly understood by images.

IMAGINATION is that faculty of the mind by which it forms new combinations out of its previous conceptions. It is a creative faculty; but its creations are limited by the number of mental images formed by observation. It has been aptly described as constructive memory. The exercise of this faculty affords great pleasure to the mind. It also gives a kind of ubiquity, enabling an individual to enjoy the scenes of other lands, and the events of the past. It is the possession and exercise of this faculty that makes a poet, a musician, a sculptor, a painter, or a writer of fiction.

IMITATION OF CHRIST, THE, is the title of a devotional treatise written by Thomas à Kempis, a monk of Utrecht, who lived in the 15th century. This work has been translated into many languages, and reprinted more often than any other book except the Scriptures.

IMMACULATE CONCEPTION, THE, of the Blessed Virgin, a festival of the Roman and Greek Churches in honour of the doctrine that the virgin was born without original sin.

IMMANUEL, meaning "God with us," the name applied to a child born of a virgin, prophesied by Isaiah, ch. vii. 14, and fulfilled at the birth of Christ, Matt. i. 22.

IMMORTALITY is the doctrine of the unending existence of the human soul. This was held by the Egyptians before the time of the sacred Scriptures.

IMMUNITY. See *Med. Dict.*

IMPEACHMENT is an indictment presented by the House of Commons to the House of Lords, accusing some person, generally a peer, of some high crime. A deputation of Commoners presents the charge at the Bar of the House of Lords; the peers are the judges, and the accused may employ counsel. If the charge is high treason, a lord high steward is appointed to preside. The last impeachment was that of Lord Melville in 1806 on the charge of appropriating public money, but he was acquitted.

IMPENETRABILITY. That property of matter by which two bodies cannot occupy the same space at the same time. For example, if a cup be filled with water and a spoon be placed in it, some of the water will flow over, making room for the spoon, which cannot be said to have penetrated the water.

IMPERIAL FEDERATION. The first step was taken in 1884 by the founding of the Imperial Federation League. The Jubilee celebrations of 1887 and 1897 in honour of Queen Victoria did much to forward the movement. In 1887 was held the first conference of representatives of the self-governing colonies. In 1892 a committee of the league, appointed to draw up a definite scheme of imperial federation, recommended that as a first step the colonies should be invited to take a share in the cost of defending the Empire, but the invitation evoked a poor response. The Boer War, however, did much to knit the different parts of the Empire together, and in 1902, when the Colonial premiers attended the coronation of King Edward,

a conference was held between them and the British Government, resulting in the offer of pecuniary help towards the maintenance of the navy from all the great Colonies except Canada. Canada, however, has since 1905 taken over the duty of defending Halifax and Esquimalt, so that now no imperial troops are stationed in any part of the Dominion. It has, also, aided the mother-country by means of a preferential tariff. As regards the other colonies, Australia contributes £200,000 per annum; Cape Colony £50,000; New Zealand £40,000; Natal £35,000; and Newfoundland £3000.

IMPRESSMENT, the seizing and compelling persons to enter the navy. This practice was resorted to from the 14th century to the reign of George III., laws being passed to regulate the system. Although these have not been repealed, the practice has died out.

INCANDESCENT LIGHT is that produced by some substance being made and kept at a white heat. (1) The *electric* incandescent lamp consists of a bulb of glass containing a loop of extremely thin carbon. When the loop has been fastened in the bulb the air within is withdrawn and the bulb sealed to prevent the admission of air. The loop of carbon is connected with two terminals outside, and to these the conductors from the battery or a dynamo are fastened. When the electric current is allowed to pass to the terminals the carbon becomes incandescent and remains in that state as long as the current continues to flow. (2) Incandescent light is also produced by means of *gas*. In this case the intensely white light is obtained by causing the flame from a modified form of a Bunsen burner—which gives great heat—to play upon a mantle placed over it. The mantle is cone-like in shape and made of rare earths which are incombustible. The advantage of the mantle is an increased amount of light with a decreased consumption of gas.

INCAS were the kings of Peru from about the year 1020 till its conquest by the Spaniards, 1531–32. The first Inca was Manco Capac, who with his wife Mama Ocollo founded the Peruvian royal family. They claimed to be children of the sun, sent from heaven to instruct the natives. Manco built the city of Cuzco and ruled over the surrounding country about 80 by 90 miles in extent. His descendants gradually increased their dominions until they reached from Chile to Quito, and from the Pacific to Paraguay. The government of the Incas was a mild form of despotism. The Inca made all the laws and imposed taxes. He was also the chief priest and presided at all religious festivals. All the male descendants of the Inca formed the nobility and were the governors of the subdivisions of the country. The whole territory was divided into three portions, the produce of which supported the Inca, the priests and the national worship, and the people, respectively. All classes were compelled to work for a stipulated time for the common weal.

INCENSE is the aroma given off by the burning of certain woods, resins, dried flowers, and seeds. It has been used in the religious rites of most nations from the earliest times. The monuments of ancient Egypt show the worshippers offering incense to their gods.

INCHCAPE ROCK, THE, or Bell Rock, a small islet 14 miles east of the Firth of Tay. Formerly this was a cause of many shipwrecks, to prevent which the Abbot of Aberbrothwick placed a bell upon it to warn sailors. Upon this tradition Southey founded his ballad of the Inchcape Rock. A lighthouse now stands upon it.

INCOME TAX is a tax levied by the State upon a person's income, whether derived from houses, land, shares in mines, railways, &c., trades, professions, or salaries. It was first levied in 1799, abolished in 1806, reimposed in 1842, and continues to the present day. The amount has varied considerably, the lowest being 2d. in the £ in 1874, the highest 1/4 in 1885–6. Refer to "Income Tax" in *Index*.

INCREMENT, UNEARNED, is the increase in the value of land consequent upon the extension of towns or the growth of industrial occupations.

INCUBATION, ARTIFICIAL, or the hatching of eggs by artificial means, has been practised by the Egyptians for thousands of years, and a rude method has been in use in China from time immemorial. Among European nations, France took the lead on the invention of Bonnemain's apparatus (1777). It has made great progress in our own country since 1880, when Mr. C. Hearson brought out his apparatus, by the use of which a much larger percentage of eggs are successfully hatched than when placed under hens. This method is largely adopted by gamekeepers for rearing pheasants.

INDEX EXPURGATORIUS, THE, is a catalogue of books showing what books Roman Catholics are absolutely forbidden to read, and what books they may read in such editions only as have been expurgated of objectionable passages.

INDIA. Refer to *Index*.

INDIAN ARCHIPELAGO, THE, lies between the Indian and Pacific Oceans, and includes a large number of islands. The chief are Borneo, the Philippines, the Sunda Islands, including Sumatra, Java, Bali, Sumbawa, Flores, &c.; the Celebes, Moluccas, Key, and smaller groups.

INDIAN CIVIL SERVICE. Refer to *Index*.

INDIAN CORN. See *Maize*.

INDIAN MUTINY, THE. 1857–8, was supposed to have been caused by the introduction into the army of cartridges which had been greased with a mixture of cows' and hogs' fat, the handling of which was abhorrent both to the Hindoo and to the Mohammedan. No doubt this led to the immediate outbreak, but the desire to shake off the English yoke had long been gaining ground. The Mutiny commenced May, 1857, at Meerut, where the Sepoys refused to obey their English officers, and murdered them. The mutineers marched to Delhi, which remained in the hands of the rebels for four anxious months. In September the city was stormed and taken by General Nicholson. The neck of the rebellion was now broken, but another year elapsed before the country was pacified. The commander-in-chief of the army that accomplished this result was Sir Colin Campbell, afterwards Lord Clyde. Among the men who covered themselves with glory during the mutiny were Sir John Lawrence, who kept the Sikhs loyal; General Havelock, who brought relief to the British garrison at Lucknow; General Outram, who chivalrously served under Havelock, although entitled to take the command out of his hands; and Lord Canning, the Governor-General, with his cool head, firm will, and courage that never faltered. On the re-establishment of British authority, a royal proclamation announced, 1st November, 1858, that the governing power of the East India Company was abolished, and that henceforth the Sovereign of England would be the supreme ruler of India. And in 1877 the Queen was proclaimed "Empress of India."

INDIAN OCEAN, THE, lies south of Asia, and between Africa and the Eastern Archipelago. It has been navigated from the earliest times, as the winds which blow across it are regular. The northern part is within the region of the monsoons, and the southern part in that of the trade winds.

INDIANS, RED. See *American Indians*.

INDIAN TERRITORY, about 32,000 square miles south of the Red River, U.S.A., set apart in 1832 for Indian tribes, where they settled, became more or less civilized, and established an organized government, churches, banks, schools, &c. The population is about 400,000, but of these only about 13 per cent. are Indians, the rest being whites and negroes.

INDIA RUBBER. See *Rubber*.

INDIGO is a vegetable dye-stuff yielding a beautiful blue colour, obtained from the leaves and stem of the genus *indigofera*, found in the East and West Indies and in Mexico. The only European plant producing indigo is the common woad. It is now manufactured in the chemical laboratory, especially in Germany.

INDO-CHINA, or Further India, comprises the following States:—(1) *Native State*, Siam. (2) *British States*, Burma, Straits Settlements and Protected Malay States. (3) *French States*, Cochin-China, Tonquin, Protectorates of Cambodia and Annam.

INDRA, the name of a Hindu deity. He is called "the lord of the virtuous and the discomfiter of those who neglect religious rites." He is represented as riding on an elephant, and when painted is covered with eyes.

INDUCTION. (1) The act of putting into office; for example, a parson into actual possession of his living. (2) In *logic*, the process of the mind by which we establish general truths from particular instances. (3) See *Electricity* and *Dynamo*.

INDULGENCES are relaxations or remissions of the penitential works and temporal punishments that a penitent in the Roman Catholic Church is called upon to undergo. Indulgences were freely sold from the 13th to the 16th centuries, and their sale by Tetzel, a Dominican friar, roused the indignation of Martin Luther, and turned his mind to the need of a reformation in the Church.

INDULGENCE, DECLARATION OF, was issued by James II. in 1687 on his own authority, suspending the penal laws against Roman Catholics and Nonconformists. This was opposed by the latter, as they saw that it was an attack on civil liberty. In 1688 the Declaration was re-issued and ordered to be twice read in all churches. Most of the clergy refused to obey, and Archbishop Sancroft, with six bishops, presented a petition to the king, begging him not to insist on the Declaration being read in Churches. The bishops were arrested and tried on a charge of seditious libel, but acquitted, 1688.

INDUS, THE, 1,800 miles long, rises on the tableland of Tibet, flows through deep gorges between the Himalaya and Hindu-Kush mountains, and empties itself by several mouths into the Arabian Sea. About 470 miles from the mouth the Indus is joined by the Panj-nad, which receives the waters of the Jhelum, Chenab, Ravi, and Sutlej. On the right bank is the Kabul, which joins it at Attock, from which town the river is navigable, but on account of the shifting character of its banks, no important town is found near the main stream.

INERTIA is the inability of matter to change its state of rest into that of motion, or *vice versa*, without the application of force.

INFALLIBILITY, PAPAL. Infallibility is the exemption from possibility of error.

In very early times it was claimed for the Councils of the Church when properly constituted. The infallibility of the Pope, though held by many Roman Catholics, was not made an article of faith until 1870, when, at a council assembled at Rome, it was declared that when the Pope in the discharge of his office defines a doctrine, what he states respecting such, is in conformity with the Divine will.

INFANTICIDE, the murder of a child, was a common crime in ancient Greece and Rome, and still prevails among some Islanders in the Pacific. In India very many female children were put to death as soon as they were born, until the practice was made punishable by English law. In England the laws are strict with regard to life. It is a crime to abandon or expose an infant to danger, or to fail to supply it with proper food and clothing.

INFERNO, the first part of Dante's poem "Divina Commedia," written about 1300, describes a vision in which the poet is conducted by Virgil through Hell, and holds conversations with celebrated persons who had recently died.

INFERNAL MACHINES are boxes containing dynamite or other explosive, with a clock work arrangement to cause an explosion at a given time. Bombs or hand grenades may be included in infernal machines, as they have been used by anarchists for assassination.

INGELOW, JEAN, poet and novelist, *b.* at Boston, Lincolnshire, 1820, *d.* 1897. The publication of her poems, in 1863, brought her name into prominence. Her best known novels are *Off the Skelligs* and *Fated to be Free.*

INGLIS, SIR JOHN, *b.* in Nova Scotia 1814, *d.* 1862. During the Indian Mutiny he succeeded Sir Henry Lawrence in the chief command of the Residency at Lucknow, until its relief by Sir Henry Havelock, 1857. Shortly afterwards he became major-general and K.C.B.

INGOLDSBY LEGENDS, an English adaptation of old French stories by Richard Barham, Canon of St. Paul's, who wrote under the name of Thomas Ingoldsby.

INGOLSTADT, a fortified town of Upper Bavaria, on the left bank of the Danube.

INGRAM, ARTHUR FOLEY WINNINGTON, *b.* 1858; was curate of St. Mary, Shrewsbury, 1881-5; chaplain to the Bishop of Lichfield, 1885-8; and became head of Oxford House, Bethnal Green, 1888, where for nearly eight years he devoted himself to work among the poor in connection with the University Settlement. He was also Rector of St. Matthew's, Bethnal Green, 1895-7. He was ordained Suffragan Bishop of Stepney in 1897, and Bishop of London, 1901. He has taken the lead as a mission preacher in his diocese.

INK. (1) *Black Writing Ink* is prepared from powdered nut galls, solution of sulphate of iron, gum arabic and water; *Coloured Ink* is made by dissolving a particular pigment and adding it to the three latter ingredients. (2) *Printing Ink* is made by mixing lampblack with linseed oil and a certain amount of yellow soap. *Indian Ink* is made by mixing pure lampblack with gum or gelatine and drying the paste so formed.

INKERMAN, a village in the Crimea, 3 miles from Sebastopol, noted for the defeat of the Russians by the English and French, 1854.

INLAYING is inserting one material into another differing in nature or colour. The following terms designate the different kinds of inlaid work according to the materials employed:—*Bidri*, thin plates of silver let into an alloy of zinc, copper, or lead; *Damascening*, inlaying gold and silver into iron or steel; *Buhl work*, inlaying brass into tortoiseshell; *Marquetry*, inlaying woods of various forms and colours; *Pietra dura*, the inlaying of stones of various kinds; *Mosaic*, the inlaying of small pieces of stone to form patterns.

IN MEMORIAM, a poem by Lord Tennyson, written as a tribute of affection to the memory of the friend of his college days, Arthur Hallam, son of the historian.

INN, a tributary of the Danube, rises in a lake at the foot of the Rhætian Alps, flows through the valley of the Engadine, and then through Tyrol into Bavaria; for a part of its course it forms the boundary between Bavaria and Austria, and joins the Danube at Passau.

INNER TEMPLE. See *Inns of Court.*

INNISFALLEN, an island in the lower lake of Killarney, containing the ruins of an abbey founded in the 6th century. Here the annals of Ireland were compiled in the 13th century, and a copy of them is preserved in the Bodleian library at Oxford.

INNOCENT III., POPE, *b.* 1161, elected Pope 1198, *d.* 1216. His is regarded as one of the greatest of Pontiffs. Endowed with great natural ability, and believing that the supreme authority of the Church in secular as well as spiritual matters should be recognized by all, he gradually succeeded in bringing nearly the whole of Christendom into subjection to the Papal power. Among others, King John of England was compelled to submit to him. He established inquisitorial tribunals, from which arose the Inquisition.

INNSBRUCK, the capital of Tyrol, Austria, on the Inn, lies in a deep valley. It has manufactures of wool, cotton, silk, and glass. The most noted buildings are the Hofkirche, containing the tomb of the Emperor Maximilian I., the Chancery with the golden roof, and the Imperial Castle.

INNS OF COURT, THE, are corporate bodies to which all barristers and students of law must belong. The term also designates the buildings belonging to each society. In London there are four of these courts:—The Inner Temple, the Middle Temple, Lincoln's Inn, and Gray's Inn. Each of these is governed by a body of benchers. The privileges of the Inn are to admit men to become students of law, and to confer the right to practise in the Law Courts. They have the power of refusing to admit a person as member without stating a reason, and also of disbarring one considered unworthy of the profession.

INOCULATION is the operation of communicating the poison of a certain disease into the system which, by exciting a mild attack of the disease, helps to protect the person from a more violent attack. The Chinese, it is said, practised this process for small pox from very early times. It was in use in the east of Europe in the 18th century, and was introduced into England by Lady Mary Wortley Montague in 1717, who, while in Turkey, had it tried on her own son. Gradually the practice grew in England until displaced by vaccination—a method of dealing with small-pox discovered by Dr. Jenner about 1796. Inoculation for hydrophobia has been of late years practised by Dr. Pasteur, and inoculation for consumption has been tried by Dr. Koch.

INQUISITION, THE, a tribunal for the punishment of heresy, was instituted by Innocent IV. in 1248. It was introduced into Italy, France, Germany, and Spain. In the latter country, during the reign of Isabella and Ferdinand, it became a state tribunal, and was carried on with extreme secrecy, rigour, and cruelty. The usual punishment for those found guilty was death by fire. The Inquisition was finally abolished in Spain in 1835. In Rome it still exists as a tribunal for ecclesiastical offences.

INSECTS, properly so called, have bodies divided into three parts:—(1) *head*, which contains the mouth, the antennæ or organs of feeling, and the eyes; (2) *thorax*, bearing organs of motion consisting of three pairs of jointed legs and two or four wings; (3) *abdomen*, containing organs of nutrition and reproduction. Respiration is carried on by means of air tubes which terminate at the surface. The higher insects undergo three changes or metamorphoses.

INSECTIVOROUS PLANTS are those which, in addition to the usual mode of feeding, have the power of capturing insects and devouring them. Though there are many such plants they may be thus grouped:—(1) those with leaves provided with pit-like traps, filled with a viscid fluid, which secures any insect alighting on them, for example, the common bladder wort; (2) those which have no pits in the leaves, yet secrete a viscid fluid, as the common sundew; (3) those whose leaves not only secrete a viscid fluid but also have a movement by which they secure the insect, for example, the Venus' fly-trap.

INSPECTOR GENERAL OF THE FORCES, an officer whose duty since 1904 has been to inspect fortifications and other land defences, and to perform other duties formerly undertaken by the Commander-in-Chief.

INSPIRATION. In ordinary language is (1) the act of receiving air into the lungs, (2) any elevating influence conveyed to the mind by something apart from the individual, (3) in theology it is the supernatural influence of the Holy Spirit on the human mind by which the sacred writers were qualified to receive and set forth Divine communications.

INSTINCT is that natural impulse which leads animals, apart from experience, to perform certain acts which tend to promote the welfare of the individual, or the perpetuation of the species. Examples: migration of birds, construction of nests, formation of comb by bees in the dark, and the laying of eggs by butterflies and moths on the leaves of plants on which the larvæ are to feed.

INSTITUTE OF FRANCE. A learned body, corresponding in some measure to the Royal Societies in England, and formed on October 25th, 1795, to replace those academies which had been suppressed during the Revolution. Its object is the advancement of the arts and sciences by continual researches, by the publication of new discoveries, and by correspondence with the most distinguished scholars of all countries.

INSURANCE. Refer to *Index.*

INTAGLIO, a representation of an object made by incised engraving on the surface of a gem or other substance, as opposed to carving in relief. From an intaglio impressions in relief may be made on soft substances such as wax.

INTERLAKEN—"between the lakes"—a town in Switzerland on the left bank of the Aar, between the lakes of Brienz and Thun. It is 26 miles from Berne, and from it are obtained magnificent views of the Jungfrau and other peaks of the Bernese Alps.

INTERDICT, PAPAL, is a penalty of the Roman Catholic Church laid upon persons, places or countries, debarring them from the sacraments, the celebration of public worship, and the privilege of Christian burial. The most famous interdicts were that laid by Alexander III., on Scotland in 1180, that by Gregory VII. on Poland, that by Innocent III., on France in 1200,

and on England in 1209. The interdict in England was the result of King John's refusal to receive the Pope's nominee as Archbishop of Canterbury. It lasted six years, and was not removed until John consented to place his crown in the hands of the papal legate and receive it back as a vassal of the Pope.

INTRANSIGEANTS (Irreconcilables). members of a political party uncompromisingly hostile to an existing government, the term being used chiefly in Spain. France, and Italy; e.g., the republicans in Spain in 1873.

INTROIT. In the ancient office for Holy Communion a psalm, hymn, or anthem was sung as the clergy were entering the chancel and taking their places before the altar. It was called the *Introit*, the psalm of *entry*.

INTUITION is the faculty by which beliefs or judgments present themselves to the mind with irresistible force as self-evident truths, such as Euclid's axioms; in brief, it is the faculty by which, without reasoning, we recognize the truth.

INVERARAY, capital of the county of Argyle, is beautifully situated at the head of Loch Fyne. In close proximity is the castle of the Duke of Argyle.

INVERCLYDE (John Burns). **FIRST BARON,** *b.* 1829, *d.* 1901; son of one of the three founders of the Cunard Line of steamships. On their retirement he became head of the firm, and in 1897 was made a peer. He wrote a history of the Cunard Line, and a work on the adaptation of merchant ships for war purposes. See *Cunard Line*.

INVERNESS, the capital of the northern Highlands, stands at the mouth of the river Ness and near the entrance to the Caledonian Canal. It received its first charters from William the Lion, 1165–1214. About five miles from the town is Culloden Moor, where Prince Charles Stuart was defeated by the Duke of Cumberland, 1746.

INVERTEBRA'TA, literally, destitute of backbone. In zoology a collective term used to denote all the animals which are destitute of an internal frame-work of bone. [For the classification of invertebrates, see under *Zoology*.]

INVESTITURE, the act of formally bestowing some office, possession, or benefice, such as the grant of land in fief or the rights and possessions of an ecclesiastical dignitary, by giving a branch, some instrument of office, or other symbol of that which was intended to be conveyed.

INVINCIBLE ARMADA. See *Armada*.

INVINCIBLES, a secret society of Irish or Irish Americans formed to overthrow British authority in Ireland by the assassination of officials. In 1867 some of the members blew down part of Clerkenwell prison wall, and in 1882 other members murdered Lord Henry Cavendish and Mr. Burke in Phœnix Park, Dublin.

IO. (1) In Greek mythology, the beautiful daughter of Machus, king of Argos, changed by Hera (Juno) in a fit of jealousy into a white heifer. (2) In astronomy, an asteroid, and also a satellite of Jupiter.

IODINE is an elementary substance originally obtained from kelp, the ashes of certain sea-weeds. It is now chiefly prepared from the S. American nitrate, or *caliche*. Iodine and its compounds are extensively used in medicine, photography, and the production of many brilliant colours.

IO'NA, a small island of the Hebrides. Here St. Columba landed, with twelve disciples, from Ireland and founded a monastery, about 563, which became a great missionary centre.

IONIAN ISLANDS, THE. lying west and south of the Greek mainland, consist of seven principal islands, of which Corfu is the largest, and a number of smaller islets. They are uniformly mountainous, and enjoy a fine climate. The chief productions are olives, grapes, currants, and honey, and these form the chief exports. The imports are wheat and other grains, manufactured articles, cured fish, and hardware. The town of Corfu, on the east coast of the island of that name, is the chief town and is the seat of a university.

IPHIGENI'A in Greek mythology was the daughter of Agamemnon, who served as priestess of the goddess Artemis. She is the heroine of two plays by Euripides.

IPSWICH, the county town of Suffolk, on the Orwell. It was the birthplace of Cardinal Wolsey, and among its old buildings is Wolsey's Grammar School. The town has a considerable trade in agricultural machinery and artificial manures. It sends two members to Parliament. (For population, etc., see p. 902.)

IRAWADI or **IRRAWADDY,** the great river of Burma, is navigable as far as Bhamo, 840 miles from the sea. About 90 miles from the Gulf of Martaban, into which it discharges its waters, the river forms a delta, with nine main channels, of which the Bassein on the west and the Rangoon on the east are the chief. Towns on its banks—Rangoon, Mandalay, and Bhamo.

IRELAND, the most westerly of the British Islands, is separated from Great Britain by the Irish Sea. Since 1801 Ireland has ceased to have a separate Parliament. The country since that date has been represented in the Imperial Parliament by 103 members in the House of Commons and by 28 representative peers in the House of Lords. It has, however, a distinct executive government, headed by the Viceroy, or *Lord-Lieutenant*, with the *Chief Secretary for Ireland* as his principal minister. Ireland has its own Privy Council. Lord Chancellor, and Attorney-General, and a Constabulary under the direct control of the Viceroy. As the King's representative the Viceroy holds courts and levées and discharges the social duties that commonly fall to a sovereign. The Chief Secretary is directly responsible to the House of Commons for the acts of the Irish Government, and therefore to a certain extent occupies the position of prime minister to the Viceroy, subject, however, to the direction of the Ministry in London. Refer to "Ireland" in *Index*.

IRELAND, CHURCHES IN. The Irish Church, of Celtic origin, was founded by St. Patrick in the 5th century, and in the two following centuries was a distinguished missionary church; for example, it sent Columba to convert Scotland. Until the 12th century it remained independent of Rome. From the 12th to the 16th century there were two churches: Anglo-Norman and Celtic, both subject to Rome. At the Reformation the former became "Protestant," the latter with four-fifths of the people remained "Catholic." The Church of the minority, however, was by law the Established Church, and so remained until 1869. In the 17th century a new element of religious confusion was introduced on the settlement in Ulster of Scottish Presbyterians. The Roman Catholics were penalised more shamefully than ever after the accession of William III., until the Catholic Emancipation Act, 1829, removed their disabilities. Since 1869, when the "Irish Church" was disestablished, the State has ceased to favour one Church more than another. The disestablished Anglican Church has about 1500 clergy, with 11 bishops and 2 archbishops; the Roman Catholic Church has about 3500 clergy, with 23 bishops and 4 archbishops; and the Presbyterian Church about 700 ministers.

IRENÆ'US, SAINT, supposed to have been a native of Smyrna, was born probably between 120 and 140 A.D. He was a pupil of Polycarp and Papias. He became a presbyter, and at a later period bishop of Lyons. He actively opposed the Gnostics, and wrote several works in defence of the Christian faith. Except a fragment in Greek, entitled "Adversus Hæreses," all his writings have been lost. He suffered martyrdom at Lyons in the persecution of Septimius Severus in 202.

IRETON, HENRY, *b.* 1610, *d.* 1651; was a general in the Parliamentary Army in the Great Rebellion. He married a daughter of Cromwell, and took a leading part in the trial of Charles I. During the Commonwealth he assisted in the reduction of Ireland, and died at Limerick.

IRIS—"the rainbow,"—(1) in Greek mythology a goddess of Olympus, a messenger of the gods to men frequently mentioned in the Iliad of Homer. (2) In botany the name of the common flag of our gardens. (3) In anatomy, the coloured portion of the eye surrounding the central pupil. It is sensitive to light and contracts or expands as the light increases or decreases.

IRISH GUARDS formed in 1900, by command of Queen Victoria, in recognition of the gallantry of her Irish soldiers in the Boer War. See *Guards, The*.

IRISH PARLIAMENT. An Irish Parliament, so-called, existed long before the Tudors, but it had no representative character. Henry VIII. was the first to summon chiefs of the native Irish to a parliament in Dublin, but it was not until the reign of George III. that the Irish Parliament exercised any authority of its own. Its complete subservience to the English Parliament, previous to that reign, is plainly set forth in *Poynings' Law* (which see). Ireland's opportunity came with England's peril in the course of the American War of Independence. In 1778 Grattan began his illustrious career, and by 1782 succeeded, with the aid of Flood and Malone, in securing the independence of the Irish Parliament. At first no Irish Catholic could sit as a member, or even vote for one. The right to vote was at length conceded, but a Bill entitling Catholics to become members was vetoed by the King, who also refused to sanction the removal of many other of their disabilities. Irish discontent led to the rebellion of 1798. When this had been put down Pitt by unscrupulous means induced the Irish Parliament to pass the Act of Union, which came into force in 1801. See *Grattan, Henry*.

IRKUTSK, capital of East Siberia, on the Angara, not far from Lake Baikal. It is the largest city in Siberia, and a great centre of the tea and fur trade. Population exceeds 50,000.

IRON is almost always found as an ore, either as an oxide or a sulphide. The two common forms of the oxide are the red hæmatite and brown hæmatite, both rich in iron, and as they do not contain sulphur can be at once smelted. The common form of the sulphides is the clay iron-stones. These are always roasted before being smelted. Iron as obtained by smelting is very brittle, and hence neither malleable nor ductile; both these qualities are obtained by the process of refining and puddling.

IRON AGE is that period in the history of man when his implements and weapons were made of iron. This period succeeded the Bronze Age, and this the Stone Age, when his weapons were made of flint. It

is not known at what period of time, nor in what country, the iron age commenced.

IRON DUKE, THE, was the name given in his latter years to the Duke of Wellington, on account of his strong, iron constitution, coupled with his personal intrepidity and great moral courage.

IRON GATES, the name given to that part of the Danube which flows through a narrow gorge between the Carpathians and an offshoot of the Balkans, a little above the town of Gladdova. The river here flows over a bed of jagged rocks, which, until 1849, formed an effectual barrier to all vessels drawing more than 2½ feet of water. The obstruction formed by these rocks has since been removed by blasting.

IRONSIDES, the name given to the troopers of Cromwell's army, because they were sober, solid, brave, God-fearing men, who could be relied on to stand firm in the severest shock of battle.

IRONY is that mode of speech by which a speaker conveys a meaning the direct opposite of that which the words naturally express. See 1 Kings xviii. 27.

IROQUOIS, a confederation of the Mohawks and other Indian tribes in North America, known to the English as the "five nations." In the struggle with the French for supremacy in North America, they sided with the English, whose fortunes they also shared in the American War of Independence. On the conclusion of that war the Mohawks removed in a body from the United States and settled in Canada, north of Lakes Erie and Ontario.

IRREDENTISTS, the name of a political party in Italy, which, in 1876, was placed at the head of the Government, and raised the cry of "Italia Irredenta,"—that is, the redemption or recovery of those territories which at one time formed part of Italy, and were then in the occupation of other Powers. The movement did not, however, make much progress, and soon ceased.

IRVING, EDWARD, *b.* at Annan 1792, *d.* 1834, a celebrated Scotch minister. He became famous as a preacher in London, but his peculiar doctrines respecting the gift of tongues and of prophesying led to his deposition by the Presbytery of Annan. He subsequently founded the Irvingite or "Catholic Apostolic Church," which still survives, though its members are few.

IRVING SIR HENRY, *b.* 1838, *d.* 1905, whose real name was John Henry Brodribb, began his career at Sunderland, in 1856, as Gaston in *Richelieu*. In 1866 he first played to a London audience at St. James's Theatre, and in 1871 made his first appearance at the Lyceum, where during the next thirty years he not only raised himself to the top of his profession but did much to raise the profession itself in public estimation. His fame began with his representation of Mathias in *The Bells*, was reinforced by his interpretation of Hamlet, and firmly established by a long series of successful performances in association with Miss Ellen Terry, who joined him in 1878 on his becoming lessee of the Lyceum. In 1895 he was knighted.

IRVING, WASHINGTON, *b.* at New York, 1783, *d.* 1859; an American essayist and novelist. He wrote a burlesque history of New York, and after travelling in Europe published his "Sketch Book" and "Tales of a Traveller."

IRVINGITES, followers of Edward Irving after his deposal by the Presbytery of Annan. They formed the "Catholic Apostolic Church," which has a four-fold order of ministry—apostles, prophets, evangelists, and teachers.

ISAIAH, the greatest of the Hebrew prophets, who prophesied in the days of Uzziah, Jotham, Ahaz, and Hezekiah, kings of Judah, from about 700 or 710 B.C. He is sometimes called the "Evangelical Prophet," on account of the many remarkable Messianic prophecies in the book that bears his name; but in the opinion of many scholars of repute the latter part of Isaiah (chapters xl.–lxvi.) is the work of a later prophet, who is spoken of as *Deutero-Isaiah*, the second Isaiah.

ISANDLANA, in Zululand, ten miles from Rorke's Drift, where a body of British troops, in 1879, was almost annihilated by an overwhelming Zulu force. Out of 800 British soldiers only 40 escaped.

ISHTAR, a Babylonian deity who seems to have united in her person the attributes of Venus and Mars, being regarded as the goddess of love and war.

ISINGLASS, a gelatine prepared from the air-bladder of the sturgeon and other fishes and used in confectionery and for clarifying wines.

ISIS, one of the chief divinities of Egypt in ancient times. She was worshipped as the moon-goddess, the wife of Osiris, the sun-god. She was represented in the form of a woman with the horns of a cow, as they were supposed to symbolise the crescent moon. She was regarded as the mother and nurse of all things good and beautiful.

ISLAM, the religion of Mohammed. Refer to *Index*.

ISLE OF MAN, situated in the Irish Sea, midway between England and Ireland; area 220 square miles, population about 55,000. Many of the inhabitants are engaged in mining and fishing. Chief towns are Douglas, the capital, Castleton, Ramsey, and Peel. The natives, who are called Manx, enjoy complete home rule, but they have no representative in the House of Commons. The legislative body, called the "House of Keys," is composed of 24 members. The arms of the island are formed of three legs.

ISLE OF FRANCE. See *Mauritius*.

ISLE OF WIGHT, situated off the coast of Hampshire, from which it is separated by Spithead and the Solent; area 135 square miles, population about 80,000. It is noted for its picturesque scenery. The chief places of interest are Carisbrooke Castle, where Charles I. was confined in 1647; Osborne House, a residence of Queen Victoria, but now a convalescent home for officers and a college for naval cadets; Shanklin and Blackgang, each with its chine; and Ventnor with its convalescent homes. The chief towns are Newport, Ryde, and Cowes.

ISMAIL PASHA, *b.* 1830, *d.* 1895; was a grandson of the celebrated Mehemet Ali. He made Egypt virtually independent of the Sultan of Turkey, and in 1873 was acknowledged by him as Khedive, with the right of succession in his family. He engaged in great public works, the chief of which was the construction of the Suez Canal; but he became so involved in debt that he sold his shares in the Canal to the British Government. His extravagance led to the dual control of Egypt by France and England, and ultimately to his abdication, 1879. He was succeeded by his son, Tewfik.

ISMAILIA, a town in the Isthmus of Suez, 46 miles south of Port Said. It came into existence during the construction of the Suez Canal, and is the centre of the engineering works connected with it.

ISOBARS are lines drawn through those points on the earth's surface where the mean pressure of the atmosphere is the same.

ISOCRATES, (a-tes) a Greek orator and friend of Plato, who wrote orations for others to use. Of these twenty-one are extant. He died in 338 B.C., at the age of 97.

ISOTHERMAL LINES are those drawn on a map or globe to show the places which have the same mean annual temperature. Latitude alone does not determine this, but elevation, prevailing winds, distance from the sea, and other circumstances.

ISPAHAN', the ancient capital of Persia, and still its second city. It is situated in the midst of a fertile plain in the centre of the country, and is the seat of important manufactures. It still possesses many relics of its ancient splendour. It was captured by Tamerlane in 1387, and sacked by the Afghans in 1722; population about 60,000.

ISRAEL, "a prince of God," the surname of Jacob, grandson of Abraham, and progenitor of the Israelitish nation, which was in ancient times divided into tribes, named after his twelve sons.

ISTHMIAN GAMES, THE, were those celebrated on the Isthmus of Corinth from pre-historic times in alternate years. The games included a variety of athletic performances, horse and chariot racing, and contests in music and poetry. The prize was a simple wreath of parsley, pine, or ivy, but it shed lustre not only on the victor but on his family and city.

ITALY consists of a peninsula stretching into the Mediterranean Sea, with Sicily and Sardinia, and many small islands. Italy is noted for its sunny skies, beautiful flowers, and fine fruits. Among its famous cities, with their treasures of art, are Rome, Naples, Milan, Florence, Venice, and Turin. It is also interesting for its volcanoes—Etna, Vesuvius, and Stromboli, and for the remains of the buried cities of Herculaneum and Pompeii. Its mineral products are marble, mineral ores, and sulphur; its chief exports — olive oil, wine, candied fruits, silk, and works of art; its fisheries are highly valuable; its manufactures suffer from want of coal. Area 110,000 square miles, population upwards of 32,000,000.

ITALY, KINGDOM OF. Before 1859 Italy was under the rule of many sovereigns, the chief being the Austrian Emperor, the King of Sardinia, the Pope, and the King of Naples and Sicily. In the first half of the 19th century the Italians had made many futile attempts to free themselves from the tyranny of their rulers. In 1859 the French under Napoleon III. united with Victor Emmanuel, king of Sardinia, to help the Italians to throw off the yoke of Austria. As a result of the victories of the allies over the Austrians at Magenta and Solferino, Lombardy was made part of the kingdom of Sardinia. Four of the smaller states of Italy were also by their own desire annexed to that kingdom. In 1860 Garibaldi drove the king of Naples and Sicily out of his dominions, and proclaimed Victor Emmanuel King of Italy. In 1861 the first Italian Parliament was held at Turin. In 1866 Austria ceded Venetia to the king of Italy, and in 1870 the union of Italy was completed by the withdrawal of Rome from papal authority.

ITO, MARQUIS, *b.* 1838, a Japanese statesman, who spent much time in Europe and America, studying the educational and military systems as well as the various constitutional forms of government. Returning to his own country he became the leader of all the great reforms, which, commencing in 1871, gradually transformed Japan and placed it on an equality with the Great Powers of the West.

IVAN THE GREAT, the founder of the monarchy of Russia, began his reign in 1462. He abolished Tartar rule, and

brought the various provinces and principalities of Muscovy under a central government. He was nevertheless a brutal tyrant, and most of his successors during the next two centuries were of the same character. His immediate successor, known as "Ivan the Terrible," was the first to assume the title of *Tzar*.

IVEAGH (Edward Cecil Guinness) **BARON,** *b.* 1847, at one time head of the great brewery firm of Guinness, Dublin. On the sale of the business in 1889 to a company for £5,200,000, he gave £250,000 to build workmen's dwellings, to be let at low rents, one-fifth to be expended in Dublin, and the rest in London. He was created a baron in 1891. He has also expended £250,000 in clearing an insanitary area in Dublin, building thereon workmen's dwellings, baths, concert hall, &c.; and £250,000 to the Jenner Institute in London for the study of Preventive Medicine.

IVORY is obtained from the tusks of the elephant, hippopotamus, walrus, narwhal, and sperm whale. African elephants yield much more ivory than the Indian, and also of a better quality. The value of the ivory depends much upon the size of the tusks, as well as their texture and colour. In 1902 more than 10,000 cwt. was imported into England, valued at £400,000. Most of the ivory used in Russia is obtained from the fossil tusks of the mammoth, a gigantic elephant now extinct. Ivory has from ancient times been used for ornamental purposes. The most skilful ivory-carving at the present day is executed in India and China.

IVORY GATE, THE. In the mythology of Greece and Rome the gate of sleep, through which false dreams are sent from the lower world.

IXI'ON, in Greek mythology, king of the Lapithæ, who for his base ingratitude to Zeus (Jupiter), was punished by being chained to a fiery wheel ever revolving in the world below.

JABIN, king of Hazor in Palestine, the head of a confederacy of native princes opposed to Joshua, who defeated them utterly at the Waters of Merom, about 1450 B.C. See Jos. xi. 7, 8.

JACK AND JILL, a nursery rhyme founded apparently on the Icelandic myth, that two children thus named were kidnapped by the moon while carrying water in a bucket between them.

JACKSON, "STONEWALL," *b.* 1824, *d.* 1863; an American general who fought on the Confederate side in the Civil War. At the first battle at Bull's run, 1861, he and his men stood as firm as a wall, enabling their comrades to rally, and ultimately win the day. From that day, "Stonewall" was the name his firmness at a critical moment earned for him. After the battle of Chancellorsville, while returning from a reconnaissance beyond the lines, he was mistaken for the enemy, and mortally wounded by his own men.

JACOBINS, the members of a French political club formed at the outbreak of the French Revolution in 1789, and so called from the Jacobin convent, in Paris, in which they held their meetings. The club had branches all over France, and became the greatest power in the land, all the great events which happened during the "Reign of Terror" being determined by it. The fall of Robespierre, its president, in 1794, led to its dissolution.

JACOBITES, the adherents of James II. after his abdication, and of his son and grandson, the two Pretenders. They rose in rebellion in 1715 and 1745. The name is derived from *Jacobus*, the Latin form of James.

JACOBS, WILLIAM WYMARK, *b.* 1863, entered the Post Office Savings Bank, 1883. In 1896 he commenced publishing a succession of amusing books of tales and sketches of nautical life, including "Many Cargoes," "The Skipper's Wooing," "A Master of Craft," "Light Freights," "The Lady of the Barge," and "Captains All."

JACOTOT, JEAN JOSEPH, *b.* 1770, *d.* 1840, a well known French educationist, who devised a new method of teaching founded on certain paradoxes—such as "Tout est dans tout"—at the root of which lay a truth of great importance. His great practical maxim was "Répétez sans cesse."

JACQUARD, JOSEPH MARIE, *b.* at Lyons, 1752, *d.* 1834; inventor of the Jacquard loom, which turns out figured silks. His invention at first aroused the wrath of the workers in silk, but they learnt to regard him as the best friend of their trade. His statue was erected at Lyons in 1840, on the spot where nearly 40 years before his loom had been destroyed by a mob.

JAC'QUERIE is the name given to a revolt of the French peasants against the privileged classes, in 1358, after the name assumed by their leader, *Jacques Bonhomme*. It was put down with ruthless severity at the cost of 12,000 lives.

JADE is a hard, tough, silicious rock of a leek-green colour, with a smooth surface. It takes a fine polish, and is much used for ornaments in China and Japan, and by the natives of New Zealand.

JAEL, the wife of Heber the Kenite, secretly killed Sisera while he was asleep in her tent. See Judges iv. 21.

JAINAS or **JAINS,** a sect of Hindus, the followers of Jina, a sage who is held to have attained omniscience, and who comes to reform abuses. A *Jina* appears at intervals, and on his decease he is worshipped as a deity. The sect numbers about 400,000.

JAMAICA, the largest of the British West Indies, area about 4,000 square miles; population about 650,000, three-fourths of whom are negroes. From the sea-coast the land rises by a series of ridges culminating in the W. Peak of the Blue Mountains, 7,360 feet high. Kingston, with a good harbour, is the capital. In January, 1907, great havoc was wrought in and around Kingston by an earthquake, and more than 600 persons were killed. Jamaica exports sugar, coffee, dyewoods, rum, bananas, and other fruits. It was captured by the British during the Commonwealth, in 1655.

JAMES, three of this name are mentioned in the New Testament. (1) James, the son of Zebedee, an apostle put to death by Herod Agrippa I. (Acts xii.) (2) James the son of Alphæus, also one of the twelve Apostles. (3) James, "the Lord's brother." It is probable that the last named is the James who presided at the Council of Jerusalem (Acts xv.) and wrote the Epistle of St. James.

JAMES IV. OF SCOTLAND, reigned 1488–1513, married Margaret, daughter of Henry VII., of England, a marriage which resulted in the accession of his grandson, James VI., to the throne of England. As the ally of France he led an army across the Border, and was defeated and slain at the battle of Flodden Field, 1513.

JAMES I. OF ENGLAND, who reigned 1603–25, was the first king of Great Britain. He was the son of Mary Queen of Scots and Lord Darnley. He had an excessively high opinion of his kingly office and dignity, believing in "the divine right" of kings, and in the duty of "passive obedience" on the part of their subjects. He had great learning but little common sense, and was wittily called "the wisest fool in Christendom." James was usually under the influence of some favourite, such as George Villiers, whom he created Duke of Buckingham. In his reign there was a constant struggle for power between King and parliament, which was continued in the reign of his successor, and ended in the great Rebellion.

JAMES II, son of Charles I, reigned 1685–88. Owing to illegal acts in his endeavour to re-establish the Roman Catholic religion in England, he was obliged to flee the country. After making an unsuccessful attempt in Ireland to regain the crown, he finally retired to St. Germains, in France, where he died, 1701.

JAMES, GEORGE PAYNE, *b.* in London 1801, *d.* at Venice 1860; was the son of an eminent physician. When quite young he showed literary talent, and became a prolific writer, being the author of at least 60 works of fiction, besides several historical works.

JAMESON, MRS., *b.* 1794, *d.* 1860; the daughter of an Irish miniature painter, was an authoress of repute. In 1842 she began to write on art subjects, and gained distinction by her work on "Sacred and Legendary Art."

JAMESTOWN, on the James river in Virginia, was the first permanent English settlement in America, founded in 1607, and named after the reigning sovereign, James I.

JAMRACH, JOHANN, *b.* at Hamburg 1815, *d.* in London 1891, a celebrated collector of wild animals, and dealer in all kinds of zoological curiosities.

JAN'ISSARIES, a body of Turkish infantry formed about 1330 as the Sultan's body-guard, and consisting at first chiefly of Christian captives. It was dissolved, 1826, after a revolt purposely provoked, it is said, by the Sultan Mahmud II.

JANUARIUS, SAINT, a native of Benevento, and bishop of that see, who suffered martyrdom under Diocletian, about the close of the 3rd century. His head and two phials of his blood are preserved as relics at Naples, and on certain occasions the relics are carried to the high altar, where, after prayer, the blood is believed to liquefy, and in this condition is presented to the people for their veneration.

JANUS, an ancient Latin deity, who presided over the beginning of everything, and was therefore invoked first in every undertaking; hence the first month of the year is named after him. At Rome a covered passage (not a temple), bearing his name, was closed only in the rare occurrence of peace throughout the Empire. He is represented with two faces, denoting peace and war; and he holds a sceptre in his right hand and a key in his left, to signify his guardianship of gates and doors, as the opener and the shutter. (*Janua*=door.)

JAPAN consists of four large islands, and about 3,000 small ones; area 160,000 square miles; population about 46 millions. Since 1870, Japan has adopted, to a great extent, the arts, mode of government, and civilisation of western nations. The principal towns are Tokio the capital, with Yokohama as its port, Kioto, Osaka, and Nagasaki. The chief exports to England are rice, silk, camphor, antimony, porcelain, and lacquered wares; the chief imports, cotton and woollen goods, machinery, sugar, and petroleum.

JAPANNING is the art of coating wood, metal, etc., with a hard durable varnish, in imitation of the famous lacquered work of Japan. Black japan for tinned-iron goods consists of an intimate mixture of asphaltum, gum, and linseed oil, applied in layers, which layers are successively hardened at about 200° F., and finally polished by rubbing.

JARRAH is a hard, durable wood resembling mahogany, obtained in West Australia from the *eucalyptus marginata*. It is much used in England for street paving.

JARROW, a town on the Tyne, near Newcastle, in the county of Durham, important for its shipbuilding and iron works and export of coal. The Venerable Bede spent his early years in Jarrow monastery; population about 35,000.

JASON was the leader of the Argonauts on their voyage to Colchis to gain the golden fleece, which was guarded by a sleepless dragon. By the aid of Medea, daughter of the King of Colchis, they succeeded, and Jason married Medea. After ten years Jason married Glauce, daughter of a Corinthian king, and Euripides, in one of his greatest tragedies, has dramatised the story of Medea's revenge. Jason, on a subsequent voyage, was shipwrecked, and saved only to meet his death by being crushed by the poop of the ship "*Argo*."

JASPER is an opaque variety of quartz, generally red or brown in colour, but sometimes striped wth green or yellow. It takes a high polish, which renders it valuable for ornamental purposes.

JAVA is the most important Dutch possession in Southern Asia: capital, Batavia. It has a rich vegetation due to a volcanic, therefore fertile, soil, a warm climate, and a population of twenty-six millions, which is forced to be diligently agricultural under the old Dutch "system of culture." Home grown rice is the staple food, and Javanese coffee is highly prized. The Dutch have governed the island since 1595, except for the six years (1811–17), when it was captured and held by the British.

JEAMES is colloquially used for a footman or flunky, and is another form of James. Thackeray created the name in his "Yellowplush Papers."

JEANNE D'ARC, Joan of Arc, Maid of Orleans. Henry VI. of England claimed the throne of France, by the Treaty of Troyes, 1422, on the death of Charles VI.; and the English regent in France, the Duke of Bedford, was supported by the Burgundians against the Dauphin Charles and the Orleanists. The English over-ran the north of France, and invested Orleans, the only city of importance left to the Dauphin, when their victorious career was checked by this heroine of the Middle Ages. Stirred by visions of "our lady of Bellemont," commanding her to help the French, she sought the presence of Charles, who, half in earnest, half in despair, entrusted her with the leadership of his troops. Such a striking leader inspired the followers with a fanatic enthusiasm for their cause, and a succession of French victories led to the raising of the siege of Orleans, and the crowning of Charles at Rheims, 1429. Joan, leading a sally at Compiègne, was captured by the Burgundians and handed over to the English. Condemned as a sorceress, she was sent to the stake at Rouen, May 30th, 1431.

JEDBURGH, county town of Roxburghshire, possesses the ruins of a famous abbey of the twelfth century. It saw stirring times in the Middle Ages, and originated "Jeddart Justice," a lynch law by which a man was hanged and then tried.

JEFFERIES, JOHN RICHARD, *b.* 1848, *d.* 1887; commenced literary work as a journalist and writer of newspaper articles and magazine essays on rural and agricultural subjects. In 1878 he published "The Gamekeeper at Home," which at once established his fame as a writer minutely acquainted with life in the fields, woods, and hedgerows of Southern England. This was followed by "Wild Life in a Southern County," "The Amateur Poacher," "Life of the Fields," "Red Deer," and other similar works.

JEFFERSON, THOMAS, *b.* in Virginia, 1743, *d.* 1826; a great American statesman, and third president of the United States. He drafted the "Declaration of American Independence," which was adopted July 4, 1776. He was strongly in favour of giving a large measure of independence to individual states, and drew up the constitution for Virginia. In 1801 he became president, and was re-elected in 1805.

JEFFREY, FRANCIS, LORD, *b.* 1773, *d.* 1850; was called to the Scottish bar in 1794, and soon obtained a great reputation. In 1802 he was made editor of the *Edinburgh Review*. His editorship and his brilliant critical contributions brought him great fame. His writings have been published in four volumes.

JEFFREYS, JUDGE, *b.* Denbigh, 1648, *d.* 1689; a famous and most infamous English lawyer. By his marvellous skill in cross-examination he rose in his profession, becoming Recorder of London in 1678. After Monmouth's rebellion he was sent on the Western Circuit to try the rebels, and the "Bloody Assize" resulted in 320 recorded deaths. His hideous glare, hard features, and fierce shouts, terrified his victims, and his drunken habits almost led to his own death. On the flight of James II. Jeffreys disguised himself, but was identified by an attorney, and narrowly escaped death by the mob, only to die miserably in the Tower.

JEHOSHAPHAT, VALLEY OF, is mentioned by the prophet Joel as the place where Jehovah would gather the heathens after the captivity, to judge them for their misdeeds to Israel. Whether merely a visionary spot, or the valley so-named, lying between Jerusalem and the Mount of Olives, is doubtful.

JEHOVAH, the sacred Old Testament name for God, so sacred that the Hebrews seldom, if ever, spoke the word, using as a substitute Adonai or Elohim. The primitive meaning of Jehovah was, "I am that I am," or "The eternal," but its meaning gained in fulness as the Jewish religion invested the name with all the attributes of a national deity.

JEHU, son of Nimshi, (2 Kings ix. 20), a leader in the army of Jehoram, king of Israel, anointed king by order of Elisha. He brought about the death of Jehoram, Ahaziah, and the infamous Jezebel, and his cruelty towards the relations of his victims, and the priests of Baal is almost unequalled in Jewish history. "Jehu" is now a slang word for a coachman.

JELALABAD, in Afghanistan, half-way to Cabul from the Indian frontier, and famous for its defence against the Afghans by Sir R. Sale, 1842.

JELLY FISH, sea-blubbers, and sea-nettles are all popular names for the bell-shaped Medusæ, which, lying on the sands, resemble a mass of jelly. They vary in size from a few inches up to twenty feet, with tentacles carrying stinging cells, which often seriously annoy swimmers. See "Jelly-fish Stings" in *Med. Dict.*

JEMMAPES, a manufacturing village near Mons in Belgium, and the scene of an Austrian defeat, 1792, which gave France possession of Belgium.

JENA, a town in Saxe-Weimar, Germany, near which Napoleon gained a decisive victory over the Prussians in 1806.

JENGHIZ KHAN (1162–1227 A.D.), a Mongol emperor, and one of the world's greatest conquerors. After consolidating the various Mongolian tribes, he twice overran China. His envoys to Transoxiana being executed, his army started on its great career of conquests. They looted Bokhara and Merv, drove the Turks into their present European homes, whilst part of his forces successfully ravaged southern Russia and northern India. Death overtook him whilst over-running China for the third time, but the news was prevented from prematurely reaching Mongolia, by the slaughter of all who encountered the funeral procession.

JENKINSON, ANTHONY, a famous trader and traveller of Elizabeth's reign. He travelled in the Levant, and afterwards to the White Sea, and obtained trading privileges for the English Muscovy Company. He was the first Englishman to penetrate to Khiva and Bokhara, and the records of his adventures are intensely interesting and instructive.

JENKINS, ROBERT, captain of a West Indian trading vessel, asserted before the Parliament of George II. that the Spaniards, after fruitlessly searching his ship for contraband, cut off his ears, which he dramatically produced. Report said he lost these in the pillory; but his case so suited the temper of the nation that Walpole, the Prime Minister, was forced against his will into war with Spain, 1739.

JENNER, EDWARD, *b.* Berkeley 1749, *d.* 1823: apprenticed near Bristol, and educated under the celebrated surgeon, John Hunter, he practised medicine in his native town. Many physicians knew the popular idea regarding cow-pox, as conferring immunity from small-pox, but Jenner demonstrated the truth of this fact, and introduced a method of propagating cow-pox by inoculating one person from another. This process, under the name of "vaccination," gradually gained acceptance. He was rewarded by a grant of £30,000 from Parliament, and he won world-wide professional honours.

JENNER, SIR WM., *b.* at Chatham, 1815, *d.* 1898; a celebrated English physician, who became physician in ordinary to Queen Victoria, 1862. He was made a baronet, 1868, and was President of the College of Physicians, 1881-8. He was the first to distinguish clearly between typhus and typhoid. He attended the Prince Consort in his last illness, 1861, and the Prince of Wales in his attack of typhoid in 1871.

JENNINGS, SARAH, favourite of Queen Anne, and wife of the great Duke of Marlborough. She was on such familiar terms with the Queen that they agreed to address each other, the Queen as Mrs. Morley, and the Duchess as Mrs. Freeman. At length her imperious conduct led to her downfall, her place in the Queen's affection being taken by a Mrs. Masham.

JEPHTHAH, an illegitimate son of Gilead, who, for defeating the Ammonites, was made judge in Israel. Jephthah's vow, to sacrifice in honour of his victory the first thing emerging from his house, unhappily led to the sacrifice of his own daughter. His defeat of the Ephraimites who disputed his authority is remarkable for the means employed to identify the fleeing enemy by their inability to pronounce "Shibboleth."

JERBOAS, or jumping mice, are fawn-coloured burrowing mammals, having a body about eight inches long, short fore legs, and very long hind legs enabling them to take enormous leaps. They live in colonies, collect roots and grain by night, and store food for winter use. They are found in Asia, Eastern Europe, and Africa.

JEREMIAH, son of Hilkiah of Anathoth, near Jerusalem, one of the great Hebrew prophets. But a "child" when called to his prophetic office (629 B.C.), he passed through the troublous times of Josiah and Jehoahaz. Jehoiakim burned the roll he had dictated to Baruch, foretelling the coming of Nebuchadnezzar; and for similar

prophecies, the princes of Zedekiah cast him into a miry dungeon, from which he was rescued by Nebuchadnezzar. He was granted an asylum with Gedaliah, the governor for the Babylonians, but was carried by the murderers of Gedaliah to Egypt, where he is said to have been stoned to death, about 580 B.C.

JEROBOAM, son of Nebat, the first king of Israel (the ten tribes). On the death of Solomon, 975 B.C., he was chosen by ten of the tribes of Israel as king instead of Rehoboam, Solomon's son, who reigned over Judah and Benjamin, the remaining two tribes. Jeroboam set up golden calves at Dan and Bethel for the people to worship, and, in spite of prophetic warnings, continued the idolatrous worship of the calves, gaining the infamous title of the "man who made Israel to sin."

JEROME, SAINT, *b.* 340. *d.* 420 A.D. One of the most learned of the Latin fathers. His early life is not altogether blameless, but after a serious illness at Antioch he became a devout recluse and student. Returning to Rome, he became Secretary to Pope Damasus. After the death of this pontiff he entered a monastery at Bethlehem, and devoted himself to the study of Hebrew and Theology. He produced a Latin version of the Scriptures, which, under the name of the "Vulgate," still remains the authorised version in the Roman Catholic Church.

JEROME OF PRAGUE, *b.* 1360, *d.* 1416. Educated at Prague, he came to Oxford, where he imbibed those principles which led to his subsequent preachings against the abuses of the hierarchy, and the loose morals of the clergy. Favoured in Poland and Hungary, he rashly journeyed to Constance to aid John Huss, and was seized by the Duke of Bavaria, and condemned for his errors against the Catholic faith. His imprisonment temporarily broke his spirit, and he retracted, but afterwards he disowned his retractation and bravely met his fate at Constance, where he was publicly burned, about a year after the martyrdom of Huss.

JERROLD, DOUGLAS, *b.* London 1803, *d.* 1857; a kindly and distinguished dramatist and humourist. Relinquishing a seafaring life, he rose from compositor to dramatic critic, through his critique on Der Freischütz, anonymously submitted. As play-wright his "Black-Eyed Susan," 1829, drew an audience for three hundred nights. His contributions to *Punch*, especially of "Mrs. Caudle's Curtain Lectures," and the increased circulation of *Lloyd's Weekly Newspaper*, under his editorship, testified to his success in periodical literature.

JERRYMANDERING, political trickery, such as manipulating the boundaries of electoral divisions, to the unfair advantage of a certain party, after the manner of Governor *Jerry* of Massachusetts.

JERSEY, largest of the Channel Isles; capital St. Helier. Fertile, picturesque, and with a mild climate, it offers inducements to tourists. Its early potato crop brings it £250,000 annually. The ordinary and legal language is French; population about 60,000.

JERSEY CITY, on the west side of Hudson river, opposite New York, a typically busy American city, of rapid growth (population 7,000 in 1850, now 170,000), and manufacturing importance.

JERUSALEM, the well known sacred city in Palestine, standing on the hills of Zion, Acra, Moriah, and Bezetha, and thus a natural fortress almost impregnable in ancient times. Its early history is Biblical. The Jebusites, its earliest inhabitants, were defeated by Joshua and David, the latter making it his capital, 1049 B.C. Successive attacks by Egyptians, Assyrians and Babylonians bring us to its destruction by Nebuchadnezzar, 588 B.C., and the Jewish Captivity. Though rebuilt by Ezra and Nehemiah, under edict from Cyrus, it knew no peace, being sacked by Ptolemy Soter, and only regained its independence for a time under the Maccabees, 165 B.C. It fell under the power of Rome, 37 B.C., and was utterly destroyed by Titus 70 A.D. The Moslems have held possession since 637, except for the temporary possession by the Crusaders in the twelfth century.

JERUSALEM, COUNCIL OF. See *Apostolic Council.*

JERUSALEM CHAMBER, on the south-west side of Westminster Abbey, so called from including in its original decorations a view of Jerusalem, and scriptural references to it. It dates from the 14th century. Here Henry IV. died, and here, in 1870, the committee met to revise the Authorised Version of the Bible.

JERVIS, SIR JOHN, Earl of St. Vincent, *b.* at Meaford 1734, *d.* 1823. Entering the navy as a boy, he became commander after the capture of Quebec, 1759. As Vice-Admiral he reduced the West Indies, and gained his earldom for his victory over the Spaniards off St. Vincent, 1797. He does not rank high as a tactician, but he was a master of good order and discipline

JESTERS, COURT, "Court fools," a regular institution of early times. These buffoons, in motley, with hood surmounted by a cockscomb and bells, made sport of all even to the king, emphasizing their antics with the bauble or stick from which depended a blown bladder. Among the famous jesters were Dagonet of King Arthur, Scogan of Edward IV., Yorick of Denmark, and Archy Armstrong of Charles I. The Court fool did not survive the Puritanical spirit of the Commonwealth.

JESUITS, members of the Society of Jesus, a prominent Roman Catholic religious order, founded 1534, and sanctioned by papal bull, 1540. A severe training and a high standard in education were demanded of the members, with rigid vows of chastity, poverty, and absolute obedience to the "general" of the order. Within a few years they were established in most European countries, numbering 12,000 in 1640 and 24,000 in 1740. They also founded important establishments in India, China and S. America. They considered ends rather than means, they employed subtle distinctions to justify their methods, and they were very often accessory to political plots. Pascal's witty "Provincial Letters" represent the feeling of opposition that was abroad against the order. The year 1759 saw their suppression in Portugal, followed rapidly in France and Spain; and finally, as a measure to preserve peace in the Church, Pope Clement XIV. disbanded the order in 1773. They were rehabilitated by Pope Pius VII. 1814, and are still tolerated in Switzerland, the Netherlands, the British Empire, and the United States.

JET, a compact black variety of lignite (brown coal), easily carved and polished, and so, especially suitable for the making of mourning jewellery. Whitby, in Yorkshire, is the seat of the English industry, but jet is now being supplanted by the use of vulcanite.

JETHRO (Raguel or Reuel), a priest or prince of Midian, father-in-law of Moses. Visiting Moses at Sinai he wisely counselled him to appoint a council to assist him in his arduous administration (Exod. xviii. 21.)

JEUNESSE DORÉE, a party of Parisian youths under de Fréron, aiming at a counter revolution on the fall of Robespierre, 1794. *Jeunesse Dorée*, "gilded youth," is now the equivalent of fop or coxcomb.

JEWELL, JOHN, *b.* near Ilfracombe 1522, *d.* 1571; a father of the English Reformation. On Mary's accession he recanted his Protestantism of the previous two reigns, but at Frankfort he made a public retraction of his recantation, and by Elizabeth was awarded the bishopric of Salisbury. His teaching was based entirely on Christ and the gospels, and a copy of his "Apology for the Church of England" was to be found chained in every church for a hundred years after his death.

JEWELLERY, or Jewelry, personal ornaments, which are often of great value from their being made of precious metals, or decorated with costly gems. The term is applied to the art and business of the goldsmith.

JEWS, descendants of Abraham, originally called Hebrews, then Israelites, and finally Jews on their return from captivity. Their early history is Biblical:—Abraham was blessed by God, the blessing passed on to Isaac, thence to Jacob, from whom descended the twelve patriarchs, ancestors of the tribes. Joseph found a home for his kinsmen in Egypt, whence Moses led their descendants to Canaan, the Promised Land. This land was conquered by Joshua and administered by judges till the days of Saul. Their captivity in Babylon, their return by Cyrus' leave and rule by governors, such as Ezra and Nehemiah, bring us towards the end of Old Testament history. Their subsequent history is that of Jerusalem. The Jews are now a scattered race, numbering about 6,000,000 in Europe. The mention of Mendelssohn, Rubenstein, Heine, and Meyerbeer indicates the Jewish wealth of genius, yet the Jews have generally been persecuted. The French, after the Revolution, were the first to treat them on terms of equality, but it was not until 1858 that we finally removed all the disabilities of the Jews, as citizens, by opening the doors of Parliament to any Jew who could secure his election.

JEZEBEL, daughter of Eth-Baal, a Zidonian king, wife of Ahab, King of Israel. She treacherously obtained Naboth's vineyard, bringing upon herself, through Elijah, the judgment: "the dogs shall eat Jezebel by the walls of Jezreel." This was literally fulfilled when Jehu headed a rebellion and entered Jezreel as victor. (2 Kings ix.)

JEZREEL, a royal city of the kings of Israel, sixty miles north of Jerusalem.

JIDBALLI, Somaliland, where General Egerton defeated the Mullah's troops, 1904.

JINGO is supposed to be derived from the Basque mountain soldiers employed by Edward I. in Wales swearing by *Jainko*, or "the supreme God." The term now indicates an aggressive British policy, and really dates from M'Dermott's music hall song, 1878, against Russia, (*"We don't want to fight, but by Jingo if we do."*)

JINN (sing. *Jinnee*), in Arabian demonology, beings created 2000 years before Adam, and degraded from their high estate for their disobedience to the Creator. Eblis was their chief. They had power over nature, and their services could be commanded by means of talismans. In the "Arabian Nights" the jinnee is called *genie*, e.g., the "genie of the lamp."

JOAB, son of David's sister Zeruiah, and commander-in-chief of David's army. He valiantly defeated the Syrians and Ammonites, but his share in the death of Abner, Uriah, Absalom, and Amasa shows him to have been a revengeful, ambitious leader, fully deserving the fate decreed by Solomon. (1 Kings ii. 31.)

JOAN, POPE, a mythical female Pope, supposed to have occupied the Papal chair as John VIII., 855 A.D., until the birth of a child during a public procession disclosed her sex. The whole story was a fabrication of an infamous kind.

JOAN, "The Fair Maid of Kent," *b.* 1328, *d.* 1385, wife of the Black Prince, and mother of Richard II., derived her title from her comeliness, and from becoming Countess of Kent on her brother's death.

JOAN MAKEPEACE, *b.* in the Tower of London 1321, *d.* 1362; was a daughter of Edward II., and married, 1328, to David Bruce, aged four years, to *make peace* with the Scots.

JOAN OF ARC. See *Jeanne d'Arc.*

JOB. It is doubtful whether Job as an individual ever existed. Many critics of eminence regard the Book of Job as a moral and religious apologue, designed to show that God's government of the world is inexplicable, on the theory that men's temporal blessings and afflictions are proportioned to their goodness and wickedness respectively. It enforces the duty of obedience and submission to the will of God, who will "at the latter day," Job believes, "stand upon the earth," and vindicate His faithful servants and His own righteous government.

JOBBER. Refer to *Index.*

JOCKEY CLUB, founded in 1750, to regulate horse-racing. It makes rules and regulations concerning flat-racing, arranges weights to be carried by different horses, &c.; decides all disputes, and, although it has no legal authority, its decisions are accepted by all engaged in flat-racing. The Grand National Hunt Committee, formed in 1866, performs a similar service for steeplechasing.

JOHANNESBURG, a busy gold-mining centre in the Transvaal, founded in 1887, in consequence of the discovery of rich gold-reefs in the surrounding district known as the "Rand." In less than ten years Johannesburg became a town of 100,000 inhabitants. Its growth and prosperity were only temporarily checked by the Boer War.

JOHN BULL, a personification of the English people, originated by Arbuthnot; with us, typifying good humour and honesty; on the continent, often typifying rudeness and combativeness.

JOHN COMPANY, an old title for the East India Company, derived from *Jan Kompanie,* the Eastern name for the Dutch East India Company.

JOHN, KING, *b.* Oxford, 1167, *d.* 1216. Though the favourite son of Henry II. he rebelled against his father; though favoured by his brother Richard I. he schemed to gain the throne in Richard's absence; and though crowned without dissent, murdered Arthur, his nephew, to prevent a possible rival, a murder resulting in the loss of Normandy. His rage at the Pope for not appointing his nominee to the see of Canterbury set him violently against Rome; but in the end, after his kingdom had been laid under an interdict, and he himself had been excommunicated, he submitted ingloriously to Papal authority, and received the crown as a Papal gift. His last years saw all classes of the people leagued against him, and his reluctant signing of the Magna Charta, 1215, was but the prelude of a war against his own subjects, happily cut short by death. English history paints no blacker page of ingratitude, insincerity, and cruelty than the record of John.

JOHN O'GROAT'S HOUSE, in the north of Scotland, near Duncansby Head, Caithness. Its octagonal shape, with eight doors, windows, etc., is ascribed to the desire of John of Groat (about 1500 A.D.), to prevent quarrels as to precedence at the annual meetings of his family. From John O'Groat's to Land's End is analogous to the Jewish expression, "from Dan to Beersheba," both indicating the whole length of the country.

JOHN OF GAUNT, Duke of Lancaster, *b.* Ghent (Gaunt) 1340, *d.* 1399; fourth son of Edward III. He married, as his second wife, Constance, eldest daughter of Pedro the Cruel, the deposed king of Castile. He made a futile attempt to gain the throne of Castile, but though a brave knight, he was an incompetent general. He was so unpopular with the common people that, in the course of Wat Tyler's insurrection, his palace of the Savoy in London was destroyed, 1381. His son, Henry of Bolingbroke, became Henry IV.

JOHN OF LEYDEN, a prominent leader of the Anabapists, the most fanatical Reformers of Luther's time. Seizing Münster, in Westphalia, he tried to establish a "Christ-like kingdom," 1532, but was overcome by force of arms, 1535, by the Bishop of Münster, by whose orders he suffered death by torture in the usual mediæval fashion.

JOHN, SAINT, apostle, "that disciple whom Jesus loved," was the son of Zebedee, a fisherman, and Salome. Originally a disciple of the Baptist, he accompanied Jesus during the whole of his ministry. In the early days of his ministry as an apostle Jerusalem was the centre of his activity, but in later life Ephesus became his headquarters. He suffered persecution under Domitian (95 A.D.), and after banishment to Patmos, where he probably wrote the book of "The Revelation," he died at Ephesus. Naturally of a fiery disposition —gaining with his brother James, the surname of *Boanerges,* "Sons of Thunder," he became the eloquent apostle of "Love."

JOHN SOBIESKI was chosen king of Poland, 1674, for so ably defending the country against the Russians. He aided the Austrians in driving the Turks out of their country, and reigned over the Poles until his death in 1696.

JOHNSON, DR. SAMUEL, *b.* at Lichfield 1709, *d.* in London 1784; a distinguished writer, lexicographer, and conversationalist. He was a prodigy of learning as a child, studied at Pembroke College, Oxford, and, after two futile attempts to keep a school, came to try his fortune in London. Here, in spite of hunger, lack of shelter, and melancholia, his reports of the Parliamentary debates as "Debates in the Senate of Lilliput," his "Vanity of Human Wishes," and his bi-weekly journal the "Rambler," gained him a name as a writer. His famous dictionary, published in 1755, and "Rasselas" in 1759, led to a government pension of £300, which enabled him to maintain his social standing among the wits and politicians of his time. Boswell's monumental biography has caused the vigorous and sonorous sayings, and the great and rugged figure of the doctor to attain a unique distinction in the world of letters.

JOHN THE BAPTIST, son of Zacharias, a priest, and Elizabeth, was born six months before our Lord. Living a strikingly austere life, the "Forerunner" prepared the way of the Lord by preaching the approach of His kingdom, and the obligation of repentance as a preparation for His coming. His powerful preaching and ascetic manner of living converted high and low. Herod Antipas, tetrarch of Galilee, however, threw him into prison, and caused him to be beheaded, to carry out a foolish oath to Salome, whose mother, Herodias, he had unlawfully married.

JONAH, BOOK OF. This book in the form of an allegory, rebukes Israel's perverseness and narrowness of mind, sets forth God's care for all men, and justifies His mode of government.

JONATHAN, BROTHER, a personification of the people of the United States, derived from Jonathan Trumbull, Governor of Connecticut, to whom, as "Brother Jonathan," Washington often appealed for advice.

JONES, HENRY ARTHUR, *b.* 1851, one of the most prolific play writers. His best known dramas are "The Clerical Error," "Silver King," "The Middleman," and "Saints and Sinners"; his chief comedies are "The Liars," "Rogue's Comedy," "Whitewashing Julia," and "Joseph Entangled."

JONES, INIGO, *b.* in London 1572, *d.* 1652; studied in Italy, worked in Denmark, then returned to England. He was the first architect of his time, a period marked by the revival of the classical style of architecture. Among his works, the most famous are the Banqueting-hall, Whitehall, the famous gateway of St. Mary's, Oxford, and the Piazza of Covent Garden.

JONES, SIR EDWARD BURNE. See *Burne-Jones.*

JONGLEURS were the French mediæval wandering minstrels who memorialised in song and story the deeds of their various patrons or national heroes. They varied their musical entertainments with buffoonery and juggling.

JONSON, BEN, *b.* at Westminster 1574, *d.* 1637; poet, dramatist, and friend of Shakespeare. His personal bravery distinguished him in the Dutch Wars, and it was unhappily put to the test in a duel in which he killed a brother actor. When but twenty-four years old, "Every man in his humour" brought him success as a dramatist, and his further dramas, "Sejanus," "Cataline," "Volpone," "Epicœne," and the "Alchemist" led to King James I. making him poet-laureate. His humour and ripe learning made him the recognised leader of the meetings of wits held at the "Apollo" and the "Mermaid" taverns. He was buried in the Abbey, where his epitaph, "O Rare Ben Jonson," is to be seen in the Poets' Corner.

JORDAN, the well-known sacred river of Palestine. It rises at the foot of Lebanon, and, flowing through Lake Tiberias, reaches the Dead Sea, 1316 feet below the sea level. Its length is only 120 miles.

JOSEPH. (1) Son of Jacob, sold into Eygpt by his brothers, where he rose to great eminence. By his influence with Pharaoh, on account of his wise measures in providing against famine, he became his prime minister, and was enabled to settle his kinsmen in the country, where they remained for over two centuries. On the Israelites departing from Egypt, Joseph's remains were carried with them and ultimately buried at Shechem. (2) Husband of the Virgin Mary; his home was at Nazareth, where he worked as a carpenter. (3) Of Arimathæa, a wealthy, pious Israelite, who begged of Pilate the body of Jesus, and laid it in his own new tomb, which he had hewn out of a rock.

JOSEPHINE, Empress of the French, *b* in Martinique 1763, *d.* 1814. By her first husband, Vicomte Alexandre Beauharnais, she had two children—Eugene, afterwards viceroy of Italy, and Hortense afterwards Queen of Holland, and mother of Napoleon III. After the execution of her husband, during the Reign of Terror, 1794, she married General Bonaparte, and was crowned with him, 1804. She was his good genius and a universal favourite. In 1809, that Napoleon might marry Maria Louisa of Austria, she was

divorced. She retired to Malmaison with the title of Empress queen-dowager.

JOSEPHUS, FLAVIUS, *b.* at Jerusalem 37, *d.* 97 A.D., a celebrated historian of the Jews. After leading an ascetic life he became a Pharisee, and at twenty-six was entrusted with a mission to Nero at Rome. In one Jewish rebellion he was the leading Jewish general in Galilee, but on his capture was spared by Vespasian, and marched with Titus against Jerusalem. These experiences, and his great learning, fitted him to write the famous "History of the Jewish Nation" and "Jewish Antiquities."

JOSHUA, son of Nun, an Ephraimite, was Moses' minister or attendant. He commanded the Israelites in their battle with the Amalekites at Rephidim, was one of the two spies that reported in favour of attempting the conquest of Canaan, and on the death of Moses became his successor. Under his leadership, the Israelites made good their footing in Canaan.

JOSIAH, 641–609 B.C., last of the good kings of Judah. His reign is marked by the vigorous restoration of the worship of Jehovah, the finding of the book of the law, and the fulfilling of the prophecy made against Jeroboam 350 years before (1 Kings xiii. 2). He fell at Megiddo, as ally of the Assyrians, fighting against Pharaoh-Necho of Egypt.

JOUBERT, PETRUS JACOBUS, of Huguenot descent, *b.* 1833, *d.* 1900, was, with Krüger, the mainstay of the Boer Government. He was State Attorney of the Transvaal, 1867, but twice unsuccessfully contested the Presidency. His distinguished career as a general was marked by his success against General Colley at Majuba, 1881, and against Dr. Jameson, 1896. As Commandant General in Natal he proved himself "a soldier and a gentleman, and a brave and honourable opponent."

JOUSTS. See *Tournaments*.

JOWETT, BENJAMIN, *b.* 1817, *d.* 1893; was elected Master of Balliol College, Oxford, in 1870. His influence on the work of the University was very great. He was a Broad Churchman, and wrote "The Interpretation of Scripture" in *Essays and Reviews*, for which he was tried for heresy but acquitted. As a writer, he is best known for his translation of Plato's Dialogues.

JUBILATE (a-te), "shout ye," the second canticle in the morning service of the Church of England.

JUBILEE, in the Jewish law, signified every fiftieth year, when lands were restored and slaves freed. It now signifies the 50th anniversary of any important event. Two jubilees were celebrated in Queen Victoria's reign, one in 1887, at the conclusion of the 50th year, and one in 1897, at the conclusion of the 60th year of Her Majesty's reign. The latter is known as the "Diamond Jubilee."

JUDAH, son of Jacob and patriarch of the greatest of the twelve tribes. Judah and Benjamin, under Rehoboam, separated from the other tribes, 975 B.C., and remained apart until the days of the Captivity, 588 B.C. The remnants of the whole nation on their return from captivity reunited, and all without distinction were known thenceforth as Jews. David, Solomon, and the Messiah himself were among the remarkable descendants of Judah.

JUDAS MACCABÆUS, Judas the "hammerer," so named in honour of his bravery. He succeeded his father in 166 B.C. as leader in the struggle against Antiochus Epiphanes, King of Syria. He regained the independence of Judea and restored the worship of Jehovah. The struggle with the Syrians still went on, and at last, with his army crushed, he fell fighting near Jerusalem, 160 B.C.

JUDEA. In the time of our Lord a province in the south of Palestine (which see.)

JUDITH, a beautiful and pious Jewish heroine of the 7th century B.C. Being in Bethuliah when besieged by the Assyrians, she visited the camp of Holofernes, the opposing general, ingratiated herself in his affections, and in the night cut off his head, carrying it into Bethuliah. Inspired by this deed, a sally was made, resulting in a complete Assyrian defeat.

JUGGERNAUT, "Lord of the World," one of the titles of Vishnu, the second of the Hindoo gods (Brahma, Vishnu, and Siva). At Puri, in Orissa, a special feast, in honour of Juggernaut, is annually held in June, when his car is drawn in procession amid a vast concourse of pilgrims, often numbering 200,000. Some fanatics in former times threw themselves beneath the car, but the deaths at the feast are now either accidental or due to exhaustion. The term "Juggernaut" is now figuratively applied to any blind devotion to an object.

JUGGLING, the performing tricks by legerdemain or sleight of hand, no deception being practised as in conjuring.

JU-JITSU, or **JIU-JITSU,** an ancient art of self-defence practised from remote ages by the governing and military classes in Japan, and now encouraged in all classes by the Japanese Government. It has been introduced into England. It is a form of athletics and wrestling which keeps the body in good training and enables it to meet all attacks with the body covered only with a loose jacket and breeches. It cultivates quickness of the hand, eye, and foot, and prepares for all forms of bodily contest without weapons.

JU-JU, the name of any fetish, idol, or charm among the negroes of West Africa. It is also applied to witchcraft and anything magical or supernatural.

JULIAN, surnamed "The Apostate," nephew of Constantine the Great, *b.* at Constantinople 331, was Roman Emperor 361–363. He was brought up as a Christian, but, on his elevation to the throne, he announced his conversion to paganism, and issued an edict granting toleration to all religions. He was killed by an arrow when engaged in war with Persia. He wrote several treatises against Christianity, many of which are remarkable for their philosophic spirit.

JULIUS CÆSAR, *b.* 100 B.C., the most famous of Roman generals, an orator, a statesman, and a historian. Early in life his democratic sympathies, and marriage with Cornelia, daughter of a democratic leader, forced him to leave Rome, but returning on the death of the dictator Sulla, 78 B.C., he became extremely popular. He formed with Pompey and Crassus the first Triumvirate, 60 B.C. His own "Commentaries on the Gallic Wars" describes the subjugation of Gaul, 58 B.C., and Britain, 55–54 B.C., conquests which increased his popularity but stirred the envy of Pompey. As Pompey schemed his ruin, Cæsar "crossed the Rubicon," a little river that divided his province from that of Pompey, marched to Rome, and, following Pompey, defeated him at Pharsalia, in Greece, 48 B.C. Pursuing the followers of Pompey into Egypt, he came under the fatal fascination of Cleopatra, and this resulted in his joining in the Alexandrine War. After having crushed the Pompeian party, he was offered by Mark Antony the kingly crown. This act led to the conspiracy of patriots, like Brutus, and of patricians envious of Cæsar's popularity and power, and resulted in his assassination, at the base of Pompey's Pillar in the Senate House, on the Ides (15th) of March, 44 B.C.

JULY, the seventh month of our calendar, named after Julius Cæsar, who was born on July 12th. It was originally named *Quintilis* or "fifth" month, March being then the first month.

JULY REVOLUTION, was the revolution by which Louis Philippe became king of France in the place of Charles X., 1830.

JUMNA, the chief tributary of the Ganges, 900 miles long, feeds important irrigation canals. Delhi and Agra stand on its banks. At its junction with the Ganges is the important railway centre and fortress of Allahabad.

JUNE, the sixth month of our calendar, possibly named after some Roman *gens* or clan. "*The Glorious First of June*" was in 1794, when Lord Howe defeated the French fleet off Brest.

JUNG BAHADUR, SIR, *b.* 1816, *d.* 1877; became Commander-in-Chief of the army of Nepaul, and in 1846 made himself Prime Minister to the Maharajah or prince of that state. In the Indian Mutiny, 1857, he assisted the British by sending a body of Goorkhas. For this he was knighted and received the Grand Cross of the Star of India.

JUNGFRAU, a mountain in the Bernese Alps, Switzerland, about 13,000 feet high. Its name means "maiden" or "virgin," and it may have been so called from its conspicuous beauty when seen from Interlaken, and other points of view. The construction of the railway, daringly designed to reach the summit, has been suspended, if not abandoned.

JUNGLE is the name given to such tracts of swampy land as abound along the southern bases of the Himalayas. They are rendered almost impassable by the dense growth of banyans, screw-pines, and bamboos, and by the rank undergrowth of tropical vegetation; they are the abode of tigers, elephants, monkeys, and snakes. The heat and moisture of the jungle are answerable for the well-known Indian remittent fever.

JUNIUS, LETTERS OF, seventy letters signed *Junius*, in Woodfall's Public Advertiser, 1769–73. It has never been settled who Junius was, though the evidence strongly indicates Sir Philip Francis; but the audacity, vehemence, and acerbity of the letters, their polished, concise style, and the intimate acquaintance of the author with all the political and court intrigues have rendered them classical.

JUNKER, WILHELM, German traveller, *b.* 1840, *d.* 1892, explored the Upper Nile, 1877, and Central Africa, 1887.

JUNO, a Roman goddess, corresponding to the Greek *Hera*, was the wife of Jupiter, and was worshipped by the Romans as the Queen of heaven. No Roman wife or maiden entered upon an undertaking without soliciting the help and favour of *Juno Regina*, the protectress of womankind.

JUNOT, ANDOCHE, Marshal of France, *b.* 1771, *d.* 1813. In 1807 he commanded a French army which entered Portugal and captured Lisbon. His non-success at Vimiera, against Wellington, and in Russia under Napoleon, in addition to the effect of old wounds, brought on the insanity which resulted in his death by suicide.

JUPITER. (1) Supreme Roman deity, later identified with the Greek Zeus. As father of gods and men, ruler of thunder, lightning, wars, and vintages, his worship was conducted on the Ides of each month, with great pomp and ceremony, all the priests, chariots, and even sacrifices being robed in his sacred white. (2) Largest planet of our solar system, 1250 times the size of the earth. Its day and

night combined equal but 9 hours 58 minutes, and it has at least six moons. It was discovered by Galileo, 1610, and the eclipses of its moons enabled Römer to calculate the velocity of light.

JURA MOUNTAINS, offshoots of the Alps, forming a plateau 150 miles by 40 miles, with an average height of 3,000 feet. They separate Switzerland from France.

JURY (SCOTLAND). In civil cases it consists of twelve men, but unanimity is not required. If after three hours' deliberation at least nine agree, the verdict is accepted. In criminal cases it consists of fifteen men, and the verdict of a majority suffices. (See *Not Proven* and refer to "Jury" in *Index.*)

JUSTIN, surnamed the Martyr, a learned father of the early Christian Church, of the first half of the second century. He was at first a pagan, but became a Christian, and, gaining experience by disputing in Rome, Ephesus, and elsewhere, he wrote the account of these disputes in his "Dialogue with Trypho the Jew." He also wrote a defence of Christianity in his two "Apologies." He is said to have been scourged and beheaded at Rome for his impiety to the gods.

JUSTINIAN, THE GREAT, Emperor of Byzantium 527–65, A.D. By the aid of his wife, the imperious Theodora, and of his great generals, Belisarius and Narses, who subdued the Vandals and Ostrogoths in Africa and Italy, he restored these countries to the Byzantine Empire. He is best remembered for the thorough revision of the whole system of law, which he caused to be made, resulting in the "Institutions" and three other legislative works which, under the name of "Corpus Juris Civilis," constituted the Roman law in Europe for the next four centuries.

JUTE, a textile fabric obtained from the inner bark of a plant grown extensively in Bengal. The plant averages eight feet in height, and its inner bark, after being soaked or *retted*, for a few days, allows the strong yellowish fibre to separate in lengths of about six feet. After being softened by crushing in oil and water it is ready for the manufacturing process. This process includes breaking into lengths about sixteen inches long, *carding*, and *drawing* into parallel even slivers or long strands, and *roving*, by which the slivers are lengthened and given that slight twist which makes it more compact and ready for weaving. Dundee takes three-fourths of our 400,000 tons of imported jute, and makes of it grain-bags, carpets, carpet backings, and table cloths.

JUTES, one of the three Low German tribes—Angles, Saxons, and Jutes—who conquered Britain in the 5th and 6th centuries. Coming from Jutland they landed near Ramsgate, 450 A.D., and, having helped to defeat the Picts, settled in Kent.

JUTLAND, the peninsula and mainland province of Denmark. The western half is low-lying and generally barren, but the eastern part has excellent pasturage and produces good cereal crops; area, about 13,000 square miles; population, about one million.

JUVENAL, lived about 50-130 A.D., one of the two greatest of Roman satirists. His reputation commenced, when his satires were published, after he was sixty. Though inflated in style, they showed his wit, command of language, and force and fulness of thought. They have been commended by Christian writers as storehouses of moral precepts, tending to the encouragement of virtue as well as the chastisement of vice. They have been translated into English by Dryden and others.

KAABA. See *Caaba.*

KAAP, or DE KAAP, a gold bearing district of the Transvaal Colony, situated to the north-east of Barberton.

KABUL. See *Cabul.*

KAFFIRS or Caffres, that part of the Negro race, including the Zulus and Kaffirs proper, which forms the bulk of the natives of South Africa. The name is Arabian and signifies "infidel," or one who refuses Islam. They inhabit conical huts which form a tribal kraal, and the men mind the cattle whilst the women work in the fields. We were engaged, on and off, during the whole of the last century, suppressing this war-like, stalwart people, and annexing their land. *Kaffirs* on the Stock Exchange is the name for shares in South African mines.

KAISER WILHELM CANAL, a ship canal, 70 miles in length, joining Kiel on the Baltic, to the mouth of the Elbe near Brunsbuttel on the North Sea. Besides enabling the German fleet of the North and Baltic Seas to concentrate rapidly without the journey round Denmark, it has materially stimulated the North German trade since its completion in 1895.

KALAHARI DESERT, a wide district, partly German, partly British, extending 600 miles north of the Orange River, with an average elevation of 3,500 feet. Though almost waterless it is inhabited by a considerable number of Bushmen, and is the home of herds of antelopes.

KALEIDOSCOPE, an optical instrument useful to designers, and an interesting scientific toy, was invented by Sir David Brewster, 1817. It consists of a tube containing mirrors having their reflecting surfaces inclined at 60° or other submultiple of 360°. The eye aperture is in the cap at one end. The other end is closed by a piece of ground glass with pieces of coloured glass, which are kept loosely in position by another glass disc. The reflections of these coloured glasses in the mirrors assume beautiful regular forms, and, by shaking the tube, coloured reflections may be obtained in an infinite variety of forms.

KALENDS, or Calends, the 1st day of every month in the ancient Roman calendar. Dates were reckoned backward from three fixed points, Kalends, Nones, and Ides; thus May 28th was IV. Kal. Jun., or the 4th day before the 1st day of June. To pay on the "Greek Kalends," means not to pay at all, for the Greeks did not use the term Kalends.

KALGOORLIE, a town situated at the eastern end of the Coolgardie gold-field, Western Australia. A railway connects the town with the capital. Though the gold-field came into prominence as recently as 1895, the population of Kalgoorlie in 1901 exceeded 18,000.

KALI, one of the names given to the wife of Siva, one of the Hindu Trinity. She is represented as wearing round her neck a string of human heads.

KALMUCKS, a nomadic race of Western Mongolia, inhabiting Central Asia and south-east Russia, in colonies under a khan or chief. They are small in stature, warlike, and noted horsemen.

KAMTSCHATKA, a mountainous peninsula of Eastern Siberia, having an average width of 200 miles, and stretching 800 miles into the Pacific Ocean. Its 7,000 hardy inhabitants hunt and fish in their three months' summer, and, in the long winter, retire to a lazy life in earth pits only accessible through the one outlet in the roof. Capital, Petropavloski.

KANA'KAS are the natives of the Hawaii Islands, but the name is especially applied to the natives of New Hebrides, and other South-Sea Islands, who were formerly employed on the Queensland sugar plantations.

KANDAHAR. See *Candahar.*

KANDY, the old capital of Ceylon, stands in the centre of the Ceylon coffee districts, and possesses as a relic, in one of its temples, the adored tooth of Buddha; population about 19,000.

KANGAROO, an Australian marsupial, or pouch-bearing quadruped. The "Great Kangaroo," which may be taken as a type, stands as tall as a man, and obtains its balance with the aid of its long tail. It possesses long, powerful hind legs with which it can spring upwards of 20 feet. The young are nursed in a pouch, which contains the nipples from the milk glands. They are grass feeders, and are hunted as a pest to the farmer; their flesh is nutritious, and their skin makes good leather.

KANO, a walled town situated in Northern Nigeria. Leather and cotton cloths are manufactured, and there is a considerable trade with the Arabs and the Barbary States.

KANT, IMMANUEL, the greatest modern metaphysician, *b* Königsberg, 1724. **d.** 1804. He was professor of mathematics, theology, philosophy, and logic in the University of Königsberg, and in his earlier works actually anticipated the discovery of the tidal drag on the earth, and the nebular hypothesis. His great works, the *Critique of Pure Reason*, 1781, and the *Critique of Practical Reason*, 1788, have had a greater influence on modern philosophy than the works of any other philosopher.

KAOLIN, or **CHINA CLAY,** is the fine white clay used in the manufacture of porcelain. It is derived from the decomposition of felspar in rocks, such as granite. The chief British source of supply is the claypits of Devon and Cornwall. Kaolin is also used for the sizing of printing paper and cotton cloth, and in the preparation of certain pigments.

KARA'CHI or Kurrachee, a flourishing seaport on the delta of the Indus, where the produce of the north-west of India finds an outlet. It is the terminus, on the Arabian Sea, of the Indus Valley State Railway, and a place of fast-growing importance.

KARAKORUM MOUNTAINS, the western branch of the Himalayas, lying between Eastern Turkestan and Kashmir; highest peak 28,000 feet. The Karakorum Pass has an altitude of 18,550 feet.

KARA SEA, lies between Nova Zembla and the north Russian mainland, and was first explored by Nordenskjöld and Wiggins. It is navigable two months annually, opening, by the Obi and Yenisei, the trade of Western Siberia.

KARNAK, a village on the Nile, near Luxor, Egypt. The grand remains of the temples of Ancient Thebes, in its vicinity, have rendered it famous.

KAROO, THE GREAT, a vast plateau at an elevation of 3,000 feet, extending across Cape Colony, between the Nieuveld Berge and Zwarte Berge. Its clayey soil, though barren in summer, after the rains furnishes grass for the goat, sheep, and ostrich farms.

KARS, city and fortress of Asiatic Russia, 100 miles N.E. of Erzeroum. The Russians took it from the Turks in 1828, again in 1855, when gallantly defended by General Fenwick Williams, and finally in 1877, after which it was ceded to Russia by the Berlin Treaty.

KASHGAR, chief city of Chinese Turkestan, Central Asia. British influence at Kashgar has declined since its reconquest by the Chinese, 1879, from Yakoob Bey, its Moslem ruler. Population 16,000.

KASHMIR. See *Cashmere.*

KASSASSIN, twenty miles from Ismalia, Egypt. Here Arabi Pasha's troops were routed, 28th August, 1882, by the British under General Graham, and again on the 9th September, 1882.

KATRINE, LAKE, a beautiful lake in the Trossachs, not far from Loch Lomond, immortalised in Scott's "Rob Roy," and "The Lady of the Lake." Though set in the midst of romantic scenery and associated with romantic story, its waters are utilized to supply the needs of Glasgow.

KATSURA, VISCOUNT, *b.* 1847; a Japanese soldier and statesman. He studied military methods in Germany, and on his return to Japan assisted in the reform of the Japanese army. His services in Korea and Manchuria during the Chino-Japanese War were rewarded by a peerage.

KATYDID, a large, green kind of grasshopper of the central and eastern States of America, so named from the sound made by the male to attract the female, a sound made by grating its wings against its body.

KAURI PINE, a tree found only in New Zealand, and highly valued for its resin (Kauri gum), which is used in making varnish. The gum is found in a fossil state wherever Kauri forests once stood.

KAY-SHUTTLEWORTH, SIR JAMES, *b.* at Rochdale, 1804, *d.* 1877; was a pioneer of popular education in England. He was instrumental in persuading the local authority of Manchester to adopt measures for the improvement of the sanitary conditions of the mill workers. He took a leading part in the movement for "educating the people," and was the first secretary of the Committee of the Privy Council on Education, 1839. He may be regarded as the father of the pupil-teacher system in England, and the author of the celebrated Minutes of the Council on Education, 1846.

KAZAN or Kasan, a fortified town on the Kasanka, a tributary of the Volga, Russia. Its recent growth has been rapid, owing to its shipbuilding and fur trade. It is the seat of a University and of a Greek Archbishopric; population about 150,000.

KAZANLIK, a town of Roumelia, at the foot of the Balkans, near the Shipka Pass. Its great manufacture of attar of roses received a serious check during the Russo-Turkish War, 1876–8.

KEAN, EDMUND, a celebrated actor, *b.* in London 1787, *d.* 1833. He was almost unequalled in his renderings of the tragic characters of Shakespeare, and was at the head of his profession when only 27. His private life unfortunately led to an outbreak of popular indignation against him, and, though he regained public favour, his intemperance led to a most dramatic breakdown during a performance of Othello, February, 1833.

KEATS, JOHN, a true English poet, *b.* at Moorfields, London, 1796, *d.* Rome 1821. When but 21, under the genial encouragement of Leigh Hunt and Hazlitt, he published his "Endymion," which was mercilessly criticised by the "*Quarterly Review.*" The next year his "Eve of St. Agnes" and his "Hyperion" were better received; but his promising career was cut short by consumption.

KEBLE, JOHN, a celebrated divine, *b.* at Fairford, Gloucester, 1792, *d.* 1866, became Professor of Poetry at Oxford, 1831, and settled at Hursley, near Winchester, 1836, where he worked as a parish priest to the end of his life. By his sweetness of character, his saintly life, his sound learning, and his "Christian Year"—a volume of religious poetry, published 1827—he exercised a wide and beneficent influence on the English Church and nation.

KEBLE COLLEGE, OXFORD, dedicated, 1870, in memory of John Keble, to provide a liberal education for men intending to seek orders in the Church of England.

KEEWATIN, a district north of Manitoba bordering on Hudson Bay, Canada, and extending to the Arctic Ocean; area about 250,000 square miles. It is well-wooded, rich in minerals, and has valuable fisheries; but Hudson Bay, its natural outlet, being open to navigation only a few months of the year, Keewatin attracts only a few traders.

KELPIE, the water spirit of Scottish folk-lore. It took the form of a man or a horse, and was described as rising from the water of a river on the approach of a person who was fated to be drowned in the stream.

KELVIN, LORD, (William Thomson), a celebrated scientist, *b.* at Belfast, 1824. His father was a professor of mathematics, and in that subject William Thomson distinguished himself at Peterhouse, Cambridge, gaining a fellowship, which was followed by the Chair of Natural Philosophy at Glasgow, 1846. From the first, his contributions to scientific knowledge have been marked by wonderful originality and fertility of resource. As an inventor and designer of scientific apparatus, he is recognized as one of the greatest living workers. He devised and laid the first Atlantic cable; the Admiralty use his compass and sounding apparatus; even so commonplace a thing as a water-tap he has perfected; and scientists owe to him many of their most delicate electrical instruments. His discoveries in pure science are marked by the same vivid imagination, and are most suggestive. He was knighted, 1866, and raised to the peerage, 1892. English and foreign honours have been showered on him, and he stands among the first in the scientific world.

KEMBLE, JOHN PHILIP, celebrated actor, *b.* at Prescott, 1759, *d.* at Lausanne 1823. He was educated for the Roman Catholic priesthood, but the Kembles, including his own father, his sister Mrs. Siddons, his brothers Stephen and Charles, and his daughters Fanny and Adelaide, were born for the stage, and John scored a triumph when but 24 at Drury Lane. He managed Drury Lane for 14 years, and Covent Garden 6 years, but suffered during the "O.P." (*old price* for theatre seats) Riots, 1809. An educated gentleman, his noble bearing exactly suited the more dignified Shakespearian characters.

KEMBLE, FANNY, actress, *b.* London, 1809, *d.* 1892; of the Kemble family of great actors, she gained distinction in tragedy and, after her unfortunate American marriage, in readings from Shakespeare.

KEMPENFELT, RICHARD, *b.* Westminster 1718, *d.* 1782. He saw service in the East and West Indies, and as a rear-admiral is renowned for his brilliant outmanœuvring of the French fleet under De Guichen, 1781. Cowper, in the "Loss of the Royal George," has memorized his death with that of his crew, numbering 800, from the over-heeling of the ship, when in harbour at Portsmouth, through the sudden moving of the guns.

KEMPIS, THOMAS À, *b.* about 1380, in Rhenish Prussia. He entered St. Agnes' Monastery, Zwolle, in the Netherlands, 1400, became Prior, 1448, and remained there till his death. The profound piety of his book "On the Imitation of Christ," has appealed to all Christians regardless of sect, and has caused it to be translated into nearly every language.

KEN, THOMAS, a learned divine, *b.* at Berkhampstead, 1637, *d.* 1711. He was the author of the morning hymn, "Awake my soul" and of the evening hymn "Glory to Thee." Though one of the "Seven Bishops" protesting against the "Declaration of Indulgence" of James II., his loyalty to James made him a "Non-juror," and cost him his see of Bath and Wells.

KENDALL, HENRY CLARENCE, *b.* in New South Wales, 1841. *d.* 1882; an Australian civil servant, journalist, and poet, whose poems, "Leaves from an Australian Forest," and "Songs from the Mountains," give vivid descriptions of scenes in the Australian bush.

KENILWORTH, a town near Warwick. The extensive ruins of its castle still include the Norman keep, but the greater part consists of Elizabethan work. This castle was the prison of Edward II., 1327, and in 1575 the scene of entertainments given by its owner, the Earl of Leicester, to Queen Elizabeth. See Sir Walter Scott's "Kenilworth."

KENNICOTT, BENJAMIN, an eminent theologian, *b.* at Totnes 1718, *d.* 1783. His life work was the "Hebrew Old Testament with various readings," towards which monumental work over 600 Hebrew MSS. were collected, his own devoted exertions being well seconded by a public subscription of £10,000, and the assistance of eminent theologians and scholars.

KENOSIS, literally "an emptying," is the doctrine taught by St. Paul in Phil. ii. 6-8. It expresses the limitation imposed upon Himself by our Lord in taking human nature. See Mark xiii. 32.

KENSINGTON, the royal borough of London. Its attractions for the sight-seer are unique. Within the circuit of a mile he may visit the Victoria and Albert Museum of decorative art (free M. Tu. S.) the Natural History Museum, the Indian, and the Scientific Museums (all free daily), the Imperial Institute, the Royal College of Music, and the Albert Hall (often open to inspection), the beautiful Kensington Gardens with the Albert Memorial, and the Kensington Palace, containing the room in which Queen Victoria was born (free daily).

KENT, a county in the south-east corner of England, separated from France by the Strait of Dover. Here the Romans and the Jutes landed in their invasions of Britain. It was the scene of the preaching of Augustine and his fellow-missionaries in 597. Among its places of interest are Canterbury with its cathedral, Dover with its castle, Woolwich with its arsenal, and Chatham with its dockyard, Greenwich with its hospital and observatory. It is extremely fertile and is noted for its hop and fruit gardens; population about 1,200,000.

KENT, DUKE OF (Edward Augustus), fourth son of George III. and father of Queen Victoria, *b.* 1767, *d.* 1820.

KENTISH FIRE, a series of three claps of the hands repeated three times in succession, to mark approval of a speaker's remarks or the favourable reception of a toast. The same means are sometimes adopted to interrupt a political speaker. It received its name from the circumstance that the method was practised by Kentish audiences during the agitation against Catholic emancipation, 1828-29.

KENT'S CAVERN, near Torquay, Devon. As a result of explorations in this cavern conducted by the Royal Society, 1858, and the British Association, 1864, it has been proved from the remains found in the cavern, that man using flint tools, bone needles, etc., existed in England contemporaneously with the mammoth

and many animals now extinct, or not now found in England.

KEPLER, JOHANN, astronomer and mathematician, a contemporary of Tycho Brahé and Galileo, *b.* Weil, Würtemberg, 1571, *d.* 1630. In spite of a life of difficulties both as a student at Tübingen and as professor of astronomy at Gratz, Prague, and Rostock, his diligent research enabled him to enunciate the three laws which have become the basis of all subsequent astronomical investigation, viz. *Kepler's Laws*: (1) that the path of a planet is elliptical, the sun occupying one of the foci, (2) that the line joining the centre of the sun and the centre of each planet passes over equal areas in equal times. (3) that for every planet, the square of the time of its complete revolution round the sun forms with the cube of its mean distance a constant ratio.

KERRY, a maritime county of Ireland, south of the estuary of the Shannon. Its population has been reduced through emigration by 200,000 during the last 50 years, in spite of its abundant oat and potato crops, and splendid slate-quarrying. The beautiful Lakes of Killarney, flanked by the highest and most picturesque mountains of Ireland, attract tourists from all parts of the Empire.

KESWICK, a market town of Cumberland, on the beautiful lake Derwentwater, was once noted for its black-lead mines; it is now a tourist centre for the Lake District.

KETCH, JOHN, nicknamed Jack Ketch, hangman of the time of Charles II. and James II., notorious for his barbarous methods, specially shown at the execution of Russell and of Monmouth.

KETCHUP, or **CATSUP,** a condiment or sauce usually made from mushrooms, tomatoes, or walnuts, by expressing their juice, boiling this juice down and appropriately seasoning it.

KETCHWAYO, or **CETEWAYO,** elected chief of all the Zulus in 1873. Lord Chelmsford, after a great reverse at Isandlana, completely defeated the Zulus at Ulundi, 1879, and divided their country among thirteen distinct chiefs. These chiefs quarrelling, an attempt was made to restore Ketchwayo, but a rival chief defeated him and drove him into the British reserve, where he died 1884.

KEW, a village of Surrey on the Thames, famous for its Botanical Gardens, with their unsurpassed collection of exotics, palm houses, arboretum, and pagoda. The gardens are open free every day, and, since the institution of the cheap electrical car-service with West London, they attract over one million visitors annually. The Kew Observatory keeps the standards for adjusting magnetic, thermometrical, and meteorological instruments.

KHARTOUM stands at the junction of the Blue and the White Nile. For nearly a century it served as the emporium for the ivory and gum of the Soudan, and until recently was a great market for slaves. It is celebrated for the heroic defence made here against the Mahdi and his Soudanese troops, by General Gordon, who was slain 26th January, 1885, when the city was captured by the Mahdi. Thirteen years ater it was retaken, 1898, by an army of British and Egyptian troops under General Kitchener. The city has been rebuilt and is the capital of the Egyptian Soudan.

KHELAT or Kelat, capital of Baluchistan. This hill fortress, the residence of the Khan, was taken by the British in 1839 and 1877, and now our resident agent at Khelat, to a great extent, controls the country as a dependency of British India: population about 15,000.

KHYBER PASS, or Kaibar Pass, thirty miles in length, between Peshawar in India, and Cabul in Afghanistan, with precipitous sides, in many parts from 1,000 to 3,000 feet high, and in some places only three or four yards apart. It is regarded as the military key to north-west India from Afghanistan, but that key is now in British hands.

KIAO-CHAU, a sea-port of the Yellow Sea, on the Shan-tung Peninsula in China, with a good harbour as outlet for the mineral wealth of the district. It was leased to Germany, 1898.

KIDDERMINSTER, a manufacturing town of Worcestershire, famous for its carpets and tapestry, and as the birthplace of Rowland Hill: population about 25,000.

KIEFF, OR KIEV, a town on the Dnieper, south-west Russia, once the capital of the Muscovite Empire. Its cathedral dates from the 11th century, and marks the position of Kiev as the "Canterbury of Russia;" population about 185,000.

KIEL, a Baltic seaport, German naval station, and capital of Schleswig-Holstein. It has rapidly risen in importance, especially in its provision and dairy trade, since the opening of the Kaiser-Wilhelm Canal: population about 70,000.

KILAUE'A, the largest active crater in the world, the crater being two miles across and 1,000 feet deep, and always seething with lava. It is situated halfway up Mauna Loa, a volcanic mountain 13,700 feet, of Hawaii, Sandwich Islands.

KILIMANJA'RO, a mountain of German East Africa, situated almost on the equator, of volcanic origin, and consisting of two connected peaks, Kibo, 19,700 feet, and Kima Wenzi, 17,500 feet. They are possibly the famous "Mountains of the Moon," of which ancient geographers wrote.

KILLARNEY, LAKES OF, about 45 miles west of Cork, Kerry, Ireland. Their beautiful and impressive scenery attracts thousands of visitors annually. The lower lake, Lough Leane, is about six miles by two and a half miles. It has two richly-wooded islands, Ross and Innisfallen, and is connected with two smaller lakes by a winding stream which passes Muckross Abbey. In a particular part of its channel is heard the celebrated *Eagle's Nest Echo.*

KILLIECRANKIE, a wild, picturesque pass on the Garry, a tributary of the Tay, Perthshire. Here Graham of Claverhouse, Viscount Dundee, fighting for King James II., fell in the hour of victory, 1689. His loss proved the death-blow to the Jacobite cause in Scotland.

KILMAINHAM, a suburb in the west of Dublin. The Royal Hospital for old and maimed soldiers was designed by Sir Christopher Wren, and erected here in 1680, on the site of an ancient priory. In 1881 Parnell and other leading members of the Land League were confined in the gaol as "suspects" under the Coercion Act of that year.

KILT, the short woollen petticoat that forms part of the national dress of the Scottish Highlanders, was adopted during the reign of James VI., and the variety in the pattern and colouring of the tartans which distinguish the various clans is a still more modern development.

KIMBERLEY, South Africa, about 600 miles north-east of Cape Town. The discovery of diamonds in 1870 caused the great rush which resulted in Kimberley becoming the chief inland city of South Africa. During the Boer War its inhabitants, including Cecil Rhodes, endured a three months siege, until relieved by General French, February, 1900.

KINDERGARTEN, a modern system of education for very young children, originated by Friedrich Froebel (1782–1852) and introduced into England 1851. This system aims at the unfolding of the child's whole nature spontaneously by organised games and attractive object lessons. It aims at training the child to seek knowledge from a natural desire to learn. The whole system is directed towards the simple and harmonious development of all the faculties—mental, moral, and physical. Kindergarten methods are now general in England, and, when applied in the spirit of the founder, are undoubtedly an educational success.

KING GEORGE'S SOUND, a bay on the south-west of Australia, on which stands Albany, a calling station for P. and O. steamers.

KINGLAKE, ALEXANDER WILLIAM, *b.* near Taunton, 1811, *d.* 1891; the author of two well-known works: "Eothen," an account of his travels in the East, and the "Invasion of the Crimea." In the latter, which is marked by exhaustive detail and picturesque description and narrative, he embodies the results of his personal observations and information gleaned from the papers of Lord Raglan.

KING LEAR, one of the finest Shakespearian tragedies, published 1608. Holinshed, from whom Shakespeare derived the plot, records how Lear, "ruler over the Britains in the year of the world 3105," had three daughters, Gonorilla, Regan, and Cordelia. Gonorilla and Regan, protesting great love for Lear, were rewarded with lands and noble marriages; whereas Cordelia, full of dutiful affection, but void of pretence, was left by her father without dower or husband. Cordelia by her beauty gains a powerful husband, Aganippus of Gallia, and furnishes comfort to Lear in the grief and trials caused by his undutiful daughters.

KING MAKER, THE, Richard Neville, Earl of Warwick, the last of the powerful barons of the Middle Ages. By means of his 30,000 retainers he was instrumental in placing Edward, Duke of York, on the throne, 1461; but, displeased by Edward's marriage, he restored Henry VI. to the throne (1470). The restoration lasted only a few months, for Warwick was defeated and slain at Barnet, April, 1471. Lytton's historical romance, "The Last of the Barons," is based on the career of the king-maker.

KING'S EVIL, an old name for *Scrofula* (which see in *Med. Dict.*). In Mediæval times it was customary to bring patients to the king to be touched for a cure, and the Prayer Book of Henry VIII. contained a special Healing Service. Edward the Confessor and Anne were respectively the first and last English sovereigns to "touch" for the disease.

KINGSLEY, CHARLES, clergyman, social reformer, novelist, poet, *b.* near Ashburton, Devon, 1819, *d.* at Eversley, Hants, 1875. His two novels, "Alton Locke" and "Yeast," illustrated his views on his Christian Socialism, and they were ably seconded by his many periodical articles under the name of *Parson Lot.* "Hypatia," "Westward Ho!" "Two Years Ago," and "Hereward the Wake," are still great favourites, and well illustrate the range of his sympathies, and his sturdy manliness. He was rector of Eversley, 1844, professor of history at Cambridge, 1859–1869; he became Canon of Chester, 1869, and Canon of Westminster 1873.

KINGSLEY, HENRY, novelist, *b.* 1830, *d.* 1876; brother of Charles Kingsley. After visiting Australia, he wrote "Geoffrey

Hamlyn," "Ravenshoe," etc., and for a short time was editor of the *Edinburgh Daily Review*.

KINGSLEY, MARY, *b.* in London. 1862. *d.* 1900; a niece of Charles Kingsley. She was a brave, enterprising traveller in West Africa, and published accounts of her journeys and observations under the titles: "Travels in West Africa," "West African Studies," and the "Story of West Africa."

KINGSTON. (1) An ancient town of Surrey, on the Thames, about 12 miles south-west of London; population about 50,000. It retains in its market-place the "king's stone" that commemorates the crowning of seven Anglo-Saxon kings. Improved and cheap electric communication with West London, and proximity to Richmond, Bushey Park, and Hampton Court, have led to its recent rapid growth. (2) A city of Ontario, Canada, on Lake Ontario, with an excellent harbour and with busy ship-building and steam-engine works; population about 20,000. (3) The capital and chief port of Jamaica, with a splendid harbour. It exports sugar, rum, coffee, fruits, spices; population about 40,000. (See *Jamaica.*)

KINGSTOWN, a seaport, six miles south of Dublin. Originally *Dunleary*, it was named Kingstown in honour of a visit of George IV., 1821. Passengers and mails from Holyhead are landed at its two splendid piers, and it is the residence of rich Dublin business men.

KIOTO, a city at the south end of Niphon, Japan. As *Miaco*, until 1868, it was the residence of the Mikado. This "Paradise of Japan" is particularly famous for its silks, lacquer work, and bronzes.

KIPLING, RUDYARD, a famous writer of short stories, and occasional and humorous verse, *b.* Bombay, 1865. He was educated at Westward Ho, Devon, but returning to India, 1882, became famous when just turned twenty by his stirring verse and graphic stories of Indian military life, as in "Departmental Ditties," "Plain Tales from the Hills," and "Soldiers Three." His popular "Barrack Room Ballads," 1892, his two inimitable "Jungle Books," 1894–5, his fascinating romance, "Kim," and other later works, have made him perhaps the most popular writer of the day.

KIRGHIZ, a nomadic people of the steppes of Asia, between the Ural and Altai Mountains. They number about 2½ millions, speak a Turkish dialect, and, though professing Islamism, retain their heathen practices. Their civilisation is in every respect yet in its infancy.

KIRKE'S LAMBS, a regiment whose flag bore the Paschal Lamb as its emblem. Their cruelties in the West of England, after Monmouth's rebellion, 1685, gained them this ironical title.

KIRKWALL, a seaport on Mainland, Orkney Islands. Its people are engaged in fishing. St. Magnus' Cathedral, an interesting structure, dates from 1137; its choir is now the parish church.

KISMET, "Fate or Destiny," expresses the absolute submission of Mohammedans to the decrees of Allah, who foreordains every circumstance in the life of all individuals.

KIT-CAT CLUB, a club founded about 1688 and dissolved about 1720. It derived its name from that of its caterer, Christopher Cat. The club soon assumed a political character, its members including Marlborough, Walpole, and other Whig leaders. The club room was adorned with three-quarter length portraits of its members, painted by Sir Godfrey Kneller, and from this circumstance portraits thus reduced have been called kit-cat portraits.

KITCHENER (Horatio Herbert) **LORD,** *b.* at Ballylongford, Kerry, 1850. He saw service as a French volunteer in the Franco-German War, 1870. He joined the Royal Engineers at twenty-one, served on surveys of Palestine and Cyprus, had command of the cavalry in Egypt, under Sir Evelyn Wood, and became Sirdar of the Egyptian army, 1892. After dealing the Dervishes a deadly blow, 1896, he earned his peerage and a parliamentary grant for breaking the power of the Khalifa at Omdurman, 1898. In the Boer War he was chief of the staff to Lord Roberts, and, as Commander-in-Chief in South Africa, after Lord Roberts returned to England, he reduced the Boers to submission. Made Commander-in-Chief in India, he has found ample scope for his remarkable organising ability.

KITTO, JOHN, an eminent writer on Biblical subjects, *b.* at Plymouth, 1804, *d.* 1854. He began life as a working mason, but, becoming deaf from a fall, he tried his hand in turn at shoemaking, dentistry, and printing. His "Essays and Letters" gained him a patron and opportunity for travel in the East, which he turned to good account in his "Pictorial Bible," "Pictorial History of Palestine," etc.

KLEPTOMANIA, a form of insanity in which the patient displays an uncontrollable desire to steal without motive. The disease is more common among women than men, and attacks them more frequently during pregnancy than at other periods.

KLONDIKE, a river which flows into the Yukon, and which gives its name to a gold district in the north-west territory, Canada, near Alaska. Klondike is richly auriferous, and the difficulties of reaching the district, the high price of necessaries there, and its Arctic climate, have not deterred the adventurous gold-digger from seeking his fortune around Dawson City, its capital.

KNELLER, SIR GODFREY, *b.* Lübeck about 1647, *d.* Twickenham, on Thames, 1723. The finest portrait painter of his time, he received the patronage of five English sovereigns, including Charles II. and George I. He was buried in Westminster Abbey.

KNIGHTHOOD, a dignity originally conferred by the sovereign for distinguished military services. It was introduced into England by the Norman kings, who made the investiture a solemn religious ceremony. With the decline of the Feudal system, knighthood ceased to be an exclusively military order, and now the honour is conferred by the sovereign on men distinguished in the arts of peace as well as of war. For "Orders of Knighthood" refer to *Index*

KNOT. the nautical name of a geographical mile, about 1⅛ of a statute mile, used to express the rate of a vessel's motion. The rate is ingeniously reckoned, for, the log-line being divided by *knots* into parts each $\frac{1}{120}$ of a geographical mile, the number of such divisions run out in half a minute is evidently equivalent to the rate per hour at which the vessel is travelling.

KNOUT, a whip formed of long, triangular thongs of hide, artificially hardened and grooved, and pointed with metal. It was formerly an instrument of punishment in Russia. A single stroke has been known to prove fatal, and few victims have endured more than thirty.

KNOX, JOHN, the great Scotch reformer, *b.* at Gifford Gate, Haddingtonshire, 1505, *d.* 1572. He was ordained priest, and, when forty years of age, commenced his strenuous life of religious reforms. Captured by the French, he served in their galleys one or two years. On his release he was appointed one of the royal chaplains to Edward VI., but, being opposed to episcopacy, he declined to accept a bishopric. On the accession of Mary he joined Calvin at Geneva. Returning to Scotland, 1559, he stirred the people to excesses of reform. Incited by his intemperate zeal, they demolished all that was beautiful in most of their cathedrals and churches. He exercised, however, a deep and lasting influence on the whole moral and intellectual life of his countrymen.

KOCH, ROBERT, an eminent German bacteriologist, *b.* 1843. Becoming member of the Imperial Board of Health, he discovered, in 1882, the bacillus of tuberculosis, and, after research in India and Egypt, that of cholera. Professor in the University of Berlin, and Director of the Institute of Hygiene, he gave the world, in 1890, a specific cure for phthisis, but it has not proved an effectual remedy.

KOH-I-NUR, "Mountain of Light," the largest and most famous diamond of the English crown. Traditionally, it dates back 5,000 years, but its known history dates from the Mogul Emperor, Shah Jehan, to its passage, on the annexation of the Punjab, into the hands of Queen Victoria, 1849. Once nearly 800 carats, it has by successive cuttings been reduced to 106.

KOLA NUTS, or Gura nuts, the seed of an African plant, are highly prized by the Soudanese, because of their power to ward off exhaustion. Analysis shows this power to be due to a stimulating alkaloid, similar to that found in tea, and this is the only justification for the recent introduction of Kola preparations among some of our foods.

KÖNIGGRÄTZ, a town on the Elbe, in Bohemia. Here the Prussians gained a great victory over the Austrians, 3rd July, 1866; the battle is also named *Sadowa*.

KÖNIGSBERG, a fortified seaport on the Pregel, in the north-east of Germany. It has an important export trade in amber, timber, grain, and hemp. Large ships must now unload at Pillau, its outer port, owing to the bar; but a large ship canal connecting Königsberg with the Baltic is projected; population about 175,000.

KORAN. Refer to *Index*.

KORDOFAN, that part of the Eastern Soudan lying between Darfur and the White Nile. Its capital is El Obeid, and its population about 300,000. Millet is the chief grain, and the negroes and Arabs trade in hides, ostrich feathers, and until lately also in slaves. The Mahdi, in 1883, wrested the country from the Khedive of Egypt, under whom it had been since 1821, but recently, with the aid of British arms, and under the direction of British officers, it has been recovered.

KOSCIUSKO, MOUNT, the loftiest mountain in Australia, 7,308 feet high, situated in New South Wales. In it the river Murray has its source.

KOSSUTH, LOUIS, a noted Hungarian patriot, *b.* 1802, *d.* 1894. At first a lawyer and member of the Austrian diet, he was imprisoned for his extreme views on the liberty of the subject. After this he became, in 1844, leader of the National League, which aimed at Hungarian independence. In 1848 the Hungarians rose in rebellion, and the diet declared the independence of Hungary, and appointed Kossuth governor. The rebellion was put down by the Austrian emperor, and Kossuth was compelled to take refuge in Turkey. He resided for a while in England, and afterwards in Italy, his hostility to the Austrian govern-

ment making him unwilling to avail himself of the general amnesty.

KOUMISS. See *Med. Dict.*

KRAKATO'A, a small island lying between Sumatra and Java, famous for its volcanic eruption in 1883. This tremendous explosion, heard over nearly a tenth of the earth's surface, caused an air-wave to travel thrice round the earth, and a water-wave which engulfed 30,000 people. The beautiful sunsets of that year in England and elsewhere were due to the suspended dust cast into the atmosphere by this eruption.

KREMLIN, THE, a fort or citadel of Moscow, enclosing in its walls numerous churches, with palaces and arsenals. At the Cathedral of the Assumption the Czars are crowned, and near the great tower of Ivan the Great, 266 feet high, is a tower with the famous bell, "Great Ivan," now cracked, weighing 200 tons.

KRIEGSPIEL, "War Game." The game is played by means of relief maps on a large scale and metal blocks representing bodies of troops, so that the movements of the blocks on the map represent the operations of the two armies over that part of the country. The "commanders" move alternately, and the results of each move are decided by the "umpire," who has previously laid down the general idea of the operations and the special idea for each side.

KRISHNA, a form of Vishnu, one of the three principal gods of the Hindoos—*Brahma*, *Vishnu*, and *Siva*. Vishnu, "the preserver," is destined, the Hindoos believe, to have in all ten incarnations, Krishna being the eighth of the series, Buddha the ninth, with the wonderful *Kalki*, as tenth, yet to come.

KRUGER, PAUL, president of the late Transvaal Republic. *b.* in Cape Colony, 1825, *d.* 1904. When a boy of twelve he trekked with his father and a large company of Boers from Cape Colony to escape British rule. The boy was early inured to the life of a hunter and herdsman of the wild veldt, and took a conspicuous part in war with the natives. In mature manhood he developed a strong puritanical spirit, drawing his inspiration from one sole source—the Bible. Kruger led the Transvaal Boers in 1881, when they rose in arms to assert their independence, and as *Oom Paul* became their president in 1883. After the Jameson Raid, 1896, his hostility to the British and the "Outlanders" generally was more marked than ever. As a result of the war with the British, he fled from South Africa and settled in Holland, 1900.

KRUPP, ALFRED, *b.* Essen, 1812, *d.* 1887; established one of the greatest steel and ordnance manufactories in Europe. He introduced into his German workshops the Bessemer process for the making of steel, and the great steam hammers of Nasmyth. He was thus enabled to turn out the enormous steel castings, and the great, modern breech-loading guns, which have made his name famous.

KUBLAI KHAN, a grandson of the celebrated Jenghis Khan, and emperor of the Mongols in the 13th century. In 1267 he invaded China, and established there the Mongol dynasty. He extended his conquests over Cochin-China, Tibet, and beyond the Ural mountains westward, thus creating one of the largest empires ever known. Marco Polo describes the splendour of his court and the wisdom of his rule.

KUENLUN MOUNTAINS form the northern boundary of the plateau of Tibet, and are sparsely inhabited by a nomadic people.

KULTURKAMPF, the controversy during the years 1872 to 1882 between the Prussian Government and the Church of Rome. The name signifies a struggle for education and enlightenment.

KUMASI, or Coomassie, the capital and chief town of Ashanti, West Africa. A British army, led by Sir Garnet Wolseley, captured and burnt the town in 1874. It was again taken by the British in 1896, since when Ashanti has formed a British Protectorate, with Kumasi as the seat of the British resident.

KUNCHINJINGA, the second highest mountain in the Himalayas, 28,177 feet, situated north-west of Sikkim.

KURDISTAN, a mountainous district in Western Asia, south of Armenia, chiefly round the upper reaches of the Tigris, belonging partly to Persia and partly to Turkey. Its turbulent and almost uncivilised people, numbering two millions, acknowledge the rule neither of Turkey nor Persia, but only that of their own tribal chiefs. The Christians of Armenia have suffered terribly from the cruel outrages of their lawless neighbours, the Kurds.

KUROKI, BARON, *b.* 1846, one of Japan's brilliant generals. He saw active service during the Chino-Japanese War of 1894, and took part in the storming of Wei-hai-wei. In the war of 1904-5 he was present at the operations along the Yalu, and in the subsequent Japanese advance took command of the right wing, and played an important part in the victories of Liao-Yang, the Shaho, and Mukden.

KUROPATKIN, ALEXEI, *b.* 1848. He gained military experience in various Russian operations in Central Asia and in the Russo-Turkish War of 1877, during which he acted as chief of the staff to Skobyloff, and was present at Plevna. On the outbreak of war with Japan he was appointed to the command of the main Russian army, acting under Alexieff. On the recall of the latter he was left in sole command, but, after the battle of Mukden, was, at his own request, superseded by Linievitch.

KUROSHIWO, the Black Current of Japan, whose warm waters, from the Pacific Equatorial Current, beneficially affect the climate of Japan, and of the west coast of North America, in the same manner as the Gulf Stream affects our climate.

KURRA'CHEE. See *Karachi.*

LAAGER, the term applied first by the Boers to a defensive camp improvised out of ox-wagons. The wagons are arranged close together in a circle, with the baggage, etc., piled up between the wheels so as to form a continuous rampart.

LABARUM, the banner or standard of Constantine the Great. The pike, with its cross-piece bearing the banner, was crowned by a circle enclosing the letters *X* and *P*, the Greek initial letters for Christ. This design of good omen is supposed to have been revealed to Constantine in a dream.

LABRADOR, a vast peninsula in Canada, between the Gulf of St. Lawrence and Hudson Bay. Its soil is so barren and its climate so rigorous that its inhabitants number only a few thousand Eskimos and Indians, who carry on the fish-oil and fur trades respectively. It was first sighted by Cabot, 1497.

LAC. (1) A yellow, resinous substance exuded from the twigs of plants on the irritation of a tiny insect, *Coccus Lacca*, or produced by the insect itself from the twig, as its hatching ground. In its different preparations as *stick-lac*, *seed-lac*, *shell-lac*, etc., it is generally of a pale yellow colour, due to the presence of the insect; this colouring matter, extracted by the use of alkalis, forms *lac-dye*. Lac, dissolved in alcohol, forms varnish. India, Burma, and China supply most of the shell-lac. (2) In India, *lac*, or *lakh*, is a word denoting 100,000, and is generally used with reference to rupees—a lac of rupees.

LACE, network, generally composed of linen or cotton threads, used for ornamental purposes. The Bible records its manufacture in gold; ancient Grecian art gives evidence of its use; and the Middle Ages have handed down most beautiful specimens, worked chiefly by nuns for use in churches. The finest lace is of linen, hand-made, and of two varieties, point-lace and pillow-lace. *Point-lace* is worked entirely by the needle, and the 16th century Venetian specimens led to the later Brussels and Maltese varieties. *Pillow-lace* is made on a pillow by the manipulation of bobbins with thread, and the 15th century specimens from Flanders led to the Honiton, Mechlin, and Valenciennes varieties. *Machine-made lace* owes its introduction to John Heathcote, 1809, of Notts, and it is often difficult to distinguish the more beautiful specimens of this kind of lace from the true, hand-made lace.

LACH'ESIS. (1) In Greek mythology one of the three fates, *Clotho*, *Lachesis*, and *Atropos*, presiding over man's destiny. (2) A venomous kind of snake found in the north-east of South America, one variety possessing at its tail the well-known *rattle*.

LACHINE RAPIDS, on the St. Lawrence, near Montreal. Steamers avoid these rapids in ascending the river by means of a canal; but in descending, even the largest steamers shoot the rapids.

LACHRYMÆ CHRISTI—"Tears of Christ"—the name given to the wines produced from the vineyards around the foot of Mount Vesuvius. They are red or white, sweetish to the taste, and of very good bouquet.

LACORDAIRE, JEAN BAPTISTE, a celebrated French preacher, *b.* 1802, *d.* 1861. His training for the law, and his democratic ideas, eminently fitted him to appeal to the French people. His thrilling discourses at Notre Dame, Paris, will long be remembered.

LACQUER, varnish formed by dissolving lac in spirit, and coloured, if required, with saffron, gamboge, etc. It is applied to metals to prevent the surface tarnishing. The Japanese lacquer wood and papier-mâché ware by the application of several coats of a native varnish.

LACTOMETER, an instrument for determining the proportion of cream in milk. The simplest is a tube graduated to one-hundredths, in which good milk, after standing, would indicate 12 or 13 hundredths of cream. Floating lactometers are graduated in accordance with the fact that the natural specific gravity of good milk is 1·029. Lactometers, however, do *not* aid in detecting adulteration, this being only possible by careful chemical analysis.

LADIES' MILE, the drive north of the Serpentine, Hyde Park, London. Here, during the season, the Coaching and Four-in-hand Clubs meet.

LA'DOGA, the largest lake in Europe, area 7,000 square miles, situated near St. Petersburg, with the River Neva as outlet. In conjunction with many canals it forms a valuable waterway, besides giving employment to numbers of fishermen on its many islands.

LADON, the hundred-headed, sleepless dragon appointed by Juno to guard the apples in the gardens of the Hesperides.

LADYSMITH, a town in the north of Natal, South Africa, memorable for the British defence, under General White, against the Boer forces from November, 1899, to February, 1900, when it was relieved by General Buller.

LAFAYETTE, MARQUIS DE, *b.* 1757, *d.* 1834; a French general and statesman, celebrated alike in the history of the United States and of France. He took an important part as general in the American War of Independence, 1777-81. He played a prominent part in the French Revolution as commander-in-chief of the National Guards. His methods were too mild to please the Revolutionary leaders, and to save his life he withdrew from France. In 1830 he again commanded the National Guards, and was instrumental in placing Louis Philippe on the throne.

LA FONTAINE, JEAN DE, French writer; *b.* 1621, *d.* 1695. His *Fables* are world-famous, and place him high among the geniuses of his time, Molière, Racine, etc.

LAGOS, an island off the Slave Coast, West Africa. Previous to its occupation by the British in 1861 it was a great slave market, but it is now a great trading-centre; its chief exports are palm oil, wax, and ivory: population about 30,000.

LA HOGUE, CAPE, west of Cherbourg, France. Near La Hogue, James II. witnessed the wrecking of his hopes in the defeat of the French fleet by the English and Dutch. 1692.

LAHORE, a town near the Ravi, is an important railway centre, and capital of the Punjab; population nearly 200,000. Near Lahore is the important but dreary military station of Mean Meer.

LAING'S NEK, the scene of the defeat of the British under General Colley by the Boers in 1881, is a defile in the Drakensberg Mountains in Northern Natal.

LAISSEZ FAIRE, "Let things take their course," a term used in political economy to describe the principle of unrestricted competition in industrial enterprises as opposed to regulation by the State.

LAKE DISTRICT, the district round Lakes Windermere, Ulleswater, and Derwentwater, on the borders of Cumberland, Westmoreland and Lancashire. Its most beautiful lake and mountain scenery and the many interesting associations with the so-called Lake poets—Wordsworth, Southey and Coleridge—as well as with the Arnolds and Ruskin, make Ambleside and Keswick the head-quarters of thousands of tourists annually.

LAKE DWELLINGS. The remains of these dwellings in Switzerland give evidence of their existence in the Stone and Bronze Ages, some thousands of years ago. From the remains, they appear to have stood on piles, and to have been the homes of hunters and fishermen, not unacquainted with agriculture, weaving, and ingenious methods of making tools. The Irish *Crannogs* are similar, but of a later date, and were mainly intended for defensive purposes.

LALLA ROOKH, an Oriental romance by the celebrated Irish poet, Thomas Moore, published 1817. It is a series of four tales describing, with felicitous Oriental colouring and imagery, how Lalla Rookh, daughter of Aurungzebe, obtains her princely lover, through meeting him in the guise of a minstrel. For this poem Moore received 3,000 guineas from Longmans.

L'ALLE'GRO, one of the best of Milton's earlier poems. It praises mirth and gaiety, and forms a fitting companion to his "Il Penseroso."

LAMAISM, a form of Buddhism, established in Tibet about the 7th century. The head, both of Church and State, is called the *Dalai Lama*, or Grand Lama, and is considered by the Tibetans to be the incarnation of their chief god. All the other members of the priesthood are called *lamas*, and hence the religion of the Tibetans is known as *Lamaism*. One remarkable feature of their religion is the use of "praying wheels." These are cylinders containing rolls of prayers, which are supposed to be said as often as the cylinder is turned.

LAMARTINE, ALPHONSE, a French poet and politician, *b.* 1790, *d.* 1869. When thirty, he published his "Méditations Poétiques," which placed him in the front rank of French authors. He took a prominent share in the affairs of his country. His "Histoire des Girondins" is thought to have precipitated the Revolution of 1848, which drove Louis Philippe from the throne.

LAMB, CHARLES, a famous English essayist, *b.* in London, 1755, *d.* 1834. He was a most lovable man, and he devoted his life to the care of his sister who, in a fit of insanity, had killed her mother. He spent thirty-three years as clerk in the service of the East India Company, 1792–1825, during which time he published, in conjunction with his unfortunate sister, the "Tales from Shakespeare," still highly prized, and commenced in the London Magazine the delightful "Essays of Elia," on which rests his fame as an author.

LAMBERT, JOHN, *b.* Kirkby Malham, Yorks, 1619, *d.* 1692; was an able general in the Parliamentary army, who substantially contributed towards the victories of Marston Moor, Dunbar, and Worcester. He was a staunch Republican, opposed the movement for crowning Cromwell as king, and even helped to bring about the downfall of Richard Cromwell. He also set himself against the restoration of Charles II., and was in consequence banished to Guernsey, where he spent the last thirty years of his life, chiefly in flower-gardening.

LAMBETH CONFERENCE, a meeting of the bishops of the Anglican Communion from all parts of the world. It was first held in 1867, and since then once each decade. It only meets for consultation, its resolutions having no legal force.

LAMBETH PALACE, the city residence of the Archbishop of Canterbury, situated in Lambeth, a Metropolitan borough, south of the Thames. The building dates from the 13th century and contains a valuable library.

LAMMAS DAY, first day of August. It was originally a religious harvest festival, *lammas* meaning "loaf mass"—a term indicative of the offerings at this festival.

LAMMAS LANDS are lands in England over which certain people have common rights from old Lammas Day, August 12, to Lady Day in every year. During the remainder of the year the lands revert to private ownership.

LAMPBLACK, an amorphous form of carbon, manufactured by burning turpentine, resins, and other substances, rich in carbon, in chambers furnished with a limited supply of air. The *soot*, collected on blankets, is purified, and then used as the basis of printers' ink, black paint, etc.

LAMPREY, an eel-like fish with a slimy body, without jaws, paired fins, or scales, and having the power of attaching its mouth, lined with teeth, by suction to fishes on which it preys. The Romans used them as food, and the death of Henry I. from a surfeit of lampreys has given them an historical interest.

LAMPS, ELECTRIC. See *Electric Lighting.*

LANARKSHIRE, the busiest manufacturing and most populous county of Scotland, is situated round the Clyde: hence its name Clydesdale. It contains Glasgow, Hamilton, and Airdrie, all owing their importance to the rich coal and iron fields of this county; population about 1,200,000.

LANCASHIRE, which includes the detached portion, Furness, is the busiest manufacturing and the most populous county of England. Its principal industry is cotton, and Manchester, the centre of that industry, is the most famous city in the world for the trade in cotton goods. Besides Manchester, the following towns are engaged in the cotton manufacture:—Bolton, population 178,000; Oldham, 140,000; Blackburn, 133,000; Preston, 115,000; Burnley, 102,000; Rochdale, 86,000; Bury, 58,000; Ashton, 50,000; and Middleton, 30,000. But Lancashire does not depend on cotton alone. Its manufacture of machinery is of great importance. Its famous seaport, Liverpool, accounts for about one-fourth of the imports, and two-fifths of the exports, of the United Kingdom. Other industries, too, are numerous:—Barrow-in-Furness (population 60,000) is an important iron-manufacturing and ship-building town; St. Helens (90,000) is one of the most important glass-manufacturing towns in the kingdom; Wigan (86,000) has extensive iron smelting and manufacturing works; Warrington (68,000) extensive manufactures of iron, soap, and leather; and Widnes (30,000), large alkali works. The population of the county exceeds 4,000,000.

LANCASTER, the county town of Lancashire, occupies an eminence on the left bank of the Lune, 7 miles from the sea. It has suffered in most of the wars carried on on English ground. The old castle, much strengthened by John of Gaunt, is now used as a prison; population over 40,000.

LANCASTER, HOUSE OF, the descendants of John of Gaunt, Duke of Lancaster, fourth son of Edward III. The claim of the House of Lancaster to the throne was based on the consent of parliament.

LANCASTER, JOSEPH, *b.* in London, 1778, *d.* in New York, 1838; an enthusiastic educationalist, the first to found large schools for poor children in England and to work them on the monitorial system, using the least ignorant to teach the rest.

LANCERS, cavalry regiments armed with the lance. The weapon consists of a shaft of ash, beech, or bamboo several feet in length, with a steel point 8 or 10 inches long. In some continental armies the shaft is of tubular steel. The use of the lance spread into Western Europe from Russia and Poland, was adopted by the Prussians in 1812, by the French in 1813, and by the British army, which now includes six regiments of lancers, in 1815.

LANDER, RICHARD LEMON, *b.* at Truro, 1804, *d.* 1834, was the first African explorer to trace out and map the course of the Niger. He died of the effects of a wound inflicted by natives while on his third expedition.

LANDES, THE, a dreary expanse of sand and marsh with patches of pasture, in the south-west of France on the Bay of Biscay. Large flocks of sheep are here tended, but the former custom of using stilts is being abandoned. Drainage and the planting of trees are reclaiming the marshes and fixing the sand-dunes.

LANDOR, ARNOLD HENRY SAVAGE, *b.* at Florence, an English writer, artist, and traveller. His published accounts of his travels in the Far East brought him into prominence, and his attempt to penetrate through Tibet into Lhassa in 1897, and the account of his capture and tortures still further quickened public interest. His chief works are: "Alone with the Hairy Ainu,"—an account of his

journeys in Yezzo and the Kurile Islands—and "In the Forbidden Land."

LANDOR, WALTER SAVAGE, *b.* at Warwick, 1775, *d.* 1864, a great master of English prose. His impulsive disposition led to his expulsion from Rugby and Oxford, and in 1808 he raised a band of volunteers to oppose Napoleon in Spain. He married unwisely, and lived his last years in Florence. His "Imaginary Conversations" contains much noble prose of classical correctness.

LANDSEER, SIR EDWIN, *b.* in London, 1802, *d.* 1873, an eminent English animal painter, who, like Millais, exhibited at the Academy whilst still a youth. Among his most popular works are "High Life and Low Life," "Dignity and Impudence," "The Challenge," and the famous lions of the Nelson monument in Trafalgar Square.

LAND'S END, a granite promontory, 100 feet high, forming the most westerly point of England. The *Longships Lighthouse* is a mile distant from the headland.

LANDSTURM, a section of the German army reserve enrolled exclusively for home defence. It consists of all males between the ages of 17 and 45 who do not belong to the regular army or to the reserves. The force is called out only in case of threats of invasion.

LANDTAG, the parliament of any one of the kingdoms or countries which are included in the German Confederation. Thus Prussia, Saxony, and Bavaria each has its landtag.

LANDWEHR, a force of the army reserve in Germany and Austria, consisting of those men who have served a continuous period with the colours, and have also assembled for annual drills during an additional period in the First Reserve. Five years are spent in the first class of the Landwehr, and service continues in the second class until the age of 39. In case of war the various army corps are brought up to war strength by drawing on the reserve and Landwehr.

LANE, EDWARD WILLIAM, *b.* at Hereford, 1801, *d.* 1876, the most notable Arabic scholar that England has produced. He was the first to produce an accurate translation of the *Arabian Nights*, and his Arabic Lexicon, a work of many years of labour, has a European reputation.

LANFRANC, *b.* about 1005, *d.* 1089, the chief ecclesiastical adviser of William the Conqueror. He was an Italian, and was educated at Pavia. He became Prior of a monastery founded by the Conqueror at Caen, and accompanied him to England, where he was raised to the primacy.

LANG, ANDREW, *b.* at Selkirk, 1844; a literary critic and writer of versatile talents. He has distinguished himself in many branches of literature, including poems, ballads, fairy tales, novels, and biographies, in addition to numerous articles in magazines and translations from the Classics.

LANGLAND, WILLIAM, an English poet contemporary with Chaucer, about 1340–1400. His great work is "Piers Plowman," an alliterative poem dealing with the social grievances of the middle and lower classes of England, and attacking the clergy for their laxity and dishonesty.

LANGTON, STEPHEN, *b.* about 1150, *d.* 1228, was nominated by Pope Innocent III. to the Archbishopric of Canterbury against the will of King John. He took a leading part in the movement by which the Barons gained the Magna Charta.

LANSDOWNE, HENRY CHARLES, MARQUIS OF, *b.* 1845. After holding various offices under Mr. Gladstone, he was appointed Governor General of Canada in 1883, and five years later became Viceroy of India. As a Liberal Unionist he accepted the office of Secretary of State for War in the third ministry of Lord Salisbury in 1895, and became Foreign Secretary in 1900. This latter office he held until the resignation of Mr. Balfour, in December, 1905. His administration of the office was marked chiefly by an Anglo-Japanese Agreement, 1902, and its renewal, with fresh stipulations, in 1905; also by an Anglo-French Agreement, 1904. His policy won the approval of the whole nation.

LAOCOÖN, a priest of Neptune, at Troy, was destroyed, according to the legend, with his two sons by two huge serpents, because he angered Minerva by warning his fellow-countrymen against the device of the wooden horse (See *Troy*).

LAPIS LAZULI, a beautiful mineral of azure colour used in mosaics. It consists of a silicate of alumina with a small percentage of iron and lime. Ultramarine was at one time obtained as a pigment from this stone.

LAPLACE, PIERRE SIMON DE, a renowned French Scientist, *b.* 1749, *d.* 1827. He rose from humble circumstances to a high position in scientific circles in Paris, making his mark particularly in the application of mathematics to astronomical and physical science. He formulated the famous Nebular Hypothesis in his "Exposition du Système du Monde."

LAPLAND, a region in the extreme north of Scandinavia, and extending eastward to the White Sea. The Lapps, a race of little people of great endurance, are hospitable but not cleanly. The "mountain Lapps" are virile and energetic, and employ the reindeer as a domestic animal; the "sea Lapps" are an impoverished folk who live by fishing.

LA PLATA, RIO DE, the estuary of the South American rivers Parana and Uruguay, is rendered difficult of navigation by a prevalent, squally wind known as the *pamperos*. Monte Video, on the north side, has good harbourage, but Buenos Ayres is difficult to reach.

LAPUTA. Swift's "Travels into several remote nations of the World" describes Gulliver's *Voyage to Laputa*, an imaginary island peopled by philosophers and men of science. In this way the great satirist attacked Newton and the Royal Society.

LARCH, a deciduous, cone-bearing tree found in Canada, Great Britain and the mountainous parts of Europe, yields a resinous wood valuable in ship-building. Turpentine and gum are obtained from it, and its bark is used for tanning.

LARES (-es), the Roman deities who presided over the household and public places as their protectors, if properly respected and propitiated. The hearth typified the altar to the Lares, and was considered a sacred emblem of home life.

LA ROCHELLE, a seaport of France, midway between Nantes and Bordeaux. It was the stronghold of the Huguenots in the 16th and 17th centuries; population 20,000.

LARVA, the name applied to the first stage of development in an insect after it has emerged from the egg; thus, the caterpillar is the larva of butterflies and moths.

LASCAR, a term in Hindustani for a camp-follower, but now used to denote the natives employed on large British ships that visit Eastern ports. They are good sailors, of a quiet disposition, and, for the most part, are Mohammedans.

LASSO, a rope, often made of hide, with a running noose, used by ranchmen in Mexico and on the pampas of South America. The lasso is attached to the saddle, and the rider, by a dexterous cast, flings the noose over the head of the horse or ox, and brings it to the ground half strangled.

LAS PALMAS, the chief town in the Canary Islands, is situated on the north-east shores of Grand Canary. The town enjoys considerable trade, and is coming into prominence as a health resort; population exceeds 44,500.

LATAKI'A (formerly *Laodicea*), a seaport of Syria, on the mainland opposite to Cyprus, 50 miles south of Antioch. The harbour is choked with sand, but an export trade is carried on in Latakia tobacco, which grows on the hills behind the town; population 10,000.

LATERAN, THE, a palace in Rome, originally named from the Roman family Lateranus. Till the 14th century the Lateran was the usual residence of the Pope. Adjoining the palace is the famous church, *Lateran, Saint John*, "the mother and head of all churches" in Rome.

LATIMER, HUGH, *b.* at Thurcaston, Leicester, 1488, *d.* 1555, a Protestant martyr. He was appointed bishop of Worcester by Henry VIII., but resigned the office to preach and to tend the poor. He was an outspoken man of lovable disposition, and a greater preacher than theologian. He perished at the stake with Ridley at Oxford in the reign of Mary.

LATITUDE is distance north or south of the equator expressed in degrees, minutes, and seconds. The distance from the equator to the pole is divided into ninety equal parts called degrees. Many methods of finding the latitude of a place are employed, the most common being the observation of the altitude of the pole star above the horizon, which gives the latitude.

LATTER-DAY SAINTS, the name given to themselves by the Mormons.

LAUD, WILLIAM, Archbishop of Canterbury, *b.* at Reading, 1573, *d.* 1645. During the period of his autocracy, Charles I. carried out the directions of Laud in church matters and enforced them through the Court of High Commission. Laud's attachment to High Church principles and his attempt to impose the English liturgy on the Scottish Presbyterians, aroused opposition, and he was beheaded on a Bill of Attainder passed by the Long Parliament, against the wishes of the King and the Lords.

LAUGHING GAS, or nitrous oxide, is used as an anæsthetic in dentistry and minor surgical operations. It produces temporary insensibility, during which some patients laugh or cry hysterically.

LAURENCE, SAINT, a Christian martyr of Spain, who was burnt to death on a gridiron during the Valerian persecutions.

LAURIER, SIR WILFRED, *b.* at St. Lin, Quebec, 1841; the first French Canadian to become premier of the Dominion. He began his political career in 1871 as a member of the Quebec Provincial Parliament. In 1874 he was elected to the Federal Parliament, and soon took a prominent position, his great powers of oratory gaining for him the title of "Silver-tongued Laurier." As Premier, a position he attained in 1896, his policy has been marked by loyalty to Great Britain, as evidenced by his tariff legislation of 1897, which gave our country preferential treatment, and by the prompt despatch of Canadian troops to South Africa in the Boer War.

LAUSANNE, near the northern shore of Lake Geneva, has Ouchy as its lake-side port. It is famous as the scene of the labours of Gibbon the historian; population over 36,000.

LAVA is the molten matter which issues from volcanoes. The surface lava has a porous appearance due to the escape of gases, but at a depth below the surface

it is compressed and glassy. Pumice stone is the lava-froth of the surface. Examples of the cooling of lava in curious columnar forms are seen in Fingal's Cave and the Giant's Causeway.

LAVOISIER, ANTOINE LAURENT, the originator of modern chemistry, *b.* in Paris, 1743, executed 1794. He was the first to show that combustion was a form of chemical action due to the union of oxygen with other elements. As a holder of government offices, he fell a victim to the Reign of Terror.

LAW, JOHN, financier, *b.* at Edinburgh, 1671, *d.* 1729. His scheme for a paper currency of bank notes was rejected in Scotland, but was phenomenally successful in Paris, where Law won the support of the Regent Orleans. An enterprise which became famous under the name of the "Mississippi Scheme" proved his ruin. Law was driven from France and his estates forfeited.

LAW, WILLIAM, *b.* at Kingscliffe, Northamptonshire, 1686, *d.* 1761; a controversial and devotional writer. His "Serious Call to a Devout and Holy Life" has been described as one of the most powerful works of devotion in the English language; this, together with his "Treatise of Christian Perfection," and the influence he exercised over the Wesleys and other young men, gave a great impetus to the religious revival of the period.

LAWRENCE, SIR HENRY, *b.* in Ceylon, 1806, *d.* at Lucknow, 1857. He served in the Afghan and Sikh Wars and became Commissioner of Oudh. He was killed by a shell during the memorable defence of the Residency at Lucknow in the Indian Mutiny. The Lawrence Military Asylums in India form a most fitting memorial to this great soldier and his brother.

LAWRENCE, JOHN, LORD, *b.* 1811, *d.* 1879, brother of the above, entered the Indian Civil Service in 1829, and became Chief Commissioner of the disturbed province of the Punjab in 1853. On the outbreak of the Indian Mutiny in 1857 he enlisted the support of the Sikhs and sent a large contingent to the aid of our troops at Delhi, besides despatching a number of heavy guns for the siege of that city, thus contributing largely to the success of our arms. He became Governor-General of India in 1863, and was afterwards raised to the peerage.

LAWRENCE, SIR THOMAS, *b.* at Bristol, 1769, *d.* 1830, a famous portrait painter. He had the support of George III., became the most fashionable portrait painter of his day, and was President of the Royal Academy.

LAYARD, SIR AUSTEN HENRY *b.* at Paris, 1817, *d.* 1894, was a famous archæologist. In 1845 he undertook, at his own expense, extensive explorations on the site of ancient Nineveh, and made valuable discoveries which he described in "Nineveh and its Remains" and "Monuments of Nineveh." The famous Assyrian bulls from the palace of Sardanapalus were presented by him to the British Museum. He also rendered good service to his country as British Ambassador to Constantinople, 1877–80.

LAZZARONI, a low class of Neapolitans without settled homes or occupation, and named after Lazarus, the beggar of the parable, or from the Hospital of Saint Lazarus where they sought relief.

LEAD, a heavy, malleable metal of great commercial value. It is particularly useful for gas and water pipes and for roofing. Solder, type-metal and pewter are alloys of lead. The oxides of lead, litharge, red lead and white lead are used by painters and plumbers, and sugar of lead is used medicinally. Lead poisoning is an insidious evil almost unavoidable by workers in lead, because its effects are cumulative. Scrupulous cleanliness is the best preventive, and meals should never be eaten in the work-room.

LEAMINGTON, a fashionable health-resort of Warwickshire, noted for the efficacy of its mineral springs. It is situated on the Leam, 2 miles from Warwick. Winter is *the season* of Leamington; population nearly 30,000.

LEANDER. See *Hero.*

LEATHER, the prepared hides or skins of animals. The hides, imported in great quantities from South America, Australia and the Cape, are cleansed, cleared of hair, stretched, then tanned by soaking in a strong astringent solution, as of oak bark or nut galls. The leather is then pounded or rubbed, and softened with oils. *Morocco* leather, originally made from goat-skin, *roan* leather from sheep-skin, and *Russia* leather from calf-skin with a dressing of the odorous oil of birch-bark, have special preparations.

LEBANON, two parallel ranges of mountains in Syria, north of Palestine. Its famous cedars are still worthy of their reputation. Mount Hermon, the highest point of Lebanon, is snow-clad and reaches a height of 10,500 feet.

LECKY, WILLIAM HARTPOLE, *b.* at Dublin, 1838, *d.* 1904, one of the most prominent historians of the 19th century. His reputation rests on his "History of European Morals," his "History of the Rise and Influence of the Spirit of Rationalism in Europe," and his "History of England in the Eighteenth Century."

LEE, ROBERT EDWARD, *b.* 1807, *d.* 1870, the able leader of the Confederate troops in the American Civil War. Only the diminishing resources of the South and the increasing resources of the North caused his generalship to be unavailing. He was at the head of the States Military Academy before the outbreak of the war, and he had seen service in Mexico.

LEECH, JOHN, *b.* 1817, *d.* 1864, a famous "Punch" artist and illustrator. He was a schoolfellow of Thackeray at the Charterhouse, and his colleague on the staff of Punch. His political cartoons, and humorous sketches in that paper, greatly added to its reputation, and form one of its most valuable series of contributions. His illustrations in "Hood's Comic Annual" and Dickens' "Comic History of England" are famous.

LEECHES, blood sucking, worm-like creatures, one variety being particularly notable for its medicinal uses. The medicinal leech is found occasionally in British ponds, but the principal supplies come from the marshes of France. The leech-gatherer wades into the water and allows the leeches to attach themselves to his legs. The practice of leeching was very common formerly, and is still used on occasions to reduce inflammation. See *Med. Dict.*

LEEDS, a busy manufacturing city on the Aire, in the West Riding of Yorkshire, noted especially for its woollen industry. Yorkshire College, Leeds, formerly one of the constituent colleges of Victoria University, obtained a Charter in 1904, and is now known as Leeds University. The ruins of Kirkstall Abbey with its grounds on the outskirts of Leeds, were presented to the city by the late Colonel North. (For population, etc., see p. 902.)

LEEWARD ISLANDS, THE, a British Colony in the West Indies. They include (1) Antigua, on which is the federal capital, St. John, (2) St. Christopher and Nevis, (3) Dominica, (4) Montserrat, and (5) the Virgin Islands. The federal colony has a population of 127,000.

LEGAL TENDER. See *Commercial Dictionary.*

LEGATE, a papal ambassador, who, on particular missions, is empowered to act with almost full papal authority. The powers of a legate were usually conferred upon the Archbishops of Canterbury before the Reformation, the presence of foreign legates in England being repugnant to the nation.

LEGEND. 1. At first this was the title of the book containing the lessons appointed to be read daily in the early church. Later the term was applied to a collection of the lives of saints and martyrs, and remarkable stories concerning them. One of the most celebrated is the "Golden Legend," translated into English by Caxton, and printed by him in 1483. As much that was recorded in these collections was pure invention, the term legend gradually came to be applied to any fiction that claimed to be the truth. 2. The superscription round the head of a coin or medal.

LEGHORN, an important seaport of Italy and a strong naval station, 15 miles south of Pisa. It exports straw hats, silks, wine and dried fruits; population 100,000.

LEGION, in ancient Rome a body of troops, numbering from 3,000 to 6,000 at various times. At first it consisted solely of Roman citizens, and was divided into *maniples* of 60 foot soldiers with two centurions and a standard-bearer, the younger men in battle forming the front line with the veterans at the back. In the first century B.C., foreign auxiliaries were admitted and the legion became a self-contained unit resembling an army corps.

LEGION OF HONOUR, a French order established in 1802 by Napoleon to reward distinguished military and civil service. The honour is now conferred as a distinction upon foreigners as well as Frenchmen, and the number of members is limited to 30,000. The decoration consists of a white enamelled star of five rays, suspended by a scarlet watered-silk ribbon, and on it is inscribed, *République Française,* 1870, and *Honneur et Patrie.*

LEGITIMISTS, supporters of the older branch of the Bourbon family during the revolutions in France in the 19th century. Louis Philippe, the representative of the younger or Orleanist branch, gained the throne from Charles X. in the revolution of 1830. The two branches, however, united in supporting the claims of the Comte de Paris after the Republic of 1871 was firmly established.

LEIBNITZ, GOTTFRIED WILHELM VON, *b.* at Leipsic, 1646, *d.* 1716, one of the greatest of German philosophers and mathematicians. After seeing Sir Isaac Newton's method of "Fluxions," he invented the differential and integral calculus, and was one of the pioneers in the study of comparative philology, collecting words and phrases from many languages for the purpose of comparison.

LEICESTER, the county-town of Leicestershire, one of the midland counties of England. It has important hosiery, boot and lace industries. (For population, etc., see p. 902.)

LEICESTER, EARL OF, *b.* 1531, *d.* 1588, the favourite of Queen Elizabeth, was a younger son of the Duke of Northumberland. The suspicious death of his wife, Amy Robsart, forms a dramatic episode in Scott's "Kenilworth." He was not successful as a military leader in the Netherlands, but he was entrusted with the command of the land forces at Tilbury in the year of the Armada.

LEICHHARDT, FRIEDRICH, *b.* 1813, near Berlin, an Australian explorer who published excellent records of his travels in Northern Queensland. He probably lost his life in a journey across Cape York

Peninsula in 1848, as no news was heard of him after April of that year.

LEIGHTON, FREDERICK, LORD, *b.* at Scarborough, 1830, *d.* 1896, one of the foremost British painters of the 19th century. He travelled and studied on the continent, developing remarkable power as a colourist and designer. In 1878 he became President of the Royal Academy, and during the eighteen years of his office did more to add dignity and bring prosperity to this Society than any of his predecessors.

LEIGHTON, ROBERT *b.* about 1611, *d.* 1684, a Scottish divine whose life and writings revealed a remarkable saintliness of character. He was appointed against his wish to the See of Glasgow, from which he retired after vain attempts to justify episcopal government in the eyes of Scotsmen. After his death was published his "Rules and Instructions for a Holy Life."

LEINSTER, in many respects the most important of the four provinces of Ireland, occupies the south-eastern part of the island. Dublin, the Irish capital, is in Leinster, and the chief ports are Dundalk, Drogheda, Kingstown, and Wexford.

LEIPSIC, an important city in Saxony, 100 miles south-west of Berlin, has a great printing and book-binding industry, and its university and conservatoire of music have a great reputation. Here, in the "Battle of the Nations," in 1813, an allied force of Prussians, Austrians and Russians succeeded in defeating Napoleon; population about 485,000.

LEITH, a seaport adjoining Edinburgh, with an important Baltic trade in grain and timber, and a large export trade in coal, cotton and iron. It has large flour mills, distilleries, breweries, engineering and chemical works; population about 75,000.

LELAND, JOHN, *b.* in London, 1506, *d.* 1552. After travelling on the continent he became chaplain and librarian to Henry VIII., and received the title of royal antiquary. He spent six years in searching the archives and libraries of cathedrals, abbeys, priories and colleges for material illustrating the history and archæology of England and Wales, but died before completing the systematic arrangement of his treasures. Most of his collection was placed in the Bodleian Library.

LELY, SIR PETER, *b.* 1618, in Westphalia, *d.* 1680, in London, a portrait painter who had as patrons Charles I., Cromwell and Charles II. For the latter monarch he painted the well-known "Court Beauties," now exhibited at Hampton Court.

LEMBERG, a trading city of Galicia, in Austria, the seat of an Armenian, a Roman Catholic and a Greek Archbishopric. The Jews form a third of the population; they manage the great fairs and control the transit trade of the city.

LEMON, a fruit of the same order as the orange and lime, which it resembles. It is widely cultivated in Southern Europe. Its juice, containing citric acid, is anti-scorbutic and makes a wholesome and refreshing drink. Its rind, when candied, is used in cakes and puddings, and from the oil extracted from it a flavouring known as essence of lemon is obtained. Salt-of-Lemon is a chemical product of potash not related in any way to the fruit.

LENA, a great river of eastern Siberia, rising near Lake Baikal. After a course of 2,800 miles it enters its delta and flows into the Arctic Ocean. It is frozen for more than half the year, but its basin furnishes an invaluable network of waterways in a district rich in minerals. Yakutsk is the chief town on its banks.

LENSES are plates of transparent material, glass or pebble, whose curved surface causes the rays of light that pass through them to converge or diverge, thus producing a decrease or increase in the apparent size of the objects viewed. Ten varieties of lenses may be obtained by combining convex, plane and concave surfaces, the well-known magnifying or microscopic lens having two convex surfaces. In a camera it is essential that the image produced by a lens should be well defined. Rays of light, however, entering the lens near the centre do not coincide exactly with those that enter near the edge; hence arises the use of the circular stop in the photographic camera to restrict the area of the lens. The unequal refraction of light in single lenses gives rise to colour bands, which may be obviated by the use of a combination of lenses, which are then known as achromatic lenses.

LENT, a penitential period of forty days observed in the Christian Church as a time of preparation for Easter. The first day of Lent, or Ash Wednesday, is observed with great solemnity in the Roman Catholic Church. Sundays are not included in the fast. The festival of *mi-carême*, or mid-lent, is observed on the Continent as a relief from the rigours of the long period of abstinence.

LENTHALL, WILLIAM, the Speaker of the *Long Parliament*, became famous by his refusal to tell the King whether any of the "Five Members" were present or not. When the Long Parliament reassembled after the death of Cromwell, he resumed his office as Speaker, and favoured the Restoration.

LEO, POPE, surnamed "The Great," occupied the papal chair 440–461. In his time the invasions of the Huns under Attila threatened Rome, and it was due to his interposition that the danger was warded off from the city. He was not, however, equally successful in dealing with Genseric, a Vandal chief, by whom, in 455, Rome was sacked.

LEOFRIC, Earl of Mercia in the 11th century. Through his influence with the Witan, Edward the Confessor was elected king. He is closely associated with the traditions of Coventry as the husband of Lady Godiva. (See *Godiva, Lady).*

LEONARDO DA VINCI, *b.* at Vinci, near Florence, 1452, *d.* 1519. He was a gifted artist, a sculptor, architect, mathematician and engineer, and is one of the greatest examples of true versatility of genius. His most famous painting is a fresco, "The Last Supper," on the walls of the Convent of Santa Maria, in Milan, and this, despite its ruinous condition, remains one of the world's masterpieces.

LEONIDAS. See *Thermopylae.*

LEOPOLD I., king of the Belgians, 1831–65. He was the youngest son of Francis, duke of Saxe-Coburg. His sister, Maria Louisa, was the mother of Queen Victoria, and his brother Ernest was the father of the Prince Consort. For three months, in 1830, he occupied the throne of Greece, but he abdicated it and accepted the Belgian kingdom, which he ruled with remarkable wisdom and firmness for thirty-four years.

LEPANTO, a small seaport on the Gulf of Corinth, now of little importance owing to the silting up of the harbour. It was the scene of the destruction, in 1571, of the Ottoman fleet of 200 galleys and 60 other vessels by the combined fleets of the Christian States around the Mediterranean.

LEPROSY. See *Med. Dict.*

LE SAGE, ALAIN RENÉ. *b.* 1668, *d.* 1747, a French dramatist and novelist who first attracted public attention by a drama, "Turcaret," in which he attacked the impositions of the "farmers-general" of taxes. His greatest work, "Gil Blas," has given him a place among the best of novelists. Its wealth of detail has caused charges of plagiarism to be raised against him, but apparently with slight justification.

LESLIE, DAVID, a famous Scottish general who served under Gustavus Adolphus and fought for the Parliamentarians at Marston Moor. He opposed Cromwell after Charles II. signed the League and Covenant, but was decisively beaten at Dunbar, 1650, and after the Battle of Worcester was taken prisoner. At the restoration he was made a peer with the title Lord Newark, and was awarded a pension. He died in 1682.

LESSEPS, FERDINAND DE, *b.* 1805, *d.* 1894, a great French engineer, who designed and superintended the construction of the Suez Canal, 1859–69. His scheme for cutting a canal across the Isthmus of Panama led to a financial collapse, for which de Lesseps, being held to be partly responsible, was condemned in his old age to a term of imprisonment, which, however, was not carried into effect.

LESSING, GOTTHOLD EPHRAIM, *b.* 1729, *d.* 1781, one of the first of German writers to forsake the French school of thought and the French style, and to reflect German ideals and national sentiments. His "Laocoön" is a brilliant essay in art criticism, his "Nathan the Wise" is a didactic drama, whilst his pungent theological writings helped to lay the foundations of Biblical criticism in Germany. "Emilia Gulotti" is considered his best tragedy.

LE'THE is, in Greek mythology, the river of Hades, whose waters confer upon the "shades" passing to the Elysian Fields forgetfulness of their earthly ills.

LETTERS, or epistles, whether of a private or public kind, have at various times reached a literary excellence that has secured for them a place in literature. The epistles of Cicero on philosophical questions, and those of Saint Paul to the infant churches, occupy a high place among the best of writings. The 18th century was an age of letter writers in England and, amongst others, Pope, Swift, Gray, Cowper, and Horace Walpole are especially noteworthy, whilst among later writers, Shelley, Byron, and Keats showed a facility in prose that rivals their gift of poesy. The French have at all times been a nation of great prose writers, and the letters of Madame de Sévigné may be mentioned as typical of the letter writing of the fashionable and political world of the monarchy.

LETTRES DE CACHET, sealed warrants issued by the French kings up to the time of the Revolution of 1789, authorising the arrest of individuals who might be deemed dangerous to the State, and their detention in prison without a trial.

LEVANT, the eastern portion of the Mediterranean and the coast regions of Syria, Asia Minor, and Egypt.

LEVANTER, the prevailing summer wind off the Mediterranean coasts of Africa.

LEVÉE, a ceremonial morning reception held by the sovereign or his representative. The function differs from a drawing-room in the circumstance that only gentlemen are present at a king's levée, while both ladies and gentlemen are admitted to a drawing-room.

LEVER, CHARLES JAMES, *b.* at Dublin, 1806, *d.* 1872, the popular Irish novelist, was educated as a doctor in Dublin, and, turning to literature, wrote "Harry

Lorrequer" and "Charles O'Malley," at the age of thirty. His books abound in rollicking good humour and adventure. He spent the last twenty-seven years of his life in the English consular service.

LEVERRIER, URBAIN, *b.* 1811, *d.* 1877, an eminent French astronomer, who shares with the English astronomer, Adams, the honour of discovering the planet Neptune from observations of the variations in the length of a revolution of Uranus. This discovery, a remarkable triumph of mathematical astronomy, forms one of the greatest confirmations of the application of the Laws of Gravitation to the Solar System.

LEVITES, THE, a Jewish tribe descended from Levi, the son of Jacob and Leah. To this tribe was entrusted the duty of the priestly ministrations and sacred offices of the Temple. The tribe numbered 40,000 in the time of David, but after the captivity only forty could be gathered together. As a separate caste the Levites seem to have disappeared after the Roman occupation of Palestine.

LEWES, the county-town of Sussex, is a market town and a railway junction of some importance. Near Lewes, Henry III. was defeated by Simon de Montfort, 1264; after the battle a treaty, known as the Mise of Lewes, was signed, by the terms of which Montfort became practically the ruler of England.

LEWIS CARROLL. See *Dodgson.*

LEYDEN, an important town of Holland, situated about 6 miles from the sea. It is the seat of an important university which was established in 1575. Leyden was founded by the Romans, during the 17th century was famous for the manufacture of cloth, and since that time it has declined in importance; population about 54,000.

LHASSA, the capital of Tibet, is situated upon a tributary of the Sanpo, on a dreary plateau whose altitude is about 12,000 feet. It is the great holy city of the Buddhists and the residence of the Dalai Lama, their high priest. Lhassa had been visited but rarely by Europeans until 1904, when it was occupied by a force of the Indian army led by General Macdonald and Colonel Younghusband. The town is exceedingly dirty, and the principal building is the Potala, the residence of the Dalai Lama, a huge structure possessing a gilded roof. Lhassa is the most important trading centre of Central Asia; population about 50,000, of which a large number are monks.

LIANAS, the name given to various species of climbing and twining plants, which grow in great profusion in tropical forests. Lianas twine themselves about the trunks of trees, and in time form a barrier which is almost impenetrable. They resemble hempen cables, and frequently twine themselves so tightly about a tree that the latter is crushed.

LIAOTUNG, the most southern of the three provinces of Manchuria. The province was the scene of the principal land operations during the Russo-Japanese War. The chief towns are Mukden, the capital of Manchuria. Newchwang, a treaty port at the head of the Gulf of Liaotung, and Port Arthur and Dalny, near the extremity of an extensive peninsula jutting into the Yellow Sea.

LIAO-YANG, a town of Manchuria, situated about 40 miles in an approximately south-westerly direction from Mukden. It stands in one of the most fertile districts of Manchuria. Near here, in September, 1904, the Russians were defeated by the Japanese in one of the most sanguinary battles of modern times.

LIBATION, properly a drink-offering made to a god. Amongst the Romans, libations were offered at meals to the Lares or household gods. The term was also used of offerings of meal, honey, etc., which were placed upon the altar of a god.

LIBAU, a Russian port situated upon the Baltic coast. It possesses a fine harbour, and exports oats, flour, flax, and eggs. Libau harbour is kept practically free from ice, and on that account is much used by the Russian navy; population 65,000.

LIBERAL PARTY, the name given to one of the two great political parties of Great Britain. Its members have in the past supported the extension of the franchise, and free trade, and, during the closing years of the 19th century, Home Rule for Ireland. The name was bestowed upon the party about 1832, on the occasion of the passing of the Irish Reform Bill; previous to that time its members were known as Whigs.

LIBERAL UNIONISTS, the name given to those members of the Liberal party who refused to support Mr. Gladstone's Home Rule Bill in 1886, and who, under the leadership of the Marquis of Hartington (later the Duke of Devonshire), threw in their lot with the Conservatives. The two parties thus combined took the name of *Unionists*, the corner-stone of their policy being the maintenance in its integrity of the union between Great Britain and Ireland.

LIBERIA, a negro republic situated on the Guinea coast of West Africa. It was established in 1822 by a number of philanthropists as a home for freed slaves. The principal productions are coffee and rubber. Liberia has an area of 45,000 square miles, and an estimated population of over two millions. The capital is Monrovia.

LICK OBSERVATORY, situated on Mount Hamilton, California, obtains its name from James Lick, by whom it was founded and equipped. On its completion, in 1888, it was handed over to the University of California. The observatory contains a world-famous refracting telescope, which possesses an aperture 36 inches in diameter.

LICTORS, the attendants of the magistrates of ancient Rome. They preceded the latter in the streets of Rome, and attended to the arrest and punishment of criminals. The lictors carried bundles of rods called fasces, and axes, the instruments of punishment. The number of lictors attending upon a magistrate varied from six to twenty-four, according to the rank of the latter.

LIDDON, HENRY PARRY, *b.* in Hampshire, 1829. *d.* 1890; an eminent theologian and preacher. In 1866 he delivered his famous Bampton Lectures on "The Divinity of Our Lord." In 1870 he was created canon of St. Paul's Cathedral, where he preached with great effect. Most of his sermons have been published and have exercised a great influence on religious thought.

LIDFORD LAW, an expression implying to hang first and try after. The term is said to have arisen from the practice that once held at Lidford, in Devonshire, the castle of which served as the prison of the Stannaries. William Browne, a local poet of the 16th century, refers to the practice in some stanzas, commencing:

"I oft have heard of Lidford Law:
How in the morn they hang and draw
And sit in judgment after."

LIEBIG, BARON VON, *b.* at Darmstadt, 1803, *d.* 1873, a celebrated German chemist. He was educated at Bonn and Paris, and subsequently became Professor of Chemistry at Giessen, and later occupied a similar post at Munich. His researches were of a most varied nature, but he devoted much time to the study of the chemistry of food and agriculture. The Extract of Beef and the Food for Children prepared from his prescriptions are well known.

LIÉGE, a large manufacturing town, is situated upon an extensive coalfield in the south of Belgium. Coal, iron and zinc are mined, and Liège specialises in the manufacture of small-arms, and produces in addition machinery, woollen goods, leather and sugar; population about 175,000.

LIEN. See *Commercial Dictionary.*

LIFEBOAT, a boat designed to save persons from vessels in distress, and so constructed that it will keep afloat in the most stormy seas. Its principal properties are strength, stability, and power to right itself when capsized. The ordinary lifeboat has a continuous deck, between which and the bottom is situated an air-tight chamber containing ballast. In addition to this air-space, there are usually two chambers placed above the deck, designed to keep the boat afloat should this chamber be stove in, and to assist the boat in righting itself should it capsize. The deck of the boat is a few inches above the surface of the water, and is connected with the water by a number of valved tubes, which allow the water which is shipped to escape, but do not permit the outside water to enter. Lifeboats are usually provided with a carriage, by means of which they may be taken along the shore to any desired spot.

LIFE GUARDS, the name given in England to two cavalry regiments which form part of the Household Troops, and which are engaged in personal attendance upon the sovereign.

LIFE-SAVING APPLIANCES. (1) The Life-belt is an ordinary canvas belt, to which are attached pieces of cork. When in use the belt is fastened round the body. Occasionally life-belts are constructed with air-tight chambers. (2) The Life-buoy is usually circular in form, and is composed of cork covered with canvas. In the navy some life-buoys are fitted with flares, which are lighted automatically when the life-buoy is sent adrift, and serve to indicate the position of the latter. These are used at night to rescue a man who has fallen overboard. (3) One of the most useful appliances is known as the "Rocket Apparatus." A rocket having a light line attached to it is fired from the shore over a vessel in distress; by means of the line a hawser is hauled on board from the shore and made fast to the mast. Along this hawser, by means of a sling buoy, the persons on board the vessel are hauled ashore.

LIFTS, the name given to certain contrivances for raising heavy weights. They consist essentially of a cage or chamber, which is capable of moving up and down a vertical shaft. The cage may be raised by means of a rope attached to a drum or by means of an hydraulic press. In the latter case the plunger of the press is placed beneath the floor, the press itself being some distance below the basement. In all cases, to reduce the work, the cage is counterpoised by a weight about equal to its own weight.

LIGHT. The sensation which is called light is produced when certain rays proceeding from the sun or other luminous body fall upon the retina of the eye. These rays are conveyed through the medium known as ether, which pervades all space and matter. Light itself is invisible, but is made visible by the minute dust particles in the air. The velocity of the light rays has been determined in various ways, and

is about 186,000 miles per second. It is found that ordinary sunlight is composite in character. If a ray be admitted into a darkened room, passed through a glass prism and thrown upon a screen, it is seen that the image has become a band showing in order the following colours—red, orange, yellow, green, blue, indigo, and violet. These are not seen in distinct bands, but one colour merges into those situated on either side of it. "White light" is the result of the blending of these colours.

LIGHT CURE. See *Finsen.*

LIGHTFOOT, JOSEPH BARBER, *b.* at Liverpool, 1828, *d.* 1889, became Bishop of Durham, 1879. He was one of the finest Biblical scholars of the 19th century, and in addition to writing several brilliant commentaries on the Pauline Epistles and on the writings of the Early Fathers, he assisted in the revision of the Authorised Version of the New Testament.

LIGHTHOUSE, a beacon which is placed on some prominent part of the coast, on a reef, or at the entrance to a harbour. The modern lighthouse is constructed usually of granite, and is cylindrical in form. The lamp is usually an oil lamp, the wicks being arranged in concentric rings. The light is either continuous or of the flash variety. In order to increase the brilliancy of the light, reflectors or lenses are used. In each case the result is the same, the rays are all sent out parallel to one another, and thrown where they are required. The flash light is produced either by causing the light with its reflectors, etc., to revolve, or by shutting off the light by means of a screen, the apparatus being moved by clockwork. Every important lighthouse has its own distinctive flash, which is obtained by producing long and short flashes at varying intervals, or, occasionally, by giving both red and white flashes.

LIGHTNING, the name given to the flash observed when an exchange of electricity occurs between one cloud and another, or between a cloud and the earth. It thus corresponds to the spark which may be obtained by means of an electrical machine. Lightning is usually classified into forked lightning, sheet lightning and ball lightning. The last is of somewhat rare occurrence. Forked lightning is usually wavy in character and does not in the least resemble the conventional pictures of it. When it occurs below the horizon, its reflection in the upper parts of the atmosphere gives rise to the lightning of the sheet variety.

LIGNITE, sometimes called brown coal, is a kind of partially carbonised wood. It is formed when peat, which has subsided some distance in the earth, is submitted to a moderate pressure. Lignite contains about 55 per cent. of pure carbon, as against about 85 per cent. found in good coal.

LILLE, an important manufacturing town situated in the north of France, near the Belgian border. It manufactures textiles of all kinds, iron goods and sugar; population about 220,000.

LILLIBULERO, the name applied to a political song aimed at James II., and very popular in England previous to the Revolution, 1688. It derives its name from the refrain which ran "Lullibulero, bullen—a—lah." The words, which are mere doggerel, were written by Wharton and were set to music by Henry Purcell.

LILLIPUT, a country mentioned in Swift's "Gulliver's Travels," which was inhabited by a race of pygmies no bigger than one of Gulliver's fingers.

LIMA, the capital of Peru, is situated a few miles from the Pacific coast. It is very unhealthy and much troubled by earthquakes. Lima contains the tomb of Pizarro, who, at the head of a Spanish force, took the town, 1535, and was murdered there a few years later; population 113,000.

LIME, or oxide of calcium, in its pure state is a whitish solid or powder, which is obtained by heating, or burning limestone in a kiln. It is slightly soluble in water. When water is added to freshly burnt lime, or quicklime, as it is commonly called, chemical combination ensues and a large quantity of heat is given off. Lime treated in this way is known as slaked lime. The most important compound of lime is chloride of lime, commonly called bleaching powder.

LIMELIGHT, a light which may be obtained by projecting an ordinary bunsen flame upon a piece of quicklime. The latter becomes incandescent, and a brilliant white light of high illuminating power is produced. Instead of the bunsen flame, a mixture of coal gas and oxygen, or of hydrogen and oxygen, is generally used. Limelight is used for magic lanterns and for scenic effects in theatres.

LIMERICK, the chief port on the west coast of Ireland, is situated at the head of the estuary of the Shannon. Its exports include bacon and dairy produce. Limerick was the last town in Ireland to surrender to William III., and then the inhabitants surrendered to General Ginkel, on condition that they should not be punished, and that they should retain their religious liberties. These conditions were embodied in the Treaty of Limerick, 1691. The Protestant party at Dublin repudiated this treaty, and Limerick was for some time after known as "the city of the violated treaty."

LIMESTONE, or calcium carbonate, is one of the most abundant of the rocks which compose the crust of the earth. Ordinary limestone, so called, is a hard compact rock with a grey or bluish grey colour. It is slightly soluble in water containing carbon di-oxide. When water which contains calcium carbonate in solution evaporates the latter is left behind, and thus stalactites and stalagmites are commonly found in limestone districts in which caverns usually abound. Chalk and statuary marble possess the same chemical composition as limestone; in fact, to scientists, they are known as limestone.

LIN'ACRE, THOMAS, *b.* 1460, *d.* 1524, a celebrated physician, who was for some time private physician to Henry VIII., and was one of the founders of the Royal College of Physicians.

LINCOLN, the capital of Lincolnshire, is situated on the river Witham. It is an important agricultural centre, manufactures agricultural implements, and possessing one of the largest horse-fairs in England. Lincoln cathedral is famous for its magnificent towers and its beautiful angel choir. The town was a place of considerable importance under both the Romans and Saxons; population about 49,000.

LINCOLN, ABRAHAM, *b.* in Kentucky, 1809, *d.* 1865, was the sixteenth president of the United States. He was elected in 1861, the election being fought largely on the slavery question. The civil war broke out shortly afterwards, and much of the success of the Federal government was due to his perseverance and practical good sense. He was re-elected president, 1865, but was assassinated in the following year by John Wilkes Booth.

LINCOLN, FAIR OF, the name given to a battle fought near Lincoln, 1217, in which the Earl of Pembroke, acting as regent for Henry III., defeated Louis, son of Philip II. of France. The battle is so called from the enormous amount of booty which fell into the hands of the victors.

LINCRUSTA, a material used as an ornamental covering for dados and ceilings. It is a mixture of paper, cellulose, etc., worked into a kind of paste with oils, and then made into a substance like paper and plaster with a pattern in relief.

LIND, JENNY, *b.* at Stockholm, 1820, *d.* 1887, a celebrated prima donna, commonly known as the "Swedish Nightingale."

LINEN, a cloth made of the fibres of the flax plant. The fibres which occur in the stem of the plant are separated from one another by soaking them in water. They are then dried, the woody portions removed and the fibres separated by combing into longs and shorts. The remaining operations are spinning the yarn and weaving it into cloth. The chief linen manufacturing districts of the British Isles are in Ulster, Fife and Forfar. In the former district, fine linen goods are made; Dunfermline specialises in table linen; and the coarser goods, such as canvas, are made at Dundee, Montrose, etc. There is also some linen manufactured in Yorkshire, at Barnsley and Leeds.

LINGUA FRANCA, "Free Tongue," the dialect employed in intercourse between Europeans and the inhabitants of the coast regions of North Africa and the Levant. It is a corrupt form of Italian, with an admixture of words from other languages, and proves of great use to travellers and business men trading in those districts. The term is also applied to any similar mixture of tongues used in commercial intercourse, e.g., the *Pidgin English* of the East.

LINIEVITCH, GENERAL, *b.* 1843; a Russian general who saw active service against the Tartars, in the Russo-Turkish War, and during the Boxer rising in China. During the Russo-Japanese War he commanded the Russian left, and offered the most stubborn resistance to the Japanese advance. After the Battle of Mukden he succeeded Kuropatkin as commander-in-chief.

LINNÆ'US, CAR'OLUS, *b.* 1707, *d.* 1779, a famous Swedish botanist. He introduced a classification of plants based upon the sexual system, which possessed the merit of simplicity, but has since given way to one more scientific, which is based upon the comparison of all the organs of the plant. Linnæus was one of the pioneers in the modern study of natural science.

LINOLEUM, a floor covering composed of ground cork, colouring matter and oxidised linseed oil. A certain proportion of gum and the colouring matter necessary to produce the ground colour required are added to the oil, and the whole is formed into a paste by mixing it intimately with the ground cork. The paste is then pressed on to a backing of stout canvas and allowed to dry, after which patterns in various colours may be printed on the upper surface.

LINSEED, the seed of the flax plant, from which a valuable oil is extracted. Linseed oil is used in the manufacture of varnishes and printers' ink, and, mixed with lime-water forms a valuable remedy under the name of "Carron-oil," for burns. The seeds, after the oil has been extracted, are used as food for cattle.

LIPTON, SIR THOMAS, *b.* at Glasgow, 1850. Starting life as a small retail dealer, he gradually built up a huge business, with branches in all the most important towns in England, acquired tea and coffee estates in Ceylon, and developed an extensive cold storage business in the United States. In 1899, 1901, and 1903 he attempted, without success, to win the

world-famous yachting trophy, the America Cup. He was knighted in 1898, and created a baronet in 1902.

LIQUEUR, a mixture of alcohol and water flavoured with the oil obtained from some fruit. The best known liqueurs are Curaçoa, Maraschino, Kirsch, Benedictine and Chartreuse.

LISBON, the capital of Portugal, is situated upon a magnificent harbour, at the mouth of the Tagus. It does considerable trade with South America, Madeira and the Azores, and is a port of call for the Cape Liners. Lisbon was a place of considerable importance under the Romans, and from the 8th to the 12th century was held by the Moors. In 1755 it was almost entirely destroyed by a terrible earthquake, and since that date has been practically rebuilt.

LISTER, JOSEPH, *b.* 1827, a distinguished surgeon who occupied the post of "Surgeon-Extraordinary" to Queen Victoria, who in 1896 created him a baron. He is one of the leading authorities on bacteriology, and is famous as the introducer of the antiseptic treatment in performing surgical operations.

LISZT, FRANZ, *b.* in Hungary, 1811, *d.* 1886, a celebrated musician. He was one of the most brilliant pianists of his day, and his own musical compositions are very numerous.

LITHOG'RAPHY, a method of printing in which calcareous stones take the place of blocks or type. In this method of printing advantage is taken of the following facts, namely, that stones of the class used rapidly absorb grease, and that two greasy substances will mix, but that water and grease will not. Stated simply the process is as follows:—A drawing is made upon the stone by means of a pen or brush, the ink used being very greasy; a wet roller is then passed over the stone causing the parts not inked to become damp. Thus certain parts of the stone have absorbed grease, and others, water. Now, if the stone be inked by means of a roller, the ink will adhere only to those portions which are already greasy, the damp portions being left quite clean. Thus an impression of the drawing may be obtained.

LITMUS, a blue pigment which is obtained from a species of lichen. From the fact that acids cause the litmus to turn red, it is used by chemists as a test for acids. If the reddened litmus be placed in a liquid of an alkaline nature, it reverts to its original colour, and thus it can also be used as a test for alkalies.

LITRE, a measure of capacity used in the Metric System. See "Metric System" in *Index*.

LITTLE PARLIAMENT, sometimes called "Barebones Parliament," was summoned by Cromwell, 1653, and consisted of 140 members, all of whom were nominees of "Independent" ministers of the Gospel. They did practically nothing, and resigned after sitting for about five months.

LIVADIA. (1) The name given by the Turks to that portion of Greece which is bounded on the north by Thessaly and on the south by the Gulfs of Corinth and Aegina. (2) The name of a summer residence of the Czar of Russia, in the Crimean Peninsula.

LIVERPOOL, the second largest town and seaport of England, is situated on the northern shore of the estuary of the Mersey. Its docks extend for a distance of about 7 miles. A large portion of them are included in Bootle, a northern suburb of Liverpool, now forming a separate municipal borough; population about 60,000. The principal imports are raw cotton, grain, cattle and timber, and it exports manufactured goods of all kinds. Liverpool, for long a village of little interest, dates its importance from the opening up of the South Lancashire coalfield and the rise of the cotton industry, in the 18th century. (For population, etc., see p. 902.)

LIVERY, the name given to the distinctive dress which is worn by the household servants of the wealthy. In feudal times the servants of the household formed a fighting force in war time, hence the origin of the distinctive dress. The members of the various companies of the City of London formerly wore distinctive dresses or liveries, and hence are often known as the City liverymen.

LIVERY COMPANIES, of which there are seventy-eight in London, consisted originally of the members of the various trades exercised within the city. Admission is by inheritance or by payment. [Refer to "Livery Companies" in *Index*.]

LIVINGSTONE, DAVID, *b* at Blantyre, near Glasgow, 1813, *d.* 1873, a famous missionary and explorer, who spent the greater part of his life in Southern and Central Africa. He discovered Lake Ngami and the Victoria Falls, and explored parts of the Zambesi basin as well as the district in the neighbourhood of the great lakes. In 1871 fears were entertained for his safety, and Stanley was sent to find him. They met at Ujiji, but Livingstone resolved to remain where he was. Two years later, 1873, he succumbed to dysentery. His heart was brought to England and buried in Westminster Abbey.

LIVY (Titus Livius), *b.* 59 B.C., *d.* 17 A.D., was one of the greatest of the Latin prose writers and historians. He spent the greater part of his life at the Court of the Emperor Augustus, and wrote a history of Rome, only one-fourth of which is extant.

LIZARD, a reptile common in most of the tropical and temperate districts of the globe. Many species are recognised, one of which is poisonous. The length of the lizard varies from a few inches up to nearly 6 feet. It usually possesses four legs, though occasionally some or all of its legs may be absent. Four species are found in the British Isles.

LLAMA, an animal which is a native of South America. In many respects it resembles the camel, though it is smaller and possesses no hump. It is usually about 3 feet high, and is covered with long hair, either black or white in colour. The llama is a valuable beast of burden, and is closely allied to the vicuna, alpaca, and guanaco.

LLANDUDNO, a popular watering place situated in Carnarvonshire, in the neighbourhood of Great Orme's Head; population about 9,500.

LLANOS, the name given to the extensive plains in the northern parts of South America, in Venezuela and parts of Colombia. They are grassy plains, with here and there patches of woodland, and they make excellent grazing grounds. The total area of the Llanos is about 150,000 square miles.

LLOYD'S. See *Commercial Dictionary*.

LOAD LINE, the mark placed on the sides of British ships to indicate the extreme limit of immersion permitted by the Board of Trade in loading them with cargo. The mark, which is also known as Plimsoll's mark, from the efforts made by Samuel Plimsoll to secure the passing of the Merchant Shipping Act of 1876, consists of a circle with a horizontal line passing through its centre.

LOADSTONE, or magnetic iron ore, is so called from the fact that it possesses the power of attracting iron—the word meaning "leading" or "drawing-stone." It is found in large quantities in Sweden.

LOBSTER, a shell fish which is found in large numbers in the shallow waters around the British coasts. It is bluish-black in colour whilst living, though on boiling, the colour changes to a brilliant red. Lobsters are carnivorous, and are caught in traps of wicker work, which have been baited with dead fish.

LOCH LEVEN, a lake situated in the county of Kinross, Scotland. It contains several islands, upon one of which formerly stood Loch Leven castle, in which Mary Queen of Scots was imprisoned by the Scottish nobles, 1567–1568.

LOCKE, JOHN, *b.* in Somerset, 1632, *d.* 1704, one of the greatest of English philosophical writers. He was a close friend of the Earl of Shaftesbury, and on the latter going into exile, 1682, Locke accompanied him. He lived in Holland until the Restoration. His greatest work, entitled "Essay concerning Human Understanding," took him nearly twenty years to write, and is still regarded as one of the finest works of its kind. His other works include "A Treatise upon Government," and "Some Thoughts concerning Education."

LOCUST, the name applied to a class of insects, which closely resemble the grasshopper, and are found in the tropical and subtropical districts of Asia, Africa and America. Locusts are winged insects, and their length varies according to species from about 3 to 8 inches. The best known species is that known as the "Migratory Locust" which infests Southern Asia and Africa. These locusts travel about in enormous numbers, eating every green thing they meet with, and converting large areas of fertile country into an absolute desert. It is impossible to arrest or divert their flight, and visitations from them are the prelude to a period of famine. Within restricted areas their advance is checked by digging water-trenches or by laying waste with fire a strip of territory that crosses their direction of progress. In many districts the insects are eaten, after being roasted or salted.

LODESTAR, literally "a guiding star," the name applied in general to any star by means of which a traveller determines the direction in which he is journeying; it is most frequently applied to the North Pole Star.

LOFO'DEN ISLANDS, a chain of islands situated off the west coast of Norway, within the Arctic Circle. The waters in the neighbourhood form one of the most valuable fishing grounds in the world, the fish being mainly cod and herring. The season lasts from January to April or May. Between two of the islands, towards the south of the group, occurs the whirlpool called the *Maelstrom*.

LOG, a simple apparatus used to determine the velocity of a ship. It consists of a triangular piece of wood, weighted in such a way that it floats in a vertical position. It is connected with the logline at two of its corners. The log-line is divided into lengths usually equal to $\frac{1}{120}$ of a nautical mile, the points of division being indicated by different coloured pieces of cloth; the first twenty fathoms are usually undivided. The method of using the log is as follows:—One man stands with a half-minute sand glass, whilst another throws the log overboard; owing to the resistance of the water it remains practically stationary, and the log-line commences to run out. As soon as the first division passes over the bulwark the sand-glass is turned, and as soon as the sand has run out, the length of rope which has passed over is carefully noted. Since the lengths into which the log-line is divided bear the same ratio to a nautical mile (1:120) as a half minute

does to sixty minutes, the number of lengths (or knots) gives the velocity of the ship in nautical miles per hour. Many patent logs are now in use, but their construction is of an exceedingly complicated nature.

LOG, KING, a character in one of Æsop's Fables. The frogs desired a king, and Jupiter sent them an ordinary log of wood. They were dissatisfied with this, and Jupiter sent them a stork, which promptly commenced to devour its subjects.

LOGIC, the science of pure reason or the science of the laws of correct thinking. It may be divided into two branches, called respectively Deductive and Inductive Logic. Deductive logic is that branch which deals with the establishment of particular from general propositions, and Inductive logic deals with the establishment of general truths from particular propositions.

LOGWOOD, the wood of a tree which grows in Central America, and which is exported in large quantities from Honduras. The tree grows to a height of about 40 feet, and its wood furnishes a most valuable dye. The harder parts of the tree are cut into small pieces and thoroughly soaked, the resulting liquid being of a reddish-brown colour. This can be changed to red, blue green, etc., by the addition of certain mineral salts, and thus a dye of almost any colour may be obtained.

LOHENGRIN, is the hero of a German mediæval poem, the son of Parsival. He liberated Elsa, daughter of the King of Brabant, but concealed his name. Being pestered to reveal it when he had achieved fame in fighting against the Huns and Saracens, he was carried away by a white swan. The story forms the foundation of one of Wagner's best operas.

LOIRE, the longest river of France, rises in the Cevennes. After flowing for some distance in a northerly direction, it bends to the west and empties itself into the Bay of Biscay, after a course of about 600 miles. The Lower Loire flows through one of the most fertile districts in France. Its principal tributaries are the Allier, Vienne and Sarthe, and the largest towns upon its banks are Orleans, Tours, Angers and Nantes.

LOLLARDS, a name applied to the followers of John Wyclif. The Lollards were regarded as heretics by the Church, and in 1401 one of their leaders, William Sawtre, was burnt at the stake. They objected to the use of church decorations, images, and the celebration of the mass, and are regarded by many as the precursors of the Reformation. The origin of the word "Lollard" is uncertain. It may be derived from the Low German "lullen," "to sing," or it may be the name of one of the early leaders.

LOMBARDS, Italian merchants who first settled in England in the 13th century. They gave a great impetus to trade, and were for a long time the only persons who carried on any sort of banking. Our kings often found it convenient to borrow from them. Lombard Street perpetuates their memory.

LONDON, the capital of England and the largest city in the world, is situated at the head of the estuary of the Thames. The administrative county of London has an area of over 117 square miles, and contains a population of more than 4½ millions. It extends from Highgate and Hampstead on the north to Sydenham on the south, and from Woolwich on the east to Hammersmith and Putney on the west (all inclusive). The foreign element numbers about 66,000, of whom more than 55,000 live in the borough of Stepney. London returns sixty-one members to the House of Commons. For municipal purposes it is divided into twenty-seven boroughs, in addition to the cities of London and Westminster. The affairs of the city of London are managed by the City Corporation, and the general local authority for the remainder of London is the County Council. The Lord Mayor is elected by the former body. The port of London extends from London Bridge to Blackwall, and is one of the largest and busiest in the world. Its imports and exports are of a most miscellaneous character. The industries carried on in London are both numerous and varied; among the most important are brewing, distilling, the manufacture of tobacco and cigars, sugar refining, the making of musical instruments, cabinet making, clothing, boots and shoes, printing, shipbuilding and the manufacture of marine engines and boilers. The principal places of interest are the Houses of Parliament, Westminster Abbey, St. Paul's Cathedral, the Mansion House, the British Museum, South Kensington Museums, the Law Courts and the Tower.

LONDON BRIDGE connects the City of London with the borough of Southwark. The present structure was designed by John Rennie, and was commenced in 1824. It is a handsome granite bridge with a length of over 300 yards. The first bridge mentioned in history was a wooden one, which was destroyed in 1091 by a storm; the first stone bridge was built in the 12th century; it was lined with houses on both sides, and in the middle was a chapel dedicated to St. Thomas of Canterbury.

LONDONDERRY, a seaport situated on the north coast of Ireland at the mouth of the Foyle. The exports are mainly dairy produce, and the town contains some linen factories and distilleries. It is famous for the brave stand made by its inhabitants against the army of James II., 1689; population about 40,000.

LONDON GAZETTE, the government official newspaper. In it are published proclamations and orders, etc., and other official notifications. All bankruptcy proceedings are published in it, and all legal announcements required by law. It is issued on Tuesdays and Fridays.

LONGFELLOW, HENRY WADSWORTH, *b.* in Maine, 1807, *d.* 1882, one of the most famous of American poets. During the years 1835–1854 he occupied the chair of Modern languages at Harvard University. Among his best known works are "Evangeline," "Song of Hiawatha," "Courtship of Miles Standish" and "The Golden Legend." The work of Longfellow appeals much more strongly to British readers than is usually the case with the work of American poets.

LONG FIRM, the name given to a particular variety of fraud or swindling. A Long Firm fraud is one in which a number of persons, under the pretence of opening a business, secure the delivery of a large quantity of goods upon credit; with these they decamp and renew their operations in another district.

LONGITUDE, distance east or west from some fixed line. For most countries, in accordance with the decision of the Geodetic Congress of 1884, this line is the meridian passing through Greenwich Observatory. But French maps still reckon from Paris, and Portuguese maps from Ferro.

LONG PARLIAMENT, the name given to the parliament which conducted the civil war. It was summoned in 1640, and its first work was the impeachment of Strafford and Laud. It then drew up the Grand Remonstrance which led Charles I. to attempt the arrest of the "Five Members." In 1648 the Presbyterian members, to the number of about 100, who refused to sit in judgment upon Charles, were excluded, the act of expulsion being known as Pride's Purge. The remnant, fifty-three in number, known as the Rump Parliament, continued to sit until 1653, when Cromwell expelled the members and closed the House of Commons. On the death of Cromwell it was recalled by the army, dismissed by Lambert, recalled again by Monk, and finally, in 1660, the year of the Restoration, after issuing writs for a new parliament, it dissolved itself.

LORDS, HOUSE OF. Refer to *Index*.

LORELEI, a cliff about 430 feet in height, situated upon the bank of the Rhine, a few miles below Bingen. According to tradition, the Lorelei is the abode of a siren; it is the subject of an unfinished work by Mendelssohn.

LORENZO MARQUES, a town and harbour of Portuguese East Africa, on the north side of Delagoa Bay. It is one of the few really good harbours on the east coast of Africa, and is the best port for Pretoria, to which there is a railway; population about 7000.

LORETTO, a small town situated in Italy, near Ancona. In the cathedral of Loretto is shown a small building known as the *Casa Santa*, which is said to be the house in which Christ dwelt at Nazareth, and which was miraculously deposited at Loretto during the 13th century. The town is, in consequence, much visited by pilgrims.

LOTHIANS, THE, the three counties of Haddington, Edinburgh, and Linlithgow, in Scotland. For some centuries the whole district from Tweed to Forth was called Lothian, and formed part of the Anglian Kingdom of Northumbria, but in 1018 it was taken by the Scots, and the name got restricted to the portions above mentioned.

LOTTERY, a kind of gambling in which prizes are allotted by chance. In an ordinary lottery, each person participating buys a ticket, which bears a certain number. The prize winners are determined in the following way: tickets, which are numbered similarly to the lottery tickets issued, are placed in a hollow cylinder; whilst in another cylinder are placed an equal number of tickets, on some of which are inscribed the various prizes offered, the remainder being left blank. A ticket is drawn simultaneously from each cylinder, and when a prize ticket appears, the ticket drawn at the same time from the other cylinder indicates the winner. The operation is continued until all the prize-winners have been determined. Lotteries are illegal in England, but in most European countries they are allowed, under very stringent State supervision. It is worthy of notice that a portion of the money required to establish the British Museum was raised by means of a lottery.

LOTUS-EATERS, a people of Libya, North Africa, who lived in the Syrtic district around the gulf now called Sidra. The lotus is still plentiful there. It is a prickly shrub with a sweet fruit, from the juice of which a wine is made. When Ulysses' sailors, after their long wanderings, had tasted the fruit, they had no longer a desire to return home.

LOTUS, THE SACRED, a kind of water-lily that grows in the Nile and elsewhere. It is still regarded as sacred among the Chinese and Hindus, many of whom burn certain parts of the leaf and stalk before the shrines of their deity.

LOUIS XIV., king of France, 1643–1715, commonly called "Le Grand Monarque," was the son of Louis XIII. and Anne of Austria. He ascended the throne when

five years of age, and during his minority, his mother, assisted by Mazarin, acted as regent. His reign was marked by a long succession of wars, in which England took a prominent part. Louis married Maria Theresa, and on her death Louise de Maintenon. In 1685 he revoked the Edict of Nantes, thereby causing many thousand Huguenots to emigrate. His reign is sometimes called the Augustan age of French literature; among the noted writers who were his contemporaries were Molière and Corneille. Louis was the idol of the French people, but he was a despot in every sense of the word, and the enormous expenditure and consequent heavy taxation his wars entailed, undoubtedly paved the way for the French Revolution of 1789.

LOUIS XVI., *b.* 1754, *d.* 1793, ascended the throne in 1774. During his reign the French Revolution commenced, and Louis and his queen, Marie Antoinette, were guillotined. He was a man actuated by the best of motives, but was weak and incompetent. On his devoted head fell the punishment due to the selfish despotism of his Bourbon ancestors.

LOUIS NAPOLEON. See *Napoleon III.*

LOUIS PHILIPPE, *b.* 1773, *d.* 1850, was the eldest son of Duke Louis of Orleans. He supported the Revolution, but was suspected of aiming at the crown, and was compelled to leave France, 1793. He did not return until after the fall of Napoleon, having spent the intervening time in Austria, America and England. After the Revolution of 1830, and the abdication of Charles X., he was elected King of the French. He held this office until 1848, when another revolution occurred, and he retired to England, where his death occurred two years later.

LOURDES, a small town in the south of France, upon the river Pau, in the department of Hautes Pyrénées. In the neighbourhood is a famous sacred spring, the waters of which are reputed to possess remarkable healing properties. The town is annually visited by a large number of sick and infirm persons, who come to the church of Our Lady of Lourdes and bathe in the waters.

LOVE FEASTS. See *Agapæ.*

LOVER, SAMUEL, *b.* at Dublin, 1797, *d.* 1868, a celebrated Irish novelist and song-writer. Among his best-known novels are "Rory O'More" and "Handy Andy"; and of his songs, "Molly Bawn," "Father Molloy," "Four-Leaved Shamrock" and "The Low-backed Car" are well known.

LOWE, ROBERT. See *Sherbrooke, Lord.*

LOWELL, JAMES RUSSELL, *b.* in Massachusetts, 1819, *d.* 1891, a celebrated American essayist and poet. From 1857 until 1862 he acted as editor of the Atlantic Monthly, and on resigning that post became editor of the North American Review. His best known works are "My Study Windows," a series of essays, and "The Biglow Papers," a collection of poems in which he gives his views on some of the social and political problems then agitating the minds of American people.

LOWESTOFT, a fishing town, and seaside resort of Suffolk, 9 miles south of Yarmouth. It is a clean and well-built town, with a fine esplanade and good piers. The cliff on which it is built forms part of Lowestoft Ness, the most easterly cape of England; population 30,000.

LOW SUNDAY, the name given to the Sunday which follows Easter Day.

LOYOLA, IGNATIUS DE, *b.* in Spain, 1491, *d.* 1556, the founder of the order of Jesuits, or as it is properly called the "Society of Jesus." Loyola was originally a soldier, and was severely wounded whilst serving in the army of Ferdinand V. On his recovery he devoted his life to the service of the Church. The Society of Jesus was established about 1530, and formally recognised about ten years later. Loyola became the first general of the order, and remained in office until the end of his life. He was canonised in 1622.

LUBBOCK, SIR JOHN. See *Avebury.*

LUBECK, a free city of the German Empire situated on the coast of the Baltic Sea. It was formerly one of the chief seaports in Europe, and a leading city of the Hanseatic League, but its importance has considerably declined of late years owing to the opening of the Kaiser Wilhelm Canal, between the Baltic and the North Sea, as a result of which Kiel has taken much of its trade. The trade of Lübeck at the present time is mainly with other Baltic ports; population about 82,000.

LUCERNE, the capital of the canton of Lucerne, is the great tourist centre of Switzerland. It is situated on Lake Lucerne, and in the immediate neighbourhood are The Rigi and Mount Pilatus, both much visited by tourists; population 30,000.

LUCIFER, the morning star, the name applied to Venus; but when the latter appears as an evening star it is known as Hesperus. From a passage occurring in Isaiah xiv., "How art thou fallen from heaven, O Lucifer, son of the morning," in which the King of Babylon is referred to, the name has been in error applied to Satan.

LUCIFER MATCHES. See *Matches.*

LUCKNOW formerly the capital of the kingdom of Oudh, is situated on both banks of the Gumti, a tributary of the Ganges. It is an important railway junction and military centre. Lucknow played a prominent part during the Indian Mutiny. In the early days of the Mutiny it was defended by Sir Henry Lawrence, and partially relieved by General Havelock. The final relief was effected by Sir Colin Campbell in 1858; population 264,000.

LUDDITES, the name given to the rioters who during the years 1811–16 wrecked a large number of textile machines in the towns of Lancashire, Yorkshire and the north Midlands. They derived their name from one of their number, an idiot named Lud.

LUKE, SAINT, the author of the third Gospel and of the Acts of the Apostles. By profession he was a physician, but became the constant companion of Saint Paul in his missionary journeys.

LURCHER, a dog which is a cross between a collie and a greyhound. It is noted for its intelligence and speed, and is the favourite dog of the poacher.

LUSIAD, the national poem of the Portuguese, was written by Camoens, 1572. It deals with the deeds of Vasco da Gama and the various Portuguese navigators and soldiers who had been engaged in planting colonies in the East and West Indies.

LUTE, a musical instrument which was formerly much used, but which is now regarded almost as a curiosity. It closely resembled the guitar, and sometimes possessed as many as twenty-four strings.

LUTHER, MARTIN, *b.* 1483, *d.* 1546, was perhaps the greatest of the religious reformers of the 16th century. He was educated for the law, but in 1505 he became a monk. In 1517 Luther published a series of propositions condemning the sale of indulgences. These were at once declared to be heretical, and he was summoned to appear at Rome. He declined to go and was excommunicated, 1520. Luther now broke away entirely from the Roman Catholic Church. He burnt the Papal bull at Wittenburg, and proceeded to the formation of a reformed church. He was summoned to appear at Worms before the Emperor, Charles V. Here he defended himself ably, but found it expedient to conceal himself for a time. By 1530 his followers had increased to such an extent that he had nothing to fear from the Pope. Luther was an able writer, and his writings are fairly numerous, the most valuable being his translation of the Bible into German. As a man he was enthusiastic and excitable, but he was by no means the fanatic that his enemies represented him. He advocated peaceful measures where possible, and cannot be blamed for the acts of violence committed by the more ignorant of his followers. His "Table Talk," a collection of *obiter dicta*, shows him to have been a man of much personal charm.

LUXOR, a village situated in Upper Egypt, which occupies a portion of the site of ancient Thebes. In the neighbourhood are magnificent ruins, among which are those of the great temple of Rameses II.

LYALL, EDNA, *b.* at Brighton, *d.* 1903, the *nom de plume* of Ada Ellen Bayly, was a popular novelist. Among her best known novels are "Donovan," "Won by Waiting," "Knight Errant" and "Hardy Norseman."

LYCEUM, the name of an exercise ground and gymnasium of Ancient Athens. It was here that Aristotle expounded his system of philosophy, and the name has in consequence been applied since to various educational establishments.

LYCH GATE, a churchyard gate which is provided with a roof. Lych gates are still to be seen in various parts of England, especially in the counties on the Welsh border. Formerly the first part of the burial service was held at the gate of the churchyard, under the shelter of the roof.

LYCURGUS, *b.* in the ninth century B.C., the great legislator of Sparta, where, after his death, he was honoured as a god.

LYDDITE, a very powerful explosive, named from Lydd, in Kent, where it is manufactured. Its exact composition is a government secret, but it is largely composed of picric acid. Its shattering effect is about three times that of gunpowder.

LYELL, SIR CHARLES, *b.* in Forfar, 1797, *d.* 1875, the father of modern geology. He showed that the earth of to-day has been produced by continuous gradual changes, and not by great and sudden changes at long intervals, the view previously accepted. It was the study of his "Principles of Geology" that set Darwin to work to prove the same law in Biology.

LYNCH LAW, the name applied to the administration of justice by the mob. It is practised in certain lawless districts of the southern United States. The term is said to have arisen in the state of Virginia, where one of the early settlers, a farmer named Lynch, set himself up as an unofficial judge.

LYONESSE, the country of King Arthur, was probably situated somewhere in Cornwall. According to tradition it occupied a position between Land's End and the Scilly Islands, and is now beneath the Atlantic Ocean.

LYON KING OF ARMS, the Scottish official who superintends the armorial bearings of all the noblemen and gentlemen of the kingdom. With his heralds and pursuivants he is also responsible for all public ceremonials and proclamations. His state costume is very gorgeous.

LYONS, the second largest city of France, is situated on the Rhone, at the junction of that river with the Saône. It is the largest silk-manufacturing town in Europe. The Greeks established a colony

at Lyons about 550 B.C., and it was a place of some importance in the time of the Romans; population 470,000.

LYTTON, EDWARD BULWER (first Baron Lytton). See *Bulwer-Lytton*.

LYRE, the most ancient of stringed instruments. It possessed seven strings, but no stops, and consequently was capable of producing but seven notes. It was played either with the fingers or with a "plectrum."

LYRIC, originally a piece of poetry which was capable of being set to music, and sung to the accompaniment of the lyre. It is the name given generally to that species of poetry in which the writer expresses his own emotions.

MAB, QUEEN, a queen of the fairies, the subject of an early poem written by Shelley.

MAC, a Gaelic prefix, found in the names of persons, and signifying "son of."

MACADAM, JOHN LOUDON, *b.* at Ayr, 1756, *d.* 1836; the inventor of a method of making and mending roads known as "macadamising." The method is extremely simple. Fragments of some hard rock are placed upon the surface of the road to the depth of six inches or more; these are pressed together, some binding substance being scattered over them, and a hard compact surface is thus obtained. A new kind of macadam called *tar-mac* is now largely used. In this the stones are first covered with tar, and when rolled produce a hard, smooth surface like that of asphalt roads.

MACAO, a small island situated at the mouth of the Canton River. It is about 2½ square miles in area, and belongs to Portugal. The inhabitants are engaged in the tea, silk, and opium trades.

MACARONI, a foodstuff prepared in the form of long pipes or threads, the latter form being known usually as vermicelli. It consists of wheaten flour and water, and is made principally in Italy.

MACAULAY, THOMAS BABINGTON, *b.* in Leicestershire, 1800, *d.* 1859; a famous essayist and historian. In 1830 he entered parliament, but resigned shortly afterwards to take up the post of legal adviser to the Indian government. Returning to England, he was appointed Secretary of State for War in the Liberal Ministry, an office he held for three years. His present reputation is based upon his writings, of which the best known are a "History of England, from 1685–1697," "Essays," and "The Lays of Ancient Rome." Much of his best work was published in the Edinburgh Review. He was created a peer in 1857 in acknowledgment of his great literary ability.

MACBETH, a ruler of the Scottish district of Moray during part of the 11th century. He murdered Duncan, king of Scotland, and seized the throne, 1140. After reigning for 17 years, he was killed in a battle with Malcolm, the son of Duncan, 1157. These historical facts are embodied in Shakespeare's noble tragedy, *Macbeth*.

MACCABEES, a family of heroic patriots who delivered the Jews from the tyranny of Antiochus Epiphanes, King of Syria, 175–164 B.C. The most famous of these leaders were Mattathias and his son Judas Maccabæus. The latter, who succeeded his father, 167 B.C., completed the deliverance of his countrymen. His brother Jonathan became prince and high-priest, and the sovereignty of the Jewish nation was exercised by other Maccabæan princes until 37 B.C. This dynasty of priest-princes is usually called the Asmonæan dynasty.

McCLURE, SIR ROBERT, *b.* at Wexford, 1807, *d.* 1873; a famous Arctic explorer. He took part in the search expedition organised to find Sir John Franklin in 1848, and in 1850 succeeded in making his way along the north coast of Canada and discovering the north-west passage to India.

MACDONALD, FLORA, a native of the Island of South Uist, one of the Hebrides. She assisted Prince Charles Edward to escape from Scotland after he had been defeated at the battle of Culloden, 1746.

MACDONALD, GENERAL, SIR HECTOR, *b.* 1852, *d.* 1903; a gallant Scotsman who rose from the ranks, served nine years as a private in the Gordon Highlanders. He was promoted Lieutenant for his distinguished conduct at the battle of Candahar (July, 1880). His subsequent brilliant services, especially in the Battle of Omdurman, marked him out for the highest place, when his sad death by suicide closed his career.

MACDONALD, GEORGE, *b.* at Huntly, Aberdeenshire, 1824, *d.* 1905; Scottish poet and novelist, was educated for the ministry, but took to literature. All his novels, however, are replete with religious thought and purpose. "David Elginbrod," "Robert Falconer," "Malcolm," and "The Marquis of Lossie," are characteristic. He has written some beautiful poems.

MACDUFF, a more or less mythical individual, who lived in the 11th century. He is sometimes known as "The Thane of Fife," and is said to have assisted Malcolm, son of Duncan, to defeat Macbeth, 1157.

MACE. (1) A weapon used in the Middle Ages. It was a club about five feet long, with a metal head studded with spikes. It survives at the present time as an emblem of authority, used by public officials. (2) The outer covering of the nutmeg kernel, used as a spice, and obtained from the islands of the Malay Archipelago.

MACEDONIA, the name of a portion of the Turkish province of Roumelia. Macedonia attained the height of its power under the rule of Alexander the Great, about 330 B.C. The population at the present time is very mixed, consisting of Turks, Greeks, Albanians, and Wallachians. Partly owing to this, partly to differences in religion, but largely owing to Turkish misrule and Bulgarian intrigue, Macedonia is always on the verge of revolt. Massacres are of common occurrence—the inhabitants suffering at the hands of both Turks and Bulgarians. At the present time (1904), the slightest occurrence might produce a rebellion; in fact, it is only the fear of Austria and Russia that has kept Bulgaria from declaring war during the past two years. The inhabitants are engaged mainly in the rearing of goats and sheep. The principal productions are attar of roses and carpets. The chief town is Salonika, the terminus of an important railway from Vienna.

MACHIAVELLI, NICCOLO, *b.* at Florence, 1469, *d.* 1527, a famous Italian diplomatist and writer. His writings, which are both political and historical, are characterised by a calculating, cynical, and unscrupulous tone.

MACHINE GUN. The principal machine guns in use at the present time are the Maxim, Hotchkiss, and Colt, used respectively by the British, French, and Americans. They consist of a single barrel of small calibre, and after the first discharge are capable of firing a large number of bullets in rapid succession, the working being perfectly automatic. The gun is fed from a belt or bandolier. The Maxim differs from the others in that the energy of the recoil is used to perform the mechanical work. By it, the used cartridge is ejected, the gun reloaded, the lock closed, and the new cartridge fired with extraordinary rapidity. Over 400 discharges in a minute are possible, but a water jacket is necessary to keep the temperature down. The amount of water used is about a gallon, and at the rate of 400 shots per minute, this is boiling in about 90 seconds. The Hotchkiss and the Colt are not provided with this jacket. In these the heat is dissipated by increasing the surface of the barrel, and so quickening the radiation of the heat. In the Hotchkiss this increase is effected by fitting metal rings on the barrel; in the Colt, by using a very thick barrel. In both forms the mechanical operations are effected by using a portion of the gas produced by the explosion of the powder. They are much simpler in construction than the Maxim. The rate of discharge is slightly higher in the Hotchkiss than the other two, 500 per minute against about 400, whilst the range of the Maxim is greatest, about 2,500 yards against 2,000.

MACINTOSH, CHARLES, *b.* at Glasgow, 1766, *d.* 1843; a celebrated chemist, the inventor of the fabric of which macintosh cloaks are made. It consists of a thin sheet of india-rubber sandwiched between two sheets of woven fabric.

MACKAY, CHARLES, *b.* 1814, *d.* 1889; journalist, popular poet, and war correspondent. His real forte was song-writing: "Cheer, Boys, Cheer," "There's a Good Time Coming," and "To the West," set to music by Henry Russell, took the world by storm. He was war correspondent to the *Times* during the American Civil War.

MACKAY, JOHN WILLIAM, *b.* in Dublin, 1831, *d.* 1902; the "Silver King," went to New York when quite young. In the rush to Nevada he was one of the first, and acquired great wealth through his shares in the "Bonanza" silver mine.

MACKENZIE RIVER, a Canadian river, rising in the Rocky mountains, and flowing into the Arctic Ocean. It is about 1,100 miles in length, and flows through a fertile district. It was discovered and explored in 1789 by Alexander Mackenzie, an officer of the North West Fur Company.

MACKENZIE, SIR ALEXANDER. See under "Explorers" in *Index*.

MACKENZIE, SIR MORELL, *b.* 1837, *d.* 1892; a great authority on throat diseases; studied medicine in London, Paris, and Vienna. He had a great share in establishing the Throat Hospital in Golden Square. His reputation caused him to be summoned to attend the Emperor Frederick in 1887, whose cancer, however, he could not cure. His "Manual of Diseases of the Throat and Ear" is a standard work.

MACKEREL FISHING. The chief fishing grounds are on the south and west coasts of the British Isles and the east coast of North America. Mackerel are usually caught with a drift net, left in the water during the night. In shallow waters, seine nets are sometimes used. The shoals appear in British waters in May or June.

McKINLEY, WILLIAM, *b.* 1843, in the State of Ohio, *d.* 1902; president of the United States from 1897 until his death. In 1890 he was chairman of a committee which drafted a revenue bill, imposing heavy duties upon imports, especially manufactured goods. This bill is known as the McKinley Tariff Bill. In 1897 he was elected president, defeating the Republican candidate, William Bryan. During his term of office, the Spanish American War was fought, and the tariffs increased by the passing of the Dingley Tariff Bill. In 1901 he was re-elected, but was shot in September of the following year, at Buffalo, by an anarchist named Czolgosz. He was a most popular president, both at home and in Europe.

MACLAREN, IAN. See *Watson, John.*

MACLISE, DANIEL, *b.* 1806, *d.* 1870; an artist. His best known works are the two frescoes, each 45 feet long and 12 high, in Westminster Hall, one representing the meeting of Wellington and Blucher, the other the death of Nelson.

MACMAHON, MARSHAL, *b.* 1808, *d.* 1893; a French military commander. He commanded the French division at the storming of the Malakoff, Sebastopol, 1855. In 1859 he led the combined French and Sardinian army, which inflicted a crushing defeat upon the Austrians at Magenta, in Lombardy. During the Franco-Prussian War he was in command of an army corps. He was wounded, and surrendered to the Germans at Sedan, 1870. In 1873 he became President of the Republic, an office which he resigned in 1879, owing to disagreements with the Republican party.

MACPHERSON, JAMES, *b.* 1738, *d.* 1796, claimed to be the discoverer of the Ossian poems, the work of a Gaelic writer of the 3rd century. The publication of these poems led to a heated discussion, but it has since been proved beyond a doubt that they were Macpherson's work.

MACREADY, WILLIAM CHARLES, *b.* in London, 1793. *d.* 1873; a great actor. He began to act in 1810, and left the stage in 1851. His Shakesperean plays marked an epoch in English stage management. He was especially successful in Macbeth, Lear, King John, and Iago. His American tours ended sadly in a riot promoted by his rival, Forrest, in which seventeen people were killed.

MADAGASCAR, the third largest island in the world. It is situated on the east coast of Africa, from which it is separated by the Mozambique Channel, which is about 250 miles wide. Its area is about 230,000 square miles, and its population is estimated to be nearly four millions. Minerals are fairly abundant, but the people are mainly engaged in agriculture, and are noted for their skill in metal work. The capital is Antananarivo, and the chief port Tamatave; the exports are hides, rubber, and dyewoods. Since 1895 it has been under French protection, the ruling race previously being the Hovas.

MADEIRA ISLAND, the most important of a group of islands situated in the Atlantic Ocean, about 700 miles west of Lisbon. It is a Portuguese Colony with a dry climate, specially suitable for consumptive patients. The population is about 140,000, and the principal town and seaport, Funchal, is a port of call for Atlantic steamers. The principal exports are fruit and wine.

MADONNA, a representation, in painting or statuary, of the Virgin, frequently with the Child Christ.

MAD PARLIAMENT, held at Oxford in 1258. The barons attended armed, and forced Henry III. to agree to the appointment of a council, whose special work was to reform the government of the country.

MADRAS, the third town and seaport of India. It is the capital of the division of Madras, and is situated on the east coast of the peninsula. Much money has been spent on the construction of harbour works, but goods have still to be landed in surf boats and lighters. The native town is very unhealthy. The principal building is the citadel, Fort St. George. Madras was founded by the English in 1639, and, with the exception of the period 1746–9, during which it was occupied by the French, it has remained in their possession ever since. It has now an important university. Its principal exports are teak, tobacco, and sugar, and much of its trade is with ports situated to the east.

MADRID, the capital of Spain, population 540,000. It is situated on a lofty and dreary plateau. The climate is one of extremes; the summers are intensely hot, and the winters so cold that skating is not uncommon. The importance of Madrid is purely political. Its principal buildings are the Royal Palace and the Royal Picture Gallery.

MÆANDER, a river in Asia Minor. Its serpentine course has made its name expressive of the windings of a stream.

MÆCE'NAS, a Roman statesman who lived in the time of the Emperor Augustus. He is famous as a patron of literature, Horace and Virgil being amongst those whom he encouraged.

MAELSTROM, a whirlpool situated off the coast of Norway, near the Lofoden Islands. It is perilous at certain states of the wind and tide, but otherwise can be crossed without much danger.

MAFEKING, a small town in British Bechuanaland. It is one of the most important posts on the railway from Capetown to Salisbury, and is about 700 miles from the former town. It is famous as the town from which Jameson started on his famous raid in 1895, but will be remembered for the heroic stand made by its garrison under Colonel (now General) Baden-Powell during the Boer War. From the outbreak of the war in October, 1899, until the following May, it successfully resisted all efforts to take it. At one time General Cronje, with 8,000 men, attempted its capture, though later the besieging force was much smaller. Altogether the Boers lost during the siege about 1,000 men and 5 guns. A few days before the actual relief by Colonel Mahon, a determined effort made by the Boers resulted in the garrison taking over 100 prisoners. The relief was effected (May 12th, 1900), 215 days after the commencement of the war. Colonel Plumer, who had been making heroic efforts to relieve the place from the north, entered the town a few days later.

MAFFIA, a secret society whose headquarters are in Sicily. The society exists mainly for the protection of smugglers, though its avowed object is the overthrow of the government. Its members do not resort to violence, except to avenge personal wrongs.

MAGDALA, a stronghold in Abyssinia. It is situated about 9,000 feet above sea level. It was taken by storm and destroyed by Sir Robert Napier in 1868, during the Abyssinian war.

MAGDEBURG, a strongly fortified town on the River Elbe. It is the capital of the province of Prussian Saxony, and its strategic importance is due to the fact that it commands the direct road from Cologne to Berlin. Its inhabitants (about 215,000) are mainly engaged in the manufacture of beet sugar and spirits. In the 17th century, the device known as the Magdeburg hemispheres was constructed by the Burgomaster, Otto von Guericke, the inventor of the air-pump. It consists of two immense hemispheres, the edges of which fit each other exactly, and is intended to illustrate the great pressure of the atmosphere. The burgomaster had the air withdrawn from the interior of the hemispheres, and then attached a horse to each, to pull in vain in opposite directions.

MAGEE, WILLIAM CONNOR, *b.* 1821, *d.* 1891; bishop of Peterborough for twenty-three years, and Archbishop of York for a few weeks; combined oratorical gifts of a high order, both as preacher and speaker, with wit, humour, and practical common-sense.

MAGELLAN, FERDINAND, a Portuguese navigator, who in 1520, commanded the first expedition which sailed round the world. He did not finish the voyage, being killed in a fight with the natives of the Philippine Islands.

MAGENTA. (1) A small town in Lombardy, the scene of a battle between the French and Austrians in 1859, in which the latter suffered a severe defeat. (2) One of the aniline dyes, obtained from coal tar and named from the battle fought in the year of its discovery.

MAGGIORE, LAGO, or Lake Maggiore, is situated in the North of Italy, but partly in Switzerland. It is the second largest of the Italian lakes, being 39 miles long and 7 miles broad, and is noted for the beauty of the scenery in the neighbourhood. The river Ticino passes through it.

MAGI, the priests of the ancient Persians. They were the teachers of the people, and were deeply versed in astrology. The name was afterwards applied generally to men who possessed a reputation for great wisdom.

MAGIC, the name used to account for any striking occurrence when the producing causes are unknown, or not understood. In early times the name was applied to sorcery and witchcraft.

MAGIC LANTERN, an optical instrument invented in the 17th century, by means of which an enlarged image of photographs, or of pictures and diagrams painted with transparent varnish on glass slides, is projected on a screen in a darkened room. The lantern is a cubical box, to the front of which is fixed a horizontal tube in two parts, one sliding within the other. At the anterior end of the movable portion a double convex lens is placed, and a second lens of small focus is inserted at the junction of the fixed tube with the lantern, and just behind it a slit is made for inserting the inverted slides. Within the lantern is a powerful lamp, the light of which is adjusted in the focus of a concave reflector, and level with the tube. The rays are reflected on to the fixed lens, which directs them upon the slide. The movable lens then receives them, and forms an image of the brightly illuminated picture, and projects it on to the screen. This image may be made larger or smaller, by increasing or diminishing the distance between the two lenses. In the best lanterns, an arc light, or an oxyhydrogen lamp, is used.

Dissolving views are produced by having two similar lanterns, placed side by side, and directed towards the same part of the screen. A metallic diaphragm closes the aperture of one lantern, while that of the other is being opened, and, as a result, the image projected by the one merges into that projected by the other.

MAGNA CHARTA, the great charter of English liberty, which the barons compelled King John to sign at Runnymede, near Staines, in 1215. It enacted: (1) that taxes should not be levied without the consent of the Great Council, (2) that justice should not be delayed or denied to any man. (3) that no man should be imprisoned or outlawed but by the judgment of his equals, and by the law of the land. It contained many other clauses dealing with the matters which have ceased to be of interest at the present time, notably the severe forest laws, and the rights of the barons. It has always been regarded as the foundation of British liberty, and has been confirmed many times.

MAGNESIA, a town in Asia Minor, situated near Smyrna, and now called Manisa. It was at this town that the attractive properties of the loadstone were discovered, hence the terms magnet, magnetism, etc. It has also given its name to magnesia, the oxide of magnesium.

MAGNETISM. The ancients gave the name magnet to certain hard black stones, particularly abundant in Magnesia, in Asia Minor, which possessed the property of attracting to them small pieces of iron and steel. Somewhere about the 11th century it was discovered that, if a long piece of this stone were freely suspended by a fine thread, it possessed the remarkable property of pointing north and south. The discovery was made use of in navigation, and, from that time, the name *Lodestone*, i.e., leading stone, was applied to the natural magnet. Dr. Gilbert further investigated its properties, and, in 1600, he published the results of his experiments. He discovered that the attractive force was greatest at two positions on the stone. In a long piece these two positions are generally at or near the ends, and the force gradually diminishes to the middle, where no attraction takes place. The positions of greatest attraction he named the *Poles*, and the neutral line he called the *Equator* of the magnet. The stone is an oxide of iron, and is abundant in Sweden, Spain, Elba, and parts of the United States, though it does not always possess magnetic properties.

It has been found that the lodestone has the power of communicating its properties to small bars of steel, and without any loss of magnetism to itself. Thus, if a steel knitting-needle, or a piece of a watch-spring, be rubbed with one end of a lodestone about twenty times, from end to end, in one direction only, it will acquire all the powers of a magnet: it will attract small pieces of iron or steel; or, if balanced freely at the centre, will set itself in a position from north to south, and, if deflected from that position, will oscillate from side to side, and at length come to rest pointing in the original direction, the end that pointed north at first always returning to that position. If two such needles are brought close to each other, the north-seeking end (pole) of the one will repel the north-seeking pole of the other, and will exert an attractive force on the south-seeking pole. Every magnet, whether natural or artificial, has two poles. If it is broken into two parts, each part will still have two poles of opposite kinds. A magnetised bar of steel retains its magnetism almost indefinitely, but its powers may be destroyed by rough usage, or by heating the bar to redness. In addition to iron and steel, nickel, cobalt, chromium, and manganese are attracted by a magnet; and, a short time ago, Professor Dewar showed that, if a powerful magnet were brought near a vessel containing liquid oxygen, the liquid would spring upwards, and adhere to the glass nearest to the poles of the magnet.

The compass needle is a magnet properly mounted and balanced. The direction which it takes is due to the fact that the earth is a great magnet, and behaves as though a huge magnetic bar lay within its mass, with its poles not quite coinciding with the geographical poles. Sir James Ross discovered, in 1830, that the magnetic north pole was situated in Boothia Felix, a peninsula to the north of North America, just within the Arctic circle. The fixing of the position of the South Magnetic Pole was one of the scientific problems which the four expeditions to the Antarctic, in the period 1900–04, set themselves to solve. It is believed to be situated somewhere about 168° east longitude and 76° south latitude. In England the compass needle does not point due north and south, but in a direction which at present is deflected approximately 16° from the geographical meridian. The amount of this variation or *declination*, as it is called, varies from time to time. About the year 1660 the compass pointed true north. At the beginning of the 19th century, the north-seeking pole pointed in a direction 24° 17′ west of true north. Since then the declination has slowly diminished, and it is calculated that about the year 1976 the needle will again point due north and south, after which the declination will be to the east of north. Occasionally disturbances occur in the earth's magnetism which affect all the compass needles over a considerable region of the globe. Such occurrences are known as magnetic storms. A magnetic storm of unusual intensity occurred on October 31st, 1903, and greatly interfered with the working of the telegraph lines and cables over a wide area.

There is a close relationship between Electricity and Magnetism. The one is easily converted into the other. The passage of a current of electricity through a silk-covered, copper wire, wound in a spiral of many turns round a core of soft iron, converts the latter into a powerful magnet as long as the current is passing. Such a combination is known as an electro-magnet. Its strength depends on the strength of the magnetising current, and the number of turns of wire in its coils. A powerful magnet of this kind, bent into the shape of a horseshoe, is capable of supporting 200 lbs. for every square inch of area in the ends of the iron core. Electro-magnets are employed for the production of the magnetic field necessary for the inducing of a current of electricity by means of a dynamo, and in electric motors, as explained in the article on electricity. They are also used by magnet makers for magnetising bars of steel, an operation which is accomplished by moving the bar from end to end, across one pole of the electro-magnet, and then moving it in the opposite direction across the other pole. An electro-magnet is also an essential part of every electric bell.

MAGNIF'ICAT, the name given to the song of the Virgin Mary, (St. Luke i. 46–55). It forms part of the evening service both of the Anglican and Roman Catholic Churches. It obtains its name from the fact that the first word in the Latin version is *magnificat*, "doth magnify."

MAGPIE, a member of the crow family of birds. It is usually about 16 inches long, standing some 9 inches in height, and is dark purple and white in colour. It can be taught to repeat words and phrases, and is an arrant thief. It has always been regarded by the ignorant with superstitious fear. They supposed it to be in league with the Evil One, and that to meet it was an indication of coming misfortune.

MAGYARS, the ruling race in Hungary, a branch of the Mongolian family, closely allied to the Finns. They settled in Hungary in the 10th century, and are remarkable for their energy and courage.

MAHAN, ALFRED MAYER, *b.* in New York, 1840; one of the foremost living critics and writers on naval matters. His best known work is entitled "Influence of Sea Power on History." He was an officer in the U.S. Navy, and was appointed to the post of Naval Expert to the U.S. Government.

MAHDI, a descendant of Mohammed, who disappeared in the 9th century. It is believed by Mohammedans that he will reappear and establish their religion throughout the world. There have been several pretenders to the title, the best known being Mohammed Ahmed, who caused the Soudan War of 1883–5.

MAHOGANY, a tree which grows in Mexico, Central America, and the West Indies. Its wood, which is very hard and capable of being beautifully polished, is much used in cabinet work.

MAHOMET. Refer to *Index*.

MAHRATTAS, a Hindu race who inhabit the north-western districts of the Deccan, in India. They were defeated by Sir Arthur Wellesley at Assaye, in 1803, and their territory became part of the British possessions.

MAID OF ORLEANS, Joan of Arc, a peasant girl of Lorraine, who in 1429 led the French army which compelled the English to raise the siege of Orleans. See *Jeanne d'Arc*.

MAIDS OF HONOUR, are the Queen's personal attendants, one of whom must be always in waiting. Queen Victoria had eight, but Queen Alexandra has only four. Each one is entitled to the prefix "Honourable" in virtue of her position.

MAIDSTONE. the county town of Kent, is on the Medway 7 miles south of Rochester. It is a very busy and thriving town and has an important trade in hops and other agricultural produce. It also possesses several paper mills and breweries; population 35,000.

MAIMONIDES, *b.* at Cordova, 1135, *d.* 1204; a famous Jewish writer and philosopher.

MAINTENANCE, CAP OF. See *Cap of Maintenance*.

MAINTENON, MARQUISE DE, *b.* in a prison at Niort, France, 1635, *d.* 1719; the second wife of Louis XIV. of France. She was, previous to her marriage, governess to one of his children. Her marriage was never openly acknowledged, but her influence knew no bounds in matters both of Church and State.

MAINZ, or Mayence, a strongly fortified town situated on the left bank of the Rhine, at its junction with the Main. The surrounding district is very fertile, and Mainz is the centre of an important wine district. It has a large river trade. The principal objects of interest are the Cathedral, the house of Gutenburg, the inventor of printing, and the remains of an aqueduct, constructed by the Romans, who founded the town; population about 85,000.

MAIZE, a cereal grown largely in the United States and South Eastern Europe. It is used in our country as fodder and in some countries it is mixed with rye to make black bread.

MAJOLICA, a valuable kind of pottery, deriving its name from Majorca, an island in the Mediterranean Sea, where it was originally made.

MAJUBA, a precipitous hill on the borders of the Transvaal and Natal, the scene of a battle fought, 27th February, 1881, between a British force of 650 men, under Sir George Colley, and a Boer force fighting for their independence. The British suffered a severe defeat, losing over 200 men in killed, wounded, or prisoners, Sir George Colley being amongst the slain.

MALACHI, the last of the "Minor Prophets." His book concludes with the prophecy of the coming of Elijah (John the Baptist).

MALACHITE, a variety of copper ore, green in colour, found in vast quantities in Russia, Australia, and Chile. Some of the finest specimens are cut and polished for ornamental purposes.

MALAGA, a province of Spain bordering on the Mediterranean Sea. The principal town, also called Malaga, is a seaport exporting the productions of the province —wines, fruits, and lead and iron ores; population about 130,000.

MALAKOFF, the strongest fortress of Sebastopol, in the Crimean War. Its capture by the French, 1855, compelled the Russians to evacuate the town.

MALAY ARCHIPELAGO same as the *Indian Archipelago.*

MALAY PENINSULA, the long narrow peninsula situated to the south-east of Burma, and connected with it by the Isthmus of Kra. It has an area of 70,000 square miles and an estimated population of four millions. The greater part is under British protection. There are two British colonies, Wellesley and Malacca, in addition to the adjoining islands of Penang and Singapore. The principal export is tin, one-half of the world's supply coming from this district. The inhabitants are Malays or Siamese, though much of the mining is done by Chinese coolies.

MALAYS, one of the divisions of the human race, found in the Malay Archipelago, Polynesia, Philippine Islands, and Madagascar. They are brown in colour, and have high cheek bones and obliquely set eyes. The pure Malays are a quiet race of traders and sailors, Mohammedans in religion, who at one time attained a high degree of civilisation.

MALIBRAN, MARIA FELICITA, née Garcia, *b.* 1808, *d.* 1836; one of the greatest prima-donnas the world has seen; made her first appearance in London in 1825. After a brief stay in New York, where she married M. Malibran, she returned to Europe. Her appearances were a series of triumphs, cut short by her early death at Manchester.

MALLEE SCRUB, a very dense growth of dwarf Eucalyptus trees found especially in South Australia, where there is a tract of 9,000 square miles covered with an unbroken expanse of this scrub.

MALMSEY, a wine obtaining its name from Malvasia, a seaport in Greece, from which it was originally exported. It is now made in Madeira, Sicily and Sardinia.

MAL'ORY, SIR THOMAS, the author of "Morte d'Arthur," a collection of legends, some original, concerning King Arthur and the Knights of the Round Table. Malory lived in the reign of Edward IV., and spent most of his life in France.

MALPLAQUET, a village in France on the Belgian border. It was the scene of a battle in 1709, during the war of the Spanish Succession, in which the French were defeated by a combined army of British and Germans, led by Marlborough and Eugene; 30,000 were slain.

MALTA, a rocky island situated in the Mediterranean Sea, south of Sicily. From 1522 until 1798 it belonged to the Knights of St. John of Jerusalem. The French then obtained possession, but Nelson took the island in 1799. It has remained in the possession of the British since then, and is an important naval and coaling station. Refer to "Malta" in *Index.*

MALTHUS, THOMAS ROBERT, *b.* near Guildford, 1766, *d.* 1834, a famous political economist. His best known work is entitled "An Essay on the Principle of Population." He was convinced that the population of the world was fast outgrowing the means of subsistence, and his methods of averting the evil came as a shock to society.

MALVERN, a health resort situated in Worcestershire. It possesses some famous medicinal springs, and the "Open air" treatment for consumptives is much practised. Its death rate, 10 per 1000, is the lowest of all the watering places of England; population about 16,500.

MAMELUKES, light cavalry soldiers forming the body guard of the Caliph of Egypt, in the 13th century. They mutinied and established a new dynasty, which lasted from 1254 until 1517. Even then they continued to exercise considerable power until the beginning of the 19th century, when there occurred a wholesale massacre of them, carried out under orders of the Sultan of Turkey.

MAMMALS, those members of the animal world whose young are suckled by the female for a short period after birth. They possess a backbone, a more or less developed covering of hair, and are warm blooded. Besides man and all the quadrupeds, they include the bat and the members of the whale, porpoise, and dolphin families. These three last differ from fish, in the possession of warm blood and of lungs, which necessitates their coming to the surface to breathe.

MAMMON, the "god of riches," in Assyrian mythology. It now signifies the spirit of avarice.

MAMMOTH, an extinct animal whose remains are abundant in the northern hemisphere, especially Siberia. In form it resembled a very large elephant, one nearly complete specimen measuring 16 feet long, and standing 9 feet high, possessing ivory tusks 9 feet long. The remains are valuable on account of the tusks.

MAMMOTH CAVE, a large limestone cave situated in Kentucky. The total length of its tunnels is estimated to be 150 miles, of which about 10 miles have been explored. Two remarkable species of fish are found in the cave, one quite blind, the other without even rudimentary eyes.

MAN, ISLE OF. See *Isle of Man.*

MANCHE, LA, the name applied by the French to the English Channel.

MANCHESTER, the largest of the cotton manufacturing towns of Lancashire. It is situated on the Irwell, a tributary of the Mersey, and upon an important coalfield. The town was founded by the Romans, and attained some importance in the 14th century, when the manufacture of woollen goods was introduced by Flemish weavers; its present importance dates from the introduction of machinery. The principal buildings are the Town Hall, the Exchange, the Cathedral, and Owen's College, the latter the seat of the recently constituted University of Manchester. Manchester was converted into a port by the opening of its Ship Canal, which was constructed in the years 1887–91, at a cost of about 15 millions sterling. It is 35½ miles in length and 26 feet in depth. (For population, etc. (not including Salford), see p. 902.)

MANCHURIA, a division of the Chinese Empire, situated to the north of China proper. It is 400,000 square miles in area, and has a population of 12½ millions, the majority engaged in agriculture and the rearing of cattle. The exports are beans, oil (obtained from beans), maize, wheat, barley, and hemp, silk and furs. The trade has decreased of late years owing to the unsettled state of the country. The principal towns are Mukden, Kirin, and Newchwang, the latter the chief port, situated near the mouth of the Liau River.

MANCHUS, the original inhabitants of Manchuria. They are a nomadic people, a branch of the Mongolian family engaged in the rearing of cattle, and numbering about 500,000. They would probably have disappeared as a distinct race before this, but for the fact that the ruling family in China is of Manchurian origin. The pigtail method of dressing the hair was introduced into China by the Manchus.

MANDALAY, the chief town of Upper Burma, is situated near the river Irawadi. The chief sources of wealth are fabrics, silver, teak and rubies; population about 180,000.

MANDEVILLE, SIR JOHN, the assumed name of a compiler of travels of the reign of Edward III. The work appeared in Latin, and received papal recognition. Versions in French, Italian, and Spanish exist, and the author is said to have made the English version on which is based his fame as the "father of English prose." There is little to be said in favour of the authenticity of either the travels or the English version. The work is evidently a compilation for the delectation of pilgrims to Jerusalem.

MANDINGO, name of the members of a negro tribe inhabiting Senegambia. They are Mohammedans in religion, and have attained a high degree of civilisation. They number about eight millions, and are engaged mainly in agriculture.

MANDRAKE, a plant found in southern Europe and Northern Africa. In shape it bears some resemblance to the human form, and the ancients invested it with miraculous powers.

MANGE, a scab or itch which affects the coats and skins of dogs and cattle.

MANGO, a tree found in tropical countries, which produces a kidney-shaped fruit. This fruit is one of the most common foodstuffs in the districts in which the tree grows.

MANGROVE, a tree found in swampy tropical districts. It grows down to the water's edge, and it spreads by means of aerial roots, a curious process, in which the drooping branches take root on reaching the mud. Its mode of growth helps in reclaiming swampy districts.

MANHATTAN ISLAND, the long narrow island upon which stands a large part of New York. It is situated at the mouth of the Hudson River, and is separated from Long Island by East River. It has an area of 22 square miles.

MANICHÆANS, a religious sect, followers of Mani, who lived in the 3rd century. They professed a religion which was a mixture of sun-worship, Buddhism, and Christianity. The sect survived in the Mediterranean countries until the 7th century.

MANILA, the capital of Luzon, the largest of the Philippine Islands. It is situated on the east side of the island, upon a fine harbour, and exports besides cigars and sugar a fibre known as Manila hemp, much used for cordage. It was founded in 1571 by the Spaniards, and remained in their possession until taken by Admiral Dewey during the Spanish-American War, 1897. It has a population of about 300,000, of whom 15,000 are Europeans.

MANIOC. See *Cassava.*

MANITOBA, an inland province of Canada. It has an area of 74,000 square miles, and a rapidly increasing population. It possesses an exceedingly fertile soil, and is one of the great wheat-producing districts of the world; its other crops are oats and potatoes. Manitoba became a province of the Dominion in 1870. The principal town is Winnipeg, situated on the Red River, near Lake Winnipeg.

MANLIUS CAPITOLI'NUS, a Roman leader. In 390 B.C. the Gauls attacked Rome, and would have taken the Capitol, had not Manlius, roused from his sleep by the cackling of the sacred geese, given the alarm to the garrison. He was thrown from the Tarpeian Rock five years later, on a charge of inciting the people to revolt.

MANNA, a sweetish liquid which exudes from the bark of a species of ash found in Italy and the district around Mount Sinai. It is gathered in the early morning, because at that time the cold causes it to congeal.

MANNING, HENRY EDWARD, *b.* at Totteridge, 1808, *d.* 1892. Originally a member of the English Church, he resigned the Archdeaconry of Chichester in 1850, and became a Roman Catholic. In the latter church he rose rapidly, and on the

death of Cardinal Wiseman, in 1865, he was appointed to the see of Westminster, which he held until his death. He was created a cardinal.

MANNY, SIR WALTER, the founder of the Carthusian Monastery, situated near Aldersgate Street, E.C., now known as the Charterhouse. He lived in the 14th century.

MANOA, the capital of *El Dorado*.

MANSION HOUSE, the official residence of the Lord Mayor of London. It is situated at the eastern end of Cheapside, in the heart of the City of London, and was constructed during the years 1739-1753, at a cost of about £70,000. The only portion open to visitors is the police court, over which the Lord Mayor presides. To view the various rooms special application must be made.

MANX, the original inhabitants of the Isle of Man. They are a branch of the Celtic race, and still retain their own language, a dialect of Gaelic, though practically all speak English in addition.

MAORIS, the members of the aboriginal race of New Zealand. They are a branch of the Malay family, and are a vigorous and intelligent race, brown in colour, with thick lips and straight black hair; they are very fond of tattooing their bodies. The bulk of the Maoris, who number about 40,000, are found in North Island.

MAPLE, a tree common throughout the northern hemisphere; about fifty species are known. Of the varieties found in England, the sycamore and plane tree are the most important; their timber is of considerable value. The sugar maple, so called because sugar is obtained from its sap, is found in Canada and the eastern districts of the United States. A small hole is bored in the trunk of the tree near the base and the sap drawn off through an elder tube. An ordinary tree will yield about five pounds of sugar each year. The leaf of the maple tree is the national badge of the Canadians.

MARABOUTS, men among the Berber tribes of North Africa who devote themselves to a religious life. They have very great influence among the common people, and many of them are, in their way, very devout; but others use their supposed sanctity as a cloak for their own selfish ends.

MARASCHINO, a very fine liqueur distilled from cherries and sweetened with white honey or the finest sugar. The best is made at Zara, in Dalmatia, and in Corsica. An inferior kind is made in Germany.

MARAT, JEAN PAUL, *b.* 1742, *d.* 1793; one of the most prominent leaders of the French revolutionists. He edited the paper which expressed the views of the revolutionary party, and wrote for it many inflammatory articles, in which he advocated wholesale murder. To escape punishment he was compelled to hide in the Paris sewers. He subsequently became a member of the committee of public safety and president of the Jacobin club. He was assassinated by Charlotte Corday, whose lover he had caused to be murdered.

MARATHON, a small village situated in Greece, about 20 miles north-east of Athens. In 490 B.C., it was the scene of one of the most famous battles in the world's history, in which the Greek forces, led by Miltiades, defeated the Persian army of Darius.

MARBLE, the name applied to various kinds of crystalline limestone capable of being highly polished. Marble is found in various colours, and is often beautifully veined. It has at all times been much used in decorative and artistic work. The pure white marble used for statuary is obtained from Carrara, in Italy.

MARCH, the third month of the year. It obtains its name from Mars, the god of war in Roman mythology. Among the Romans and in England, until the introduction of the Gregorian calendar, 1752, March was the first month of the year, and March 25th was the beginning of the legal year.

MARCONI, GUGLIELMO, *b.* at Bologna, 1875, a famous electrical engineer. He is the inventor of a method of transmitting telegraphic messages without the aid of wires. After pursuing his researches for some years, he succeeded, in 1899, in sending messages across the English Channel. Since that date he has improved his appliances and has sent messages from Newfoundland and Cape Breton to Cornwall, a distance of over 2,000 miles. His system enables ships to communicate with the land while on their voyage.

MARCO POLO, *b.* about 1256, *d.* 1323; a famous Venetian traveller. He explored parts of Central Asia, China, and South-Eastern Asia, districts previously quite unknown to Europeans. His accounts of the countries and peoples he had seen were generally discredited by his contemporaries, but subsequent explorations have proved that his statements were by no means fictitious.

MARCUS AURELIUS, *b.* 121, *d.* 180 A.D., the adopted son of Antoninus Pius, whom he succeeded as Emperor of Rome, A.D., 163. He was a scholar of considerable eminence and a philosopher of the Stoic school. His writings, entitled "Meditations," have been translated into many languages and are still widely read. Despite the fact that he conducted a vigorous persecution of the Christians, he ranks as one of the best of the Emperors of Rome.

MARDI GRAS, the name given by the French to Shrove Tuesday. It is the last and most important day of the carnival, which in France and other countries precedes the Lenten fast. The carnival lasts for three days, and is a period of feasting and general enjoyment, hence the term Mardi Gras, which literally means "Fat Tuesday."

MARENGO, a village situated in the north of Italy near the town of Alessandria. In 1800 it was the scene of a stubbornly contested battle, in which the French army, led by Bonaparte, defeated the Austrians. The French victory was largely due to a brilliant cavalry charge led by Kellerman.

MARGARET, SAINT, *b.* 1047 in Hungary, *d.* 1093; a queen of Scotland, the wife of Malcolm Canmore. She was the sister of Edgar the Atheling, and was educated at the court of Edward the Confessor. After her marriage she did much towards civilising her husband's subjects, and put new life into the Christian Church of Scotland. She was renowned for her piety and purity of life, and was canonised, 1250.

MARGARET, "The Maid of Norway," was the daughter of Eric II., King of Norway, and grand-daughter of Alexander III. of Scotland. On the death of the latter, which occurred when she was quite a child, she was the only direct heir to the Scottish throne. A council of regency was appointed, and arrangements were made to betroth her to the son of Edward I., but she died at the Orkney Islands on her way to Scotland.

MARGARET OF ANJOU, *b.* 1425, *d.* 1482; the wife of Henry VI. of England. She was the daughter of René, Duke of Anjou, and one of the conditions of the marriage settlement was that Anjou and Maine, which had been taken by the English in the preceding reign, should revert to the French. She was, in consequence, exceedingly unpopular in England. On the outbreak of the Wars of the Roses she took an active part in the military operations; she defeated the Duke of York at Wakefield 1460, and caused both him and his son, the Earl of Rutland, to be beheaded. In the following year she defeated Warwick, the king-maker, at St. Albans. In 1471 she was defeated by Edward IV., at Tewkesbury, her son was put to death after the battle, and for the next four years she was a prisoner. She was eventually ransomed by Louis XI., 1476.

MARGARET TUDOR, daughter of Henry VII., became the wife of James IV. of Scotland. From her the Stuart kings derived their title to the English crown. The only child of this marriage was James—afterwards King of Scotland—the father of Mary, Queen of Scots. After the death of James IV. she married Archibald Douglas. Lord Darnley, who married Mary, Queen of Scots, was her grandson by this marriage.

MARGARINE. By an Act passed in 1887 it was made the legal name for imitation butters made from beef-suet, milk, butter, and vegetable oils, with colouring matter.

MARIA LOUISA, *b.* 1791, *d.* 1847; was the daughter of Francis I. of Austria. In 1810 she became the wife of Napoleon, who had divorced Josephine his first wife in order that the marriage could take place. In Napoleon's absence from France she acted as regent; after his fall she returned to Vienna, and subsequently became the ruler of the grand duchy of Parma, in Italy. Here she contracted a marriage with her chamberlain, Count Neipperg.

MARIA THERESA, *b.* at Vienna, 1717, *d.* 1780; was the eldest daughter of the Emperor Charles VI. of Austria. The latter, previous to his death, had made an agreement with the European powers, called the Pragmatic Sanction, by which his daughter was to succeed him as ruler of Bohemia, Austria, and Hungary. On his death, in 1740, the Elector of Bavaria claimed Bohemia, and Frederick II. of Prussia seized Silesia. The war of the Austrian Succession ensued, Great Britain supporting the claims of Maria. The war was eventually finished in 1746, Frederick retaining Silesia, and Maria's husband being recognised as Emperor. In 1772 Maria Theresa was a party to the partition of Poland, receiving the province of Galicia as her share. The most famous of her children was the unfortunate Marie Antoinette.

MARIAMNE, a princess of the Asmonæan dynasty. She became the wife of Herod the Great, who ruled over Palestine 40-4 B.C. Herod was passionately fond, and also exceedingly jealous of her. On two occasions when he was compelled to leave Palestine he left her in the charge of a friend, with injunctions that she was to be put to death if anything serious happened to him. Mariamne heard of this and openly expressed her disgust at such brutality. This so incensed Herod that he caused her to be murdered, B.C. 29.

MARIE ANTOINETTE, *b.* at Vienna, 1755, *d.* 1793; the daughter of Maria Theresa and Francis I. of Austria. She became the wife of Louis XVI. of France, but was always very unpopular in that country. On the outbreak of the revolution, 1789, both Louis and his queen were thrown into prison. The latter intrigued with Austria and induced that country to make preparations for an invasion of France. When this became known the awful Reign of Terror occurred, during which both Louis and Marie Antoinette were executed, 1793. The revolutionists circulated many disgraceful tales about the queen, but though her excessive freedom of manners gave an air of probability

to them, there is little doubt that for the most part they were false.

MARINES, a military force, which is under the control of the Admiralty, and serves on the vessels of the British navy. There are two branches, the Royal Marine Light Infantry and the Royal Marine Artillery, and when on shore they are stationed at the various dockyard towns. Kipling's phrase "Soldier and Sailor too" aptly describes the marine. They number about 15,000.

MARINER'S COMPASS, THE, seems to have been known to the Chinese from very early times. Thus it is reported that after an action fought, about 2,600 B.C., an Emperor of China successfully navigated his fleet through a fog, by the aid of some instrument, which was probably a kind of compass. There is a mention of it in a Chinese dictionary dated about 120 A.D. The Mariner's Compass was also known to the Arabs a considerable time before Europeans became acquainted with its use. It is said to have been discovered, or possibly introduced into Europe, by an Italian about the year 1300. The same uncertainty exists with respect to the discovery of the variation of the compass. Both Columbus and Sebastian Cabot have been credited with the discovery, though it was probably known before this time. See *Magnetism.*

MARIONETTES, the name given to puppets or small figures representing human beings, which are worked by strings and made to perform various simple movements. These were in use among the ancient Greeks and the Romans, and became popular in Italy in the 17th century. The puppets were frequently made to perform little plays, the talking being done by the individual working the figures. The modern Punch and Judy show is a survival; but in this case the figures are moved by hand instead of by strings.

MARIUS, CAIUS, *b.* 157, *d.* 86 B.C., a famous Roman commander and politician; he was elected consul seven times. In 102 B.C. the Romans were thrown into a panic by the news that the Teutones and Cimbri were preparing to invade Italy. Marius, who had previously made his name in the war against Jugurtha, 107, was entrusted with the command of the Roman army. He defeated the Teutones in a great battle at Aquae Sextiae (Aix), and then marching south inflicted a crushing defeat upon the Cimbri in Lombardy. Some years later a dispute arose between Sulla and Marius concerning the command of the army which was being despatched against Mithridates, and Marius was forced to fly from Rome. He returned a short time afterwards and inflicted terrible vengeance upon the supporters of Sulla, many of them being ruthlessly put to death.

MARK, a coin pretty general in the Middle Ages in Europe, and still used in Germany, where it is the unit of the coinage. The old English mark was worth 13s. 4d.; the Scottish mark 1s. 1⅓d. (See "British and Foreign Coinage" in *Index.*)

MARK ANTONY. See *Antony, Mark.*

MARK, SAINT, the writer of the second of the Gospels. He is identified with the "John, whose surname was Mark," mentioned in Acts xii. 12. He accompanied Paul and Barnabas on their first missionary journey through Asia Minor as far as Perga, and there left them, apparently shrinking from the task before them. His Gospel was compiled largely or entirely from information obtained from St. Peter, whose secretary or amanuensis he was.

MARK TWAIN. See *Clemens.*

MARL, a sedimentary rock, that is, one deposited by the action of running water. It consists of a mixture of lime and clay, which crumbles after exposure to the atmosphere. It is largely used as a manure.

MARLBOROUGH, DUKE OF. See *Churchill.*

MARLBOROUGH HOUSE, the London residence of the Prince of Wales. It is situated at the western end of Pall Mall, and was built for John Churchill, Duke of Marlborough, from designs by Sir Christopher Wren, 1709-1710. The mansion was bought by the Crown, 1817, and was presented to the Prince of Wales, now King Edward VII., in 1860, soon after attaining his majority. On his accession it passed into the possession of Prince George of Wales.

MARLINSPIKE, a small iron tool, resembling a large pin in shape, used to separate the strands of a rope in splicing.

MARLOWE, CHRISTOPHER, *b.* 1564, *d.* 1593; a famous dramatist. He was the first writer to make successful use of blank verse in drama, and he exercised considerable influence over Shakespeare, a fact which is made evident by a comparison of the works of the two writers. His principal plays are "Tamburlaine," "Jew of Malta," and "Edward II." He also wrote portions of Titus Andronicus and other plays which Shakespeare afterwards partly rewrote. He was killed in a tavern brawl at Deptford at the early age of twenty-nine.

MAR'MORA, SEA OF, is situated between the Black Sea and the Mediterranean. It is connected with the former by the Bosphorus, and with the latter by the Dardanelles. It is 150 miles long and 50 miles broad at its widest part, and contains several islands; the largest of these is called Marmora, from the fact that marble was, and is still, quarried there, and it is from this island that the sea itself obtains its name.

MAROCHETTI, CARLO, *b.* at Turin, 1805, *d.* 1868, a famous sculptor. The statue of Colin Campbell (Lord Clyde), situated in Waterloo Place, London, is the work of Marochetti, as is also that of Queen Victoria placed in George Square, Glasgow.

MARONITES, a sect of Christians, established about the 7th century, whose name is connected with the monastery of St. Maron. They inhabit the district in the neighbourhood of Mount Lebanon, Syria, and at the present time number about 250,000. The sect became a part of the Roman Catholic Church in the 13th century, though in some instances their regulations differ from those of that church, notably in the fact that their priests are permitted to marry.

MAROONS, the name formerly given to runaway negro slaves in Jamaica and Guiana. When the former colony passed into the possession of the British, a large number of slaves escaped to the hills and defied the authorities until 1795. The name was given to the members of this body. The word probably originated among the Buccaneers, who often "marooned" troublesome individuals, that is, placed them alone upon a desert or uninhabited shore.

MARQUE, LETTERS OF, a commission from a government authorising the captain of a ship to make war on, and capture the vessels of, another country. Ships thus commissioned were called privateers. Privateering was abolished by the "Declaration of Paris" (1856).

MARQUETRY, or inlaying, the name given to the process of fixing thin sections of various coloured woods upon a suitable foundation in such a way as to produce a design. The process is much used in the construction of ornamental floors. The term was formerly used in a wider sense, and applied to almost any kind of inlaying.

MARRYAT, FREDERICK, CAPTAIN, *b.* 1792, *d.* 1848; captain in the Royal Navy, and author of sea stories; went to sea at fourteen, and in the next twenty-four years saw stirring service in every clime. Then he settled down to write those unequalled stories which portray every phase of life in the navy. "Frank Mildmay" was his first novel; "Peter Simple" and "Jacob Faithful" perhaps his best.

MARS. (1) In Roman mythology Mars was the god of war and corresponded to the Greek god Ares. According to legend he was also the father of Romulus and Remus, the former of whom founded the city of Rome. The Campus Martius, the "playing fields" of the Romans, and the month of *March* derive their names from Mars. (2) Mars is also a planet whose orbit lies without that of the earth, and nearer to it than that of any other planet. The average distance of Mars from the sun is about 133,000,000 miles, and its minimum distance from the earth 34,000,000 miles. Its time of revolution is 686 of our days, and of rotation 24 hours 37 minutes. It possesses two small moons, each less than ten miles in diameter, one of which makes a complete revolution around the planet in about nine hours.

MARSEILLAISE, LA, the song of the French revolutionists during the great revolution. It was written and composed by a French officer, named De Lisle, and obtained its name from the fact that it was first sung in Paris by a band of revolutionists hailing from Marseilles. Its stirring melody soon made it very popular, but on the restoration of the monarchy it was suppressed. On the outbreak of the Franco-Prussian war the Emperor allowed it to be revived, and it is now regarded as the national song.

MARSEILLES, the third largest town of France and the first seaport. It is situated on the Mediterranean coast a short distance to the east of the delta of the Rhone. Its imports include grain, wine, coal, and oil-seeds. Marseilles was founded by the Phœnicians about 600 B.C., and its importance has recently increased rapidly owing to the opening of the Suez Canal. Two British Steamship lines make Marseilles a port of call, the Peninsular and Oriental and the Orient-Pacific; population about 500,000.

MARSHAL, EARL. Refer to *Index.*

MARSHALSEA PRISON, THE, formerly the prison attached to the court at which servants of the royal household were tried. It was situated in Southwark, near St. George's Church. In 1849 the Court established there was abolished, and Marshalsea Prison was reserved mainly for debtors. It has since been destroyed, but will always be remembered as the residence of *Little Dorrit,* the heroine of a story written by Charles Dickens.

MARSTON MOOR, situated about seven miles west of York, the scene of a battle, 1644, during the Civil War, in which the forces of Charles I., led by Prince Rupert, were defeated by the army of the parliament. The victory of the latter was largely due to the work of Cromwell's Ironsides, a cavalry force who made their first successful appearance in this battle.

MARSUPIALS, or pouched aminals, are so called because the female possesses an external pouch situated at the lower end of the abdomen in which the young are carried for some time after birth. Marsupials include kangaroos, opossums, wombats, bandicoots, etc., and with the exception of some of the opossums found in North America, are now restricted to Australia and the adjacent islands, but their fossil remains have been found in Europe.

MARTEN, an animal resembling the weasel in shape and size which feeds upon flesh and usually makes its home in trees. Martens are widely distributed, and include several species, the most valuable being the sable-marten.

MARTIN, SAINT, *b.* about 316, *d.* about 400. In 360 he founded a convent at Poictiers, and in 371 was appointed, against his wishes, Bishop of Tours. November 11th is dedicated to his honour, and this particular day is, in Scotland, one of the four quarter days of the year. In England the sheriffs are chosen on "the morrow of Saint Martin."

MARTINIQUE, an island belonging to France in the West Indies, and forming one of the group known as the Lesser Antilles. In 1902 Martinique was the scene of a terrible volcanic eruption, during which St. Pierre, the capital, was totally destroyed, and 30,000 persons perished. Mount Pelée, a volcano situated near the town, was partially destroyed by a terrific explosion, which tore away the side of the mountain and scattered the molten fragments over the town. The whole of the shipping in the harbour, with the exception of the Roddam, commanded by Captain Freeman, was destroyed. Captain Freeman, though he had lost the greater part of his crew, and was himself badly burnt, managed to navigate his vessel to St. Lucia. The productions of the island include sugar, molasses, rum, and fruits; population about 200,000, most of whom are negroes.

MARTYN, HENRY, *b.* at Truro, 1781, *d.* 1812, a famous missionary. He spent the best part of his short life in India and Persia, where, having mastered Hindustani and Persian, he translated portions of the Bible and Prayer-book into those languages. He died worn out by his labours at the age of thirty-one.

MARVEL, ANDREW, *b.* at Hull, 1620, *d.* 1678, a poet and writer who lived during the time of Oliver Cromwell and Charles II. He travelled abroad for some time and became famous as a linguist. On his return he became assistant to John Milton, who occupied the post of Latin Secretary to the Protectorate. He afterwards entered Parliament, and, during the reign of Charles II., distinguished himself by his patriotic opposition to the corrupt ministers of that king.

MARY I., Queen of England, *b.* at Greenwich, 1516, *d.* 1558, was the daughter of Henry VIII. and Catharine of Aragon. She was brought up in the Roman Catholic faith, and lived in retirement during the reign of her brother, Edward VI. She ascended the throne in 1553, and her reign was made notorious by the persecution of Protestants, about 300 of whom perished by fire. Mary married Philip II. of Spain, but her husband left England shortly after the marriage and did not return. Among other notable events of her reign were the execution of Lady Jane Grey and the loss of Calais.

MARY II., Queen of England, *b.* at St. James's Palace, 1662, *d.* at Kensington Palace, 1694, was the daughter of James II. and Anne Hyde. She was educated as a Protestant, and married William, Prince of Orange. After the revolution her husband was appointed king, on the understanding that he and his wife should be joint rulers. Mary took little part in the active work of government, sensibly leaving William III. to do as he thought best.

MARY, QUEEN OF SCOTS, *b.* at Linlithgow, 1542, *d.* 1587, was the daughter of James V. of Scotland and Mary of Guise. She became queen a few days after her birth, and a council of regency was appointed. Mary was educated in France and married the Dauphin. Her husband died in 1561, little more than a year after his accession, and Mary returned to Scotland, where she married her cousin, Lord Darnley. The marriage was unfortunate in every way, and within a year Darnley, in a mad fit of jealousy, led the party which murdered David Rizzio, Mary's Secretary. Darnley was murdered a short time after, and within three months Mary had married Lord Bothwell, who was suspected of the murder. This conduct caused a rebellion in Scotland, and Mary was imprisoned at Loch Leven Castle. She escaped and went to England to obtain the assistance of Queen Elizabeth, 1568. The latter kept her in confinement, and thus she remained until 1587, when she was executed for complicity in one of the several plots which aimed at dethroning Elizabeth and putting Mary in her place. Much has been written concerning the "beautiful but unfortunate" Mary, but she was certainly exceedingly impulsive, and was possessed of all the fatal charm of the Stuarts. She was the mother of James I. of England.

MARY OF GUISE, *b.* 1515, *d.* 1560, the queen of James V. of Scotland, and the mother of Mary, Queen of Scots. During the childhood of the latter she acted as regent of Scotland for a short time. She was a woman of many good qualities, but was far too much under the influence of the French court to be popular with the Scots.

MARY OF MO'DENA, *b.* 1658, *d.* 1718, the second wife of James II. of England, and the mother of James Francis Edward, the "Old Pretender."

MARYLAND, one of the United States of America. It is situated upon the Atlantic coast, is about 12,000 square miles in area, and has a population of about 1,200,000. The principal exports are tobacco, tinned fruit and oysters. Maryland obtains its name from Henrietta Maria, the queen of Charles I. This monarch, in 1632, granted a charter to Cecil, Lord Baltimore, to establish a settlement in this particular district. The principal town, Baltimore, obtains its name from the title of its founder.

MASHAM, LADY (Abigail Hill), *b.* in London, 1670, *d.* 1734, a cousin of Sarah Jennings, Duchess of Marlborough, by whose influence she became a lady-in-waiting to Queen Anne. The two ladies became deadly rivals, and Mrs. Masham eventually succeeded in bringing Harley into power, and was thus largely responsible for Marlborough's downfall. She married a Mr. Masham, who was afterwards raised to the peerage.

MASHONALAND, a district forming part of South Rhodesia, with an area of 114,000 square miles, and an estimated population of 270,000. The land is fertile, the climate healthy for Europeans, and certain parts are said to be rich in gold. The inhabitants, known as Mashonas, are a quiet race, who were for some time oppressed by their warlike neighbours, the Matabele. Mashonaland became a British protectorate in 1888, and is now governed by an official appointed by the Crown, assisted by a legislative council, partly representative in character.

MASK, a covering for the face, used amongst civilised nations to conceal the identity of the wearer. Masks are in common use among savage nations, by whom they are used to scare away demons, and are therefore hideously and grotesquely ornamented. Masks were used for a similar purpose by the Romans and ancient Greeks, and thus the faces of their dead were usually covered with them.

MASKELYNE, J. N., *b.* at Cheltenham, 1839; early studied the art of illusion, for at sixteen he gave a successful public exhibition. He could detect all the tricks of other conjurers, while his own remain secret. His long reign at Egyptian Hall, Piccadilly, was the source of amusement and amazement to thousands. His "Hall of Mystery" is now removed to St. George's Hall, Regent Street.

MASQUE, a kind of play which was very popular in England during the 16th and 17th centuries. It took the place of the more modern private theatricals, the performers, who wore masks, usually being persons of rank and fashion. Performances of masques were very common at the court during the period mentioned above. The greatest poets of the time wrote masques, the finest of these compositions, entitled Comus," being the work of John Milton.

MASQUERADE, usually a dance or ball at which all present wore masks. They were popular in France and Italy, and the gatherings were often of a most disreputable description. The modern custom of wearing masks, at certain types of fancy-dress ball, is a survival of the masquerade.

MASSACHUSETTS, one of the United States of America. It is situated on the Atlantic coast, is about 8,000 square miles in area, and has a population of nearly 2,800,000, mainly engaged in the manufacture of textiles, boots and shoes, paper and hardware. The first settlement was made in 1620 by the Pilgrim Fathers, who left England in the *Mayflower*, and landed at the spot at which the town of (New) Plymouth now stands. Massachusetts took a leading part in the war of the American Revolution, and the battles of Lexington and Bunker's Hill were fought in this State. The principal towns are Boston, Cambridge, Lynn, and Worcester.

MASSÉNA, MARSHAL, *b.* at Nice, 1758, *d.* 1817, was one of the most famous of Napoleon's marshals. He rose from the ranks, and for services in Switzerland and Italy was created Duke of Rivoli and Prince of Essling. In 1810 he was appointed commander of the French forces in Spain. Sir A. Wellesley (Duke of Wellington), who was in command of the British army, retired within the lines of Torres Vedras, and Massena, being unable to obtain provisions, was compelled to retreat. He led his troops in masterly style through Spain, but was deprived of his command by Napoleon, and spent the remainder of his life in retirement.

MASSINGER, PHILIP, *b.* at Salisbury, 1584, *d.* 1640, a celebrated English dramatist. Many of his plays were written in collaboration with Fletcher; they are carefully constructed but often very coarse. Among the best are "City Maiden," "Man of Honour," and "A New Way to Pay Old Debts."

MASSÓRAH, "tradition," a body of critical notes on the text of the Hebrew Scriptures, with rules for the guidance of copyists and statistics relating to the number of words and even letters in each book. The object in view was absolute correctness in writing and reading the Old Testament.

MASTIC, a straw-coloured resinous substance which is obtained from a species of evergreen found in the countries adjacent to the Mediterranean Sea. Mastic is obtained by making incisions in the bark of the tree, and appears in the form of pear-shaped drops. It is used in the manufacture of varnish.

MASTIFF. There are two kinds of mastiff, the European and the Asiatic. The European mastiff is a powerful, smooth-

haired dog with a large, heavy head, and hanging lips. Its colour is either black or tan, mixed with greyish white patches, and it stands from 25 to 30 inches high at the shoulder. It is remarkably faithful, and makes a good watch-dog. The Asiatic mastiff is somewhat larger than the European variety, and differs from it principally in the possession of a rough coat.

MASTODON, an animal, now extinct, which belonged to the elephant family. Its remains are widely distributed throughout Europe, Asia, and North America, and show that it was somewhat larger than the existing elephant.

MATABELE LAND, a part of Southern Rhodesia, is situated to the north of the Transvaal, and to the south-west of Mashonaland. It has an area of 61,000 square miles and a population of about 155,000. The Matabele are a warlike tribe closely allied to the Zulus, and, under King Lobengula, they bravely resisted the forces of the Chartered Company for some time. For particulars of annexation and government see *Mashonaland.*

MATADOR. See *Bull Fighting.*

MATCHES came into use during the years 1830–40, and are now made in enormous quantities in Sweden, Belgium and England. The ordinary method of manufacture is as follows:—The wood is usually yellow or white pine, and trees with a diameter of from 12 to 20 inches are considered most suitable. These trees are cut into blocks about 14 inches long. The bark having been removed, one of these blocks is placed upon a kind of lathe and a continuous band of uniform thickness turned from it; and at the same time, by means of suitably fixed knives, the band is divided into seven strips each 2 inches in width. The strips are divided into lengths, and by means of a knife machine cut into splints, the machine being capable of dealing with about 120 strips at a time. The splints are now arranged in frames and dried in an oven; they are then dipped first into paraffin, and then into the composition which is to form the substance of the head. The matches are dried and packed by hand into boxes. In some of the cheaper varieties sulphur is used instead of paraffin to make the wood burn readily, but this method produces a particularly evil-smelling match. The head of the ordinary match is usually composed of phosphorus, chlorate of potash and glue. In the safety match the phosphorus is placed upon the side of the box and the head made of sulphide of antimony, chlorate of potash and glue. By this means the danger of accidental ignition in reduced to a minimum. Vestas resemble matches in every respect except that the splints are replaced by short pieces of thin wax taper.

MATHEMATICS, the science which treats of the properties and relationships of numbers and magnitudes. It is divided into Pure Mathematics and Mixed or Applied Mathematics. The former branch deals with magnitudes in a purely abstract manner, and includes Arithmetic, Algebra, Geometry, Trigonometry, Differential and Integral Calculus, etc.; the latter applies the principles of pure mathematics to the study of nature. This branch includes Acoustics, Optics, Heat, Dynamics, Astronomy, etc.

MATHEW, THEOBALD, *b.* in Tipperary, 1790, *d.* 1856, is usually known as the "Apostle of Temperance." He was originally a priest, but in 1838 opened a temperance mission at Cork. He was an eloquent speaker, and met with astonishing success, over 150,000 converts being obtained in Cork alone. He continued preaching in other parts of Ireland, and in England and the United States. For his work he received a pension of £300 per annum from Government.

MATSYS, QUENTIN, *b.* 1466, *d.* 1531; a Flemish artist and portrait painter, said to have been a blacksmith in early manhood. His best sacred pictures are the altar-pieces at Louvain and Antwerp, while the "Money Changers" shows great skill in depicting character.

MATTERHORN, one of the peaks of the Pennine Alps, about 14,700 feet high. It is situated in southern Switzerland, near the town of Zermatt. The first successful attempt to climb the Matterhorn was made in 1865, and resulted in the loss of four lives. The ascent is still a matter of some difficulty and danger.

MATTHEW OF PARIS, a famous English chronicler or historian who lived during the reign of Henry III. His work was written in Latin, and includes a History of England from the Norman Conquest up to the reign of Henry III.

MAUNDY THURSDAY, the name given to the day preceding Good Friday. On this day, in the Roman Catholic Church, it is still the custom in some continental countries to make the washing of the feet of certain poor people a part of the ceremonial. In England the sovereign formerly did so, but the practice was discontinued in the reign of James II. The ceremony was followed by the giving of doles, and this part is still retained in England.

MAURICE, FREDERICK DENISON, *b.* near Lowestoft, 1805, *d.* 1872, a prominent churchman and social reformer. In 1846 he became professor of Theology in King's College, London, but on the publication of his "Theological Essays" he was obliged to resign his professorship. At one time he was a leader of the "Christian Socialists," and in 1856 was appointed principal of a "Working-men's College." In 1866 he was elected professor of Moral Philosophy at Cambridge. He wrote numerous works on theology and philosophy, and exercised a marked influence on the thought of his day.

MAURITIUS, an island, formerly called Isle of France, which is situated in the Indian Ocean, about 600 miles east of Madagascar. It has an area of about 700 square miles, and a population of 380,000, of whom 260,000 are Hindu coolies, mainly engaged in the production of sugar. Mauritius is a crown colony of Great Britain, and was acquired from the French during the Napoleonic wars in 1810.

MAUSO'LUS, a king of Caria, in Asia Minor, who died about 380 B.C. Artemisia, his wife, erected to his memory a beautiful sepulchre, which was considered to be one of the seven wonders of the world. From his name the word "mausoleum" is derived.

MAXIM, SIR HIRAM, *b.* in the state of Maine, 1840, a famous engineer and inventor. Amongst his many inventions the Maxim machine gun is the best known. Of late years he has spent much time and money in the invention of a flying machine.

MAXIMILIAN, FERDINAND, Archduke of Austria, *b.* 1832, *d.* 1867, was the brother of the Emperor Francis Joseph of Austria. In 1863 the French sent an expedition to Mexico, and under their influence, an assembly of Mexican notables adopted an imperial form of government, and offered the throne to Maximilian. He accepted, and on reaching Mexico, ordered the execution of all taken in arms against the new government. The United States interfered, and Maximilian, deserted by his followers, was compelled to take to the hills. He was captured and shot, 1867.

MAX-MÜLLER, FRIEDRICH. See *Müller, Friedrich Maximilian.*

MAX O'RELL, the pen-name adopted by Paul Blouet, *b.* 1848, *d.* 1903, a celebrated French journalist and lecturer. In 1872 he came to England as a newspaper correspondent, and during the years 1876–84 was the French Master at St. Paul's School, London. His writings deal mainly with the British and their foibles, and are marked by good nature and humour. Among his best known books are "John Bull and his Island," "John Bull and Co.," and "Jonathan and his Country."

MAXWELL, JAMES CLERK, *b.* at Edinburgh, 1831, *d.* 1879; one of the greatest and most original mathematicians and scientists of late years; was educated at Edinburgh University and at Cambridge. His chief work consisted of researches in electricity and magnetism, in heat and light, and in the behaviour of gases, on all which subjects his writings are very suggestive.

MAY, from the Latin *Maia,* the goddess of increase. The approach of this month was marked in old Rome by the feast Floralia, when great license was taken in outdoor rejoicings.

MAYBRICK, MRS. FLORENCE, the wife of Mr. James Maybrick, a Liverpool cotton broker. She was accused and found guilty in 1889 of attempting to poison her husband by means of arsenic derived from fly-papers. Her death sentence was commuted to penal servitude for life, but she was released in 1904.

MAY DAY, the first of May, formerly the occasion of a festival held to celebrate the return of Spring. In every village flowers were gathered in the early morning, a "Queen of the May" chosen and crowned with a garland of flowers, and a procession made to the village green, where the remainder of the day was spent in sports and dancing. The May-day celebrations were suppressed by the Puritans, and, although revived after the Restoration, 1660, have gradually declined in importance, until at the present time they have almost disappeared.

MAYENCE. See *Mainz.*

MAYFLOWER, the ship which carried the Puritan Fathers to America. The Puritan Fathers, 102 in number, left England, 1621, because they were denied freedom in religious matters. After a short stay in Holland they sailed for America, where they founded a colony at New Plymouth, in what is now the State of Massachusetts.

MAYNOOTH, a small village situated in County Kildare, Ireland. It is the seat of an important Roman Catholic College, which was established in 1795 by the Irish Parliament. In 1816 it was granted a permanent endowment of £25,000 annually. By the Irish Church Act, 1869, this was withdrawn and a capital sum fourteen times its amount granted in lieu thereof. It contains over 500 students preparing for ordination.

MAYOR, originally the title bestowed upon a steward. It is now applied to the chief magistrate of a corporate town. The mayor is elected by the councillors and aldermen. He presides over the meetings of the town council, and holds office for one year. The chief magistrates of London, Dublin, York, Liverpool, Newcastle, Manchester, Birmingham, Bristol, Leeds, Sheffield, Belfast, and Cork are Lord Mayors; and those of Edinburgh, Glasgow, Aberdeen, Perth, and Dundee are Lord Provosts.

MAY, PHIL, *b.* at Leeds, 1864, *d.* 1903; designer and caricaturist, had a hard time when he first came to London. His first

success was in connection with the St. Stephen's Review, after which he spent three years in Australia. Then he worked both on the "Graphic" and on "Punch," besides doing independent work such as "Phil May's Annual," etc.

MAZARIN, CARDINAL, *b.* 1602, *d.* 1661, a celebrated statesman who entered the service of the French government and, on the death of Cardinal Richelieu, 1642, became prime minister of France. He possessed great influence over Anne of Austria, whilst she was acting as regent of France, and later, over her son, Louis XIV.

MAZARIN BIBLE, probably a copy of the first Bible printed with movable type. It is so called because one was found in the library of Cardinal Mazarin. It is supposed to have been printed about 1450, and was divided into two volumes; about twenty copies are known to be in existence at the present time.

MAZEPPA, IVAN, *b.* 1644, *d.* 1709. a Polish soldier of fortune. He was accused of secretly meeting the wife of a Polish nobleman, and as a punishment, was stripped and tied on the back of a horse, which carried him to the Ukraine district of Southern Russia. He was kindly received by the Cossacks, and attained a position of considerable influence amongst them. Although he was admitted to the friendship of Peter the Great, he entered into a secret alliance with Charles XII. of Sweden, and fought in his army in the battle of Pultova. He escaped from the battlefield and spent the remainder of his life in Turkey.

MAZZINI, GUISEPPE, *b.* at Genoa, 1807, *d.* 1872, a celebrated Italian patriot and political agitator, who spent his life in endeavouring to unite the various sections of Italy under a republican form of government. In 1848 he was successful in establishing a republic, which survived about a year. He refused to recognise Victor Emmanuel when the latter became King of Italy, 1861.

MEAL-TUB PLOT, an imaginary plot concocted by Thomas Dangerfield in 1679, accusing the Roman Catholics of a design to murder Charles in order to set James on the throne. He said that papers about the plot were concealed in a meal-tub in the house of a Roman Catholic lady. Dangerfield was accidentally killed as he was being whipped back from Tyburn.

MECCA, the birthplace of Mohammed, the sacred city of the Mohammedans, and the nominal capital of Arabia. The great Mosque contains the Caaba (which see) and all Mohammedans are expected to make at least one pilgrimage to it. More than 100,000 persons visit it as pilgrims annually. Since 1517 Mecca has been in Turkish hands, and has been visited by Christians on very few occasions, and then only in disguise; estimated population 60,000.

MECHANICS, the science which treats of force and the action of force upon matter. It is subdivided into Kinematics and Dynamics. *Kinematics* considers the motion of a body without reference to the force producing that motion. *Dynamics* is divided into two sections, Statics and Kinetics. *Statics* deals with bodies in a state of equilibrium, and considers the forces which produce that state; *Kinetics* treats of bodies in motion with reference to the forces causing that motion.

MEDALS, pieces of metal, usually circular in form, which are struck or cast to commemorate some notable event of historical importance. In England they date from the reign of Henry VIII.: since 1793 a medal has been struck to commemorate every great naval or military victory. In the case of a prolonged campaign, the plan adopted is to have one medal, which is served out to all taking part in the campaign, whilst those present at any particular victorious engagement receive a bar or clasp, bearing the name of the engagement. This bar is attached to the ribbon by which the medal is suspended. The most coveted of English medals is the Victoria Cross, instituted in 1856, and bestowed for conspicuous bravery in action; it is in the form of a Maltese Cross.

MEDE'A, in classical mythology, a sorceress, the daughter of Aetes, king of Colchis. She assisted Jason to obtain possession of the Golden Fleece, and afterwards became his wife.

MEDIA, the name formerly given to a district situated south of the Caspian Sea. As an independent state, Media attained the height of its power about 700 B.C. It was conquered by Persians and annexed by them 558 B.C.

MEDICI, the name of a distinguished Italian family, the members of which attained great power in Florence and Tuscany during the 14th, 15th and 16th centuries. The founder of the family's greatness was Giovanni de Medici (*b.* 1360, *d.* 1429), who amassed a large fortune in trade, and used his money to obtain political power. His descendants adopted the same means to keep this power, and for a considerable time the Medici were almost absolute rulers of Florence. The members of the family were distinguished by their generous patronage of art and literature, though several acquired also an unenviable reputation for cruelty, vice and tyranny. Cosmo de Medici 1389–1464), and Lorenzo (1448–1492), surnamed the Magnificent, were two of the greatest. One of Lorenzo's sons became Pope in 1513 as Leo X., and another Medici became Pope as Clement VII., by whom our Henry VIII. was excommunicated. Catherine de Medici became the wife of Henry II. of France in 1533, and Maria de Medici, the wife of Henry IV. of France in 1600. The family became extinct about 1740.

MEDI'NA, a small town situated in Arabia. It is the second great holy city of Mohammedans. Medina contains the tomb of Mohammed, who took refuge there after his flight from Mecca, 622 A.D.; population about 16,000.

MEDITERRANEAN SEA, the sea which separates Europe from Africa. It is connected with the Atlantic Ocean, of which it forms a part, by the Strait of Gibraltar, which in its narrowest part is only fourteen miles wide. Its extreme length is over 2,000 miles, and it has an area of nearly a million square miles. The Mediterranean Sea is practically tideless, and owing to the fact that the loss of water by evaporation is greater than the gain from the rivers, there is a current from the Atlantic through the Strait of Gibraltar. As a consequence of this evaporation the water of the Mediterranean is salter than that of the adjoining ocean. The principal islands are Corsica, Sardinia, Sicily, Malta, Cyprus and Crete, and the largest indentations of its coast, the Adriatic Sea, the Ægean Sea and the Gulfs of Lyons, Genoa, Cabes, and Sidra. The eastern part of the Mediterranean is sometimes called the Levant.

MEDJIDI, a Turkish order of knighthood and decoration instituted in 1852. It was bestowed upon a number of British officers who fought in the Crimean War.

MEDUSA, in classical mythology, one of the Gorgons. She was originally a most beautiful woman, but incurred the wrath of Minerva, who turned her hair into serpents, and caused her to present such a horrible appearance that any person looking at her was converted into stone. Medusa was slain by Perseus, and her head placed in the centre of the shield of Minerva, where it still retained its terrifying appearance.

MEERSCHAUM, a greyish-white or yellowish mineral which is found in parts of Asia Minor, Greece, Morocco, etc. It is a mixture of silica, magnesium, and water, and is capable of being highly polished. Meerschaum is made into pipes, which are highly prized by smokers on account of the markings made upon them by the nicotine.

MEERUT, a town and military station situated in India, between the Ganges and the Jumna. Meerut was the scene of the outbreak of the Indian Mutiny, May, 1857; population 119,000.

MEGAPHONE, an instrument used to carry the sound of the voice to a distance with little loss of intensity. It is used on ship-board for speaking to passing vessels, by "coaches" training crews for rowing, etc. It consists of a tube of metal or cardboard, conical in shape, and fitted with a mouthpiece. The waves of sound in passing through the instrument undergo a series of reflections. They are thus prevented from spreading in all directions, but are concentrated, as it were, towards the person they are desired to reach.

MEGATHERIUM, an extinct animal of the sloth species. Its remains are abundant in South America, and show that it was one of the largest and most powerful of land animals. The length of a full grown megatherium, including the tail, was about 18 feet; it was furnished with very short and tremendously powerful legs and a strong thick tail about 5 feet long. The animal fed upon the leaves and young shoots of trees, and its body was so constructed as to permit of its uprooting the trees, in order to reach its food.

MEGIDDO, an ancient city of the Canaanites, which was situated in the Valley of Jezreel. It was the scene of the battle in which Deborah and Barak defeated Sisera (Judges iv. and v.).

MEGRIM, the name of a kind of headache which affects one side of the head only in the region of the temple. The name is sometimes applied to a complaint from which horses suffer in hot weather, the symptoms of which are dizziness and staggering, accompanied occasionally by complete insensibility.

MEISSONIER, JEAN LOUIS, *b.* at Lyons 1815, *d.* 1891, a famous French painter. His pictures are, as a rule, very small, and remarkable for their extraordinary accuracy of detail. They fetch very high prices. "The Cuirassiers" being sold for £16,000.

MELANCHTHON, PHILIP, *b.* at Baden, 1497, *d.* 1560, the name assumed by Philip Schwarzerd, the assistant and friend of Martin Luther; the name Melanchthon is simply the Greek translation of the German. Melanchthon was a brilliant scholar and a zealous reformer, though he was much more tolerant than many of his fellow-workers. His writings are very numerous and include the "Augsburg Confession," an exposition of the Lutheran Creed.

MELANESIA, the name given to the group of islands situated in the Pacific Ocean, and extending from New Guinea to the Fiji Islands. The area of the group is about 390,000 square miles, and they contain an estimated population of about one million. The principal islands are New Guinea, New Britain, New Caledonia, New Hebrides, the Solomon Islands, Santa Cruz, the Loyalty Islands and the Fiji Islands, and they are practically all under either German, French, or British protection.

MELBOURNE, the capital of the colony of Victoria, and the largest town in Australia, is situated on the Yarra River, near its entrance into Port Philip Bay. It is a modern, well-built town which was founded in 1835, and became the capital of Victoria in 1851. The principal exports are gold and wool; population about 500,000.

MELBOURNE, LORD, *b.* 1779, *d.* 1848, the statesman who occupied the post of premier at the time of Queen Victoria's accession. He was one of the officials to whom fell the task of informing the young queen of the death of William IV., and consequently of her own accession.

MELCHIZEDEK, "King of Salem," the priest of the most high God," who is mentioned in Genesis xiv. 18.

MELINITE, a powerful explosive. It is a yellow crystalline solid and exceedingly dangerous to handle. Melinite is either pure picric acid, or a mixture of picric acid and ammonium nitrate. Picric acid is obtained by treating carbolic acid with nitric acid.

MELLITUS, the first Bishop of London. He attempted to introduce Christianity among the East Saxons. Mellitus was consecrated by Augustine A.D. 604, and was Archbishop of Canterbury, 619–624, being the third to hold that office.

MELODRAMA, the name originally given to a kind of musical play. At the present time a melodrama is a play which abounds in striking and sensational incidents, and one in which, generally speaking, probability is treated as of secondary importance. The tension, which is often considerable, is relieved by the introduction of low-comedy parts.

MELON, a plant extensively cultivated in tropical countries for its fruit, which is much used as food. There are several distinct varieties, of which the best known in this country are the Common or Musk Melon and the Water Melon. The former is a native of Asia, and its fruit is rounded in form with a diameter of from 5 to 12 inches. The water melon is grown both in Asia and America, and its fruit is rather larger than that of the Common Melon, frequently having a diameter of from 15 to 18 inches.

MELROSE, a small town situated in Roxburghshire. It contains the ruins of a famous Cistercian Abbey, which are considered to be the finest in Scotland. They are mentioned in Sir Walter Scott's "Lay of the Last Minstrel," and are visited annually by a large number of tourists.

MELTON MOWBRAY, a small market town situated in Leicestershire. It is the centre of the most popular hunting district in England. Melton Mowbray is also noted for its pork pies and Stilton cheese; population about 3,000.

MEMEL, a seaport of Prussia, in the Baltic Sea, at the entrance of the Kurische Haff; trade in corn and timber; population 20,000.

MEMNON, one of the heroes who fought on the side of the Trojans in the Trojan war. A celebrated temple at Thebes, in Egypt, was erroneously supposed to have been erected in his honour. The statue in front of this temple was said to give out a musical sound at sunrise.

MEMORY, the faculty of retaining and reproducing at will, mental or sensory impressions. Memory is so necessary even in the every day affairs of life, that its phenomena were early the subject of thought and observation. The power of memory seems strongest with regard to ideas recorded through the sight. Sounds seem to give the next strongest impression; we can all, even the most unmusical, remember a tune we have often heard, and like. Impressions derived from the senses of taste and feeling do not seem to last so well, and it is doubtful whether one can actually recall a smell. The power of memory shown by individuals is astonishing. Some people, like Julius Cæsar, never forget a face once seen; others, like Lord Macaulay, can repeat hundreds of lines of either poetry or prose that they have read over twice. [See *Mnemonics.*]

MEMPHIS. (1) An ancient town of Egypt, once the capital, now in ruins, on the left bank of the Nile, about ten miles above the Pyramids. (2) Town in U.S.A., in the State of Tennessee, on the Mississippi, 800 miles above New Orleans. The river is navigable for large vessels up to Memphis; and it is also an important cotton mart and manufacturing town. Population 100,000.

MENAI STRAIT, the long narrow channel between the Isle of Anglesea and Carnarvon. The Suspension Bridge, designed by Telford, was opened in 1825; the Britannia Tubular Bridge for railway traffic, designed by Robert Stephenson, in 1850.

MENDELSSOHN-BARTHOLDY, FELIX, *b.* 1809, *d.* 1847; the great musical composer and conductor. Born at Berlin, of Jewish parentage, he spent the later years of his life at Leipsic, where he died. He frequently visited England, and one of his last public acts was to conduct his "Elijah," at Exeter Hall. This work, together with his "Songs without Words," (Lieder Ohne Worte), will render him immortal.

MENDICANT ORDERS, certain orders in the Roman Catholic Church whose members give up all their property, and live upon alms. The principal are the Dominicans, Franciscans, Carmelites, and Augustinians.

MENELA'US, King of Sparta, the abduction of whose wife, Helen, was the cause of the Trojan War.

MENENIUS AGRIPPA, one of the early consuls of Rome, 503 B.C. His arguments, illustrated by the well known fable of "the belly and the members," healed the first great rupture between the Plebeians and the Patricians of Rome, 493 B.C.

MENNONITES, a Protestant sect that originated early in the 16th century and soon spread through Holland and Germany to Switzerland. They are named from Menno Simons (1505-61) who denounced the excesses of the Anabaptists, and set himself to reorganize the body on more rational lines. The sect still lingers, and is rather strong in America, where they bear a high reputation for integrity and simplicity of life.

MENTO'NE, a town of France on the Mediterranean, about 2½ miles from the border of Italy, a favourite winter resort of the wealthy. Population 15,000.

MENTOR, a faithful friend of Ulysses, and guardian of his son during his absence at Troy. From the wise counsel he always gave, the word Mentor has become an expression for wise counsellor.

MEPHISTOPH'ELES, (e-les) the name given to the devil in Marlowe's "Doctor Faustus," and Goethe's "Faust," hence a term applied to any cynical or malicious person.

MERCA'TOR (Gerard Kremer), *b.* 1512, *d.* 1591; the inventor of a method of making maps in which the meridians and parallels cut one another at right angles, thus making the distances appear greater as they get farther from the equator. The name *Mercator* was probably given to Kremer because of the usefulness of his projection to mercatores or merchants.

MERCIA, the last formed of the kingdoms into which the Saxons and Angles divided England after the conquest and expulsion of the Britons. It occupied the central part of England.

MERCILESS PARLIAMENT, a parliament summoned by King Richard II. in 1388, at the dictation of Thomas, Duke of Gloucester. By this Parliament the Duke of Suffolk and Robert de Vere were outlawed, and seven others of the king's ministers were ordered to be executed.

MERCURY. (1) A Roman deity, son of Jupiter and Maia. Originally the god of traffic and gain, he was, through the attributes of the Greek god Hermes being assigned to him, also looked upon as the messenger and herald of the gods, and the god of eloquence and of thieves. (2) The planet nearest the sun, from which its average distance is about 36 million miles. Its diameter is about 3,200 miles.

MERCURY. See *Quicksilver.*

MER DE GLACE, one of the most famous of Alpine glaciers, on the northern slope of Mont Blanc, above the valley of Chamouni.

MEREDITH, GEORGE, novelist and poet, one of the most strenuous writers of the latter half of the 19th century, was born in Hampshire in 1828. "The Egoist," "The Ordeal of Richard Feverel," "Evan Harrington," and "Diana of the Crossways" are perhaps his best novels.

MEREDITH, OWEN, the pseudonym of the first Earl of Lytton.

MERIDIAN, an imaginary great circle passing through any given place, and through the North and South Poles. The sun is "on the meridian" of a place, i.e., at its highest point in the heavens, at midday.

MERIVALE, CHARLES, *b.* 1808, *d.* 1893, dean of Ely from 1869 to his death, was educated at Harrow and Cambridge. He was one of the best examples of the union of athletic and mental powers. His "History of the Romans under the Empire" is an eminently readable book, and on the whole very reliable.

MERLIN, the name of an ancient British bard and magician, supposed to have lived during the time of the struggle between the Britons and the Saxons. He is a character in Tennyson's "Idylls of the King." Another set of legends locates him in what is now Scotland, and his grave is still shown near the Tweed.

MERMAID, a fabulous creature, half woman and half fish, said to inhabit the sea. The idea undoubtedly arose from the reports of sailors who had seen the manatee, sea-cow, or woman-fish, as it is called by the Portuguese. These huge fish, having breasts with which they suckle their young, are found in the mouths of African and American rivers.

MEROM, WATERS OF, a small lake in the upper course of the Jordan, identified with the present Bahr-el-Huleh.

MEROVINGIANS, the first dynasty of Frankish kings in Gaul. The name is derived from Mervig, king of the Salian Franks from 448 to 457. Pepin the Short finally deposed the Merovingians and caused himself to be crowned king of the Franks, in 751.

MERSEY, a river in the west of England separating Lancashire from Cheshire, and flowing into the Irish Sea. The Irwell, which joins it on the right bank flows past Manchester, while Liverpool stands near the mouth of the main river.

MERTHYR-TYDFIL, or **TYDVIL,** on the river Taff, in Glamorganshire, is one of the most important iron-smelting towns in the country. Much of the iron-ore here treated comes from Spain. (For population, etc., see p. 902.)

MERV, a town on an oasis of Turkestan, between Bokhara and Persia, occupies an important position with regard to the routes from Russia and Siberia to Persia

and India. The Russians took possession of the oasis in 1884. The ancient city of Merv has a most interesting history, dating back even to the time of Alexander the Great.

MESMER, FRIEDRICH ANTON, *b.* 1734, *d.* 1815; the originator of the doctrine of animal magnetism, also called mesmerism. The same power is professed now by certain persons under the name of Hypnotism.

MESOPOTAMIA, (between the rivers), the country between the rivers Tigris and Euphrates, extending from the Armenian Mountains to about Bagdad. It has an area of 55 000 square miles, most of it of extraordinary fertility when under good cultivation. Since the blighting rule of the Turks fell on it, in 1515, the land has been more and more neglected, until systematic cultivation now hardly exists.

MESSAGERIES MARITIMES, the leading steamship company of France, trading mostly with the East and with South America. Its fleet amounts to a quarter of a million tons, and comes sixth in importance. Marseilles is its headquarters.

MESSENGER, a thoroughbred horse, which was imported into the United States from England about 1788, and from which most of the celebrated American trotters derive their descent.

MESSIAH. (1) A Hebrew word equivalent to the Greek "Christos," the Anointed One. The word denotes, in the Old Testament, the Great Prophet whom the Jews expected to be sent by God to raise their nation to a state of political and spiritual domination. (2) An Oratorio by Handel, first performed in 1742. It is hard to say whether this, or Mendelssohn's "Elijah," ranks as the greatest oratorio.

MESSI'NA, the second city of Sicily, stands on the Strait of the same name. It is a place of call for many of the ships which pass through the Mediterranean to or from the Suez Canal. Population 156,000.

MESSINA, STRAITS OF, are between Italy and Sicily, 24 miles long and from 2½ to 14 miles wide. The famous Scylla and Charybdis were located here.

METAMORPHIC ROCKS, a term introduced by Sir Charles Lyell, and now generally adopted by geologists, to include the deepest system of rocks composing the earth's crust. These rocks have undergone a change in texture or structure through which they have lost their original sedimentary character, and become hard, shining, and crystalline. They include marbles, serpentine, graphite, and roofing-slate. From the fact that neither animal nor vegetable remains have been found in it, the system is also known as the *non-fossiliferous* or the *azoic* system.

METAMOR'PHOSIS. (1) In zoology, a term for certain well-defined changes undergone by certain insects and amphibians at different stages of their existence, as from caterpillar to chrysalis, or from tadpole to frog. (2) In ancient mythology the term is applied to the changes in outward semblance which gods and goddesses were wont to undergo, and which supplied material to many writers for their poetic fancy. The "Metamorphoses" of Ovid are still widely read and greatly admired.

METAPHOR, a figure of speech by which one thing is put for another which it only resembles in some quality or effect. Thus David speaks of God's law as being "a light to his feet and a lamp to his path." Metaphor plays an important part in the language of every man, whether he knows it or not, as when he speaks of a ship "ploughing" the waves. Hence language has been called "petrified metaphor."

METAPHYSICS, that branch of science or philosophy which deals, or attempts to deal, with existence as such. It treats of that which underlies all phenomena, giving unity and meaning to the whole system of things in the realm of both mind and matter.

METAYER SYSTEM, the system under which a large part of France and most of Italy is cultivated. The tenant, called *metayer*, supplies simply the skill and labour, the landlord supplying all else, and receiving generally half the produce.

METEMPSYCHO'SIS, a word denoting a migration of the soul from one body to another at death. It is better known under the name of the "transmigration of souls," a doctrine which still prevails in some parts of Asia, particularly India. Refer to "Transmigration of Souls" in *Index*.

METEOR, a small luminous body, seen for a few moments in the sky, and then disappearing, being either entirely dissipated, or falling to the earth as a mass of stone. There are various collections of small bodies travelling in different directions round the sun. The earth, in its orbit, now and then comes near one or other of these collections, with the result that some of the smaller bodies are attracted to the earth. Some of these bodies are exploded by the heat which their rapid flight through our atmosphere generates; others reach the earth, and are generally known as *aerolites*.

METEOROLOGY, the science of the laws which govern the weather; the science which treats of and investigates the various phenomena of the atmosphere. The importance of the subject to the farmer, the sailor, and the miner, as well as to mankind in general, can hardly be over estimated, and the increased attention paid to it of late years has resulted in many useful warnings being given to the three classes mentioned. The invention of the Barometer made "Meteorology" possible.

METHODISTS. Refer to *Index*.

METRE. (1) In poetry, the regular arrangement of syllables into feet, lines, and stanzas. A foot may contain two or three syllables, and it may have the accent on any syllable. Thus we arrive at five distinct kinds of feet: the *Trochee*, in which the accents fall as in "surplus"; the *Iambus*, as in "depart;" the *Dactyl*, as in "merrily"; the *Amphibrach*, as in "containing"; the *Anapæst*, as in "undesigned." The greatest of English poems are written in lines of five feet, or pentameters; and the commonest English foot is the iambic. Unrhymed iambic pentameters form the metre of *blank verse*, in which are written Shakespeare's plays and Milton's "Paradise Lost." (2) The unit of measurement in the Metric or Decimal System of Weights and Measures.

METRIC SYSTEM, THE. Refer to *Index*.

METRONOME, a small machine for marking intervals of time, used by musicians. It is practically an inverted pendulum moved by clockwork, and is made to go faster or slower by lowering or raising the weight.

METROPOLITAN POLICE COURTS. Of these there are fourteen, situated in various parts of London, presided over by twenty-five magistrates, receiving mostly a salary of £1500 a year. They must have been barristers of at least seven years' standing and actual practice previous to appointment, or else stipendiary magistrates in the provinces.

METROPOLITAN WATER BOARD was constituted by the Water Act of 1902. It consists of sixty-six members, representative of the London County Council, the London boroughs, the surrounding County and District Councils, and the Thames Conservancy. It took over the works and responsibilities of the eight large water companies, paying them a total of 42 millions as compensation.

METTERNICH, PRINCE VON, *b.* 1773, *d.* 1859, an eminent Austrian statesman and diplomatist, was born at Coblenz. After filling minor posts, he became Austrian minister at the Court of Dresden in 1801. From that time till 1848 he may be said to have shaped the policy and determined the action of Austria. It was he, more than any one else, who contrived the marriage between Maria Louisa and Napoleon; he it was who formed, in 1813, the continental coalition which gave the blow to Napoleon's power and led to his abdication and exile at Elba. On the re-settlement of Europe, after the final defeat of Napoleon at Waterloo, Metternich devoted all his energies to repressing what he termed the revolutionary tendencies of the age. At last the storm of 1848 proved too much for him, and he fled to England. On the re-establishment of monarchy in Austria he returned, but took no further open part in the government.

METZ, a town and fortress of Germany, in Alsace-Lorraine, which, previous to the Franco-German War in 1870–71, belonged to France. The loss of Metz, 1870, after a siege of two months, and the surrender of Bazaine with his army of 173,000 men, rendered the struggle of the French against the Germans hopeless.

MEXICO, the most southerly country of North America, is a federal republic, containing 27 States. With an area of 760,000 square miles, it has a population of only about 13½ millions. The country consists of a vast table-land, with a belt of more or less level land round the coast. The mineral productions of Mexico constitute its chief wealth. The precious metals still constitute two-thirds of the total value of its exports. So rich in silver were its mines that they are supposed to have furnished as much as the rest of the world. Agriculture is backward, and the roads are deplorable, but the railways, where they exist, are fairly good. Mexico revolted from Spain in 1810, from which time until 1876 it was in a state of constant revolution. The attempt of Napoleon III., 1864–67, to impose Maximilian, an Austrian prince, on the Mexicans, as their Emperor, was an utter failure, and resulted in the execution of Maximilian. In 1876 Porfirio Diaz, a Mexican general, became President of the Republic, and from that time the government has been stable and effective. Chief towns—Mexico, the capital, population 345,000, and Vera Cruz, the chief port, on the Gulf of Mexico.

MEXICO, GULF OF, a large body of water between North and South America, having the United States on the north and Mexico on the west and south. A portion of the equatorial current of the Atlantic flows into the Gulf by the southern entrance, and after getting heated in its passage round the Gulf, passes out by the northern channel, to flow over to Europe under the name of the Gulf Stream.

MEYERBEER, GIACOMO, *b.* 1791, *d.* 1864, was, like Mendelssohn and many other great musicians, of Jewish descent. At the age of five he improvised on the piano, and at nine was considered an accomplished pianist. Meyerbeer will be best remembered for his operas, especially "Robert le Diable," "Les Huguenots," "Le Prophète," and "L'Etoile du Nord."

MICA, a name given to a group of minerals which split very readily into very thin plates, nearly transparent. In some countries they are used as a substitute for glass in windows; it is also used for

gas-chimneys, and stove doors, because of its heat-resisting power.

MICAH, a prophet who lived during the reigns of Jotham, Ahaz, and Hezekiah, and so was contemporary with Isaiah, Hosea, and Amos. He foretold the destruction of Jerusalem and the birth of the Messiah at Bethlehem.

MICHAEL, SAINT, is mentioned in the Old Testament as the "great prince" of Israel. In the Revelation, his name is given first in the list of the seven archangels. From these facts it is inferred that he is the chief of the angels. Milton calls him "prince of celestial armies."

MICHAELMAS DAY, a festival instituted in 487, in honour of St. Michael and All Angels. In England it is one of the four quarter days on which rent becomes due.

MICHELANGELO BUONARROTI, painter, sculptor, and architect, was born in Tuscany, 1475, of an ancient and honourable, though not wealthy family. He early gained distinction as a sculptor in Florence, and under the patronage of Lorenzo de Medici he executed his "Battle of the Centaurs," and the "Madonna." Rome then claimed him for a time, and here among other work he executed his "Cupid." Another stay at Florence was cut short by a summons from Pope Julius in 1503, who wanted him to design his tomb, a work, however, which was never carried out. Julius' successor, Pope Leo, sent him back to Florence, to enrich the Church of San Lorenzo with his work, but this was interrupted by the siege of Florence, in the defence of which Michelangelo took an active part. In 1542 he was appointed architect of St. Peter's, Rome, and took an active interest in the progress of the Cathedral till his death. His achievements in painting were due rather to the persuasion of his friends than to his own inclination. Sculpture was undoubtedly the form of art in which he most excelled, though his frescoes remain as evidence of his great genius.

MICROBE. See "Bacteria" in *Med. Dict.*

MICROM'ETER, an instrument for measuring small distances or angles. One of the most common forms of micrometer is the vernier, employed on barometers and astronomical instruments to give accurate readings; another is the micrometer screw, whose head has its circumference divided into a great number of equal parts. The micrometers attached to astronomical telescopes are delicately adjusted to fine, movable threads, which cross the field of vision, and accurately determine the movements and direction of the heavenly body under observation.

MICRONESIA, a group of small islands lying between the meridians of 130° and 170° east longitude, and extending from the Equator to about 10° north latitude. Till 1899 they belonged to Spain, but were then handed over to Germany.

MICROPHONE, an instrument for increasing the intensity of faint sounds. It usually consists of a long piece of carbon loosely supported by two other fixed pieces. The fixed pieces are made part of the circuit of a telephone, and on a slight noise being made on the wooden support of the microphone, it is heard greatly augmented at the earpiece of the telephone.

MICROSCOPE, an instrument for magnifying the apparent size of small objects. It consists essentially of two lenses placed one at each end of a small tube. The one nearer to the object to be looked at gives an inverted and enlarged image of the object within the tube, while the eyepiece or lens near the eye still further magnifies this image. The dissecting microscope is of one lens only.

MIDAS, a fabled king of Phrygia, who begged that all he touched might turn into gold. The god Bacchus granted his request, but Midas soon wished it otherwise. When his food and drink became gold on touching his mouth, he was fain to ask the god to revoke his gift.

MIDDLE AGES, a period generally understood to extend from the destruction of the Roman Empire, towards the end of the 5th century, to about the time of the discovery of America, in 1492. It comprises the rise and fall of the Feudal System, with all its attendant struggles, evils, and benefits.

MIDDLESBOROUGH, a great iron manufacturing, and shipping town on the Tees, in Yorkshire. In 1829 a solitary farmhouse occupied the site. By 1900 it housed about 90,000 persons. Its rapid growth is due to the discovery of iron-ore in the adjacent Cleveland Hills. (For population, etc., see p. 902.)

MIDRASH, the exegesis, explanation, or interpretation of the Jewish Scriptures, as given after the Captivity by Ezra, and by succeeding rabbis and teachers.

MIDSHIPMAN, the second rank of combatant officers in the Royal Navy, cadets in training forming the first or lowest. The greater part of a midshipman's time is spent in study. For his course of training refer to "Midshipman" in *Index*.

MIKADO, the ruler of Japan. The office is hereditary only in the male line. Until 1868 the Mikado's sovereignty was only nominal, the real power being in the hands of the Shogun, or Tycoon, a military dictator, whose office was practically hereditary, so that the Shogun was regarded as the business head of the nation, although great reverence was paid to the Mikado as spiritual ruler.

MILAN, next to Naples the largest city in Italy, stands in the great plain of Lombardy, in the north-west of Italy. The Cathedral, commenced in 1386, and not yet entirely completed, is one of the most striking ecclesiastical edifices in the world. The theatre of "La Scala" is known by repute all over the world. Population exceeds 500,000.

MILAN, KING OF SERVIA, *b.* 1854, *d.* 1901; was the grand-nephew of the celebrated Milosh Obrenovitch, founder of Servian autonomy. He was adopted by his cousin Michael, and educated at Paris, where he was thought to show great talents. On the assassination of Michael in 1868, Milan was declared regent, although only 14 years of age, and in 1872 he assumed the government. His quarrels with his wife Natalie, his abdication in favour of his son Alexander, and his sudden death at Vienna, were matters of European interest.

MILAN DECREE, a proclamation issued from Milan in 1801 by Napoleon, forbidding all continental nations to whom he could dictate to deal in any way with England.

MILFORD HAVEN, a harbour in Pembrokeshire, 10 miles long and from one to two miles wide, one of the safest and most commodious in the kingdom. Pembroke, which stands on the southern side of the haven, is an important naval dockyard.

MILITIA, a body of troops raised for the defence of the country against invasion. Theoretically, all men between 18 and 35, with certain exceptions, are liable to serve, but the ranks are readily filled without having recourse to compulsion. The militia assembles annually for not more than 56 days' training, during which officers and men receive the same pay and allowances as those of the same rank in the regular army, and on disbanding, the privates receive a bounty of £1 or more.

MILK, CONDENSED, is simply milk from which a large proportion of the water has been removed by heating, sugar being generally added to preserve it.

MILKY WAY, THE, a luminous band seen on a clear night to stretch across the sky. It is really an innumerable host of stars, so distant as to be inseparable to the naked eye.

MILL, JAMES, *b.* 1773, *d.* 1836, was a native of Montrose, in Scotland. Educated at Edinburgh University, he soon took to literature, and in 1802 went to London. His "History of British India" brought him fame, and gained him confidential employment under the East India Company. He took a leading part in the foundation of University College, London.

MILL, JOHN STUART, *b.* 1806, *d.* 1873, son of the above, said "he never was a boy." His father early took his education in hand with good results intellectually. As a speculative reformer few could keep pace with him, but many of the reforms he advocated are now accomplished, especially with regard to the legal status of women.

MILLAIS, SIR JOHN, *b.* 1829, *d.* 1896, was born at Southampton of an old Jersey family. He early showed talent and became a pupil at the Royal Academy in 1840. In 1846 he became an exhibitor. With Holman Hunt and Rossetti he was responsible for the initiation of the "Pre-Raphaelite" movement. Many of his pictures, as "Cherry Ripe," "Bubbles," and "Cinderella" have been extensively reproduced in various forms.

MIL'LENARY PETITION, a petition presented by the Puritans to James I. on his accession, supposed to be signed by 1000 ministers, asking release from certain obligations enjoined by the Church of England.

MILLENNIUM, "a thousand years," a time during which the kingdom of the Messiah is expected by many to exist visibly on earth. Its establishment will, it is believed, be preceded by great portents and calamities.

MILLER, HUGH, *b.* at Cromarty, 1802, *d.* 1856; worked in his youth as a stonemason, and carried on his education in the evenings. It is as a geologist that his name will endure. His "Old Red Sandstone" was an undoubted contribution to the geological knowledge of the day.

MILLET, a cereal, native of the East Indies, but much cultivated in most warm countries. The grain is about ⅛ of an inch in length, and very nutritious.

MILLET, JEAN FRANCOIS, *b.* 1814, *d.* 1875; one of the greatest of modern French painters. His favourite subjects were of a pastoral character, as "Gleaners," "Sheep Shearing," and "Peasants Grafting." His masterpiece is the "Angelus."

MILNER, ALFRED, VISCOUNT, *b.* 1854, was educated at King's College, London, and at Oxford, where he had a brilliant career. He was for some time assistant-editor of the "Pall Mall Gazette," after which he served in Egypt under Lord Cromer in the Finance Department. His selection in 1897 to be Governor of Cape Colony was universally approved, and his able handling of affairs through the Boer War and afterwards, justly earned him a peerage. His "England in Egypt" is accounted a classic.

MILO, of Crotona, in Italy, was a Greek athlete famous for his strength. His greatest feat was his lifting up and carrying a live ox four years old on his

shoulders. He is said to have perished miserably by wolves while his hands were caught in the cleft of a tree which he had endeavoured to rend.

MILTI'ADES (a-des), a celebrated Athenian general, one of the ten chosen to lead the army against the Persians when they landed at Marathon, B.C. 490. It was by his advice that the Athenians risked the battle, and when the victory was won, and the generals had to decide by vote who had done most to gain it, each was found to have one vote as the best general, but Miltiades had nine votes as the second best.

MILTON, JOHN, *b.* 1608, *d.* 1674; the great English epic poet, was born in Bread Street, Cheapside. His father, John Milton, a well-to-do scrivener, was a Puritan, and a man of much intelligence and refinement. Perceiving the promise of his son, the scrivener devoted himself to securing for him the best education possible. At St. Paul's School, and at Cambridge, Milton greatly distinguished himself. And during the next six years, which he spent quietly at his father's seat at Horton, in Buckinghamshire, he produced the pastoral poems "L'Allegro" and "Il Penseroso," as well as "Comus" and "Lycidas." A visit to Italy brought the leisurely part of his life to a close; henceforward he was to be for some years the strenuous political writer. He became Latin Secretary to the Protector's Government, and did good service in this capacity. His tractate on Divorce, the "Areopagitica" and the "Eikonoklastes," show his prose powers at their highest. His marriage was about as unfortunate as could have been. He espoused, in 1643, Mary Powell, the daughter of an Oxfordshire squire, an ardent Royalist and Church woman, too volatile to have the faintest sympathy with her husband's views or ways. After a few weeks she went home, and did not return to Milton till 1645. She died in 1652, the year in which his sight wholly failed, leaving him three daughters, who proved no comfort to him. In 1663 Milton married again. The Restoration set him free for his real work, and between that event and his death he produced "Paradise Lost," "Paradise Regained," and "Samson Agonistes." Milton was buried in St. Giles's, Cripplegate, beside his father.

MIMICRY, a certain adaptation of an animal or insect to its surroundings, with the result that it often escapes observation. Certain animals are found with white fur in winter but their coat in summer is brown, so as to be undistinguishable at a distance from the surrounding herbage. Certain insects imitate the bark of trees, dried sticks, &c. This is not conscious imitation, but the result of the fact that the individual thus protected has escaped its natural enemies, and the peculiarity, at first accidental, has become hereditary. Mimicry also consists in the striking resemblance that one animal or insect bears to another to which it is not closely related; thus, certain moths look like wasps and many flies like bees. The fear of their supposed stings has a protective effect.

MINCH, THE, a channel off the north-west of Scotland, between the mainland and the island of Lewis. The "Little Minch" is between the island of Skye and Long Island.

MINCIO, THE, a tributary of the Po, rises in the Tyrol, and flows south into Lake Garda, and thence to the Po, a distance of 93 miles. In this part of its course it passes Mantua, near which town the great Latin poet, Virgil, was born.

MINDEN, a town in Westphalia, on the Weser, population 25,000, is one of the most ancient towns in Germany. Near it a combined army of Germans and English gained a great victory over the French, 1759.

MINERAL OIL. See *Petroleum.*

MINERAL WATERS, waters containing mineral matter in solution, and having medicinal value and use according to the mineral contained; they usually contain either carbonic acid gas, iron, salts, or sulphur. Bath, Leamington, and Harrogate are the towns best known in England for these waters. Waters artificially aerated and manufactured are usually known as "mineral waters."

MINERVA, a Roman goddess, patroness of arts and crafts, the protectress of all who wished to excel, whether in mental or manual pursuits. Warriors also were under her especial protection, and she is represented with a helmet, shield, and coat of mail. The Greek goddess Athena was later identified with Minerva.

MINES IN WARFARE. (1) *Military Mines* are employed to defend the approaches to fortifications or encampments. At intervals along the land approaches cylinders filled with dynamite, lyddite, or other powerful explosive are buried to a depth of from 6 to 12 inches, according to the nature of the ground. These are exploded by electricity from within the position, or by a highly inflammable composition spread over the sites of the mines, the friction engendered by the tread of a number of troops over it being sufficient to fire it. (2) *Submarine Mines* are used in the waterways approaching harbours or fortresses. They are held in position at a certain depth below the surface by means of sinkers, and are fired by electricity from some observation point at a distance from the mine field, the limits of which are marked by buoys, so that the look-out is able to tell when a ship is within the zone. (3) *A Floating Mine* consists of a hollow cylinder fitted with a conical shaped end which is sufficiently weighted to keep the whole contrivance upright and floating at the surface. Round the inside of the case several needles are fitted with their points in contact with a layer of detonating compound. The impact of a vessel against a mine drives in the side of the cylinder, and causes one or more of the needles to penetrate the detonating compound and fire it. This lights a layer of touch paper with which it is in contact, and a train of gunpowder conveys the fire to layers of gun-cotton and fulminate of mercury or other powerful explosive. An earlier type of floating mine was fired by the breaking of a bottle of sulphuric acid embedded in a mixture of chlorate of potash and sugar.

MINNEAP'OLIS, the largest town in Minnesota, U.S.A., population 200,000, lies on both sides of the Mississippi, at the Falls of St. Anthony, the water-power derived from which is the chief source of the city's prosperity. Immense quantities of timber and flour go out from the mills of Minneapolis, and other industries are flourishing.

MINNESINGERS, (old German *minne*, love), the German lyric poets of the twelfth and thirteenth centuries, whose lays were mostly of an amatory nature. Wagner's "Tannhauser" is a beautiful picture of the minnesinger's life.

MINORCA, the second largest of the Balearic Isles, in the Mediterranean. It lies 25 miles north-east of Majorca, the largest, and has an area of 284 square miles. Port Mahon, the capital, population 16,000, has a splendid harbour.

MINOS, in Greek mythology. (1) A ruler of Crete, celebrated for his wisdom and justice, made after his death one of the judges in the lower world. (2) Grandson of the above, also ruled Crete. He conquered the Athenians, and made them pay tribute of seven youths and seven maidens annually, who were devoured by the Minotaur.

MIN'OTAUR, a fabulous monster, half bull and half man, confined by Minos in his "labyrinth." He used to devour the children sent annually from Athens, but was eventually killed by the hero Theseus.

MINT, an establishment for making coins. The English mint, on Tower Hill, was erected in 1810. Here all our gold and silver coins are made, the metal being first cast into bars, and then rolled into sheets the exact thickness of the coin they are intended to make. Pieces are cut out of the sheets the exact size of the coin required, and then placed in a powerful press to receive the impression of the faces and the milling, in the case of gold and silver coins. Our bronze coins are largely minted at Birmingham. Mints also exist at Sydney and Melbourne in Australia.

MIR, a commune in Russia consisting of the inhabitants of one or more villages. The land around belongs to the whole community, and is redistributed among the villagers from time to time to suit changed circumstances, and to prevent any person from acquiring exclusive right to any part of the land.

MIRABEAU, HONORÉ GABRIEL, *b.* 1749, *d.* 1791; was one of the chief movers in the great French Revolution, and perhaps its greatest orator. His courageous answer to the king when the latter sent commanding the National Assembly to dissolve, is memorable: "No one shall drive us out except by the force of bayonets." His youth had been dissolute, and this caused him to be distrusted when he tried to give the course of the Revolution a moderate turn. The people thought he had been bought by the Court. He died of a fever. Had he lived, monarchy might now be existing in France in a constitutional form.

MIRACLE PLAYS, or **MYSTERIES,** a kind of rude drama much used in the Middle Ages. The subjects were drawn from Scripture, and the monks were at first both writers and performers. These plays derived their name from the fact that they portrayed the miraculous events of the Bible narrative. Some lasted two or three days. The passion play at Ober-Ammergau, in Bavaria, is a survival of them.

MIRAGE, a phenomenon frequently observed in the desert. The rays of light proceeding obliquely from an object are more and more refracted by the cooler and denser layers of air as they proceed upward, until they are at last totally reflected and reach the observer, perhaps miles away, who sees the object as though reflected in a lake.

MISHNA, the "Oral Law" of the Jews; a series of ordinances traceable in tradition to the time of the encampment at Mount Sinai. The Mishna is the first part of the Talmud.

MISSAL, a Roman Catholic book of worship, containing the prayers and ceremonies of the Mass. It was drawn up by Pope Pius V., in 1570, and, with slight alterations in 1604 and 1634, is in use to-day.

MISSEL-THRUSH, or Mistletoe-thrush, takes its name from its fondness for the berries of the mistletoe, which hardly any other bird will touch. It is rather larger than the mavis, or song-thrush, and much bolder, facing the marauding jay or daw with great courage in defence of its young. It is common in England and Central Europe.

MISSISSIPPI, THE. Next to the Amazon, the Mississippi, with its tributary the Missouri, is the mightiest river in the world. Measuring from the source of the Missouri, it has a length of 4,200 miles, draining an area of 1,250,000 square miles. Below the Ohio it is subject to frequent floods, the land around being covered for a breadth of 150 miles. The steamer traffic along it is immense; the four towns Minneapolis, St. Paul, St. Louis, and New Orleans contributing an immense volume of trade.

MISSOURI, the chief tributary of the Mississippi has a general easterly course from its sources in the Rocky Mountains to its junction with the Mississippi just above St. Louis. Its length is 3,047 miles, but it is little navigated owing to its windings and sandbanks. Omaha, on its right bank, has a population exceeding 100,000.

MISTLETOE, a parasitic plant, i.e., one which draws its sustenance from another, is found on many trees, but chiefly on the apple. The Druids highly esteemed it when found growing on the oak.

MISTRAL, a north-west wind which often blows in winter on the Mediterranean coast of France. It is very cold and dry, and sometimes very violent.

MITHRIDA'TES (a-tes), one of the great ones of old who just missed the rank of an Alexander or a Cæsar. King of Pontus, in Asia Minor, from about 120 to 63 B.C., he had repeated contests with the Romans until subdued by Pompey. To avoid falling into the hands of the Romans he poisoned himself. He is said to have spoken 22 languages.

MITRE, the head-dress; sometimes worn by a bishop as part of his official robes. It is commonly used by English bishops as the heraldic badge of their office, on carriages, plate, etc.

MNEMONICS, a system of training the memory and assisting it by artificial aids. According to the subject on which the memory is to be exercised, certain words are chosen, the repetition of which in a given order will recall the required fact, date, or number to the memory. The ancients suggested the choosing of a known house, and the associating of the required facts with the rooms in their order.

MOA, a genus of ostrich-like birds, now extinct, formerly found in New Zealand and Australia. The largest stood probably about 14 feet high, and they were wingless.

MOABITES, a Semitic people once inhabiting the country to the east of the lower Jordan and the Dead Sea.

MOABITE STONE. This stone contains the earliest inscription in Phœnician characters known to us. It belongs to the 9th century B.C., but was only recently discovered (1868) in the land of Moab. It is interesting as being an independent confirmation of the Scripture narrative, referring to the Wars of Mesha, king of Moab, against Israel.

MOCHA, population 5,000, an ancient seaport of Arabia, on the Red Sea, once celebrated for its export of excellent coffee.

MOCKING BIRD, a bird of the Thrush family, found in North America. Its natural song is most melodious, but it has in addition a marvellous imitative faculty, being capable of imitating almost any sound, so as to deceive even the most attentive hearer.

MO'DENA, once an independent duchy, now a province of Italy, lies south of the river Po. Its chief town, Modena, has suffered much at the hands of Italy's various conquerors.

MODULATION, in music, is a term for the transition from one key to another. The Modulation is effected and indicated by the introduction of the necessary sharp or flat.

MOFFAT, ROBERT, *b.* at Ormiston, East Lothian, *d.* 1883; one of Scotland's greatest missionaries. He became a missionary at the age of 21, and spent 51 years in active missionary labour in South Africa. It was probably he who finally decided Livingstone, who married his daughter, to choose Africa as his sphere of labour.

MOGULS, EMPIRE OF THE, the empire of Baber and his successors in India, which existed in some form or other from 1526 to 1757. In the later years the Moguls were simply puppets in the hands of their powerful viceroys. Delhi was the capital of India under the Moguls.

MOHAIR, the hair of a kind of goat. It is very white and soft. The best is obtained from Angora, in Asia Minor.

MOHAMMED. or **MAHOMET.** Refer to *Index*.

MOHAWKS, a tribe of North American Indians, forming part of the great Iroquois confederation. [See *Iroquois.*]

MOHOCKS, or **MOHAWKS,** a name assumed by a band of young roysterers in the early years of the 18th century. They delighted in annoying and assaulting wayfarers at night.

MOIRÉ, the silk stuff known as watered silk. The peculiar marks are caused by wetting the silk and then causing it to undergo immense pressure.

MOKANNA. See *Veiled Prophet.*

MOLASSES, the uncrystallized part of the cane juice which remains liquid after the juice has been boiled down. The solid, or crystallized part, is the "raw" sugar.

MOLDAU, a river of Bohemia on which stands Prague, the capital. It flows north almost right through the country, and joins the Elbe.

MOLDAVIA, the northern part of the kingdom of Roumania, (which see.)

MOLE, a small animal about five inches long, which spends nearly all its time underground in passages formed by burrowing. Its eyes are extremely minute. Its usual food consists of earthworms and grubs.

MOLECH, or **MOLOCH,** a god whose worship was common among all the Canaanitish tribes; the offering of children to Moloch, either by actually burning them alive, or by passing them through the fire kindled in his image, was an abomination of which the Israelites were guilty at various periods before the Captivity. The valley of Hinnom, south of Jerusalem, where this abomination was practised, was regarded in later times, under the name of "Gehenna," as typical of hell.

MOLECULE, the smallest portion of any substance which can have independent existence. The number of molecules in a cubic inch of gas is now under investigation; the answer runs into millions.

MOLIÈRE, *b.* 1622, *d.* 1673; the greatest of the French comic dramatists, was born at Paris, and in his youth served at the French Court, where he no doubt had ample opportunity of observing the foibles he so keenly portrays. "L'Ecole des Femmes," "Tartuffe," "Le Misanthrope," "Le Médecin Malgré lui," and "Le Malade Imaginaire," are some of his most admired plays.

MOLLUSCA, a very general term from *L. mollis*, soft, embracing all animals that have a shell but no jointed limbs, as the cockle and oyster, and many, as the slug, whose shell is either wanting, or so rudimentary that it escapes ordinary observation.

MOLLY MAGUIRES, a secret society which existed in Ireland in the early half of the 19th century. Its object was the intimidation of bailiffs and other officials of the law.

MOLOKAI, one of the islands forming the Sandwich Group, in the Pacific. It is set apart for the reception of lepers, and is noted as the place where Father Damien devoted his life to the care of those pitiable outcasts.

MOLTKE, COUNT VON, *b.* 1800, *d.* 1891, Field-Marshal of the German Empire, was the man to whom, from a military point of view, Prussia owed her successes in her wars against Denmark in 1864, Austria in 1866, and France in 1870–71. He was devoted to his profession, and spared no labour to make himself master both of its theory and practice.

MOLUCCAS, or **SPICE ISLANDS,** a number of islands in the East Indies, between Celebes and Borneo. They belong to Holland. Amboyna, the capital, is one of the oldest Dutch settlements in the East.

MOMBASA, the capital of British East Africa, population 27,000, stands on a small island 150 miles north of Zanzibar. The railway runs from here to Victoria Nyanza, a distance of 400 miles.

MOMMSEN, THEODOR, the great German historian, was born in Schleswig in 1817. He early devoted himself to the study of Roman and Italian antiquities. In 1849 he was exiled from Germany for his liberal opinions, and took up his abode at Zurich. His Roman history appeared between 1854 and 1856. It at once placed him on a pinnacle by himself. His other historical and antiquarian writings are numerous.

MON'ACO, the smallest independent State in Europe, on the Mediterranean coast of France, has an area of three square miles, and a population of 13,000. The Casino, or gambling hall, is known over the world. See *Monte Carlo.*

MONASTERIES. See *Abbeys.*

MONGOLIA, a vast plateau between China Proper and Siberia, inhabited by a nomadic people, nominally subject to China. A great part of it is desert. The climate is extreme.

MONGOOS, a species of ichneumon found chiefly in India. It feeds upon rats, mice, and other vermin, and is the determined enemy of all reptiles. The mongoos fearlessly attacks the largest snakes, and displays great agility in avoiding their fangs; it kills them by biting them through the back of the neck. The mongoos was introduced into Jamaica some years ago to rid the sugar plantations of rats. After accomplishing its mission, it turned its attention to poultry, and is now a worse pest than the rats were. [See *Ichneumon.*]

MONK, GEORGE, DUKE OF ALBEMARLE, *b.* at Potheridge, Devon, 1608, *d.* 1670; was the man who did most towards the settlement of the kingdom after Cromwell's death. He marched his army to London, caused the Convention Parliament to assemble, and went to Dover to receive Charles II. on his landing.

MONMOUTH, JAMES, DUKE OF, *b.* 1629, *d.* 1685; was an illegitimate son of Charles II. by Lucy Walters. His father openly received him at Court, and he became very popular. When James II. succeeded, in 1685, Monmouth thought all England would rise to aid him, and he headed an insurrection. Taken prisoner some days after the disastrous battle of Sedgmoor, he was beheaded on Tower Hill.

MONMOUTH, county town of Monmouthshire, population 5,000, is pleasantly situated on the river Wye. It was the birthplace of Henry V.

MONOGRAM, a mark or sign composed of two or more letters, so disposed or arranged as to form one drawing. A

good monogram should show all the letters clearly, and yet not be inartistic.

MONOGRAPH, a treatise on some single subject or branch of a subject.

MONOLITH, a column formed of a single stone, as the obelisk familiarly known as Cleopatra's Needle, on the Thames Embankment. The several stones of a group like Stonehenge are monoliths.

MONOMANIA, a form of insanity in which the patient thinks and acts unreasonably on one subject only.

MONOPH'YSITES, a division of Christians who maintained that Christ had one nature only; that the divine and human were so blended in Him as to form one nature.

MONOPOLY, the sole right or privilege of trading in a certain article, or with a certain district or country. The East India Company long had the monopoly of trade with India; the Hudson Bay Company with a great part of North America. Monopolies in certain articles used often to be granted to individuals in earlier times, and Parliament struggled long and bitterly against them.

MONO-RAIL SYSTEM, a system of electric locomotion invented by Mr. F. B. Behr. A central rail, on which the carriage wheels run, is fixed at the top of an A frame, (so called from its shape), and other rails are fixed one on each side, at a lower level, on which small bearing wheels are able to play when rounding curves, etc. The carriage, the bottom of which is in the form of an inverted V, straddles the framework. The seats are placed from end to end down the centre of each compartment, and the passengers sit back to back. The advantages claimed for the system are the cheapness of construction as compared with the ordinary two rail system, and the high rate of speed, 100 to 110 miles an hour, attainable with safety.

MON'OTHEISM, a belief in one God, as opposed to Polytheism, or belief in numerous gods.

MONROE DOCTRINE, a convenient name for the statement made on behalf of the United States that they will not brook any interference from Europe with territory in America. It derives its name from James Monroe, President of the United States from 1817 to 1824, who enunciated it in a message to Congress in 1823.

MONSOON', the name given to a wind which blows pretty regularly in one direction for some months. In India the wind blows from the south-west from April to October, and from the north-east from October to April.

MONSTRANCE, a vessel employed in the Roman Catholic Church for exhibiting the consecrated wafer to the people on solemn occasions. It consists of a transparent watch-shaped box on a stand.

MONT DE PIÉTÉ, the continental substitute for the English pawn-shop, is a much more desirable institution. They are lending banks belonging as a rule to the municipality. The rate of interest is lower than with English pawnbrokers, and surplus profits are devoted to charity.

MONTAGU, CHARLES, EARL OF HALIFAX, *b.* 1661, *d.* 1715; was one of the few Englishmen whom William of Orange trusted, and was able to make real use of. By his financial ability he found money for William's wars. The National Debt, the Bank of England, and the use of Exchequer Bills we owe to his insight.

MONTAGU, LADY MARY WORTLEY, *b.* 1690, *d.* 1762, daughter of the Duke of Kingston, was a wit, beauty, and literary celebrity of the 18th century. From 1716 to 1718 her husband, Mr. Montagu, was ambassador at Constantinople. Lady Mary's letters home, containing descriptions of Turkish life and society, constitute her chief title to fame. On her return to England she introduced inoculation for small-pox.

MONTAIGNE, MICHEL DE, *b.* 1533, *d.* 1592, was the third son of a French seigneur of Périgord. He was brought up to the law, but took little interest in it. In 1571 he succeeded to the family estate, and lived thenceforth the life of a country gentleman, devoting his leisure to literature. His "Essays" have a charm and spontaneousness which may arise partly from the perfect leisure and independence to which they owe their being. They touch on and illumine nearly every topic which interests mankind.

MONT'ANISTS, a Christian sect which arose during the latter half of the second century. Montanus, its founder, was an illiterate enthusiast who maintained that Christians should return to the simplicity and severity of the early years of Christianity.

MONT BLANC, the highest mountain in Europe, 15,732 feet above sea level, is situated in the south-east of France, 40 miles south of Lake Geneva.

MONTCALM, GENERAL, one of the most efficient generals who have ever served France, distinguished himself against the British at Oswego, 1756, and Ticonderoga, 1758. In 1759 he defended Quebec when besieged by the British. At last, however, Wolfe gained the Heights of Abraham, and Montcalm was compelled to give battle. His defeat gave Canada to the British.

MONT CENIS, 11,000 feet high, a peak in the Alps, between France and Italy. The Mont Cenis Pass, 6,700 feet high, is one of the most used of Alpine passes. Napoleon constructed a road over it. Near Mont Cenis is the famous tunnel which has the same name. It is eight miles long, cost about £3,000,000, and took eight years to construct.

MONTE CARLO, a small town in the little principality of Monaco (which see). Here is the notorious gaming-hall, built on ground leased at an enormous rental from the Prince of Monaco by a joint stock company, which "runs" the establishment; population about 4000.

MONTE CRISTO, a small rocky island 26 miles south of Elba; gives its name to Alexandre Dumas' most famous work.

MONTEFIORE, SIR MOSES, *b.* 1784, d. 1885, an eminent Jew, was one of those who took a leading part in the attempt to gain full rights of citizenship for his race. Having early amassed a fortune as a stock-broker, he devoted the rest of his long life to improving the conditions of his Jewish brethren. He obtained concessions from the Czar and the Sultan. He made seven journeys to the Holy Land. He served as High Sheriff of Kent and Sheriff of London, and in 1846 he received a baronetcy from Queen Victoria in recognition of his services in the cause of humanity.

MONTENE'GRO, a small state between Herzegovina and Albania, in the mountainous region east of the Adriatic. Its area is about 3,500 square miles, and population 311,000. From the aspect of the country and the habits of the people, it may well be called the Switzerland of the East. Cettinje, population 3,200, is the capital.

MONTE ROSA, a peak, 15,200 feet high, in the Pennine Alps, and, next to Mont Blanc, the highest peak in Europe.

MONTEVIDEO, the capital of Uruguay, population 250,000, is situate on the northern shore of the La Plata, about 120 miles from Buenos Ayres. It is a well-built town, having modern requirements well supplied. It has a large export trade in hides, wool, tallow, and horns.

MONTEZU'MA, *b.* 1477, *d.* 1520, was Emperor of Mexico when Cortez landed in 1519. He at first tried to make friends with the strangers, but afterwards plotted against them. The Mexicans rose against the Spaniards, and in trying to pacify his subjects, Montezuma was saluted with a shower of stones, and died of his wounds soon afterwards.

MONTFORT, SIMON DE, *b.* about 1200, *d.* 1265, deserves to be called the founder of representative institutions. He led the barons in their struggle against Henry III., and in 1265 he summoned a Parliament which included for the first time representatives from towns. He was slain at the Battle of Evesham.

MONTGOLFIER, Joseph Michael, and Jacques Etienne, two Frenchmen who invented the balloon, in the latter part of the 18th century, using heated air for inflating it. The year 1783 may be fixed as the date when ballooning became practical, for they made a balloon 35 feet in diameter, which rose to a height of 1500 feet.

MONTGOMERY, JAMES, *b.* 1771, *d.* 1854; was a native of Ayrshire, in Scotland. He early took to literature, and became before long editor of the *Sheffield Register*. Imprisoned for his seditious articles, he began writing poetry. His hymns will probably outlast all his other writings. The best known are "For ever with the Lord" and "Songs of praise the angels sang."

MONTH. See *Calendar*.

MONTREAL, the largest and most important city in Canada, is situate on an island at the junction of the Ottawa and St. Lawrence. It has extensive canal communication with the principal towns on the great lakes, and is the head-quarters of all the important railways. Reached by ocean going vessels it is thus becoming the centre of trade for the Dominion. Its total trade, imports and exports, is about £25,000,000. The old French buildings of the town give it a very picturesque appearance: population in 1901, about 268,000.

MONT SAINT MICHEL, a singular rocky islet off the coast of Normandy, in the Bay of St. Michel. A tapering circular rock, it rises about 240 feet above the surrounding sands, and was formerly accessible only at low water. Now it is reached by a firm causeway at all times. An old town and castle crown the summit.

MONUMENT, THE, OF LONDON, was erected to commemorate the Great Fire of London in 1666. Designed by Wren, it stands near the north end of London Bridge. The inscription ascribing the origin of the fire to the Roman Catholics was erased in the reign of William IV.

MOODY, DWIGHT LYMAN, *b.* in Massachusetts, 1837, *d.* 1899; a great American evangelist; was in early life a shopman in Boston, and afterwards in Chicago. Here the active religious work he began, at the age of eighteen, demanded all his time. In 1873 he made, with Ira D. Sankey, his first famous missionary tour in Great Britain and repeated it several times later. Simplicity and earnestness marked his discourses.

MOON, THE, the satellite or attendant of the earth in its journey round the sun, has a diameter of 2,160 miles, is about 240,000 miles distant from the earth, and travels round the earth in the time popularly called a month. The period from one full moon to another is 29 days, 12 hours, 44·4 minutes, and it is noteworthy that the moon always presents the same hemisphere to the earth. This latter phenomenon is due to the fact, that the

moon makes one complete revolution on its axis while it is making its monthly journey round the earth.

MOON, WILLIAM, *b.* 1818, *d.* 1894; invented the system of raised type for the blind, which goes under his name. Educated for the ministry, he lost his sight in 1840, and at once began to study how to remedy his own and others' misfortune. The great merit of his inventions is the simplicity of the letters, and the comparative cheapness of production.

MOORE, SIR JOHN, *b.* 1761, *d.* 1808; an English general who distinguished himself in the Peninsular War against the French, after gaining distinction in the West Indies and in Egypt. In 1808, the English expedition to aid the Spaniards was sent out under his command. His renown rests mainly on the masterly retreat of his army in mid-winter. He was killed at Corunna in the moment of victory.

MOORE, THOMAS, *b.* 1779, *d.* 1852; an Irish poet, was born and educated in Dublin. His early poems do not require much notice. His fame is assured by his songs, although he undertook and carried out much more ambitious work. His poetical romance of Lalla Rookh gained much approbation for the fidelity of its pictures and its sweetness of language.

MOORS (1) The native inhabitants of the north of Africa from Tripoli westwards. (2) A name applied loosely to the Arab conquerors of Spain, who held the country from the beginning of the eighth to about the end of the fifteenth century. For centuries these Arabs possessed almost a monopoly of scientific learning and refinement, as their still extant buildings in Spain and their achievements in mathematics bear witness.

MOOSE. See *Elk.*

MORAINES. See *Glaciers.*

MORAVIA, a small state of Austria-Hungary, between Austria and Bohemia. The people are mostly Slavonians. Brunn, the capital, is an important manufacturing town. Area, 8,500 square miles; population about 2,200,000.

MORAVIANS, a Protestant sect whose members are not numerous, but active and earnest. Avoiding dogma as much as possible, they make active piety their religion. In missionary work they are especially zealous. The sect had its origin in Bohemia, and the church government is still centred at Herrnhut, in Saxony.

MORDECAI, a Jew of the Captivity. On his niece, Esther, whom he had brought up, becoming the queen of Ahasuerus, or Xerxes, he was advanced to great honour. How Haman plotted against him and was hanged on his own gallows is told in the Book of Esther.

MORE, HANNAH, *b.* 1745, *d.* 1833; was the daughter of a schoolmaster of Bristol, and early showed literary talent. Her first important publication, "The Search after Happiness," had great success, and secured her the notice of Dr. Johnson and Garrick. In 1773 she came to London, and for some years wrote dramas. The latter part of her life was spent in producing the religious and moral writings by which she is now best known.

MORE, SIR THOMAS, *b.* 1480, *d.* 1535: one of the most upright men that ever lived, was Chancellor of England after Wolsey. His "Utopia," a well written sketch of an imaginary ideal government, is still admired. He was too honest to assent to the King's religious supremacy, and was tried and executed for treason.

MOREAU, JEAN VICTOR, *b.* 1763, *d.* 1813, one of the most famous generals of France, did much towards freeing his country from invaders in the first years of the revolution. In 1800, he gained the famous victory of Hohenlinden, annihilating the Austrian army. Later on he was banished, and went to America, whence he returned to fight against his country, and was mortally wounded at the Battle of Dresden.

MORGAN, JOHN PIERPOINT, *b.* 1837, at Hartford, Connecticut; was educated at Boston and Göttingen. His father was partner of the well-known George Peabody and the son ultimately succeeded to the headship of the business. His financial acuteness re-established the financial stability of many American railways, and later his formation of the great Steel Trust and the Atlantic Shipping Combine have given him a foremost place among the magnates of commerce.
